# INTRODUCTION

This issue of *Aeronautical Engineering -- A Continuing Bibliography* (NASA SP-7037) lists 389 reports, journal articles, and other documents originally announced in December 1985 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA).*

The coverage includes documents on the engineering and theoretical aspects of design, construction, evaluation, testing, operation, and performance of aircraft (including aircraft engines) and associated components, equipment, and systems. It also includes research and development in aerodynamics, aeronautics, and ground support equipment for aeronautical vehicles.

Each entry in the bibliography consists of a standard bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by the first nine *STAR* specific categories and the remaining *STAR* major categories. This arrangement offers the user the most advantageous breakdown for individual objectives. The citations include the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract number, report number, and accession number -- are included.

An annual cumulative index will be published.

# TABLE OF CONTENTS

Page

**Category 01 Aeronautics (General)** 865

**Category 02 Aerodynamics** 867
Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

**Category 03 Air Transportation and Safety** 876
Includes passenger and cargo air transport operations; and aircraft accidents.

**Category 04 Aircraft Communications and Navigation** 878
Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

**Category 05 Aircraft Design, Testing and Performance** 880
Includes aircraft simulation technology.

**Category 06 Aircraft Instrumentation** 888
Includes cockpit and cabin display devices; and flight instruments.

**Category 07 Aircraft Propulsion and Power** 889
Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

**Category 08 Aircraft Stability and Control** 893
Includes aircraft handling qualities; piloting; flight controls; and autopilots.

**Category 09 Research and Support Facilities (Air)** 896
Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

**Category 10 Astronautics** 899
Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

**Category 11 Chemistry and Materials** 900
Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

**Category 12 Engineering** 903
Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.

**Category 13 Geosciences** 912
Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.

**Category 14 Life Sciences** 916
Includes sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

**Category 15 Mathematics and Computer Sciences** 916
Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

**Category 16 Physics** 918
Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.

**Category 17 Social Sciences** 919
Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

**Category 18 Space Sciences** 920
Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.

**Category 19 General** 920

JANUARY 1986

## 01

## AERONAUTICS (GENERAL)

**A85-48567**

**THE COMPOSITE TECHNOLOGY OF A MAIN ROTOR BLADE**

R. A. DOE and D. HOLT (Westland Helicopters, Ltd., Yeovil, England) IN: Fibre reinforced composites '84; Proceedings of the International Conference, Liverpool, England, April 3-5, 1984 . London, Plastics and Rubber Institute, 1984, p. 9.1-9.16.

The composite materials system, structural design and fabrication methods of the Lynx/Westland 30 helicopter composite main rotor blade are discussed. Attention is given to the accommodation of aerodynamic, blade weight, rotor balance, blade stiffness, and centrifugal force constraints, and to the manufacturing hardware employed in composite laminate tape-laying operations. O.C.

**A85-48570**

**ASPECTS OF CERTIFICATION OF CIVIL AIRCRAFT STRUCTURES IN COMPOSITE MATERIALS**

J. W. BRISTOW (Civil Aviation Authority, London, England) IN: Fibre reinforced composites '84; Proceedings of the International Conference, Liverpool, England, April 3-5, 1984 . London, Plastics and Rubber Institute, 1984, p. 17.1-17.12. refs

The recent past has seen a marked increase in the application of composite materials to structures in civil aircraft - some examples are cited. This paper discusses the issues raised in the airworthiness certification of such structures from the viewpoint of the Civil Aviation Authority. An outline of the requirements that have to be met and the associated guidance material that has been recently evolved is given. Author

**A85-48571**

**STRUCTURAL PLASTICS IN SPORTING AND GENERAL AVIATION AIRCRAFT**

J. FRAY (British Aerospace, PLC, Manchester, England) IN: Fibre reinforced composites '84; Proceedings of the International Conference, Liverpool, England, April 3-5, 1984 . London, Plastics and Rubber Institute, 1984, p. 18.1-18.10.

An historical account is given of the development of comparatively high performance primary structure design and fabrication techniques by sporting aircraft manufacturers, on the basis of the gradual improvement of glass-reinforced plastic materials. Extensive use is noted to have been made of foamcore sandwich primary structures, which may ultimately lead to the rapid and simple assembly by amateur constructors of entire airframes composed of only a few large sandwich panels. These technologies have recently been extended to executive aircraft. O.C.

**A85-48573**

**THE FIRST BRITISH DESIGNED AND BUILT COMPOSITE SAILPLANE**

J. C. RIDDELL (J. C. Riddell and Associates, England) IN: Fibre reinforced composites '84; Proceedings of the International Conference, Liverpool, England, April 3-5, 1984 . London, Plastics and Rubber Institute, 1984, p. 20.1-20.10.

Attention is given to evaluation methods recently applied to the composite materials used in the construction of a sailplane, proceeding from material properties and test structures to the proof loading of wing and tail panel prototype components and the ultimate strength structural testing of wing spars and fuselage. The materials employed were fiberglass woven fabrics, balsa wood sandwich panel cores, and isophthalic polyester resins for laminate and gel coat applications. O.C.

**A85-49089**

**ADVANCED TECHNOLOGIES PROMISE SALES BOOST FOR GENERAL AVIATION AIRCRAFT**

J. C. LOWNDES Aviation Week and Space Technology (ISSN 0005-2175), vol. 123, Sept. 23, 1985, p. 71, 73, 75 (5 ff.).

The implementation of advanced aviation technologies, developed by NASA and aircraft manufacturers, in the design of new aircraft is discussed. Wings and fuselages designed for natural laminar flow and the utilization of the strength and weight advantages of composite materials in aircraft design are described. Canard and winglet aerodynamics are also being applied to new aircraft designs. The improvements in measuring natural laminar flow and the advantages of the laminar flow airfoil are examined. The use of graphite epoxy, filament winding, and low-temperature curing resin in fuselage designs is explained. Some manufacturers have utilized flying scale models instead of wind tunnel tests to obtain basic stability and control data; the use of clay models is discussed. Examples of aircraft which were developed from these technological advances are presented. The development of a turbulent airfoil, an electromagnetic impulse deicing system, and a propfan installation is discussed. I.F.

**A85-49127#**

**SUNRISE, THE WORLD'S FIRST SOLAR-POWERED AIRPLANE**

R. J. BOUCHER (Astro Flight, Inc., Marina del Rey, CA) Journal of Aircraft (ISSN 0021-8669), vol. 22, Oct. 1985, p. 840-846. Previously cited in issue 16, p. 2277, Accession no. A84-35214. refs

**A85-49553**

**DETERMINING OPERATING AND SUPPORT COSTS WITH USAF DO56 MAINTENANCE DATA COLLECTION SYSTEM**

R. S. MORRIS and B. E. BARTELS (Northrop Corp., Aircraft Div., Hawthorne, CA) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 197-206.

Successful users of the USAF Maintenance Data Collection System - DO56 - have resolved and reduced the often deficient data, ascertaining maintenance action rates, reliability parameters and manpower resource consumption of weapon systems (or components thereof). Northrop Corporation utilizes the data to estimate support costs. This paper will follow the development of the support cost for the F-5, from receipt of raw DO56 data, resolution of anomalies in the data, incorporation validated data into a useable data base, and finally, the computation of operating and support costs using this data. Author

**A85-49571**
**MODELING COMBAT MAINTENANCE OPERATIONS**
T. N. COOK and R. C. DINICOLA (United Technologies Corp., Sikorsky Aircraft Div., Stratford, CT) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 390-395.

A computer model was developed to simulate helicopter maintenance operations in combat. Written in GPSS computer code, the Combat Maintenance Simulator (CMS) mathematically models a fleet of helicopters performing combat missions. Scheduled inspections, system maintenance, and repair of battle damage are performed in the course of the simulation. The user is able to specify policies with regard to deferring nonessential maintenance and repair during periods of combat emergency. Computer graphics are used to display the mission performance of the fleet under various sets of conditions. The CMS models has been used to support research aimed at reducing the maintenance workload and increasing the mission capability of Army helicopters in combat. Author

**A85-49576**
**MODELING AIRCRAFT COMBAT DAMAGE REPAIR**
D. H. KOVATCH (Vought Corp., Dallas, TX) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 440-445. refs

The development of an aircraft battle damage repair (ABDR) database, the REPAIR estimator model, and a damage simulator for estimating combat damage repair times of inflight and parked aircraft is discussed. The database, which is composed of a master file and a set of library files, is to define repair estimates as a function of a damage assessment and repair concept. The means of establishing standard and nonstandard repair estimates and the effect logistics and environmental conditions have on the estimate are explained. The REPAIR estimator model was developed to assist the processing of ABDR data and provide aircraft repair times; a flow chart of the model and an explanation of how the system functions are provided. The modified SCAN aerial target description and warhead endgame effectiveness program was used as the damage simulator model. The simulator, which predicts the probability of an aircraft surviving an attack by a missile, is described. I.F.

**A85-49584**
**SQUADRON MAINTENANCE AND REPAIR TECHNIQUES (SMART) VALIDATION TEST REPORT**
H. E. ROSENBERG and B. L. BERSON (Lockheed-California Co., Burbank, CA) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 510-512.

The purpose of this study was to evaluate the effectiveness of Lockheed's Squadron Maintenance and Repair Techniques (SMART) as a troubleshooting aid. Seven Naval enlisted personnel, ranging in experience levels of 0 to 5 years, served as the test subjects. The study was conducted on a P-3 Environmental Control System simulator board. The results of the study indicated that both inexperienced and experienced maintenance personnel could isolate faults quickly and efficiently using SMART. SMART has demonstrated the capability to reduce not only the time required to fault isolate equipment faults, but also the amount of training and skill level requirements for maintenance personnel. Author

**A85-49585**
**F/A-18 SUPPORTABILITY ASSURANCE READINESS PROGRAM**
J. J. SINNOTT (McDonnell Aircraft Corp., St. Louis, MO) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 513-519.

The use of the Supportability Assurance Readiness Program (SARP) to evaluate the reliability, maintainability, and readiness of the F/A-18 weapon/logistics support system is discussed. SARP compares the needs of the weapons system with readiness objectives and recommends adjustments if required; the elements necessary for system readiness are presented. The development of a data base which contains the reliability and maintainability performance of each item in the F/A-18 weapon system and the support elements required is described. Three SARP simulation models which were modified to accept time-dependent variations of simulation variables are discussed. The areas of projected support problems produced from the simulation models are explained. The correction of all projected problems was necessary in order to achieve an efficient system. The F/A-18 was compared with the F-4J and A-7E; the F/A-18 proved to be a better prepared aircraft requiring less maintenance, which results in reduced operating and support costs. I.F.

**A85-49657**
**ONE-ELEVEN TRAILBLAZERS**
J. MOXON Flight International (ISSN 0015-3710), vol. 128, Sept. 7, 1985, p. 32-36.

Over the last ten years, two aircraft have been employed in England to test new ideas in avionics, navigation, and flight control. The operations conducted with the aid of the two aircraft have made it possible to a mass a vast data base of knowledge. Direct voice input has been studied, and techniques for extremely accurate terminal area navigation have been established. Other studies conducted are related to relaxed stability and sophisticated gust alleviation. The conducted projects have the objective to help the UK avionics industry to gain a better foothold in world markets. Attention is given to the improvement of communications between the pilot and the outside environment, flight controls research, the simulation of terminal area holding patterns, automatic terminal area navigation, a new processing system, and a spoiler solution. G.R.

**A85-49927**
**WEIGHT CONTROL OF COMPOSITE PARTS IN PRODUCTION**
R. GILLIAM and J. MACLENNAN (United Technologies Corp., Sikorsky Aircraft, Stratford, CT) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 13 p.
(SAWE PAPER 1629)

Use of composite materials in a production environment requires methods of weight control that are unique to composite structures. Stringent controls and continued monitoring of the materials, design practices, tooling, fabrication, and repair are required. Without these controls, the weight savings associated with the use of composites can very quickly be eroded. This paper addresses the specific weight control procedures employed at Sikorsky during each phase of the development process. It gives examples of weight savings degradation that occur without these controls and the orders of magnitude of weight that can be saved in specific component areas. Author

**U.S. CIVIL AIRMEN STATISTICS FOR CALENDAR YEAR 1984 Annual Report**
31 May 1985 44 p
(AD-A156326) Avail: NTIS HC A03/MF A01 CSCL 01B

The U.S. Civil Airmen Statistics is an annual study published to meet the demands of FAA, other government agencies, and industry for more detailed airmen statistics than those published in other FAA reports. Statistics pertaining to airmen, both pilot and nonpilot, were obtained from the official airman certification records maintained at the FAA Aeronautical Center, Oklahoma City, Oklahoma. An active airmen is one who holds both an airmen certificate and a valid medical certificate. Airmen who must have a valid medical to exercise the privileges of their certificate are all airplane pilots, control tower operators, flight navigators, flight engineers, and flight instructors. The glider and lighter-than-air pilots are not required to have a medical examination but the numbers represent only those who had a valid medical certificate. Mechanics, parachute riggers, ground instructors, and dispatchers certificates represent all certificates on record at the aeronautical center. GRA

## 02

## AERODYNAMICS

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

**A85-47103**

**COMPUTED STATIC STALL OF A SUPERCRITICAL AIRFOIL**

D. M. SCHUSTER and Y. TASSA (Lockheed-Georgia Co., Marietta) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 198-202. refs

The unsteady, turbulent flowfield about a supercritical airfoil in static stall has been simulated by numerically solving the two-dimensional time dependent Navier-Stokes equations. The simulation was obtained by impulsively starting the airfoil from a zero velocity condition and then marching in time by a pre-determined time step. The Navier-Stokes equations are solved at each of these time intervals yielding a time history of the flowfield. Turbulence characteristics of the flow are obtained via an algebraic turbulence model. Results are displayed using a two-dimensional contour plotter, 'DISSPLA' graphics software and a VAX 11/780 computer. Author

**A85-47129**

**A FLOW VISUALIZATION STUDY OF THE EFFECT OF WING-TIP JETS ON WAKE VORTEX DEVELOPMENT**

J. M. WU and F. T. GILLIAM (Tennessee, University, Tullahoma) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 387-391. refs (Contract F33615-81-K-3034)

The use of discrete wing-tip jets to improve the wing performance and to modify the tip vortex roll up has been investigated. A complicated three-dimensional vortex interaction in the vicinity of the wing tip flow field becomes more clear through the flow visualization study in a water tunnel. The existence of many induced secondary vortices was discovered. This finding leads to a theoretical model for analyzing the interacting vortices flow field. Flow visualization also helped in pointing out the direction for future study. Author

**A85-47132**

**THE USE OF FLOW VISUALIZATION FOR VORTEX TRAJECTORY MAPPING**

R. C. NELSON (Notre Dame, University, IN) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 413-417. Research supported by the University of Notre Dame. (Contract F08635-80-K-0303)

A flow visualization technique employed to study the vortical wake flows on slender bodies of revolution and delta wing configurations is presented. The technique was used to investigate the leeward wake structure of bodies of revolution at large angles of attack. Both symmetric and asymmetric body vortex wakes were studied. The technique was also employed to study the leading edge vortex structure on delta wing models. Author

**A85-47134**

**QUANTIFICATION OF DOWNWASH AND GROUND VORTEX OF A LIFTING ROTOR MODEL BY FLOW VISUALIZATION TECHNIQUE**

K. WADA and H. HAYAFUJI (Meijo University, Nagoya, Japan) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 428-433.

The ground effect of a lifting rotor model of 0.08-m diameter with a constant thrust coefficient of 0.01134, a blade pitch angle of 9 deg, and no cyclic pitch control was studied in the open test section of a low-speed wind tunnel. The rotor downwash velocity and the ground vortex were visualized by using a smoke wire, a sheet of aluminum-tuft grid, and a wing sheel. An analysis of flow photographs made it possible to quantify the downwash and the ground vortex. Test results are presented in graphical form. V.L.

**A85-47144**

**VISUALIZATION STUDIES OF JET IMPINGEMENT FLOWS AT MCDONNELL DOUGLAS RESEARCH LABORATORIES**

K. R. SARIPALLI (McDonnell Douglas Research Laboratories, St. Louis, MO) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 503-509. Research supported by the McDonnell Douglas Independent Research and Development Program. refs

Visualization experiments were conducted in water to study jet impingement flows simulating the hover flight mode of vertical take-off and landing aircraft. The principal flow visualization technique used a fluorescent dye (fluorescein-sodium) as tracer fluid, with illumination by a sheet of light obtained by spreading a laser beam. Streak-line flow patterns were also obtained using air bubbles as tracer particles. The impingement configurations of a single jet issuing from a circular blocking plate, fountain-forming twin jets without a blocking plate, and inclined twin and quadruple jets were studied. The flow patterns in different cross sections of the flow were photographed for varying configuration parameters and jet velocities. Author

**A85-47149**

**VISUALIZATION OF THE VORTEX FLOW OVER DELTA AND DOUBLE-DELTA WINGS**

N. G. VERHAAGEN (Delft, Technische Hogeschool, Netherlands) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 652-657.

The structure of the vortex flow above and behind a sharp-edged delta wing and two sharp-edged double-delta wings has been investigated by employing a laserlight-sheet visualization technique. The investigation has been carried out at a free-stream velocity of 30 m/sec, corresponding to a Reynolds number of 1.4 million, based on centerline chord length. Author

**A85-47163#**

**ON THE ACCURACY OF BOUNDARY LAYER MEASUREMENTS IN CASCADES AT HIGH SUBSONIC SPEEDS**

M. HOEGER and H. HOHEISEL (DFVLR, Institut fuer Entwurfsaerodynamik, Brunswick, West Germany) IN: Measuring techniques for transonic and supersonic flow in cascades and turbomachines; Proceedings of the Seventh Symposium, Aachen, West Germany, September 21-23, 1983 . Aachen, Institut fuer Strahlantriebe und Turboarbeitsmaschinen, 1984, p. 6-1 to 6-22. refs

The accuracy of boundary layer measurements performed with flattened pitot tubes at high subsonic speeds was analyzed. The effect of Mach and Reynolds number, wall interference, probe position, and static pressure variation on the boundary layer results is investigated. Accuracy is estimated for the velocity profiles on the suction surface of a compressor cascade and a turbine cascade. A comparison of laser Doppler anemometry and probe measurements within the boundary layer of a single airfoil showed satisfactory agreement. B.J.

**A85-47164#**

### COMPARISON OF A COMPUTED TRANSONIC FLOW AND INTERFEROMETRIC MEASUREMENTS AROUND THE LEADING EDGE OF A TWO DIMENSIONAL AEROFOIL ASYMMETRICALLY MOUNTED IN A WIND TUNNEL

P. J. BRYANSTON-CROSS and J. D. DENTON (Cambridge University, England) IN: Measuring techniques for transonic and supersonic flow in cascades and turbomachines; Proceedings of the Seventh Symposium, Aachen, West Germany, September 21-23, 1983 . Aachen, Institut fuer Strahlantriebe und Turboarbeitsmaschinen, 1984, p. 7-1 to 7-15. SERC-supported research. refs

A two-dimensional numerical solution using an inviscid time marching method for the design of the leading edge profile of a transonic airfoil is compared with interferometric data obtained from image plane holograms. The comparison has been made for the whole blade profile including the trailing edge shock region. A particularly detailed analysis was made in the leading edge region where the flow is accelerated from stagnation conditions to M = 1.25 in 2 mm. The agreement between the calculated and measured flow around the airfoil section was found to be very good, and the time marching scheme adopted was found to predict with high resolution the flow around the leading edge of the blade despite a partial flow blockage. B.J.

**A85-47262**

### SOME RESULTS OF EXPERIMENTAL AND ANALYTICAL BUFFETING INVESTIGATIONS ON A DELTA WING

J. BECKER (Messerschmitt-Boelkow-Blohm GmbH, Hubschrauber und Flugzeuge, Munich, West Germany) and A. GRAVELLE (ONERA, Chatillon-sous-Bagneux, France) (International Symposium on Aeroelasticity and Structural Dynamics, 2nd, Aachen, West Germany, Apr. 1-3, 1985) ONERA, TP, no. 1985-59, 1985, 36 p.

(ONERA, TP NO. 1985-59)

Results of an investigation on the buffeting characteristics of a delta wing configuration are presented. The dynamic response on the wing of a tactical fighter type aircraft at high speed and incidence is calculated by using a semiempirical method. Separation induced unsteady pressure distributions measured on a wind tunnel model are evaluated to formulate aerodynamic excitation forces. Motion induced unsteady pressure distributions caused by harmonic roll oscillations of the model are used for a correction of aerodynamic system forces. The separation-induced buffet forces and the corrected theoretical motion-induced aerodynamic forces are established for various conditions of steady model incidence, reduced frequency, Mach number and Reynolds number. The semiempirical method is tested first by recalculation of the measured model response, and is applied to predict the buffeting of total rigid aircraft and its elastic wing. The wind tunnel measurements of this investigation were performed in a joint MBB/ONERA program in the ONERA tunnel S2 MA at Modane. Author

**A85-47269#**

### EXTENSION AND USE OF NUMERICAL PROCEDURE FOR THE THREE DIMENSIONAL UNSTEADY TRANSONIC FLOWS

P. MULAK, J. L. MEURZEC, and J. J. ANGELINI (ONERA, Chatillon-sous-Bagneux, France) (International Symposium on Aeroelasticity and Structural Dynamics, 2nd, Rheinisch-Westfaelische Technische Hochschule, Aachen, West Germany, Apr. 1-3, 1985) ONERA, TP, no. 1985-67, 1985, 10 p. refs

(ONERA, TP NO. 1985-67)

Recently a numerical procedure has been developed at ONERA to solve the unsteady transonic flow problems under 'potential flow' and 'small perturbation approximations', in the case of the most general planform wings. The use of an Alternating Direction Implicit procedure (ADI) and a functional approach has allowed a correct approximation for the small perturbation equation with consistent boundary conditions, obtained within a very reasonable computing time. Flexible models can now be taken into consideration and flutter calculations executed. The purpose of this paper is to present such results on a supercritical wing. Comparisons with experiments and the classical linear method (doublet lattice) are made. Author

**A85-47301#**

### AERODYNAMIC MODELS FOR PROPELLERS FOR FAST AIRCRAFT [CALCULS AERODYNAMIQUES D'HELICES POUR AVIONS RAPIDES]

J. M. BOUSQUET (ONERA, Chatillon-sous-Bagneux, France) (Groupe Sectoriel Franco-Sovietique - Aeronautique, Sous-groupe Aerodynamique, Acoustique Aeronautique et Structures, Reunion, 27th, Chatillon-sous-Bagneux, France, Mar. 11-15, 1985) ONERA, TP, no. 1985-55, 1985, 24 p. In French. DRET-supported research. refs

(ONERA, TP NO. 1985-55)

Features of several models being developed to describe the aerodynamics of propellers for transonic aircraft are outlined and compared with preliminary experimental results. The interest in propfans was spurred by NASA studies which have demonstrated potential efficiency gains at performance levels comparable to turbojet-powered transport aircraft. Traditional lifting line theory models provide a basis for curved lifting line, incompressible lifting surface and three-dimensional models for the propfan configurations, which are of smaller diameter than classic propeller systems and therefore must rotate at higher speeds. The validity of the new models has been established in tests of a 1 m diameter propfan in the Modane S1 wind tunnel. It is concluded that the models are of use in defining efficient airfoil shapes for realizing the potential of propfans and also as an aid in noise reduction studies. M.S.K.

### CONTRIBUTION TO THEORY OF SIMILITUDE OF SUBSONIC FLOW

A. A. SHAGAEV (TsAGI, Uchenye Zapiski, vol. 15, no. 2, 1984, p. 1-10) Fluid Mechanics - Soviet Research (ISSN 0096-0764), vol. 13, Jan.-Feb. 1984 (1985), p. 19-30. Translation. refs

The accuracy of the rules of similitude of subsonic flows about wings with infinite and finite span is analyzed. An asymptotic estimate is presented for errors of various rules correcting for compressibility and it is shown that the error of such rules can be minimized by optimum selection of the subsonic similitude parameter and by using the exact formulation of the incompressible potential flow about affine-similar foils. A similitude rule for pressure diagrams of affine-similar foils, valid in the second approximation of the subsonic theory of slender foils, is formulated. The results of calculations using approximate rules for correction for compressibility and numerical solutions of the exact equation of the potential in the case of two- and three-dimensional flows are compared. ### A STUDY OF LAMINAR SEPARATION BUBBLE IN THE CONCAVE REGION OF AN AIRFOIL USING LASER VELOCIMETRY

S. M. MANGALAM (Analytical Services and Materials, Inc., Tabb, VA), J. F. MEYERS, J. R. DAGENHART, and W. D. HARVEY (NASA, Langley Research Center, Hampton, VA) ASME, Laser Velocimetry Symposium, Miami, FL, Nov. 17-21, 1985, Paper. 9 p. refs

Laser velocimetry (LV) was used to study the nature of laminar separation bubbles in the concave region of a 1.83-meter airfoil model which was tested in the NASA Langley Low Turbulence Pressure Tunnel. Three component, coincident data from LV measurements including histograms of particle velocity, mean velocity profiles, turbulence intensity, and Reynolds stresses within the shear layer were used to determine the locations of laminar separation, transition, and turbulent reattachment. boundary-layer parameters determined from velocity profiles were used to compare the results with existing empirical relations for describing the laminar separation bubble. M. H. WILLIAMS (Purdue University, West Lafayette, IN), S. R. BLAND, and J. W. EDWARDS (NASA, Langley Research Center, Hampton, VA) AIAA Journal (ISSN 0001-1452), vol. 23, Oct. 1985, p. 1491-1496. Previously announced in STAR as N85-18000. refs

The dynamics of unsteady transonic small disturbance flows about two-dimensional airfoils is examined, with emphasis on the behavior in the region where the steady state flow is nonunique. It is shown that nonuniqueness results from an extremely long time scale instability which occurs in a finite Mach number and angle of attack range. The similarity scaling rules for the instability are presented and the possibility of similar behvior in the Euler equations is discussed. Author

**THE SUBSONIC NEAR-WAKE OF AN AXISYMMETRIC SEMIELLIPTICAL AFTERBODY**

R. A. MERZ (Lafayette College, Easton, PA), C. H. YI (Union Carbide Corp., Polyolefins Div., Bound Brook, NJ), and C. E. G. PRZIREMBEL (Clemson University, SC) AIAA Journal (ISSN 0001-1452), vol. 23, Oct. 1985, p. 1512-1517. refs

The near-wake of axisymmetric semielliptical afterbody was studied experimentally in a wind tunnel at 47 m/s using an upstream support system to minimize disturbances to the wake. The flowfield was surveyed with a variety of pressure and hot-wire probes. This paper presents the mean flowfield characteristics for the entire near-wake region. The results include static and stagnation pressure distributions as well as velocity profiles. Separation occurred at 0.38 model radii upstream of the base, while realignment was found at 0.2 model radii downstream. Centerline velocity recovery is slower than for blunt bases, but far-wake similarity was found as early as 0.4 radii downstream. The overall flowfield is heavily influenced by the wall geometry. The data presented will serve as a quantitative basis for the development and evaluation of analytical solutions. Author

**SUPPLEMENTS TO 'THEORY OF SECONDARY FLOW IN CASCADES'**

S. OTSUKA (Nagoya University, Japan) Nagoya University, Faculty of Engineering, Memoirs (ISSN 0027-7657), vol. 36, Nov. 1984, p. 118-137. refs

The secondary flow in a two-dimensional cascade has been investigated experimentally in a high-speed cascade wind tunnel. It is shown that the direction of the wake has a definite value which is independent of the aspect ratio of the cascade when loss coefficients are low. The direction of the secondary flow was related to the direction of the mean exit flow measured by a yaw meter. The experimental results confirmed the theoretical flowcalculations of Otsuka (1977). **NUMERICAL ANALYSIS OF TRANSONIC FLOW AROUND A TWO-DIMENSIONAL AIRFOIL BY SOLVING FULL NAVIER-STOKES EQUATIONS**

Y.-Y. WANG and T. FUJIWARA (Nagoya University, Japan) Nagoya University, Faculty of Engineering, Memoirs (ISSN 0027-7657), vol. 36, Nov. 1984, p. 138-178. refs

An effective finite-difference scheme for solving full compressible Navier-Stokes equations was initiated by Beam and Warming. The purpose of this paper is to develop that technique and apply it to the calculations of several typical subsonic and transonic, inviscid and viscous steady flows for NACA 0012 airfoil. Part of the analysis briefly contains the derivation process of all used formulas and the empirical treatments. Inviscid and viscous flows are analyzed separately, along with associated grid formation techniques and boundary conditions. Author

### EXPERIMENTAL METHOD FOR THE STUDY OF CORNER FLOWS [METHODE EXPERIMENTALE D'ETUDE DES ECOULEMENTS DE COIN]

J. COUSTEIX and G. PAILHAS (ONERA, Centre d'Etudes et de Recherches de Toulouse, France) Association Aeronautique et Astronautique de France, Colloque d'Aerodynamique Appliquee, 21st, Ecully, France, Nov. 7-9, 1984. 39 p. In French.
(AAAF PAPER NT 84-06)

A four-wire hot-wire anemometer was devised for obtaining data on the three velocity components in corner flows such as are present at wing-fuselage joints and between rows of turbomachinery blades. The sensor is calibrated to extract the angular sensitivity of velocity values obtained. Data from the probe are analyzed statistically to extract the average velocities and the Re stresses. Details of the numerical model for interpreting the data are discussed. Sample pressure and velocity data are provided for flow passing a wing-fuselage junction. The data expose the formation of an initial nonuniform boundary layer containing cells of longitudinal vortices. M.S.K.

### THE UNSTEADY PROPERTIES OF A FLOW WITHIN A SCHEMATIC AIR INTAKE [PROPRIETES INSTATIONNAIRES DE L'ECOULEMENT A L'INTERIEUR D'UNE PRISE D'AIR SCHEMATIQUE]

P. GRYSON and J. P. FLODROPS (Lille I, Universite, France) Association Aeronautique et Astronautique de France, Colloque d'Aerodynamique Appliquee, 21st, Ecully, France, Nov. 7-9, 1984. 43 p. In French. DRET-supported research.
(AAAF PAPER NT 84-09)

Experimental results are presented from wind tunnel studies of the two-dimensional vortical structures that form beyond the lip of a variable height air duct. The recirculating, divergent tunnel used had a 40 x 200 mm test channel. Two parallel, 8 mm thick flat plates, whose separation distance was controllable, were used in the studies. The effects of 20, 30, 40, and 60 mm separations were examined in flows with velocities between Mach 0.4-0.5. Interior data were obtained using pressure probes along and off the wall. Strio-interferometry was employed to generate flow visualizations. The appearance of the vortical fluctuations was found to be due to the interior pressure fluctuations. M.S.K.

### TURBULENCE IN AIR INLETS [LA TURBULENCE DANS LES MANCHES A AIR]

J. C. COURTY, C. CAMBON, and M. HAMADICHE (Avions Marcel Dassault-Breguet Aviation, Vaucresson; Lyon, Ecole Centrale, Ecully, France) Association Aeronautique et Astronautique de France, Colloque d'Aerodynamique Appliquee, 21st, Ecully, France, Nov. 7-9, 1984. 42 p. In French. refs
(Contract DRET-77-410; DRET-80-552)
(AAAF PAPER NT 84-10)

A spectral approach is taken to model turbulent shear flows within air intakes at high angles of attack. The model was developed to understand the effects of longitudinal and transversal pressure gradients on the turbulence. Using wind tunnel velocity fluctuation data for the interior of a compressor as a basis, a spectral model of anisotropic homogeneous turbulence is defined, including initial and boundary conditions. It is found, after examining the experimental data, that the fluctuations will probably appear at angles of attack over 14.5 deg. The fading of the largest fluctuations will be equivalent to the global fading of the fluctuations. It is therefore recommended that subsequent studies be focused on identifying the highest magnitude fluctuations. M.S.K.

### A FINITE DIFFERENCE MODEL FOR FLOWS AROUND AN AIR INTAKE [CALCUL DE L'ECOULEMENT AUTOUR D'UNE PRISE D'AIR EN DIFFERENCES FINIES]

J. P. FAIDY (Avions Marcel Dassault-Breguet Aviation, Vaucresson, France) Association Aeronautique et Astronautique de France, Colloque d'Aerodynamique Appliquee, 21st, Ecully, France, Nov. 7-9, 1984. 45 p. In French. refs
(AAAF PAPER NT 84-11)

A finite difference model is presented for simplifying the calculations necessary for designing air intake ducts for high performance military aircraft. The potential equation for a perfect fluid is written in nonconservative form in cylindrical coordinates. Account is taken of the presence of a conical object in the duct to assure flow stability in the presence of supersonic shocks. The three-dimensional geometry of the intake and cone is treated in terms of a series of longitudinal cross-sections in rotation from the center of the cone. Sample calculations for supersonic flow phenomena in the intake, when compared with wind tunnel data, show satisfactory agreement even though entropy and viscous effects are neglected. M.S.K.

### THE CHARACTERISTICS OF UNSTEADY FLOW IN AIR INTAKES [CARACTERISTIQUES DE L'ECOULEMENT INSTATIONNAIRE DANS LES ENTREES D'AIR]

M. BOURIOT, J. DELVILLE, and H. GAREM (Poitiers, Universite, France) Association Aeronautique et Astronautique de France, Colloque d'Aerodynamique Appliquee, 21st, Ecully, France, Nov. 7-9, 1984. 22 p. In French. refs
(Contract DRET-83-146)
(AAAF PAPER NT 84-13)

Past and current experimentation to characterize flows in jet engine intakes at the French Center for Aerodynamic and Thermal Studies are reviewed. Experiments on circular and planar intakes have thus far covered the characteristic scales of flow phenomena, wall effects and visualizations, probabilistic velocity and pressure conditions and coherence lengths. Presently, attempts are being made to extend all the previous techniques and measurements, which were in the two-dimensional regime, to three dimensions. The trials are performed in a square-section jet-powered wind tunnel. Instrumentation is available for 18 separate flow measurements spaced 10 deg apart and at five radial locations in the intakes tested. Calibration methods are detailed and initial results for flow velocities in intakes are compared with equivalent data from other wind tunnels. M.S.K.

**A85-48998**

### CALCULATION OF THE FLOW IN AN AIR INTAKE DUCT BY NUMERICAL SOLUTION OF THE EULER EQUATIONS [CALCUL DE L'ECOULEMENT DANS UNE ENTREE D'AIR PAR RESOLUTION NUMERIQUE DES EQUATIONS D'EULER]

CH. KOECK (Matra, S.A., Velizy-Villacoublay, France) Association Aeronautique et Astronautique de France, Colloque d'Aerodynamique Appliquee, 21st, Ecully, France, Nov. 7-9, 1984. 25 p. In French. refs
(AAAF PAPER NT 84-24)

Techniques are presented for solving the Euler equations applied to modeling the flow in an intake duct such as found on a turbojet-powered missile. Boundary conditions are defined in terms of wall friction, supersonic upstream flow variables, static pressure downstream, and subsonic velocity and drag forces. A finite volume approach is taken, using multiple grids, to obtain a two-dimensional solution. Account is taken of sideslip and the effects of different angles of attack. The method permits predictions of flow distortions which would cause asymmetrical intake flows. It is noted that a viscous treatment will not necessarily ensure the desired intake conditions. M.S.K.

**MODELING TECHNIQUES FOR TRANSONIC AIRFOILS**
S. L. PETRIE, R. J. FREULER, G. M. GREGOREK, and M. B. BRAGG (Ohio State University, Columbus) IN: Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 . La Jolla, CA, Society for Computer Simulation, 1984, p. 125-143. refs
(Contract NAS1-14406)

In the present comparative study of computer codes for the modeling of two-dimensional, single element airfoil sections for various section geometry classes, two of the codes use vortex singularities methods to obtain the potential flow solution while the remainder solve the full inviscid potential flow equations by means of finite differencing techniques that allow results to be obtained for transonic flow about an airfoil which includes weak shocks. Computational results are presented for a symmetrical airfoil section, a conventional section, and a supercritical one. Icing condition applications of the models are noted. The model codes' range of applicability and agreement with each other and experimental results, as well as their computer run times and memory requirements, are noted. O.C.

W. G. HABASHI (Concordia University, Montreal; Pratt and Whitney Canada, Longueuil, Canada), P. L. KOTIUGA, and L. A. MCLEAN (Pratt and Whitney Canada, Longueuil, Canada) Engineering Analysis (ISSN 0264-682X), vol. 2, Sept. 1985, p. 150-154. refs

This paper presents three alternatives to the classical velocity potential formulation, for inviscid flows with strong shocks. The first method is based on a modified potential, the second on a transonic stream function formulation and the third on a combination that approximates the Euler set of equations. These methods are used to successfully model external flows with strong shocks and choked internal and turbomachinery flows. Author

**UNSTEADY LIFTING-LINE THEORY AS A SINGULAR-PERTURBATION PROBLEM**
A. AHMADI and S. E. WIDNALL (MIT, Cambridge, MA) Journal of Fluid Mechanics (ISSN 0022-1120), vol. 153, April 1985, p. 59-81. refs
(Contract NGR-22-009-818)

Unsteady lifting-line theory is developed for a wing of large aspect ratio oscillating at low frequency in inviscid incompressible flow. The wing is assumed to have a rigid chord but a flexible span. Use of the method of matched asymptotic expansions reduces the problem from a singular integral equation to quadrature. The pressure field and airloads, for a prescribed wing shape and motion, are obtained in closed form as expansions in inverse aspect ratio. A rigorous definition of unsteady induced downwash is also obtained. Numerical calculations are presented for an elliptic wing in pitch and heave; compared with numerical lifting-surface theory, computation time is reduced significantly. The present work also identifies and resolves errors in the unsteady lifting line theory of James (1975), and points out a limitation in that of Van Holten (1975, 1976, 1977). Author

**COMPUTATION OF INVISCID INCOMPRESSIBLE FLOW WITH ROTATION**
A. RIZZI and L.-E. ERIKSSON (Flygtekniska Forsoksanstalten, Bromma, Sweden) Journal of Fluid Mechanics (ISSN 0022-1120), vol. 153, April 1985, p. 275-312. refs

In numerical studies of incompressible flow fields possessing substantial regions with rotation, difficulties can arise due to the task of having to set up vortex-sheet discontinuities in the field. The alternative is to adopt the Euler equations as the flow model. The recent discovery that a vortex sheet can be generated in the solution of a compressible flow field with separation from the leading edge of a delta wing at high angle of attack has led to the development of numerical methods to solve the compressible Euler equations. However, difficulties arise with respect to the employment of these methods in the case of an incompressible problem. The present investigation has the objective to describe a rather general numerical method which takes the artificial-compressibility approach for solving the steady incompressible Euler equations. **A85-49366**

**CHARACTERISTICS OF A TRAILING-EDGE FLOW WITH TURBULENT BOUNDARY-LAYER SEPARATION**

B. E. THOMPSON and J. H. WHITELAW (Imperial College of Science and Technology, London, England) Journal of Fluid Mechanics (ISSN 0022-1120), vol. 157, Aug. 1985, p. 305-326. SERC-supported research. refs

Experimental techniques, including flying-hot-wire anemometry, have been used to determine the pressure and velocity characteristics of a flow designed to simulate the trailing-edge region of an airfoil at high angle of attack. Emphasis is placed on the region of recirculating flow and on the downstream wake. It is shown that the effect of this recirculation is large even though the details of the flow within it may be unimportant. Normal stresses and cross-stream pressure gradients are important immediately upstream and downstream of the recirculating flow and are associated with strong streamline curvature. The relative importance of the terms in the transport equations for mean momentum and turbulence energy are quantified and the implications for procedures which solve potential-flow and boundary-layer equations and for alternative calculation methods are discussed. Author

**A NOTE ON THE STEADY HIGH-REYNOLDS-NUMBER FLOW ABOUT A CIRCULAR CYLINDER**

D. H. PEREGRINE (Bristol, University, England) Journal of Fluid Mechanics (ISSN 0022-1120), vol. 157, Aug. 1985, p. 493-500. refs

The most detailed theoretical description of the steady flow at high Reynolds number about a circular cylinder is given by Smith (1979). It appears to give a satisfactory description of much of the flow field. Numerical solutions for this flow computed by Fornberg (1985) are in conflict with some aspects of Smith's model. An acknowledged weak point in Smith's argument is the lack of a detailed flow for the interior of the eddies, particularly with respect to their rear closure. This paper discusses this aspect of the flow with particular emphasis on the vorticity distribution and with the aid of a solution of the Navier-Stokes equations which is valid at the rear of the eddies. As a result an interpretation of Fornberg's (1980, 1985) results is possible. The self-induced velocity of translation of the vorticity distribution is considered and discussed with reference to the flow as Re approaches infinity. Author

**APPROXIMATE CALCULATION OF FLOW FIELD IN AN INLET WITH ARBITRARY CROSS SECTIONS AND CURVED AXIS**

C. LIN (Northwestern Polytechnical University, Xian, People's Republic of China) (Journal of Applied Mechanics, vol. 1, no. 1, 1984) Northwestern Polytechnical University, English Translation of Selected Papers, ET-12 to ET-17, July 1985, 13 p. Translation.

An approximate solution for steady compressible inviscid potential flow in a slender inlet with a curved axis and arbitrary cross section is obtained using the asymptotic expansions of the flow variables in the framework of the perturbation method. It is shown that the axial velocity component at the centroid of the cross section is equal to the one-dimensional value, while that at a point other than the centroid is inversely proportional to the distance between the point and the center of curvature of the axis. In addition, it is demonstrated that the cross-sectional velocity components can be divided into two parts, with one corresponding to the variation of the cross-section area and the other corresponding to the variation of the cross-section shape. B.J.

**ON THE ABRUPT TURBULENT REATTACHMENT DOWNSTREAM OF LEADING-EDGE LAMINAR SEPARATION**

F. T. SMITH (University College, London, England) and J. W. ELLIOTT (Hull, University, England) Royal Society (London), Proceedings, Series A - Mathematical and Physical Sciences (ISSN 0080-4630), vol. 401, no. 1820, Sept. 9, 1985, p. 1-27. SERC-supported research. refs

The unsteady marginal separations in a classical boundary layer are investigated theoretically. The problem of local flow is reduced to the solution of a nonlinear integropartial differential equation for the unknown scaled skin friction which is also proportional to the decrement in the displacement. Numerical solutions for the separations are evaluated analytically, and the results are discussed. It is shown that all short length small disturbances are unstable whenever reversed flow occurs, but for sufficiently confined initial conditions the instabilities accumulate which lead to breakdown after a finite time. In nonlinear breakdown a double structure arises near the point of collapse with an effective 'shock' taking the flow abruptly from the reversed sense just upstream to the forward sense just downstream. The shock forms the link to the sudden transition and turbulent reattachment of laminar eddies at the rounded leading edges. The turbulence effects and the related phenomenon of dynamic stall are also discussed. I.H.

**A SIMPLE AND EFFECTIVE DIFFERENCE SCHEME IN AERODYNAMICS**

D. FU and Y. MA (Beijing Institute of Aerodynamics, People's Republic of China) Acta Aerodynamica Sinica, no. 3, 1985, p. 15-23. In Chinese, with abstract in English.

The usual explicit difference schemes in aerodynamics are modified by the addition of a supplementary difference operator. The techniques used in obtaining the new schemes are as simple and easy to manipulate as the original explicit difference schemes but require large time steps for computation in the case of a full implicit scheme. The method is applied to solve 2-D shock wave boundary layer interaction problem. The computed result is compared with experiment and solutions of implicit MacCormack scheme. Numerical experiments show that the developed scheme is effective. Author

**VARIATIONAL PRINCIPLE FAMILIES FOR HYBRID PROBLEMS OF BLADE-TO-BLADE FLOW ALONG AXISYMMETRIC STREAM-SHEET - A UNIFIED VARIABLE-DOMAIN APPROACH**

G. LIU (Shanghai Institute of Mechanical Engineering, People's Republic of China) Acta Aerodynamica Sinica, no. 3, 1985, p. 24-33. In Chinese, with abstract in English. refs

The mathematical tool of functional variations with variable domain is used to develop a new unified theory of various hybrid problems of blade-to-blade flow. Natural boundary conditions and artificial interface are taken into account, as are distributed mass suction and/or injection along the blade surface. A new and sound theoretical basis for FEM and other variational methods, as well as a series of new methods for blade design and modification, are presented. This theory also constitutes an important part of the optimization theory of bladings and can be extended to S2 stream surface flow, fully 3-D flow, and wing design or modification. C.D.

**A85-49705#**

**THE ROLLING VORTEX-DAMPING OF SUPERSONIC WING**

H. YAN (Northwestern Polytechnical University, Xian, People's Republic of China) Acta Aerodynamica Sinica, no. 3, 1985, p. 45-53. In Chinese, with abstract in English. refs

Based on the separated vortex field of the wing and vortex lifetime theory, theoretical formulas for the rolling vortex damping of a supersonic wing due to separated vortex of low aspect ratio sharp-edged wings under roll and angle attack are derived using suppersonic linear theory. Two terms are included in the roll vortex damping, one proportional to the product of attack angle and roll rate, the other proportional to the square of the roll rate. A new theoretical calculation model of roll damping is presented. Values for the rolling damping factor with various combination parameters of the wing planforms are given, and some comparisons between this method and prevalent potential theory are made. C.D.

### RESEARCH ON IMPLICIT APPROXIMATE-FACTORIZATION FINITE-DIFFERENCE METHOD FOR THE EULER EQUATION

F. LIU (Northwestern Polytechnical University, Xian, People's Republic of China), Y. WEI, and T. MAI (Beijing Institute of Aeronautics and Astronautics, People's Republic of China) Acta Aerodynamica Sinica, no. 3, 1985, p. 54-62. In Chinese, with abstract in English. refs

An implicit approximate-factorization finite difference method is presented and used to calculate a number of two-dimensional steady flow problems typical in computational fluid dynamics, including (1) subsonic, supersonic, and transonic flows in a straight divergent nozzle, (2) supersonic flows past an infinite wedge and a symmetric double wedge airfoil, and (3) subsonic, transonic, and supersonic flows past the NACA 0012 airfoil. The method treats strong shocks correctly, automatically satisfies the Kutta condition, and permits the use of Courant numbers greater than one so that the computation is accelerated. Both analysis and computation are carried out in body-fitted coordinate systems. The method can be extended to the calculation of three-dimensional problems. C.D.

### A CALCULATING METHOD OF THE BREAKDOWN FEATURE OF THE LEADING-EDGE SEPARATING VORTEX FOR SLENDER DELTA WINGS

B. LIN (Beijing Institute of Aerodynamics, People's Republic of China) Acta Aerodynamica Sinica, no. 3, 1985, p. 63-71. In Chinese, with abstract in English. refs

A double layer mode was established, which can be used to describe the separating vortex flow over the delta wing leading-edge. The inner layer of this double layer mode is the vortex core and outer layer is the nonrotational potential flow, both these provide the initial and outer edge conditions which are necessary for solving vortex core development. In the incompressible flow the method not only can compute the initial breakdown angles of attack, but also can compute the breakdown points along the line of the root chord when the angles of attack is more than the critical ones. The theoretical results agree with the experiment measures well and show that the breakdown points are independent of the Reynolds number. Author

### ON ROLLING RESONANCE AND SMALL ASYMMETRICAL AERODYNAMIC FORCE OF RE-ENTRY BODY

J. CAI (China Aerodynamics Research and Development Center, People's Republic of China) Acta Aerodynamica Sinica, no. 3, 1985, p. 72-81. In Chinese, with abstract in English. refs

The rolling resonance of a reentry body is discussed from a flight mechanical and aerodynamical standpoint, and the divergence of the angle of attack of the reentry body is analyzed. It is shown that rolling resonance is a primary hazard for the reentry body. It is suggested that the determination of random ablative configurations and the corresponding mathematical expectations and variances of small asymmetrical aerodynamic coefficients are key problems in the prediction of rolling resonance probability for a reentering body. C.D.

### ANALYTICAL SOLUTIONS FOR UNSTEADY PRANDTL-MEYER FLOW

J. CHEN and J. HUO (Nanjing Aeronautical Institute, People's Republic of China) Acta Aerodynamica Sinica, no. 3, 1985, p. 96-101. In Chinese, with abstract in English. refs

Using the frequency perturbation method analytical solutions for unsteady Prandtl Meyer flow are obtained, which consist of a series including up to the fifth power of the frequency. The solutions are held to the expansive surface of a two dimensional supersonic/hypersonic flat wings oscillating harmonically in pitching for the small amplitude and low frequency at arbitrary angle of attack. The contributions of higher power frequency terms of the frequency are analyzed, based on the numerical results in this paper. Author

### THE AERODYNAMIC CHARACTERISTICS OF A GU25-5(11)8 AEROFOIL FOR LOW REYNOLDS NUMBERS

R. A. MCD. GALBRAITH (Glasgow, University, Scotland) Experiments in Fluids (ISSN 0723-4864), vol. 3, no. 5, 1985, p. 253-256. refs

Wind tunnel test results are presented for the GU25-5(11)8 airfoil, most commonly used on canard microlights and characterized as a high-lift low-drag airfoil. Data were obtained for the Reynolds number range of 50,000 to 610,000, corresponding to the transition from a laminar separation flow with no reattachment to a fully attached and turbulent flow. Severe performance degradation is reported for the Re (based on freestream velocity and airfoil chord) lower that 300,000. Furthermore, oil flow pattern at the wall/airfoil junction exhibits corner boundary separation before the main airfoil separation bubble, resulting in a strong standing vortex. L.T.

### THE ANALYSIS OF COUNTER-ROTATING PROPELLER SYSTEMS

D. J. LESIEUTRE and J. P. SULLIVAN (Purdue University, West Lafayette, IN) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 14 p. refs
(SAE PAPER 850869)

A vortex lattice method for the aerodynamic analysis of counter-rotation propellers was developed. This model along with an unsteady Sears analysis for correcting the quasi-steady loadings that are obtained from the vortex lattice model were used to predict the performance of counter-rotation propeller systems. The method developed shows good correlation with experimental results. The investigation into the unsteady loadings on each of the propellers indicates that significant variations in loading occur due to the unsteady flow and due to the propeller blade passage. These variations were found to be as high as 17 percent of the mean value. The parametric studies that were performed indicate that reducing the rear propeller's diameter or rotational speed results in a loss of efficiency. Author

### LASER VELOCIMETER MEASUREMENTS OF THE FLOW FIELDS AROUND SINGLE- AND COUNTER-ROTATION PROPELLER MODELS

D. M. DUNHAM, W. L. SELLERS, III (NASA, Langley Research Center, Hampton, VA), and J. W. ELLIOTT (U.S. Army, Structures Laboratory, Hampton, VA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 9 p.
(SAE PAPER 850870)

A two-component LV system was used to make detailed measurements of the flow field around both a single-rotation and a counter-rotation propeller/nacelle. The conditions measured for the single-rotation tractor configuration include two different blade angles and two propeller advance ratios, and for the counter-rotation propeller configuration include both pusher and tractor mounts. The measurements show the increasing slipstream velocities and contraction with increasing blade angle and with decreasing advance ratios. Data for the counter-rotation system show that the aft propeller turns the flow in the opposite direction from the front propeller. Additionally, the LV system was used as a diagnostic tool to provide data to explain the large side force measured on the propeller/nacelle at angle-of-attack. Author

**NOISE CONSTRAINTS EFFECTING OPTIMAL PROPELLER DESIGNS**

C. J. MILLER (NASA, Lewis Research Center, Cleveland, OH) and J. P. SULLIVAN (Purdue University, West Lafayette, IN) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 11 p. Previously announced in STAR as N85-19923. refs
(SAE PAPER 850871)

A preliminary design tool for advanced propellers was developed combining a fast vortex lattice aerodynamic analysis, a fast subsonic point source noise analysis, and an optimization scheme using a conjugate directions method. Twist, chord and sweep distributions are optimized to simultaneously improve both the aerodynamic performance and the noise observed at a fixed relative position. The optimal noise/performance tradeoffs for straight and advanced concept blades are presented. The techniques used include increasing the blade number, blade sweep, reducing the rotational speed, shifting the spanwise loading and diameter changes. E.A.K.

**A THREE-DIMENSIONAL VISCOUS FLOW ANALYSIS FOR THE HELICOPTER TIP VORTEX GENERATION PROBLEM Final Report**

S. J. LIN, R. LEVY, S. J. SHAMROTH, and T. R. GOVINDAN Washington NASA Aug. 1985 69 p refs
(Contract NAS1-14904)
(NASA-CR-3906; NAS 1.26:3906) Avail: NTIS HC A04/MF A01 CSCL 01A

The tip vortex flow field occurring in the vicinity of the tip region of a a helicopter rotor blade is a very complicated three-dimensional, viscous flow phenomenon. The details of the flow in the tip region can have a major effect in determining the generated rotor noise and can significantly affect the performance and dynamic loading of the rotor blade. The three-dimensional viscous subsonic tip vortex generation processes is investigated by a numerical procedure which allows spatial forward-marching integration, utilizing flow approximations from the velocity-decomposition approach of Briley and McDonald. The approach has been applied to compute the laminar and turbulent tip vortex flows for a constant thickness slab airfoil with a square tip, a constant thickness slab airfoil with a half round tip and a NACA 0012 airfoil with a half round tip. The basic mechanism of the tip vortex generation process as well as the prediction of vortex appearance, strength and secondary flow shown by the calculations are in qualitative agreement with experimental results. **AN EVALUATION OF THREE HELICOPTER ROTOR SECTIONS**

R. M. HICKS and L. J. COLLINS (Informatics General Corp., Palo Alto, Calif.) Aug. 1985 122 p refs
(NASA-TM-86719; REPT-85219; NAS 1.15:86719) Avail: NTIS HC A06/MF A01 CSCL 01A

Three helicopter rotor sections were tested in the NASA Ames Research Center 2- by 2-Foot Transonic Wind Tunnel over a Mach range from 0.2 to 0.88. The sections tested had maximum thickness/chord ratios of 0.078, 0.09, and 0.10. The thickest section was of early technology and had been tested previously in other wind tunnels. This section was included in the investigation to establish a basis for comparing the two thinner sections, which were of recent design. The results of the investigation showed that the pitching-moment characteristics for the three airfoil sections were acceptable. The drag divergence Mach numbers for the three sections were 0.80, 0.825, and 0.845 in order of decreasing thickness. Author

**USE OF A HYPERBOLIC GRID GENERATION SCHEME IN SIMULATING SUPERSONIC VISCOUS FLOW ABOUT THREE-DIMENSIONAL WINGED CONFIGURATION**

Y. M. RIZK (Informatics General Corp., Palo Alto, Calif.), J. L. STEGER, and D. S. CHAUSSEE Jul. 1985 16 p refs
(NASA-TM-85344; REPT-85344; NAS 1.15:85344) Avail: NTIS HC A02/MF A01 CSCL 01A

The present paper describes a numerical mesh generation technique to be used with an implicit finite difference method for simulating visous supersonic flow about low-aspect-ratio wing body configurations using a single grid strategy. The computational domain is segmented into multiple regions, with borders located in supersonic areas to avoid the otherwise costly interfacing procedure between adjacent segments. The numerical procedure is applied to calculate the turbulent flow around the shuttle orbiter and a canard projectile at supersonic free stream Mach number. Author

**A DESIGN PROCEDURE TO MODIFY THE TRAILING EDGE UPPER SURFACE PRESSURE GRADIENT OF A GIVEN AEROFOIL**

A. J. NIVEN and R. A. M. GALBRAITH 10 Jul. 1984 29 p refs Sponsored by Westlands Helicopters Public Ltd. Company and UK Science and Engineering Research Council
(GU-AERO-8408) Avail: NTIS HC A03/MF A01

A method whereby the pressure gradient on the trailing edge upper surface of a given airfoil may be modified to enhance or reduce trailing-edge separation during dynamic stall, for a given section, while retaining the leading edge pressure distribution, is outlined. The NACA 23012 airfoil was modified to enhance the boundary layer separation at the trailing-edge. The modification procedure consists of three algorithms: a potential flow panel method allowing calculation of the original pressure gradient at any angle of attack; a procedure allowing the modification of this gradient; and an inverse potential flow panel method to calculate a new profile from the modified vorticity distribution. **MODELLING OF UNSTEADY, INCOMPRESSIBLE SEPARATION ON AN AEROFOIL USING AN INVISCID FLOW ALGORITHM**

M. VEZZA and R. A. M. GALBRAITH 8 Nov. 1984 33 p refs
(GU-AERO-8412) Avail: NTIS HC A03/MF A01

A method for the prediction of unsteady, incompressible separated flow over a two dimensional airfoil is presented. The algorithm was developed from an unsteady potential flow model and uses an inviscid formulation for the flow field. The airfoil is represented by vortex panels of linearly varying strength, piecewise continuous at the corners. Discrete vortices with finite cores are used to model the separating shear layers. Unsteady separation modeling, the theoretical framework, and numerical implementation are discussed. Results for flows which tend asymptotically to the steady state are encouraging. Author (ESA)

**AN INVESTIGATION INTO THE THREE-DIMENSIONAL STALL DEVELOPMENT ON A MODIFIED NACA 23012 AEROFOIL**
A. J. NIVEN and R. A. M. GALBRAITH 22 Nov. 1984 19 p refs Sponsored by United Kingdom Science and Engineering Research Council
(Contract MIN-DEF-2048/026XR/STR)
(GU-AERO-8414) Avail: NTIS HC A02/MF A01

A numerical method of modifying the trailing edge upper surface pressure gradient of a given airfoil was applied to the NACA 23012 airfoil to enhance the trailing edge pressure gradient. The redesigned airfoil was tested in a subsonic wind tunnel. A flow visualization technique, using a fluorescent yellow oil-film, was used to indicate transition regions, laminar separation bubbles, and the positions of turbulent separation. The extent of three-dimensionality, reverse flow, and corner flow separation were also observed. Results show increased boundary layer separation of the modified airfoil, and vindicate the design method. Author (ESA)

**COMMENTS ON THE PREDICTION OF DYNAMIC STALL**
R. A. M. GALBRAITH 20 Mar. 1985 25 p refs
(Contract DAJA45-84-M-0446)
(GU-AERO-8501) Avail: NTIS HC A02/MF A01

Navier-Stokes, discrete vortex, zonal, and empirical methods for predicting dynamic stall were reviewed. It is concluded that accepted test cases by which the performance of dynamic stall methods may be assessed are needed. There is an unresolved dilemma as to which basic prediction philosophy should be adopted. Using the appropriate form of the Navier-Stokes equations in finite difference form requires large and expensive computing power, while the predominantly empirical procedures need little of such power but much expensive data. A summary table provides a quick reference to the methods. Author (ESA)

**AEROELASTIC CONSTRAINTS FOR A WING WEIGHT MINIMIZATION PROCEDURE**
S. G. HEDMAN Feb. 1985 17 p refs
(Contract STU-81-4626)
(FFA-TN-1985-4) Avail: NTIS HC A02/MF A01

Basic formulas of aeroelastic relations for use as constraints in a wing weight optimization procedure are derived. Steady subsonic or supersonic flow is assumed, and a reference plane panel method is chosen as the aerodynamic load generator. Wing elastic deformation is assumed to be a linear function of the applied loads. The effect of changing the amount of wing material for each wing panel on the deformation properties is used in expressions for aeroelastic efficiency and induced drag. The formulas were successfully implemented for a high aspect ratio wing application. Author (ESA)

**A COMPARISON OF LASER DOPPLER ANEMOMETRY AND PROBE MEASUREMENTS WITHIN THE BOUNDARY LAYER OF AN AIRFOIL AT SUBSONIC FLOW**
P. MEYER, G. KOERBER, H. HOHEISEL (DFVLR, Brunswick), and M. HOEGER (DFVLR, Brunswick) 3 Sep. 1984 18 p refs Presented at 2nd Intern. Symp. on Appl. of Laser Anemometry to Fluid Mech., Lisbon, 2-4 Jul. 1984
(Contract DFVLR-IB-129-84/5)
(ISL-CO-219/84) Avail: NTIS HC A02

Measurements were performed with a Pitot probe and a laser Doppler anemometer in the boundary layer of a NACA 65-213 airfoil with a separation bubble on the suction side. Comparison of the results shows good agreement for attached laminar and turbulent boundary layers, at the separation point, and in the laminar separated region except for reverse flow. Differences between the two techniques are observed only near the reattachment point in flow areas with steep pressure gradients, where the presence of the probe may lead to disturbances in the flow field. The importance of a laminar separation bubble for the improvement of cascade flow and airfoils is discussed. Author (ESA)

**A STREAM FUNCTION APPROACH TO SOLVING THE CONSERVATIVE EULER EQUATIONS FOR TRANSONIC FLOWS Ph.D. Thesis**
H. L. ATKINS 1984 121 p
Avail: Univ Microfilms Order No. DA8506981

An approach to obtaining steady state solutions to the conservative Euler equations in two dimensions is presented. The approach makes use of the adiabatic assumption, and employs the stream function and the density as dependent variables, thus eliminating one equation and one unknown. The present approach is implemented in two different ways. In the first method, the conservative Euler equations are recast in terms of the density and the stream function to yield a system of two partial differential equations. The resulting equations are stiff, and hence, are solved by a fully implicit method for a geometrically simple internal flow problem. In the second method, the partial differential equation for density is replaced by an algebraic relation. Thus the resulting formulation involves solving one second order partial differential equation for the stream function. The second method is applied to airfoils at transonic speeds. Dissert. Abstr.

Avail: NTIS HC A06/MF A01; original German version available from DFVLR, Cologne DM 39.20

A data evaluation system was developed to estimate flight-mechanical characteristics. The measurements concern specific aerodynamic forces, angular velocities, and air data (flight velocity, angle of attack, and sliding angle). The measurement data are incompatible due to zero point drift, false calibrations, and noise. The data evaluation system uses the redundancy between the data through the equations or motion to estimate the errors, resulting in a compatible set of data. The state variables are Kalman filter estimated. Author (ESA)

Two state-of-the-art computer programs, Q3DFLOW and a standard Cebeci boundary layer program as applied to aerodynamic flows in a cascade are examined. Q3DFLOW is a quasi three-dimensional finite element turbomachinery program. Only the incompressible blade-to-blade module of this program is used. The Cebeci boundary layer program is for incompressible, two dimensional, and constant viscosity flows. It is used to calculate boundary layers on a few isolated airfoils and airfoils/blades in a cascade. Experimental data and other analytical computations are compared for both programs. Additionally, the theory and operation of the Cebeci boundary layer program are presented. GRA

**THE INFLUENCE OF HELICOPTER TAIL SHAPE ON DRAG: AN AERODYNAMIC STUDY USING A LOW SPEED WIND TUNNEL M.S. Thesis**

C. L. SARGENT Mar. 1985 91 p
(AD-A156304) Avail: NTIS HC A05/MF A01 CSCL 20D

This thesis examines the effect of helicopter tail shape on drag using a low speed wind tunnel at the Naval Postgraduate School. A modification to the Aeronautical Engineering Department's 3.5 ft x 5 ft. wind tunnel was made to update facilities and allow this work. Major R. Scott Mair worked simultaneously to study the effect of nose shape on drag, a result of the 2-man requirement for wind tunnel work. The existing external balance was replaced with an internal balance and a variable angle-of-attack support system was constructed as well. Quantitative data was collected with this balance, and qualitative information was obtained by tufting the models and visualizing the airflow. The equipment built was adequate with the exception of one component of the balance, which will require a new balance to be built. This single deficiency was significant enough to invalidate the output of the balance and as a result any quantitative discussion of how a helicopter's tail shape affects drag. Without this data the explanation of drag using flow visualization is also not practical. GRA

**E AND H FIELDS MEASUREMENTS ON THE TRANSALL C160 AIRCRAFT DURING LIGHTNING FLASHES**

J. P. MOREAU and J. C. ALLIOT (ONERA, Chatillon-sous-Bagneux, France) (International Conference on Lightning and Static Electricity, Paris, France, June 10-12, 1985) ONERA, TP, no. 1985-48, 1985, 8 p. refs
(ONERA, TP NO. 1985-48)

An airborne experiment was carried out to study the microphysical, dynamic, and thermodynamic properties of frontal systems and to determine the main parameters of electrical and electromagnetic phenomena associated with cloud discharges. It is found that a lightning flash lasts several hundred milliseconds and that there are two kinds of flashes, i.e., those beginning with a train of pulses lasting milliseconds and followed by solitary pulses (75 percent of the cases) and those beginning with solitary pulses. Typical E and H field waveforms for the duration of the flashes, recorded with a 2-MHz-bandwidth analog device, are presented, as are E and H waveforms obtained with 100-MHz-bandwidth transient digitizers and electromagnetic transfer functions of a well defined aperture installed on the aircraft fuselage. ### THE FLIGHT PLANNING - FLIGHT MANAGEMENT CONNECTION

J. A. SORENSEN (Analytical Mechanics Associates, Inc., Mountain View, CA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 174-178. refs

(Contract NAS1-17345)

Airborne flight management systems are currently being implemented to minimize direct operating costs when flying over a fixed route between a given city pair. Inherent in the design of these systems is that the horizontal flight path and wind and temperature models be defined and input into the airborne computer before flight. The wind/temperature model and horizontal path are products of the flight planning process. Flight planning consists of generating 3-D reference trajectories through a forecast wind field subject to certain ATC and transport operator constraints. The interrelationships between flight management and flight planning are reviewed, and the steps taken during the flight planning process are summarized. Author

### THE GROWING IMPACT OF GENERAL AVIATION ON THE WORLD'S AVIATION SYSTEM

D. W. FREER (International Civil Aviation Organization, Air Navigation Bureau, Montreal, Canada) ICAO Bulletin, vol. 40, June 1985, p. 12-16.

Of the world's more than 300,000 total general aviation (GA) aircraft, over three quarters are registered in North America. The growing numbers of GA fixed-wing and rotary-wing aircraft in the past decade, and the forecasts made by the FAA, the Aerospatiale, and Sikorsky Aircraft have disclosed trends towards escalation in growth, as well as towards increasing sophistication of GA aircraft, with growing predominance of the multiengine piston, turboprop, and turbojet fixed-wing and rotary-wing aircraft. The pilots of GA aircraft will have increasingly extensive training and advanced rating. The GA fleet will account for an increasing percentage of total instrument flight operations, international operations, and, in particular, the number of civil helicopters. This growth in GA aircraft operations needs new standards, which are currently being prepared by the ICAO. New and additional international specifications are being drawn for GA, and additional airport facilities for GA aircraft are being developed. An array of statistical data for the period 1977-1995 is included. I.S.

### AIRCRAFT ICING MUST NEVER BE UNDERSTIMATED

O. K. TRUNOV (Gosudarstvennyi Nauchno-Issledovatel'skii Institut Grazhdanskogo Vozdushnogo Flota, Moscow, USSR) ICAO Bulletin, vol. 40, June 1985, p. 17-21.

Underrating by the aircraft crew of the hazards of ice formed on the ground is one of the principal factors of ice-related accidents. A study conducted in the framework of Soviet-Swedish technical cooperation revealed quantitative relationships between the extent and geometry of ice covering and the coefficient of lift and the angle of attack, and underscored the necessity of complete ice removal from the aircraft surface before and during takeoff. The most effective current protection in both removing and preventing further accretion of ice is offered by anti- and de-icing fluids. Correct and timely application of anti-icing fluids and mechanical de-icing devices, and continuous supervision of the state of the aircraft up to the moment of take off are discussed, together with the necessary variations in these precautions demanded by different weather and ground conditions. I.S.

### POOL FIRE-VENTILATION CROSSFLOW EXPERIMENTS IN A SIMULATED AIRCRAFT CABIN INTERIOR

C. P. BANKSTON and L. H. BACK (California Institute of Technology, Jet Propulsion Laboratory, Pasadena) Journal of Aircraft (ISSN 0021-8669), vol. 22, Oct. 1985, p. 861-868. NASA-supported research. refs

An experimental facility has been built to study pool fire dynamics and flame spread behavior in a 1/3-scale simulated aircraft interior; attention is presently given to pool fire ventilation crossflow using a 'channel' pool fire subjected to crossflow velocities that replicate postcrash conditions in a wide body aircraft. Crossflow velocity is noted to have a strong effect on visible flame geometry, tilting the flame over sharply. A reverse flow ceiling jet of hot gases was also present in all tests, however, and extended far upstream of the fire, so that despite the appearance of the visible flame, the vertical momentum of the plume was strong enough to establish the reverse flow layer and spread smoke and toxic gases upstream against a significant ventilating flow. O.C.

### A NONLINEAR SOLUTION FOR PARACHUTE SUSPENSION LINE DEFORMATION

E. W. ROSS, JR. (U.S. Army, Aeromechanical Engineering Laboratory, Natick, MA) Journal of Aircraft (ISSN 0021-8669), vol. 22, Oct. 1985, p. 925, 926. refs

In the present elementary solution for the large, static deformations of a generic suspension line in a solid, flat, circular parachute configuration whose force distribution is similar to that transmitted from the adjacent fabric, the suspension line is idealized as a flexible, initially unstressed and straight string. The family of shapes obtained may be useful as a check on the correctness of the finite element code for the structural part of the calculation. O.C.

### ADVANCED ESCAPE SYSTEMS

T. FORD (Martin-Baker /Engineering/, Ltd., Higher Denham, England) Aircraft Engineering (ISSN 0002-2667), vol. 57, Aug. 1985, p. 6-10.

In connection with the introduction of new aircraft, it is often necessary to extend the performance envelope of the escape system. Advances regarding the design and the operation of aviation escape systems are discussed, taking into account developments occurring as a result of work undertaken in response to the U.S. Navy Aircrew Common Ejection Seat (NACES) program. The seat modes of operation of a new escape system include a high-altitude mode, intermediate-altitude modes, and low altitude modes. Attention is given to the mode selector, the Automatic Inflation Modulation (AIM) personnel parachute, the rigid survival kit, the Parachute Deployment Rocket (PDR), an illustration of the high-altitude ejection sequence, and the features of the NACES seat. G.R.

### HANDHELD COMPUTER WEIGHT AND BALANCE COMPUTATIONS FOR MILITARY AIRCRAFT

L. J. BRENNER (Horizons Technology, Inc., San Diego, CA) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 8 p.

(SAWE PAPER 1582)

An aircraft Weight and Balance Computer (WABC), easy to operate, and allowing considerable flexibility on types of loads and their location, is described. The WABC has two basic modes. In the initial mission planning (Mode I) the user is asked to consider all applicable inputs in terms of weight and moment of the individual tank quantities, cargo, and passengers. Once all the inputs are displayed, the user may adjust his previous inputs (Mode II). This mode will greatly simplify the adjustments by allowing changes in the load in any fuel tank or any compartment without reentering the rest of the original values. After the 'Review All' step, the WABC will step through all the entries required on the Form F,

and, if a printer is available, print the Form F for submission prior to take-off.

An evaluation of fire-resistant materials was conducted to identify possible replacements for stainless steel for use as aircraft firewalls. The materials were subjected to the standard firewall (MIL-I-83294), fire-penetration test. In addition, each sample passing this test was further evaluated on weight, thermal protection, and maintenance requirements. An attempt was made to correlate physical properties to fire penetration test performance, but was not successful due to the lack of physical property information. The report identifies those materials which should be developed for use as firewalls and fire-hardening materials on the aircraft.

I. J. HAYES Apr. 1985 51 p
(AD-A156328; ACSC-85-1095) Avail: NTIS HC A04/MF A01 CSCL 17G

The Strategic Air Command's authoritative source for instrument flight procedures, SAC Instrument Flight Course (SIFC), has no comprehensive vehicle with which to introduce the European flight environment to crews that may deploy into the unfamiliar airspace. The study acquaints the reader with the overall nature of flying in the European theater and introduces some procedural differences. The study also looks at how the European system is organized, by examining the airspace structure. The study concludes with a look at the military/civilian dichotomy of airspace control in Europe.

(AD-A156330; ACSC-85-0915) Avail: NTIS HC A04/MF A01 CSCL 01B

This handbook has been developed to instruct pilots and navigators on basic planning procedures and operations within the international environment. It provides a consolidated source of information to facilitate planning for international flights. The handbook is developed in four chapters covering: (1) an overview of the international environment, followed by checklists with item-by-item amplification of, (2) pre-flight planning, (3) enroute operations, and (4) services and facilities at foreign destinations.

## AIRCRAFT COMMUNICATIONS AND NAVIGATION

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

**A85-47683*** National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
**CONCEPTS AND ALGORITHMS FOR TERMINAL-AREA TRAFFIC MANAGEMENT**
H. ERZBERGER and J. D. CHAPEL (NASA, Ames Research Center, Moffett Field, CA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 166-173. refs

The nation's air-traffic-control system is the subject of an extensive modernization program, including the planned introduction of advanced automation techniques. This paper gives an overview of a concept for automating terminal-area traffic management. Four-dimensional (4D) guidance techniques, which play an essential role in the automated system, are reviewed. One technique, intended for on-board computer implementation, is based on application of optimal control theory. The second technique is a simplified approach to 4D guidance intended for ground computer implementation. It generates advisory messages to help the controller maintain scheduled landing times of aircraft not equipped with on-board 4D guidance systems. An operational system for the second technique, recently evaluated in a simulation, is also described.

**SIMULATION OF TIME-CONTROL PROCEDURES FOR THE ADVANCED AIR TRAFFIC CONTROL SYSTEM**
L. TOBIAS (NASA, Ames Research Center, Moffett Field, CA) and P. J. OBRIEN (FAA, Technical Center, Atlantic City, NJ) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 185-190. refs

The problem of mixing four-dimensional (4D) equipped aircraft - aircraft equipped with on-board guidance systems that can predict and control the touchdown time of an aircraft to an accuracy of a few seconds throughout the descent - with unequipped aircraft in the terminal area has been investigated via a real-time air traffic control simulation study. The objective of this study was to examine the effect of time errors (at 120 n. mi. from touchdown) on touchdown time scheduling, and to develop efficient algorithms and procedures to null the initial time errors prior to reaching the final control sector (30 n. mi. from touchdown). Results indicate that initial random errors of up to + or - 2 min can be handled via a single speed advisory issued in the arrival control sector, and thus the time schedule is not disrupted.

**TIME-CONTROLLED AIRCRAFT GUIDANCE IN UNCERTAIN WINDS AND TEMPERATURES**
J. W. BURROWS and A. CHAKRAVARTY (Boeing Co., Seattle, WA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 191-197. refs

The design requirements on airborne equipment which controls an aircraft so it arrives at an assigned time are mainly driven by the need for satisfactory control during descent. Assuming open-loop control during a typical descent, the final altitude and arrival time errors due to unforecast winds and temperatures aloft are determined. The fuel required for closed-loop control to reduce these errors is given. Equations of motion, suitable for on-board nominal descent trajectory computation using descent area forecasts, are derived, including the effects of winds and temperatures. A sample descent trajectory, obtained by integrating these equations with an actual forecast, is given. The design of descent controllers using feedback of errors relative to the nominal trajectory is treated. The arrival time errors and fuel usage of such controllers for different gain choices and unforecast winds and temperatures are evaluated by simulation. Author

**STATUS AND DEVELOPMENT TRENDS OF NAVIGATION SYSTEMS FOR GENERAL AVIATION [STAND AND ENTWICKLUNGSTENDENZEN VON NAVIGATIONSSYSTEMEN FUER DIE ALLGEMEINE LUFTFAHRT]**
K. HURRASS (DFVLR, Institut fuer Flugfuehrung, Brunswick, West Germany) Ortung und Navigation (ISSN 0474-7550), vol. 26, no. 2, 1985, p. 240-251. In German. refs

Technological advances related to the area of electronics have had a decisive effect on the development of navigation systems, taking into account the utilization of integrated components, miroprocessors, and beam deflection tubes. A further growth in the volume of air traffic during the next 12 years is predicted, and safety requirements are expected to become still more demanding. It is therefore necessary to improve further the navigation systems for aviation with respect to navigation accuracy, reliability, and availability. The present paper is concerned with an evaluation of the merits and drawbacks of the currently employed navigation systems, giving attention to developments which will make it possible to meet future demands. The VOR/DME system is considered along with Non Direction Beacons (NDB), inertial navigation, area navigation, Doppler radar, the replacement of the ILS by the TRSB system, GPS, new display systems, and collision avoidance systems. G.R.

**A85-48851**
**THE IMPOSITION OF FLOW CONTROL AVOIDS ATC OVERLOADS**
C. EIGL (International Civil Aviation Organization, Search and Rescue Section, Paris, France) ICAO Bulletin, vol. 40, Feb. 1985, p. 13-16.

The Air Traffic Flow Management (ATFM) unit was organized by the European Air Navigation Planning Group (EANPG) to ensure that an overload of the air traffic control (ATC) in the ATFM Region (which covers all Europe and has a USSR unit) does not occur, and that the traffic flow restrictions are minimized. The most important task of the ATFM is to establish early the anticipated high airspace and landing demand/ATC capacity ratio, and undertake specific action within either the strategic (early planning and coordination) or tactical, short-time measures. In practice, full use of the available ATC capacity is made on a local scale through the allocation of time slots to individual flights, and the adaptation of traffic flow into a given area. A truly regionwide coordination awaits full development of a reliable common data base, the Central Data Bank, which is now in its early phases of operation. This and other activities of the ATFM are planned and coordinated at the periodic EUR meeting of EANPG. I.S.

**A85-48852**
**INITIAL EUROPEAN CENTRAL DATA BANK OF AIR TRAFFIC DEMAND NOW IN OPERATIONAL TRIALS**
B. MARTIN (EUROCONTROL, Brussels, Belgium) ICAO Bulletin, vol. 40, Feb. 1985, p. 17-20.

A Central Data Bank (CDB), established by the Air Traffic Flow Management (ATFM) Planning Group, is to provide the ATFM service in Europe with a common reference data base for a region-wide coordinated demand/capacity assessment among the air traffic control systems of the individual local areas of the member states. The system is serviced by two chains of equipment, each consisting of an IBM 4341 Central Processing Unit attached to an IBM computer used as communications controller. The output, will indicate where and when the traffic demand will reach or exceed specific ATC thresholds. The CDB data are held in the form of Flight Data Records, which provide aircraft identification, and the departure and destination airports. At its present, Phase I, stage, about 80 percent of calculated departures are found to coordinate with the arrivals. I.S.

**RECONNOITERING THE ELECTROMAGNETIC SPECTRUM**
M. J. KESSLER Defense Electronics (ISSN 0278-3479), vol. 17, Sept. 1985, p. 107, 108, 110, 112, 114.

New developments in signal intelligence (Sigint) systems are reviewed, with particular attention given to new Sigint aircraft, direction finding, and Elint collection. It is noted that advances in computer science, signal processing, and microcircuitry have led to miniaturization of equipment and increased automation of the airborne EW systems. Higher capability equipment for identifying and locating surface emitters not only permits construction of near real-time electronic order of battle for use in the C3I network but also enables immediate response for the suppression or destruction of perceived threats through the direction of an offensive strike from the Sigint platform. **INEWS IGNITES TECHNOLOGY TRADE-OFFS AND COMPETITION**
J. B. SCHULTZ Defense Electronics (ISSN 0278-3479), vol. 17, Sept. 1985, p. 136, 137, 139 (3 ff.).

The goals of the phase of demonstration validation for the Integrated Electronic Warfare System (INEWS), the next-generation electronic warfare system for advanced fighter aircraft, are briefly reviewed. The major requirements for the INEWS are examined, and it is noted that the principal technological problem is combining the right mix of VHSIC components and other devices, such as those made of GaAs, into modular architectures that meet all the requirements for weight, space, reliability, and maintainability at a reasonable price. The problem of software is then examined, and goals for the next stages of the project are outlined. V.L.

**A85-49171**
**AUTOMATION IN AIR TRAFFIC MANAGEMENT**
S. RATCLIFFE Journal of Navigation (ISSN 0020-3009), vol. 38, Sept. 1985, p. 405-412. refs

ATC procedures are currently limited by the manpower-intensive nature of the work, the necessity for each ATC to find local solution instead of for the flight as a whole, and the practice of imposing standardized traffic patterns. Automating the critical ATC functions would require reliability at an expected accident potential of 1:1 billion. Computer hardware reliability could be assured with fault tolerant techniques. However, there is no experience base with the needed reliability which would be required of the real-time software required to handle the associated complex situations. Also, humans must be able to oversee the automatic processes. The FAA has announced intentions of automating the cruise flight phase ATC functions with the AERA plan. The system would also, optimally, interface with aircraft on-board flight management computers to enhance flight efficiency. It is concluded that progress toward automation must be pursued cautiously, and at present ATC functions should continue to be in the control of humans aided by computers. M.S.K.

**EFFECT OF INTERFERENCE ON THE PERFORMANCE OF A MINIMUM TCAS 2**

R. G. SANDHOLM 5 Sep. 1985 66 p refs
(Contract DOT-FA77WAI-817; F19628-85-C-0002)
(FAA-PM-84-33; ATC-132) Avail: NTIS HC A04/MF A01

Minimum TCAS 2 equipment is required to operate reliably in all aircraft densities up to the 0.3 transponder-equipped aircraft per square nautical mile anticipated in the Los Angeles Basin in the year 2000. Prototype TCAS equipment has been developed and shown to be capable of providing reliable surveillance in today's highest densities, which reach an average of about 0.1 aircraft per square nmi. Since there are no existing environments that reach the density of asynchronous interference anticipated for the Los Angeles Basin in the year 2000, it is neccessary to generate simulated interference to determine the performance of the TCAS 2 design in that environment. A series of bench tests were conducted for this purpose. Special sources were used to generate asynchronous ATCRBS and Mode S rely signals (fruit) and TACAN DME squitter and interrogation signals Synchronous ATCRBS and Mode S reply sequences were also generated to simulate airborne encounters. The performance was evaluated by observing how the interference signals either degrated the ability of a TCAS 2 unit to receive, process, and track the desired synchronous reply sequences, or caused the TCAS 2 unit to generate false tracks.

**GUIDELINES FOR THE EVALUATION OF VISUAL APPROACH SLOPE INDICATORS**

J. MILLAR Sep. 1984 34 p refs
(ARL/SYS-R-32; AR-003-962) Avail: NTIS HC A03/MF A01

This report discusses techniques for evaluating the efficacy of Visual Approach Slope Indicators (VASIs) intended for transport aircraft landing at major runways. The discussion is predicated on the assumption that VASI signals should act as a substitute for the information the pilot sees in the natural scene, and a list of design requirements is developed accordingly. Several testing techniques and the utility of information likely to be obtained from each one is outlined. Various aspects of experimental design including the choice of aircraft, pilots, treatments and statistical analysis which can influence the validity of conclusions are highlighted. In many published evaluations to date there has been undue reliance on the subjective opinions of pilots instead of measurements describing flight paths in objective terms. Similarly, operational evaluations have been preferred to more informative experimental tests. Adequate testing of current VASIs could enable substantial improvements to be incorporated into VASI designs of the future, but unfortunately, previous tests have not always been adequate, restricting the pertinence of the findings and limiting the generality of conclusions which might otherwise have influenced subsequent designs.

**FAA REQUIREMENTS FOR MODEL TO SUPPORT CAPACITY, DELAY, NOISE AND ENERGY PROGRAMS**

J. N. BARRER and W. E. WEISS Mar. 1985 63 p
(Contract DTFA01-84-C-00001)
(AD-A155815; MTR-WP-85W00174; FAA-DL5-85-1) Avail: NTIS HC A04/MF A01 CSCL 17G

This paper was written at the request of the FAA Management Steering Group on System Capacity/Airport Capacity in an effort to answer the recurring question, why should the FAA invest resources in the development and maintenance of models? It summarizes the FAA's requirements for modeling capability to analyze the issues of capacity, delay, noise and fuel burn. It concludes that there is a continuing need for such models and an additional need for airspace model(s) to address these issues in a complex terminal environment. The paper includes a detailed summary of those models related to capacity and delay which are currently owned by the FFA.

**A GUIDE TO USAF HELICOPTER INSTRUMENT FLIGHT PROCEDURES**

L. O. STENDAHL Apr. 1985 36 p
(AD-A156102; ACSC-85-2610) Avail: NTIS HC A03/MF A01 CSCL 01B

This report presents information concerning USAF helicopter instrument procedures. This guide consolidates existing and new guidance into an up-to-date, single-source document for use by USAF helicopter pilots. If approved by HQ USAF Instrument Flight Center (IFC), portions of this guide will be incorporated into AFM 51-37. The paper first discusses the need for consolidated guidance, unique helicopter characteristics requiring changes to instrument procedures and how airspace design has been adjusted to accommodate helicopter operations. It then outlines procedures for performing basic helicopter instrument flight, and concludes with a chronological approach to helicopter instrument mission planning and accomplishment. Also included are proposed future changes to helicopter airspace design.

**UNSTEADY AERODYNAMIC FORCES INDUCED BY AEROELASTIC VIBRATIONS OF A TURBOJET ENGINE IN A NACELLE [FORCES AERODYNAMIQUES INSTATIONNAIRES INDUITES PAR LES VIBRATIONS AEROELASTIQUES D'UN REACTEUR EN NACELLE]**

R. DESTUYNDER and J. J. ANGELINI (ONERA, Chatillon-sous-Bagneux, France) (Groupe Sectoriel Franco-Sovietique - Aeronautique, Sous-groupe Aerodynamique, Acoustique Aeronautique et Structures, Reunion, 27th, Chatillon-sous-Bagneux, France, Mar. 11-15, 1985) ONERA, TP, no. 1985-56, 1985, 22 p. In French.
(ONERA, TP NO. 1985-56)

The results of theoretical and experimental studies of the effects of a wing-mounted engine nacelle on unsteady aerodynamic forces are reported. Trials were run in a transonic wind tunnel using a rigidly mounted wing with and without the nacelle. The wing-nacelle aerodynamic interactions were not significant but the aerodynamic pitching oscillations of the nacelle alone were sufficient to induce flapping. A cylindrical lifting surface model for the oscillations of the nacelle is defined and shown to have good agreement with experimental data, as well as with predictions made using a method of doublets. The experimental data are matched if the effects of internal engine rotations are neglected. M.S.K.

### THE EXTENDED RANGE OPERATION OF TWIN-ENGINED PUBLIC TRANSPORT AIRCRAFT. I

V. W. ATTWOOLL (Civil Aviation Authority, London, England) (Royal Institute of Navigation and Royal Aeronautical Society, Meeting, London, England, Feb. 20, 1985) Journal of Navigation (ISSN 0020-3009), vol. 38, Sept. 1985, p. 423-430.

Consideration is given to potential operational and economic constraints on the establishment of suitable North Atlantic flight routes for twin-engine 757, 767 and A 310 transport aircraft. The current ICAO regulations only allow four-engined aircraft on the route, the rules having been defined during an era of lower engine reliability. The regulations also specify 60- and 120-min lower and upper limits on flight time to a suitable airport with two engines or one engine out, respectively. The possible implications of adapting the rule to two-engine aircraft are analyzed in terms of the available alternate landing sites along the route, the distances which would have to be traveled at given possible airspeeds, and the associated penalties (if any) for flying sufficiently safe, rather than most economical, routes. The results indicate that enough alternate landing strips are available to permit taking advantage of the flight economies offered by the new wide-body, two-engined aircraft. M.S.K.

**A85-49174**

### THE EXTENDED RANGE OPERATION OF TWIN-ENGINED PUBLIC TRANSPORT AIRCRAFT. II

A. LISTER (Civil Aviation Authority, London, England) (Royal Institute of Navigation and Royal Aeronautical Society, Meeting, London, England, Feb. 20, 1985) Journal of Navigation (ISSN 0020-3009), vol. 38, Sept. 1985, p. 431-435.

The FAA has, in lieu of a decision by the ICAO, issued an advisory circular listing conditions under which twin-engined transport aircraft such as the A 310, 757 and 767 could operate beyond 60 min flying time from an airport. Reluctance to change the ruling reflects both the previous normal configuration of four engines on transport aircraft and the limited operational experience with large twin-engined aircraft. Certification for operations beyond the 60 min limit will require demonstrable maintenance levels and operational familiarity. All on-board systems must function sufficiently well on one engine, with no intolerable increase in crew workload. Additionally, long-distance flight routes will be allowed only if an adequate number of alternate airports are within reach en route should engine failure occur. The last factor will to a degree be a function of weather forecasts along the planned route. M.S.K.

**A85-49175**

### THE EXTENDED RANGE OPERATION OF TWIN-ENGINED PUBLIC TRANSPORT AIRCRAFT. III

S. GRIEVE (Britannia Airways, Ltd., Luton, England) (Royal Institute of Navigation and Royal Aeronautical Society, Meeting, London, England, Feb. 20, 1985) Journal of Navigation (ISSN 0020-3009), vol. 38, Sept. 1985, p. 435-442; Discussion, p. 442-444.

The U.K. presently permits twin-engine wide-body passenger aircraft to operate on routes 90 min away from alternate airports with both engines on and 60 min with one engine out. Some concern is expressed that the 90 min distance will be eliminated, thus leaving only the 60 min option for long-distance flights. The shorter interval would cripple commercial operation by U.K. carriers in some parts of the world. The limiting rule may be further expanded by tripling the required weather factors, i.e., visibility and ceiling, for acceptable alternate airports. It is noted that the operational record with the engines on the A 310, 757 and 767 aircraft belie any concern over the in-flight failure of both engines. Furthermore, the redundancy and reliability of avionics and hydraulics systems are also sufficent to allay the need for stricter regulations. It is concluded that the new twin-engine aircraft are more reliable than the four-engine predecessors. M.S.K.

### FOKKER IMPROVES TRANSPORT DESIGN BASED ON LAUNCH CUSTOMER DEMAND

M. FEAZEL Aviation Week and Space Technology (ISSN 0005-2175), vol. 123, Sept. 16, 1985, p. 44, 45, 47.

The upgraded design of the Fokker 100 is described. It was necessary to improve the aircraft in order to meet the airlines' requirements and to create an aircraft that would grow and be useful into the 21st century. The original design of the aircraft, which was basically a derivative of the F-28, is presented. For the new design the same tooling for the fuselage, wing box, and tail were used; however, a new electrical system and auxiliary power unit were developed. The changes in the aerodynamics of the wing are examined, and the components of the all glass Collins Arnic 700 cockpit avionics suite are explained. The seating capacity was not increased, but the maximum takeoff weight was increased to allow for extended ranges. I.F.

**A85-49200**

### FIRST OPERATIONAL MARINE CORPS AV-8B SQUADRON BEGINS SERVICE

B. M. GREELEY, JR. Aviation Week and Space Technology (ISSN 0005-2175), vol. 123, Sept. 16, 1985, p. 54, 55, 57, 59, 61.

The utilization and evaluation of the AV-8B Harrier 2 by the U.S. Marine Corps are discussed. The effective attack performance, reliability, and maintainability, and the good handling characteristics of the aircraft are verified by the examples of the aircraft's performance during flight training and operation evaluation. The schedule for the incorporation of the AV-8B into the squadrons and the number of pilots and training required is examined. The features of the aircraft which have simplified the V/STOL training process are described. The changes and added components that were incorporated into the aircraft to increase its reliability are explained. The present combat radius of the AV-8B and the addition of night, under-the-weather capability to the system are described. I.F.

**A85-49579**

### THE EAGLE - A CLASSIC STUDY IN RELIABILITY GROWTH

J. J. HADEL (McDonnell Aircraft Co., St. Louis, MO) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 476-483.

The F-15 Eagle development reliability program is reviewed, emphasizing the product production phase of the aircraft, especially with regard to hardware field problems and corresponding solutions. The effects of cumulative changes in the F-15 are often masked by the combining of data from 'new' and 'old' configurations in Air Force reports. Examples of this masking effect are analyzed to illustrate how misleading the combined data can sometimes be, and the real effects of the changes are examined by segregating the configuration data to reveal the actual extent of reliability growth. Overall reliability growth trends in the Eagle are analyzed which indicate that the reliability of the aircraft has more than tripled in the eight years since initial deployment. The effects of these trends on related parameters such as abort rates and full mission capable rates are shown. C.D.

**A85-49582**

### F-15 READINESS - THE MAINTAINABILITY CONTRIBUTION

C. L. KIRKPATRICK and R. R. OBRIEN (McDonnell Aircraft Co., St. Louis, MO) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 499-504.

The Full Mission Capable (FMC) rate of aircraft maintainability of the F-15 combat aircraft is estimated and compared to classic maintainability indicators. The results are used to predict factors influencing F-15 availability during peacetime and during wartime. Squadron sorties rates of 3.4-4.8 sorties per day per aircraft are predicted based on the Air Force Logistics composite model and historical maintenance rates and repair times. Among the factors influencing the availability of F-15 aircraft during wartime are: the availability of unencumbered dispersed servicing areas; the use of built-in test equipment; and a hot refuel capability with one or two engines running. Maintainability improvements planned for future F-15 designs are briefly reviewed. I.H.

**A85-49656**

### STAR IN THE MAKING

H. HOPKINS Flight International (ISSN 0015-3710), vol. 128, Sept. 7, 1985, p. 23-28.

Astra, which has been built by an Israeli aircraft manufacturer, is the revolutionary product of an evolutionary line of business jets. The aircraft employs an Israeli-developed swept, supercritical wing. Aims of the design of Astra are related to a high-Mach-number cruise (around 0.8), reasonable fuel economy, good long-range performance (at about Mach 0.7), and a high ratio of payload to aircraft weight. Three Astra prototypes have been used in the flight-test program. One aircraft has demonstrated the type's ability to fly coast-to-coast across the United States at Mach 0.8. Observations made during a flight of Astra are discussed, taking into account the start-up, the takeoff, well-balanced handling, cabin considerations, the exemplary stall behavior, and some operational details. G.H.

**A85-49658**

### GIV - GULFSTREAM GOES FURTHER

G. WARWICK Flight International (ISSN 0015-3710), vol. 128, Sept. 14, 1985, p. 28-36.

A new model of the Gulfstream aircraft (G), GIV, is described in detail. The redesigned frame features and the changes in the aircraft systems, engine, and materials, made in the present GIII model, which extend the flight range of GIV to 4300 n.m. at Mach 0.8, and altitudes to 45, 000 ft, and make it more fuel-efficient, are specified. Among the newly added systems, the factory-fitted integrated digital avionics is the most significant. The system includes an automatic flight control system (autopilot and autothrottle), flight management (navigation and performance), electronic displays, including engine instrumentation and crew altering, and sensor integration, all with the dual redundancy as a minimum. The key element in the system is the avionics standard communication bus (ASCB), which transmits and receives information among the subsystems via a two-wire data highway. I.S.

**A85-49672**

**ANALYSIS OF ASYMMETRIC NATURAL VIBRATIONS OF AN AEROPLANE WITH MOVING DEFORMABLE CONTROL SURFACES**

Z. DZYGADLO and J. BLASZCZYK Journal of Technical Physics (ISSN 0324-8313), vol. 25, no. 3-4, 1984, p. 393-412. refs

The results of theoretical and numerical studies of natural vibrations of an aircraft with deformable control surfaces are discussed. The deformable assemblies of the aircraft are discretized by introducing beam elements and using the finite element method. The present model is composed of rigid assemblies and deformable assemblies with continuous and jumplike distribution of mass and rigidity. Equations of motion are established for the rigidity. Equations of motion are established for the rigid parts of the fuselage and equations of dynamic equilibrium for the deformable assemblies of the aircraft. A set of equations is obtained whose solution gives the required spectrum of asymmetric vibrations of an aircraft with moving deformable control surfaces. C.D.

**A85-49673**

**ANALYSIS OF NATURAL VIBRATIONS OF A DEFORMABLE AEROPLANE WITH FIXED CONTROL SYSTEMS**

Z. DZYGADLO, I. NOWOTARSKI, and A. OLEJNIK Journal of Technical Physics (ISSN 0324-8313), vol. 25, no. 3-4, 1984, p. 413-421. refs

A numerical analysis of the natural frequencies and modes of a deformable aircraft with fixed control surfaces is presented. Results have been obtained for both a fictitious and a real aircraft. The differences between the frequencies and modes of the aircraft having supports of varying rigidities are used to infer that the influence of an elastic support on the natural vibrations can be disregarded if the ratio of the frequency of the support to the lowest natural frequency of the deformable aircraft is small. The model presented here allows the natural frequencies of an aircraft of any geometrical and mass configuration to be studied in an effective way. C.D.

**A85-49912**

**JVX DESIGN TO COST METHODOLOGY**

S. Y. HOWELL (Bell Helicopter Textron, Fort Worth, TX) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 24 p. refs

(SAWE PAPER 1591)

The preliminary design and full scale development phase team that will undertake the design-to-cost (DTC) program for the Joint Services Advanced Vertical Lift Aircraft, designed 'JVX', encompasses employees from such disciplines as engineering cost analysis, finance, industrial engineering, manufacturing engineering, producibility engineering and planning, and procurement. The DTC team uses parametric techniques to predict costs during preliminary design; subsequently, as more detailed information becomes available, the DTC team resorts to 'grass roots' estimating techniques for cost estimation, on the basis of design layouts and detailed design drawings. O.C.

**A85-49915**

**IN-PRODUCTION AIRCRAFT WEIGHT CONTROL**

A. D. G. BAYLY (Lockheed-California Co., Burbank) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 16 p.

(SAWE PAPER 1597)

A development history is presented for weight control efforts directed to successive variants of the maritime patrol/ASW Orion P3 aircraft, which first entered service in 1961. Weight control measures have at various times been prompted by the incorporation of more powerful engines, additional signal analysis equipment, navigation aids, and electronic countermeasures, and rearrangements of internal equipment and stores. Attention is given to major redesign efforts undertaken to reduce weight, and the effect of these efforts on center-of-gravity location. O.C.

**A85-49920**

**AN EVALUATION OF IMPROVED ANALYTICALLY BASED WEIGHT ESTIMATION METHODOLOGIES**

M. K. MYERS (LTV Aerospace and Defense Co., Vaught Aero Products Div., Dallas, TX) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 12 p.

(SAWE PAPER 1616)

A new geometry characterization routine (GCR) was found to be mandatory for updating the existing synthesis programs for modeling changing aircraft configurations in the future. The GCR is primarily a new manner of feeding the configurational data into the Aircraft Synthesis Analysis program (ASAP). It will need a CADAM interface, and routines requiring the spatial coordinates of the aircraft's external and internal envelopes. The interfaces for radar and IR cross-sectional configurations will be useful but are not mandatory. The additional structural mandatory concepts are the blended bodies and buried engines, methods for weight estimates of individual fuselage portions, and alternate wing construction techniques. A new catalogue technique, illustrated with a diagram, will increase the productivity of ASAP. Also discussed are new methods for estimating composite construction, a new approach to structural analysis, and crack growth criteria. I.S.

**A85-49921**

**AFTI MAW - WING OF THE FUTURE**

R. W. RANKIN (Boeing Military Airplane Co., Wichita, KS) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 24 p.

(SAWE PAPER 1617)

The Mission Adaptive Wing (MAW) concept, which is undergoing evaluation in the Advanced Fighter Technology Integrator (AFTI) F-111, draws on recent advancements in materials, actuators and electronic flight control systems to change airfoil profiles in flight, and thereby conform to the diverse requirements of maneuvering, cruise, and low level penetration segments of a mission at either subsonic or supersonic speeds. Variable camber through smooth deformation of leading and trailing edges is achieved by internal actuation/deformation mechanisms and thin wing skin panels. The AFTI F-111 is an ideal test bed in that it is a variable wing sweep aircraft capable of testing variable camber over a wider range of wing geometry conditions. O.C.

**A85-49925**

**A GLANCE AT SOVIET HELICOPTER WEIGHT TRENDS AND A WEIGHT-PREDICTION METHOD**

R. A. SHINN (U.S. Army, Aviation Systems Command, St. Louis, MO) and W. Z. STEPNIEWSKI (International Technical Associates, Ltd., Upper Darby, PA) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 21 p. refs

(SAWE PAPER 1627)

The designs of Western and Soviet helicopters in the 5,000-150,000 lb gross-weight range were compared with respect to relative weight empty, zero-range payload, and engine specific weight, as well as relative weights of major helicopter components. The traditional (until the early seventies) Mil and Kamov Soviet helicopters are inferior in their operational productivity to their Western counterparts, mainly because of the weight gap in the airframes and powerplants. However, the operational new-generation and 'hypothetical' helicopters have the weight-empty, and zero-range payload to gross weight ratios similar to those of the Western counterparts. The general approach of a Soviet weight prediction method for major helicopter components, illustrated by weight equations and graphs, is compared to the Western methods, and the use of these methods in structural weight minimization is examined. Aspects of widening the productivity gap between the Soviet and the Western rotary aircraft are discussed. I.S.

**A85-49926**

**COMPUTER AIDED DETERMINATION OF ROTOR BLADE MASS PROPERTIES**

R. HUFF (Hughes Helicopters, Inc., Culver City, CA) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 39 p.
(SAWE PAPER 1628)

The present, computer program-implemented method for rotor blade design mass properties analysis allows calculation of individual component characteristics; each structural lamina or geometrical configuration entered is processed by an appropriate subroutine. The results thus obtained are added to totals for subgroup, main group, and case levels. Attention is given to a general procedure for the definition of blade contours at critical points, the classification of blade parts into different categories for analysis, and the properties of spanwise segments selected by the user for calculation and presentation in printouts. O.C.

**A85-49944**

**THE USAF'S CREST PROGRAM**

A. M. HIGGINS and E. O. ROBERTS (USAF, Aerospace Medical Div., Wright-Patterson AFB, OH) SAFE Journal, vol. 15, Fall 1985, p. 10-16. refs

The USAF recently initiated a five-year advanced development (6.3) effort in ejection seat design called CRew EScape Technologies or CREST. The objective of the CREST program is to develop and demonstrate, through full-scale testing, new escape system technologies required to reduce fatalities and major injuries in future aircraft ejections. The CREST design philosophy is based on the concept of adaptive control of the escape system and successful demonstration of the CREST technologies will lay the foundation for the development of the next-generation ejection seat. This paper describes the program's content and schedule with particular emphasis on the current Phase I activities of the CREST contracted effort. In addition, several efforts supporting the CREST program are also discussed. Author

**A85-49945**

**ADAPTIVE OPERATION OF ESCAPE SYSTEMS - A LOOK AT DESIGN REQUIREMENTS**

R. J. DOBBEK (USAF, Wright Aeronautical Laboratories, Wright-Patterson AFB, OH) SAFE Journal, vol. 15, Fall 1985, p. 22-26. refs

Some design requirements for an escape system which incorporates the adaptive operation technique are presented. This newly designed escape system would generate controlled adaptive performance. The major external parameters that affect the performance of the ejection catapult and must be considered in the design are: (1) variation in ejected mass, (2) variation in propellant temperature, and (3) variation in the surrounding acceleration field acting against the catapult. The design considerations for flight dynamics, which include controlling catapult acceleration and attitude control of the occupied ejection seats, are described. The use of trajectory control to clear the aircraft, to provide a divergent trajectory from other ejectees and equipment, and to prevent premature ground impact is discussed. The development of a recovery system, which is adaptive to changing conditions, is explained. I.F.

**A85-49946**

**GENERALIZED ESCAPE SYSTEM SIMULATION - ITS PURPOSE, RECENT MODIFICATIONS, AND POTENTIAL**

G. E. LIEPINS and S. Y. OHR (Oak Ridge National Laboratory, TN) SAFE Journal, vol. 15, Fall 1985, p. 27-31. Navy-sponsored research.
(Contract DE-AC05-84OR-21400)

The Generalized Escape System Simulation (GESS) code, which is capable of simulating a number of ejection system hardware performances, is discussed. The code is written in FORTRAN, is compatible with most mainframe computers, and contains a number of subroutines. The GESS program can calculate the trajectory for up to four escape system components; examples of how the GESS code models various ejection phenomena are provided. Comparisons of sled test results and analytically computed results with GESS results are graphically presented; GESS results correlated well with escape system test data. Further research is being conducted in order to make the GESS an integral part of an in-service usage data analysis system. A comprehensive flow chart is provided. I.F.

**CRASHWORTHY DESIGN CONSIDERATIONS FOR GENERAL AVIATION SEATS**

E. ALFARO-BOU, E. L. FASANELLA, and M. S. WILLIAMS (NASA, Langley Research Center, Hampton, VA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 16 p. refs
(SAE PAPER 850855)

This report summarizes the experimental research conducted at the NASA Langley Research Center on general aviation seat and occupant crash response and discusses seat design considerations. Included are typical floor acceleration pulses from general aviation airplane crash tests, the performance of typical general aviation seats in a simulated crash environment, and the performance of prototype energy absorbing (EA) seat designs. Static and dynamic seat testing procedures and test facilities are discussed. Also presented are results from a series of dynamic tests of typical general aviation seats and prototype EA seats. Author

**FLIGHT EVALUATION OF AN INSECT CONTAMINATION PROTECTION SYSTEM FOR LAMINAR FLOW WINGS**

C. C. CROOM and B. J. HOLMES (NASA, Langley Research Center, Hampton, VA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 10 p. refs
(SAE PAPER 850860)

The maintenance of minimum wing leading edge contamination is critical to the preservation of drag-reducing laminar flow; previous methods for the prevention of leading edge contamination by insects have, however, been rendered impractical by their excessive weight, cost, or inconvenience. Attention is presently given to the results of a NASA flight experiment which evaluated the performance of a porous leading edge fluid-discharge ice protection system in the novel role of insect contamination removal; high insect contamination conditions were also noted in the experiment. Very small amounts of the fluid are found to be sufficient for insect contamination protection. O.C.

**MANUFACTURING TOLERANCES FOR NATURAL LAMINAR FLOW AIRFRAME SURFACES**

B. J. HOLMES (NASA, Langley Research Center, Hampton, VA), C. J. OBARA, G. L. MARTIN, and C. S. DOMACK (Kentron Internaional, Inc., Hampton, VA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 11 p. refs
(SAE PAPER 850863)

Published aircraft surface waviness and boundary layer transition measurements imply that currently achievable low levels of surface waviness are compatible with the natural laminar flow (NLF) requirements of business and commuter aircraft, in the cases of both metallic and composite material airframes. The primary challenge to the manufacture of NLF-compatible surfaces is two-dimensional roughness in the form of steps and gaps at structural joints. Attention is presently given to recent NASA investigations of manufacturing tolerance requirements for NLF surfaces, including flight experiment results. O.C.

**A85-50107**

**PROPULSIVE EFFICIENCY AND AIRCRAFT DRAG DETERMINED FROM STEADY STATE FLIGHT TEST DATA**

G. BULL and G. BENNETT (Mississippi State University, MS) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 15 p.
(SAE PAPER 850872)

Propulsive efficiency and aircraft drag are presently derived from steady, level flight speed-power data by a method that is based on a computer formulation of Lock's (1935) equivalent propeller model; this makes the method suitable for use in parameter identification. The results obtained take the form of coefficients of polynomials that define the aircraft and propeller. The method is especially applicable to performance prediction and simulation, because aircraft and propeller are represented by a simple analytical model rather than tables and graphs. O.C.

**FLIGHT INVESTIGATION OF CABIN NOISE CONTROL TREATMENTS FOR A LIGHT TURBOPROP AIRCRAFT**

J. F. WILBY (Bolt Beranek and Newman, Inc., Canoga Park, CA), R. L. ONEAL (Gulfstream Aerospace Corp., Bethany, OK), and J. S. MIXSON (NASA, Langley Research Center, Hampton, VA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 16 p. NASA-supported research. refs
(SAE PAPER 850876)

The in-flight evaluation of noise control treatments for a light, twin-engined turboprop aircraft presents several problems associated with data analysis and interpretation. These problems include data repeatability, propeller synchronization, spatial distributions of the exterior pressure field and acoustic treatment, and the presence of flanking paths. They are discussed here with regard to a specific aeroplane configuration. Measurements were made in an untreated cabin and in a cabin fitted with an experimental sidewall treatment. Results are presented in terms of the insertion loss provided by the treatment and comparison made with predictions based on laboratory measurements. Author

**A85-50111*** Virginia Polytechnic Inst. and State Univ., Blacksburg.

**MECHANISMS OF TRANSMISSION AND CONTROL OF LOW-FREQUENCY SOUND IN AIRCRAFT INTERIORS**

C. R. FULLER (Virginia Polytechnic Institute and State University, Blacksburg, VA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 14 p. refs
(Contract NAG1-390)
(SAE PAPER 850879)

A simplified analytical model is used to study the principal mechanisms at work in propeller noise source radiation, fuselage response, and the behavior of the coupled inner acoustic field, in order to control low frequency sound in aircraft interiors. Both active and passive methods of noise control are comparatively evaluated in light of the transmission mechanisms. Fuselage vibrational response is noted to be dominated by only a few lower order circumferential modes. O.C.

**A85-50117**

**ADVANCED SYSTEMS FOR THE GULFSTREAM IV**

R. WINTERS (Gulfstream Aerospace Corp., Savannah, GA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 6 p.
(SAE PAPER 850900)

The Gulfstream IV corporate jet aircraft incorporates among its advanced systems solid state electric power generation, digital electronics, and an integrated avionics/subsystems electronic control design. In order to undertake missions with maximum cost effectiveness, least time, or combinations of these two criteria, flight can be automated throughout the takeoff, climb, cruise, descent, and landing regimes, under almost all weather conditions. Attention is given to the cockpit display system, flight management and guidance systems, engine instrument and crew alert systems, steering and braking control, and electrical power generation. O.C.

**A85-50118**

**AIR-CYCLE AIR CONDITIONING OF TURBINE-POWERED GENERAL AVIATION AND COMMUTER AIRCRAFT**

G. K. PAYNE (AiResearch Manufacturing Co., Torrance, CA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 15 p.
(SAE PAPER 850901)

The use of an air cycle system which operates in conjunction with general aviation and commuter aircraft turbine powerplants facilitates the design of systems that can furnish cabin heating, cooling, pressurization, humidity control and temperature control without recourse to an independent power source. Attention is presently given to air cycle system configurations and constituent features; system installation, performance data, and equipment selection guidelines are illustrated. O.C.

**A85-50126**

**USAF DAMAGE TOLERANCE METHODS APPLIED TO GENERAL AVIATION AIRCRAFT DESIGN AND ANALYSIS**

W. A. BARNGROVER (USAF, Logistics Command, Tinker AFB, OK) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 10 p. refs
(SAE PAPER 850915)

Attention is given to potential benefits to be derived from U.S. Air Force expertise and experience in the design and management of damage-tolerant structures, as found in the military standard MIL-STD-1530. The primary factor in the reduction of structural failures to date has been the awareness instilled in personnel of fatigue processes and their symptoms. Aircraft structural integrity program tasks encompass the use of design information, the use of design analyses and development tests, full scale testing, and the compilation of fleet management data. O.C.

**A85-50127**

**THE STRUCTURAL DYNAMICS OF ELECTRO-IMPULSE DE-ICING ON THE LEAR FAN KEVLAR COMPOSITE LEADING EDGE**

T. PARAMASIVAM and G. W. ZUMWALT (Wichita State University, KS) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 15 p. refs
(SAE PAPER 850917)

Attention is given to results obtained to date in analytical studies and laboratory tests of the electro-impulse deicing method, designated 'EIDI', as applied to a Kevlar-reinforced composite wing leading edge under the direction of NASA-Lewis. EIDI uses copper coils inside the leading edge to discharge capacitors and thereby create a rapidly rising and falling electromagnetic field. The repulsive force generated in a fraction of a millisec within the leading edge skin serves to debond and expel attached ice. O.C.

**A85-50129**

**FLIGHT TESTING A LIQUID ICE PROTECTION SYSTEM ON A SINGLE-ENGINE AIRPLANE**

R. L. NEWMAN (Crew Systems Consultants, Yellow Springs, OH) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 10 p. refs
(SAE PAPER 850923)

The installation and testing of a freezing point fluid depressant ice protection system on a single-engine Cessna 206 is discussed. The system sprays an ethylene glycol solution over the leading edge of the wings, empennage, and lift struts. A slinger ring distributes fluid to the propeller and a glycol spraybar deices the windshield. Aft cg stability tests and forward cg control tests were performed to evaluate the handling qualities of the modified aircraft. The system's installation had no effect on the performance of the aircraft. The technique used to estimate droplet diameter is explained. Samples of some flight testing situations are presented. The results revealed the ice protection system is capable of preventing ice accumulation. I.F.

**A85-50130**

**SPORT AIRCRAFT DESIGN TRENDS - SHAPING THE FUTURE OF GENERAL AVIATION**

S. K. WOOD SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 11 p. refs
(SAE PAPER 850881)

The rapidity with which sport aircraft designers can develop and test novel configutation concepts inexpensively has drawn attention to their efforts as a major source of technological innovation. A historical account is presently given for noteworthy sport aircraft development contributions to aeronautical progress, and such recent, highly innovative designs as the Rutan (1975) Vari-Eze are assessed as sources of enhanced efficiency general aviation aircraft configurations. Future projections are made on the basis of recent design trends. O.C.

**A85-50131**

**CONTOUR ASSESSMENT OF FORMED WING PANELS**

H. R. COOK (AVCO Corp., Avco Aerostructure Div., Nashville, TN) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 8 p.
(SAE PAPER 850884)

A procedure which utilizes finite element analysis in the contour assessment of formed wing panels is described. This procedure was designed to test age-formed integrally stiffened aluminum alloy panels with skin thickness ranging from 0.50 to 2.00 inches. The first step in the procedure involves the creation of a finite element model, which reflects the bidirectional stiffness of the panel in conjunction with local deviations from contour, using the MSC/NASTRAN computer program. Then finite element analysis, using converted inspection data, is performed to determine the forces required to close the local gaps to within specified shimming allowances. These results are compared to allowable fit-up forces and from this comparison contour adjustment can be determined. An example of the implementation of this procedure on an integrally stiffened panel segment is given. I.F.

**N85-34135*#** National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.

**FLIGHT TESTING THE FIXED-WING CONFIGURATION OF THE ROTOR SYSTEMS RESEARCH AIRCRAFT (RSRA)**

G. W. HALL and P. M. MORRIS (Army Aeromechanics Lab.) St. Louis, Mo. Army Aviation Systems Command Jun. 1985 17 p
(NASA-TM-86762; REPT-85283; NAS 1.15:86762; USAAVSCOM-TM-85-A-4) Avail: NTIS HC A02/MF A01 CSCL 01C

The Rotor Systems Research Aircraft (RSRA) is a unique research aircraft designed to flight test advanced helicopter rotor system. Its principal flight test configuration is as a compound helicopter. The fixed wing configuration of the RSRA was primarily considered an energy fly-home mode in the event it became necessary to sever an unstable rotor system in flight. While it had always been planned to flight test the fixed wing configuration, the selection of the RSRA as the flight test bed for the X-wing rotor accelerated this schedule. This paper discusses the build-up to, and the test of, the RSRA fixed wing configuration. It is written primarily from the test pilot's perspective. Author

**INTELLIGENT REDUNDANT ACTUATION SYSTEM REQUIREMENTS AND PRELIMINARY SYSTEM DESIGN**

P. DEFEO, L. J. GEIGER, and J. HARRIS Sep. 1985 80 p
(Contract NAS2-12081)
(NASA-CR-177366; NAS 1.26:177366; HR-73600253) Avail: NTIS HC A05/MF A01 CSCL 01C

Several redundant actuation system configurations were designed and demonstrated to satisfy the stringent operational requirements of advanced flight control systems. However, this has been accomplished largely through brute force hardware redundancy, resulting in significantly increased computational requirements on the flight control computers which perform the failure analysis and reconfiguration management. Modern technology now provides powerful, low-cost microprocessors which are effective in performing failure isolation and configuration management at the local actuator level. One such concept, called an Intelligent Redundant Actuation System (IRAS), significantly reduces the flight control computer requirements and performs the local tasks more comprehensively than previously feasible. The requirements and preliminary design of an experimental laboratory system capable of demonstrating the concept and sufficiently flexible to explore a variety of configurations are discussed. **AN AUTOMATED TECHNIQUE FOR ENCASING SPECIFIC PAYLOADS WITH LOW-DRAG FAIRINGS Ph.D. Thesis**

S. R. FOX 1984 492 p
Avail: Univ. Microfilms Order No. DA8507365

The energy crisis and the recent advances in technology have provided the incentive to develop an automated analytical technique that will design low-speed, low-drag vehicles which encase specific payloads. The present work represents an effort to develop such a technique by the coupling of a flow analysis method, an optimization method, a shape perturbation scheme, and a three-dimensional plotting routine. This technique, which is applicable or easily adaptable to both aerodynamic and submerged hydrodynamic vehicle designs, orchestrates shape modifications to an arbitrary circumscribing body within the constraints stipulated by the specific payload. The evidence to date indicates that with astute modeling the present technique can produce low-drag, cost-effective designs. Dissert. Abstr.

**DESIGN AND TESTING OF AN ENERGY-ABSORBING CREWSEAT FOR THE F/FB-111 AIRCRAFT. VOLUME 2: DATA FROM SEAT TESTING Final Report, May 1983 - May 1985**

S. J. SHANE Washington NASA Sep. 1985 337 p 3 Vol.
(Contract NAS1-17387)
(NASA-CR-3917; NAS 1.26:3917; TR-84428-VOL-2) Avail: NTIS HC A15/MF A01 CSCL 01C

The unacceptably high injury rate during the escape sequence (including the ejection and ground impact) of the crew module for F/FB-111 aircraft is reviewed. A program to determine if the injury potential could be reduced by replacing the existing crewseats with energy absorbing crewseats is presented. An energy absorbing test seat is designed using much of the existing seat hardware. An extensive dynamic seat test series, designed to duplicate various crew module ground impact conditions is conducted at a sled test facility. Comparative tests with operational F-111 crewseats are also conducted. After successful dynamic testing of the seat, more testing is conducted with the seats mounted in an F-111 crew module. Both swing tests and vertical drop tests are conducted. The vertical drop tests are used to obtain comparative data between the energy absorbing and operational seats. Volume 1 describes the energy absorbing test seat and testing conducted, and evaluates the data from both test series. Volume 2 presents the data obtained during the seat test series, while Volume 3 presents the data from the crew module test series. Author

**PLANETARY-GEAR-SUPPORT BEARING TEST RIG DESIGN Contractor Report, 8 Feb. 1983 - 8 Jan. 1985**

J. W. ROSENLIEB Mar. 1985 81 p
(Contract NAS3-23702)
(NASA-CR-174927; NAS 1.26:174927; AT85T004) Avail: NTIS HC A05/MF A01 CSCL 01C

A test rig was designed to evaluate the performance of a spherical roller bearing with a geared outer ring operating under conditions similar to those of a planet bearing in a helicopter transmission. The configuration is an extension of the widely accepted four-square gearbox arrangement. It provides for testing of two bearings simultaneously with outer ring rotation, misalignment, diametrically opposed loading through the gear teeth, and under race lubrication. Instrumentation permits the measurement of inner and outer ring temperature, bearing drag torque, degree of misalignment, outer ring speed, cage speed, and applied load. Author

**FATIGUE LIVES OF SPECIMENS REPRESENTING CRITICAL LOCATIONS IN MIRAGE 3 SPARS UNDER AUSTRALIAN AND SWISS TEST SPECTRA**
J. Y. MANN and G. W. REVILL 1985 68 p refs
(ARL-STRUC-R-415; AR-003-998) Avail: NTIS HC A04/MF A01

Full scale flight by flight fatigue tests on Mirage 3 fighter aircraft wings carried out at the Australian Aeronautical Research Laboratories (ARL) and the Swiss Eidgenossisches Flugzeugwerk (F+W) indicated much greater differences in the flights to failure than were expected. This problem has been investigated by conducting fatigue tests on specimens representing the major failure locations in the test wings - a blind anchor nut hole in the Australian case and an interference fit bolt hole in the Swiss case - under flight by flight loading sequences corresponding to those used in the full scale tests. Constant amplitude fatigue tests were also carried out on the blind hole specimens to provide information for life estimation purposes, and fractographic crack propagation studies were conducted on selected blind hole specimens. The experimentally determined lives of both types of specimen were greater under the Australian than the Swiss stress spectrum. Depending on the stress scaling factor considered the life ratio (Australian/Swiss flights) obtained by grouping together the two stress spectra and the two types of specimens were between 3 and 4.2. For the blind anchor nut hole specimens the predicted fatigue lives were less than those obtained experimentally at high stress scaling factors, but at low stress scaling factors the converse was the case. **THE EFFECTS OF PARAMETER VARIATION ON HELICOPTER PERFORMANCE M.S. Thesis**
C. K. KIM Mar. 1985 65 p
(AD-A156027; AD-E900451) Avail: NTIS HC A04/MF A01 CSCL 21G

Six different cases of helicopter main rotor parameter variation are considered for each of three different forward velocities - hover, sixty knots and one-hundred fifty knots in order to consider the effects of the changes on the total power required for the helicopter. The six cases included variations in rotor radius, rotor chord, solidity disc area, rotational velocity and tip velocity. Although strong positive or negative effects may be observed at some velocities, these trends are generally not the same at all velocities, indicating that trade-offs must be made in the design process in order to optimize the level flight performance. Special Operations Forces (SOF) possess requirements for unique air-to-ground attack and reconnaissance capabilities. Conventional air assets do not possess these capabilities. The present SOF air-to-ground attack weapon system, the AC-130 gunship, suffers from inherent tactical and system limitations. The study explores the requirements, the tactical employment concepts, and design considerations for a new gunship. The study concludes that a new gunship must not be a modified conventional airplane, but a dedicated weapon system designed and built for SOF. Author (GRA)

**A LIKELIHOOD FUNCTION METHOD FOR MULTIPLE AIRCRAFT MANEUVER TRACKING**
A. W. WARREN (Boeing Computer Services Co., Tukwila, WA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 415-422. refs

An algorithm for correlating and tracking high G acceleration targets in a multiple target environment is presented. The maneuver adaptation algorithm is based on hypothesis testing correlation logic and the likelihood function method. The surveillance system environment used to test the proposed tracking method is described. The hypotheses and logic for the maneuver tracking are given. The equations necessary for minimizing the likelihood distance function and the modified Gauss-Newton iterative method necessary for establishing the parameters are presented. The procedure for validating or rejecting the maneuver adaptation method is demonstrated. The application of the maneuver adaptation method to a multitarget tracking simulation is discussed. I.F.

**VALIDATION OF FAULT-FREE BEHAVIOR OF A RELIABLE MULTIPROCESSOR SYSTEM - FTMP: A CASE STUDY**
E. CLUNE, Z. SEGALL, and D. SIEWIOREK (Carnegie-Mellon University, Pittsburgh, PA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 2 . New York, IEEE, 1984, p. 1112-1120. refs
(Contract NAG1-190)

A program of experiments has been conducted at NASA-Langley to test the fault-free performance of a Fault-Tolerant Multiprocessor (FTMP) avionics system for next-generation aircraft. Baseline measurements of an operating FTMP system were obtained with respect to the following parameters: instruction execution time, frame size, and the variation of clock ticks. The mechanisms of frame stretching were also investigated. The experimental results are summarized in a table. Areas of interest for future tests are identified, with emphasis given to the implementation of a synthetic workload generation mechanism on FTMP. I.H.

**A FAULT AND DAMAGE TOLERANT NETWORK FOR AN ADVANCED TRANSPORT AIRCRAFT**
J. H. LALA, A. RAY, R. HARPER (Charles Stark Draper Laboratory, Inc., Cambridge, MA), and D. B. MULCARE (Lockheed-Georgia Co., Marietta, GA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 2 . New York, IEEE, 1984, p. 1138-1142. refs

The concept of a fault and damage tolerant communications network has been proposed previously for applications requiring high reliability. This concept is now being considered for an Advanced Transport Aircraft to connect sensors, actuators and subsystems to a central computer instead of redundant multiplexed data buses. In this paper, the reliability of such a network has been evaluated for a baseline configuration in which all sensors, actuators and communications subsystems are quadruply redundant. The processing overhead associated with managing the network redundancy, uncovering and identifying faults in the nodes and links of the network, and repairing the network in the presence of faults and damage are also estimated. These estimates are derived from execution times of actual algorithms running on a quad redundant computer that interfaces with the simulated network. Author

**THE DESIGN OF A FLUIDIC LOW-AIRSPEED SENSOR**
G. MON (U.S. Army, Harry Diamond Laboratories, Adelphi, MD) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 3 . New York, IEEE, 1984, p. 1708-1713. Navy-supported research. refs

A low-airspeed sensor (LASS) for military aircraft has been designed and tested. The design of this sensor is based on the interaction of the airsteam and the supply jet of a laminar proportional amplifier. This sensor consists of a fluidic sensing and output transducer system with the appropriate electronic signal processing and readout. The fluidic system is composed of a sensing amplifier and two pressure controlled oscillators (PCOs). The frequency output signals from the PCOs are monitored by using two inexpensive microphones and then converted to non-modulated output voltages by using two frequency-to-voltage converters. These output voltages are then compared with a difference amplifier. The output is displayed with a digital voltmeter and/or it could feed directly into the flight computer. Preliminary test results indicate that this LASS can detect airspeeds between 0 to 12 m/s. Author

**ADVANCED AVIONICS FOR THE NEXT GENERATION MILITARY HELICOPTERS**
C. BENNING, B. BOYD, and B. SKINNER (Texas Instruments, Inc., Defense Systems and Electronics Group, Dallas) Vertiflite (ISSN 0042-4455), vol. 31, Sept.-Oct. 1985, p. 24-27.

A development status and integrability evaluation is conducted for state-of-the-art helicopter avionics that may be used in the U.S. Army's 'LHX' rotorcraft development program, with a view to target acquisition time reduction, improvements in mission reliability, and partial or complete automation of pilot functions. Attention is given to a target acquisition subsystem incorporating a forward looking IR sensor and a daylight TV sensor, both of which are connected via high speed bus to the mission computer. Also used will be integrated navigation, communication and identification avionics, aircraft survivability equipment capable of suppressing enemy radar and IR sensor-controlled weapons, and a very high speed IC-based flight computer. O.C.

**A85-48074**
**SIMPLIFYING THE COCKPIT**
D. A. BITTON (Astronautics Corporation of America, Milwaukee, WI) Vertiflite (ISSN 0042-4455), vol. 31, Sept.-Oct. 1985, p. 45-47.

A development status and performance enhancement evaluation is made of a variety of proprietary advanced helicopter avionics and display system designs. Among these are the horizontal situation indicator and attitude director indicator CRT display, the former encompassing flight director cues, glidescope and localizer data, and turn and slip indicator, by means of which UH-60A Black Hawk helicopter pilots during the Grenada intervention obtained course and distance data. Attention is given to a range of CRT multifunction displays, which, as in the case of the 530MG display system, can facilitate nap-of-the-earth helicopter flight by overlaying vertical and horizontal steering commands, radar altitude, and terrain clearance, over forward looking IR sensor imagery. O.C.

**A85-49003**

**EVALUATION OF THE BENEFITS OF ADVANCED AVIONICS SYSTEM TECHNOLOGIES THROUGH COMPUTER SIMULATION**

R. S. LUCKEW, V. L. DUNCAN (USAF, Wright Aeronautical Laboratories, Wright-Patterson AFB, OH), and R. BRODERSON (Battelle Memorial Institute, Columbus, OH) IN: Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 . La Jolla, CA, Society for Computer Simulation, 1984, p. 13-18.

Attention is given to the approach employed by the U.S. Air Force's Wright Aeronautical Laboratories in the evaluation of advanced terrain-following/terrain-avoidance and threat-and-obstacle-avoidance concepts. This methodology simultaneously treats weather, terrain, and defenses as threats, while generating an optimal aircraft penetration path; this path is then converted into a realizable flight path by the BLUEMAX2 flight path generator, and the path data is fed into an 'attrition module' that calculates the probability of aircraft loss on the basis of the given aircraft and scenario. The entire scheme is noted to be adaptable to the examination of such other problems as those related to stealth, ECM, and combinations of these with terrain and threat avoidance techniques. O.C.

**A85-49091**

**MEETING THE CHALLENGE OF ESM/ECM INTEGRATION**

T. H. GREER (Litton Applied Technology, Systems Development Dept., Sunnyvale, CA) Defense Electronics (ISSN 0278-3479), vol. 17, Sept. 1985, p. 74, 76, 78, 80, 82.

Despite the inherent conflict between the basic functions of an airborne radar warning receiver (RWR) and an active onboard jammer system, there is a functional similarity in that both systems must monitor the electromagnetic environment and obtain emitter parameter data in order to perform their distinctly specialized functions. Examples of potential data flow between RWRs and jammers are presented to demonstrate that it is possible to minimize inherent functional conflicts and enhance individual system performance with a well-considered jammer/RWR interface. V.L.

**A85-49949**

**WILL ADVANCED FIGHTER AVIONICS OPERATE WHEN NEEDED?**

Aerospace Engineering (ISSN 0736-2536), vol. 5, Sept. 1985, p. 28-32.

Performance capabilities and availability of avionics systems for combat aircraft are discussed comparatively taking into account major recent improvements brought about through subsystem integration, information fusion, and hardware improvements. It is noted that the vulnerable and expensive unhardened Avionics Intermediate Shops, highly susceptible to battle damage, can be eliminated by introducing on-aircraft maintenance capability. Such issues as spare parts commonality and complexity and fault tolerance of multiple data processors are also addressed. It is concluded that availability of fighter avionics can be markedly improved by functionally pooling the multiple processing resources throughout the system as common system resources. L.T.

**DETERMINATION OF INSTRUMENT ERRORS BY COMPATIBILITY CHECKING: RESULTS FROM DYNAMIC FLIGHT TEST DATA**

R. A. FEIK Sep. 1984 30 p refs

(ARL/AERO-R-162; AR-003-968) Avail: NTIS HC A03/MF A01

The considerable potential benefits of compatibility checking of aircraft dynamic flight data have in the past not been fully realized when applied to real data. It is suggested in this report that this is partly due to the presence of errors in the real data which are not usually accounted for in computer simulation studies. When factors such as accelerometer offset from center of gravity, measurement time delays and other non-linearities are accounted for, good results can be achieved with moderate quality instrumentation. The effect of these factors on the identified instrument errors are studied in this report and confidence in the results established by a careful comparison with instrument calibrations and expected errors. Other considerations, such as the influence of maneuver shape the inclusion of altitude record, are also discussed, and the conditions for successful application of compatibility checking techniques to flight data are summarized. The importance of understanding the instrumentation system is highlighted. Author

**A NEW ERA OF FUEL CONTROLS**

L. WATSON (Chandler Evans, Inc., East Hartford, CT) Vertiflite (ISSN 0042-4455), vol. 31, Sept.-Oct. 1875, p. 38, 39.

The Adaptive Fuel Control unit destined for the T-800 turboshaft Advanced Technology Engine of the LHX helicopter program completed its initial flight evaluation in February, 1985. The units automatic and adaptive features enhanced the test vehicle's handling and reduced pilot workload, in keeping with LHX development goals. Also discussed is the EMC-32 Full Authority Digital Electronic Control system, which provides complete power management on all engine operating regimes, and combines full self-diagnostic capability with a simplified hydromechanical system design to minimize unit removals, reduce maintenance time, and cut engine response time in half. O.C.

**A85-49021*** National Aeronautics and Space Administration. Lewis Research Center, Cleveland, Ohio.
**A GENERALIZED COMPUTER CODE FOR DEVELOPING DYNAMIC GAS TURBINE ENGINE MODELS (DIGTEM)**
C. J. DANIELE (NASA, Lewis Research Center, Cleveland, OH) IN: Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 . La Jolla, CA, Society for Computer Simulation, 1984, p. 212-221. Previously announced in STAR as N84-12166. refs

This paper describes DIGTEM (digital turbofan engine model), a computer program that simulates two spool, two stream (turbofan) engines. DIGTEM was developed to support the development of a real time multiprocessor based engine simulator being designed at the Lewis Research Center. The turbofan engine model in DIGTEM contains steady state performance maps for all the components and has control volumes where continuity and energy balances are maintained. Rotor dynamics and duct momentum dynamics are also included. DIGTEM features an implicit integration scheme for integrating stiff systems and trims the model equations to match a prescribed design point by calculating correction coefficients that balance out the dynamic equations. It uses the same coefficients at off design points and iterates to a balanced engine condition. Transients are generated by defining the engine inputs as functions of time in a user written subroutine (TMRSP). Closed loop controls can also be simulated. DIGTEM is generalized in the aerothermodynamic treatment of components. This feature, along with DIGTEM's trimming at a design point, make it a very useful tool for developing a model of a specific turbofan engine. B.W.

**ROLLS' TAY ENGINE MEETS SCHEDULE FOR GULFSTREAM 4 FIRST FLIGHT**
S. W. KANDEBO Aviation Week and Space Technology (ISSN 0005-2175), vol. 123, Sept. 23, 1985, p. 103, 105, 107.

The components of the Rolls-Royce Tay engine, which is to be used in the Gulfstream 4 and Fokker 100 aircraft, are discussed. The fan section, which is composed of a 44-inch-diameter fan with 22 wide chord, solid snubberless blades, is described. Low airflow noise generation and increased air intake were achieved by raising the bypass ratio of the engine to 3.1. The design and composition of the three-stage intermediate pressure compressor are discussed. The features of the high-pressure turbine system, the airflow control system, and the combustion system are explained. The maintenance schedule of the Tay engine is described. The differences in the engine design for the two aircraft are presented. I.F.

**PROP JET SINGLES HAVE ARRIVED**
J. A. SCHWEIBOLD and M. MOLISH, II (General Motors Corp., Allison Gas Turbine Div., Indianapolis, IN) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 10 p.
(SAE PAPER 850882)

The development of turboprop and turboshaft engines for single and multiengine aircraft is discussed. The initial development of small gas turbine engines and their use and the development of the first light turboprop aircraft are described. The current turboprop and turboshaft engines were designed with a compact reserve air flow featuring a modular layout so they could be used in all single and multiengine aircraft. A description of the system development for the engine, which concentrated on detail and practical development, is provided. The modern turboprop engine is compact, lightweight, powerful, simple to operate, easy to maintain, and reliable. It provides an aircraft with improved takeoff and landing performance, high climb and descent profiles, increased airspeed, a reduction in outside noise, and increased load. A low cost turboprop engine, which retains all the high quality characteristics associated with a turboprop engine, is currently being developed. I.F.

**A85-50114**
**SINGLE-ENGINE PROPULSION IMPROVEMENT THROUGH INTERCOOLING**
J. H. WELLS (Cessna Aircraft Co., Wichita, KS) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 8 p. refs
(SAE PAPER 850894)

The use of air-to-air intercooling between a small aircraft engine's turbocharger and piston inlets allows operation at higher power with lean air-fuel mixtures, while observing cooling or detonation margin limitations; this represents specific fuel consumption improvements at a given output power. Intercoolers can be selected from available cores, or sized specifically to suit airframe requirements. The critical consideration for intercooler sizing is the critical altitude during maximum power climb. O.C.

**A85-50115**
**PORSCHE AIRCRAFT ENGINE P F M 3200**
H. BOTT and H. DORSCH (Porsche AG, Weissach, West Germany) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 16 p.
(SAE PAPER 850895)

A major automobile manufacturer is developing a family of general aviation aircraft engines for the 200-300 hp market; the first such engine to complete certification is a horizontally opposed six-cylinder design generating 212 hp at takeoff with full exhaust muffling, which employs fuel injection and is cooled by an engine-driven fan. A noteworthy feature of this propulsion system is the pilot's ability to control engine power, speed, and fuel mixture to continually optimized values by means of a single lever. Both AVGAS and MOGAS can be used as fuel. The engine is distinguished by low operating cost, low exterior noise, minimum internal vibration and noise, and ease of control. O.C.

**A85-50120**
**CONVERSION OF SMALL AIRCRAFT TO ALLISON TURBINE POWER**
T. F. PIERCY (General Motors Corp., Allison Gas Turbine Div., Indianapolis, IN) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 12 p.
(SAE PAPER 850906)

Allison Gas Turbine Division, General Motors Corporation, has produced over 20,000 Model 250 gas turbine engines. While the major use of the engine to date has been the turboshaft version for helicopters, many turboprop applications exist and numerous new applications of the turboprop version are in process in the international market. Based on the positive reception of the turboprop engine, Allison has begun a marketing program for the engine in the domestic fixed-wing aircraft market. A major effort to date is the conversion by Allison of a Beechcraft Bonanza A-36 for use in demonstrations of the marked performance improvements with this new powerplant. Author

**AN ELECTRONIC LIMITER FOR AIRCRAFT ENGINES**
A. BROWN (Bendix-Avalex, Inc., St. Laurent, Canada) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 8 p.
(SAE PAPER 850910)

An Electronic Limiter System (ELS), which provides automatic torque and temperature limiting during the critical phase of flight by controlling the fuel controls governing pressure for an aerobatic turboprop engine, is discussed. The operation of the ELS using its Electronic Limiter Unit (ELU), interface valve, shutoff valve, and engine harness is described. The ELU contains the most advanced software system available; it can perform self tests, recover from simple failures, and recalibrate without using trim-pots. The ELU hardware consists of a digital board, an analog board, and a power board. A control algorithm based on a proportional plus integral control for limiting inputs of torque pressure, interturbine temperature, and propeller speed is explained. The performance tests results have demonstrated that with the ELS it is possible to extend the capabilities of conventional gas turbine fuel controls without using complete electronic systems. I.F.

**AERODYNAMICS OF LIQUID-COOLED AIRCRAFT ENGINE INSTALLATIONS**

S. J. MILEY (Texas A&M University, College Station) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 12 p. refs
(SAE PAPER 850896)

A comparative evaluation is conducted of the aerodynamic characteristics of liquid-cooled aircraft engine installations with which experience has been gained, often as early as the Second World War. Attention is given to primary design considerations for inlets, diffusers, and warm air exit ports, with emphasis on air inlet aerodynamics and the characteristics of radiator core designs. Unique 'ring radiator' installations are noted which were originated by Kuchemann and Weber (1946). O.C.

**HIGH PRESSURE COMPRESSOR COMPONENT PERFORMANCE REPORT**

S. J. CLINE, W. FESLER, H. S. LIU, R. C. LOVELL, and S. J. SHAFFER Sep. 1983 170 p
(Contract NAS3-20643)
(NASA-CR-168245; NAS 1.26:168245; R82AEB437) Avail: NTIS HC A08/MF A01 CSCL 21E

A compressor optimization study defined a 10 stage configuration with a 22.6:1 pressure ratio, an adiabatic efficiency goal of 86.1%, and a polytropic efficiency of 90.6%; the corrected airflow is 53.5 kg/s. Subsequent component testing included three full scale tests: a six stage rig test, a 10 stage rig test, and another 10 stage rig test completed in the second quarter of 1982. Information from these tests is used to select the configuration for a core engine test and an integrated core/low spool test. The test results will also provide data base for the flight propulsion system. The results of the test series with both aerodynamic and mechanical performance of each compressor build are presented. The second 10 stage compressor adiabatic efficiency was 0.848 at a cruise operating point versus a test goal of 0.846. E.A.K.

A series of interdisciplinary modeling and analysis techniques that were specialized to address three specific hot section components are presented. These techniques will incorporate data as well as theoretical methods from many diverse areas including cycle and performance analysis, heat transfer analysis, linear and nonlinear stress analysis, and mission analysis. Building on the proven techniques already available in these fields, the new methods developed will be integrated into computer codes to provide an accurate, and unified approach to analyzing combustor burner liners, hollow air cooled turbine blades, and air cooled turbine vanes. For these components, the methods developed will predict temperature, deformation, stress and strain histories throughout a complete flight mission. Author

The fan configuration for the general Electric/NASA Energy Efficient Engine was selected following an extensive preliminary design study. The fan has an inlet radius ratio of 0.342 and a specific flowrate of 208.9 Kg/sec/sq. m (42.8 1bm/sec/sq. ft). The design corrected tip speed is 411.5 m/sec (1350 ft/sec) producing a bypass flow total-pressure ratio of 1.65 and a core flow total-pressure ratio of 1.6. The design bypass ratio is 6.8. The aerodynamic design point corresponds to the maximum climb power setting at Mach 0.8 and 10.67 Km (35,000 ft) altitude. The fully-instrumented fan component was tested in the Lynn Large Fan Test Facility in 1981. The overall performance results, reported herein, showed excellent fan performance with the fan meeting all of its component test goals of flow, efficiency and stall margin. Author

**SHROUD SEGMENTS FOR UNSHROUDED BLADE TURBINES**

R. S. ATTWOOD 1 Feb. 1985 13 p
(PNR-90260) Avail: NTIS HC A02/MF A01

The thermal requirements of shroud segments for unshrouded blade turbines were assessed by examining the thermal gradient through various types of section. For sections involving ceramic coatings, coating thickness required is defined and related to the cost in terms of cooling air flow. A limitation associated with the use of a compliant layer, as a result of its relatively low conductivity, is discussed. Transpiration of cooling air through the porous compliant layer is suggested. A method of comparative assessment of engine and rig thermal gradients and cycles was used to define a set of test conditions. Author (ESA)

A device which increases the energy efficiency of aircraft wherein a wingtip pusher propeller is positioned aft of the wingtip to rotate in the crossflow of the wingtip vortex is presented. The propeller rotates against the vortex swirl creating additional thrust from and attenuating the wingtip vortex by simultaneously extracting energy from the vortex and converting it to propeller blade induced thrust while injecting its high energy wake into the vortex axial flow to dissipate the vortex. The device increases aircraft fuel efficiency by simultaneously increasing thrust and decreasing vortex induced drag. By attenuating the vortex safety to following aircraft is maximized.

A swirler for a gas turbine engine combustor is disclosed for simultaneously controlling combustor flow rate, swirl angle, residence time and fuel-air ratio to provide three regimes of operation. A first regime is provided in which fuel-air ratio is less than stoichiometric, NOx is produced at one level, and combustor flow rate is high. In a second regime, fuel-air ratio is nearly stoichiometric, NOx production is less than that of the first regime, and combustor flow rate is low. In a third regime, used for example at highoff, fuel-air ratio is greater than stoichiometric and the combustor flow rate is less than in either of the other regimes.

**OPTIMALLY DESIGNED PROPELLERS CONSTRAINED BY NOISE Ph.D. Thesis**
C. J. MILLER 1984 191 p
Avail: Univ. Microfilms Order No. DA8507731

A design tool is developed that will produce an optimum propeller geometry for a given trade-off between noise and performance. A vortex model is used for the aerodynamics and a subsonic compact source model for the noise analysis. Optimizing the twist, chord and sweep distributions produced blades with favorable tradeoffs between noise and performance. The techniques used for noise reduction include: an inboard loading shift, diameter reduction, rotational speed reduction, increased blade sweep, and blade number increase. The trade-offs for the optimized blades show that, for the straight blade, the most effective noise reduction method is to increase the blade number which both increases efficiency and decreases the blade number which both increases efficiency and decreases the noise. This is followed by blade sweep, which can decrease the noise up to 3 dBA with no efficiency loss, and rotational speed reduction, which reduces noise by 4 dBA per percent in efficiency loss. Results demonstrate that this design tool is not only effective, but useful in the search for more efficient and lower noise propulsion methods.

Turbofan engine technologies required for the years 2000 to 2010 were studied, to assess the benefits of those technologies, and to formulate programs for developing the technologies required for that time period. Preliminary technology concepts that might be amenable to future development were ranked. Cycle studies, flowpath definition studies, and mechanical configuration studies were used to identify and establish the feasibility of the technologies that would be required in the 2000 to 2010 time frame. It is shown that a turbofan engine with advancements in aerodynamics, mechanical arrangements, and materials offer significant performance improvements over 1988 technology. The benefits of technologies are assessed using fuel burn and direct operating cost plus interest (DOC+I). The concepts could yield thrust specific fuel consumption benefits of almost 16%, fuel burn benefits of up to 24% and DOC+I benefits up to 14% in a long-range airplane relative to energy efficient engine technology levels. Technology development programs are formulated and recommended to realize those benefits

This report describes the work performed on a thermal barrier coating support technology task of the Energy Efficient Engine Component Development Program. A thermal barrier coating (TBC) system consisting of a Ni-Cr-Al-Y bond cost layer and ZrO2-Y2O3 ceramic layer was selected from eight candidate coating systems on the basis of laboratory tests. The selection was based on coating microstructure, crystallographic phase composition, tensile bond and bend test results, erosion and impact test results, furnace exposure, thermal cycle, and high velocity dynamic oxidation test results. Procedures were developed for applying the selected TBC to CF6-50, high pressure turbine blades and vanes. Coated HPT components were tested in three kinds of tests. Stage 1 blades were tested in a cascade cyclic test rig, Stage 2 blades were component high cycle fatigue tested to qualify thermal barrier coated blades for engine testing, and Stage 2 blades and Stage 1 and 2 vanes were run in factory engine tests. After completion of the 1000 cycle engine test, the TBC on the blades was in excellent condition over all of the platform and airfoil except at the leading edge above midspan on the suction side of the airfoil. The coating damage appeared to be caused by particle impingement; adjacent blades without TBC also showed evidence of particle impingement. B.W.

**ACTIVE CONTROL OF THE BUFFETING RESPONSE ON A LARGE MODERN CIVIL AIRPLANE CONFIGURATION IN WIND TUNNEL**

R. DESTUYNDER (ONERA, Chatillon-sous-Bagneux, France) (International Symposium on Aeroelasticity and Structural Dynamics, 2nd, Aachen, West Germany, Apr. 1-3, 1985) ONERA, TP, no. 1985-26, 1985, 9 p.
(ONERA, TP NO. 1985-26)

A large half wing, aeroelastic model of a civil transport aircraft has been built to study the unsteady aerodynamic response of active flaperons in the S1 ONERA wind tunnel. Then, after analyzing the buffet envelope at large angles of attack in a large range of Mach numbers, it was decided to implement an active control to reduce the dynamic wing response due to the buffeting phenomenon. It was designed as a multicontrol system, operating on the various eigen modes of the wing structure by introduction of unsteady aerodynamic damping forces generated by a flaperon motion. The amount of damping which was achieved in the wind tunnel tests shows that a significant improvement can be expected from this control system, regarding fatigue stresses, passenger and crew comfort and extension of the flight envelope. Author

**FEEDBACK CONTROL FOR FUEL-OPTIMAL DESCENTS USING SINGULAR PERTURBATION TECHNIQUES**

D. B. PRICE (NASA, Langley Research Center, Hampton, VA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 198-203.

In response to rising fuel costs and reduced profit margins for the airline companies, the optimization of the paths flown by transport aircraft has been considered. It was found that application of optimal control theory to the considered problem can result in savings in fuel, time, and direct operating costs. The best solution to the aircraft trajectory problem is an onboard real-time feedback control law. The present paper presents a technique which shows promise of becoming a part of a complete solution. The application of singular perturbation techniques to the problem is discussed, taking into account the benefits and some problems associated with them. A different technique for handling the descent part of a trajectory is also discussed. G.R.

**DESIGN OF OPTIMAL LOW-SENSITIVITY CONTROLLERS WITH PRESPECIFIED EIGENVALUES - APPLICATION TO AIRCRAFT LATERAL MOTION**

N. N. SORIAL (Alexandria, University, Egypt) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 384-386. refs

This paper considers the design of an optimal controller to an aircraft performing a lateral maneuver. The closed-loop system has a prescribed set of eigenvalues. Moreover, the closed-loop system is optimal with respect to quadratic performance index and/or its trajectory sensitivity with respect to small variations in the plant parameters from their nominal values. The predicted responses of the resulting closed-loop system are determined for nominal and perturbed plant parameters. The results show that the closed-loop system preserves the achieved properties even in the presence of small deviations in system parameters. Author

**DESIGN OF DECOUPLED LONGITUDINAL FLIGHT CONTROL LAWS UTILIZING EIGENSYSTEM ASSIGNMENT**

K. M. SOBEL and E. Y. SHAPIRO (Lockheed-California Co., Burbank, CA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 403-408. refs

Eigenstructure assignment and command generator tracking are applied to the design of pitch pointing and vertical translation control laws for the AFTI F-16 aircraft. The desired eigenvectors are chosen based upon performance and sensitivity considerations. Feedforward command tracking gains are computed to ensure steady state following to the pilot's command. An interesting feature of the design is that both modes may be implemented using the same feedback gains. Furthermore, the aircraft exhibits a conventional response with acceptable handling qualities when a flaperon failure occurs. Author

**DESIGN OF A PITCH ORIENTATION CONTROL SYSTEM FOR AIRCRAFT CONTROL IN STALL REGION**

M. M. KULKARNI and V. N. JOSHI (Indian Institute of Technology, Bombay, India) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 434-439. refs

A pitch orientation control system (POCS) has been developed for T-tail aircraft experiencing control reversal with pitch-up in unstable flight regimes. The design approach was based on the short period transfer function for a system of simplified equations having two degrees of freedom. The transfer function describes the situation in which a pole and a zero appear in the right hand control plane. A system of eight dynamic compensators is included to provide stable control in prestall and poststall conditions. The results of a computer simulation of the proposed scheme showed that stable control can be obtained using only one compensator parameter value for the prestall and poststall regimes, respectively. I.H.

**A85-47702**

**AN ADAPTIVE CONTROL OF AN ELECTRO-HYDRAULIC POSITION CONTROL SYSTEM**

M. M. KULKARNI, D. B. TRIVEDI, and J. CHANDRASEKHAR (Indian Institute of Technology, Bombay, India) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 443-448. refs

In a hydraulic system input/output relation of the control valve is nonlinear and load dependent. An adaptive control would therefore be necessary for large changes in load parameter. The paper considers a position control system. This becomes a third order system under inertia load and with compressibility of oil considered. Load pressure and integration of the load pressure are suggested as additional feedbacks. PRBS is used as the input signal and the cross-correlation technique is used for identification of the impulse response. Performance parameters are defined and then they are brought to their respective model parameters by iteratively adjusting the gains of the additional feedback loops. An 8-bit micoroprocessor based system has been useful for identification and control. The proposal seems practical and can be economically implemented. Author

**A85-47717**
**HOW AUTOPILOT REQUIREMENTS CONSTRAIN THE AERODYNAMIC DESIGN OF HOMING MISSILES**
F. W. NESLINE and M. L. NESLINE (Raytheon Co., Missile Systems Div., Bedford, MA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 2 . New York, IEEE, 1984, p. 716-730. refs

When an aerodynamically controlled missile is used in a homing application, the transfer function of the vehicle becomes part of an overall homing and attitude control feedback loop. Therefore, the missile must be designed so that its aerodynamics meet the constraints required to accomplish homing successfully. For radar homing, these constraints are stringent enough to require an autopilot that controls the aerodynamic transfer function using body instruments and internal feedback loops. Even with an autopilot, there are limits on the aerodynamic moment parameters such as M-alpha and M-delta that must be considered at the very beginning of the missile system design. This paper explores the nature and sources of these limits and presents numerical examples to illustrate what kinds of numbers are required. Author

**A85-47734**
**FURTHER APPLICATION OF OUTPUT PREDICTIVE ALGORITHMIC CONTROL TO TERRAIN FOLLOWING**
M. E. BISE (Lear Siegler, Inc., Astronics Div., Dayton, OH) and J. G. REID (Systems Control Technology, Inc., Dayton, OH) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 2 . New York, IEEE, 1984, p. 937-942. refs

The utilization of Output Predicative Algorithmic Control (OPAC) in precision trajectory control is discussed. The design of OPAC, which is a flexible closed-loop system that performs prediction, desired future reference trajectory, and future control calculations in every cycle, is presented. The TTYLON program which computes aircraft dynamics, is described. The Trajectory Controller/Observer Design Aid System (TCODAS) software that controls the design and analysis of the control system is explained. The TTYLON Program was used to design a linearized math model of the F-111/MAW and multiple input control surfaces which was tested and proved suitable for low altitude flying. Both the 35-degree and 58 degree wing sweep models followed the programmed trajectory exactly. The 35-deg model had less oscillations in outparts, due to more direct lift, which resulted in a smoother ride. I.F.

**A FLUIDIC FLIGHT CONTROL SYSTEM DEMONSTRATOR**
R. L. WOODS (Texas, University, Arlington) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 3 . New York, IEEE, 1984, p. 1691-1694. refs
(Contract N00019-81-C-0351)

This paper presents the concepts and test results of a single-axis fluidic flight control system demonstrator. This demonstrator has a pilot input handle, a fluidic control circuit with an angular rate sensor for feedback, and a fluidic-input servoactuator. Long fluid transmission lines interconnect the three components as they would be in an aircraft. The hydraulic servoactuator can be driven by inputs from the handle or from the motion of the controller containing the rate sensor and thus illustrates the basic control actions necessary for flight control. The experimental test results presented show that the static gain of the system is correct with a position hysteresis of 1.2 percent and a noise of 1.5 percent peak-to-peak. The bandwidth of the system is 1.5 Hz under the limited conditions of the test. The system has the performance expected of a flightworthy control system. Author

**A85-47789**
**PERFORMANCE EVALUATION OF AN ELECTROFLUIDIC FLIGHT CONTROL ACTUATOR**
D. R. KEYSER (U.S. Navy, Naval Air Development Center, Warminster, PA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 3 . New York, IEEE, 1984, p. 1695-1700. refs

The feasibility of providing fluidic backup control of a fly-by-wire actuator was demonstrated in the laboratory. The concept is compatible with the Navy's Advanced Flight Control Actuation System and offers a realistic approach for providing control after loss of primary flight control caused by electromagnetic pulse or interference. Laboratory testing demonstrated how fluidics can enhance the survivability of fly-by-wire control systems. The test results also demonstrated that this design will provide satisfactory performance for flight testing in the T-2C Technology Demonstrator aircraft. Author

**A85-47790**
**FLUIDICS - A RELIABLE ALTERNATIVE FOR AIRCRAFT CONTROL**
R. BENOIT (Grumman Aerospace Corp., Bethpage, NY) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 3 . New York, IEEE, 1984, p. 1701-1707.

The development of fluidic flight control systems (FCS) for aircraft stabilization is discussed. Since the present Fly-By-Wire (FBW) system is susceptible to electronic interference, a nonelectric backup system is necessary. The fluidic system uses laminates, each performing a specific function, to provide sensing, computing, and controlling for the aircraft. Hydraulic oil from the basic hydraulic system is used for sensing and signal transmission. Particular emphasis is placed on the development of fluidic actuators. Fluidic FCS were compared to mechanical systems and FBW systems and proved to be the lightest, most cost effective, and best stabilizing backup system. I.F.

**FORWARD-SWEPT WING CONTROL SYSTEM DEVELOPMENT**
D. WALLER and J. BOUDREAU (Grumman Aerospace Corp., Bethpage, NY) IN: Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 . La Jolla, CA, Society for Computer Simulation, 1984, p. 92-106.

Attention is given to the X-29 Forward Swept Wing research aircraft's Flight Control System (FCS) Flight Simulation Facility with emphasis on implementation problems encountered that relate to this unique aircraft's specific features and the 'pilot in loop' requirement. The FCS's hardware/software simulator test configuration interfaces the X-29 flight simulator to the aircraft's flight control hardware. Mathematical models incorporated in the simulation system include those for the airframe and human (pilot) factors. Four different, basic strategies are used to determine model assignment: maximum realism, maximum dynamic accuracy, minimum number of interfaces, and minimum amount of software maintenance. O.C.

P. MOORE and D. M. PAGE (British Caledonian Airways, Ltd., Crawley, England) Journal of Navigation (ISSN 0020-3009), vol. 38, Sept. 1985, p. 413-422.

Design, use and performance features of the Delco transport aircraft performance management system (PMS) for flight economy during ascent, cruise and descent flight phases are described. PMS controls pitch and thrust and is composed of three LRUs: the control display, computer and the switching units. A soft altitude hold is implemented to maintain steady drag in the face of environmental vagueries and the economy gains from not resetting the power levels. Yielding a 1-3 percent fuel saving, the system is projected to repay its cost in a little over a year. An initial 3 mos training program, including simulator time, is combined with refresher courses to ensure full use of PMS during all flight phases. Test operational applications of PMS revealed the benefits of variable-speed climb. M.S.K.

**A FULL-TIME YAW DAMPER FOR THE STARSHIP FLYING SCALE PROTOTYPE**
L. R. JOHNSON (Beech Aircraft Corp., Wichita, KS) and S. S. YANG (Beech Aircraft Corp., Wichita; Wichita State University, KS) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 8 p.
(SAE PAPER 850912)

A flight test yaw damper for Dutch roll damping improvement has been designed for the Starship flying scale prototype. An analytical study was also performed using linear analysis of a wide variety of flight conditions. Flight test results confirmed a noticeable improvement in ride qualities with the yaw damper engaged. An unexpected benefit was improved directional handling qualities during deep-stall testing. **SIMULATION STUDY OF AN AUTOMATIC TRIM SYSTEM FOR REDUCING THE CONTROL FORCES ON A LIGHT TWIN AFTER AN ENGINE FAILURE**
E. C. STEWART and P. W. BROWN (NASA, Langley Research Center, Hampton, VA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 16 p. refs
(SAE PAPER 850913)

An automatic trim system for reducing the control forces after an engine failure on a light twin has been investigated on the Langley General Aviation Simulator. The system schedules open-loop trim tab deflections as a function of differential propeller slipstream dynamic pressure and freestream dynamic pressure. The system is described and the airplane-system static and dynamic characteristics are documented. Three NASA research pilots evaluated the effectiveness of the system for takeoff and landing maneuvers. A variety of off-nominal system characteristics were studied. The system was judged to be generally beneficial, providing a 2 to 3 point improvement in pilot rating for the tasks used in the evaluations. Author

**IMPROVED CAPABILITIES OF THE NEW GENERAL AVIATION DIGITAL AUTOPILOTS**
D. M. SAMPSON (Rockwell International Corp., Cedar Rapids, IA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 10 p.
(SAE PAPER 850914)

Digital autopilots are the final link in the introduction of digital avionics equipment to the general aviation market. Although previous analog autopilot systems generally provide excellent performance, digital systems possess many advantages not possible in general aviation analog autopilot systems. Digital autopilots, now available from various manufacturers, benefit from less weight, less cost, fewer wires, enhanced diagnostic capabilities, and enhanced performance. This paper explores these advantages using the Collins APS-85 as an example of an advanced general aviation digital autopilot. Author

**GROUND-BASED AND IN-FLIGHT SIMULATOR STUDIES OF FLIGHT CHARACTERISTICS OF A TWIN-FUSELAGE PASSENGER TRANSPORT AIRPLANE DURING APPROACH AND LANDING**
W. D. GRANTHAM, P. M. SMITH (PRC Kentron, Inc.), W. R. NEELY, JR. (AFSC Liaison Office, Hampton, Va.), P. L. DEAL, and K. R. YENNI Sep. 1985 55 p refs
(NASA-TP-2451; L-15941; NAS 1.60:2451) Avail: NTIS HC A04/MF A01 CSCL 01C

Six-degree-of-freedom ground-based and in-flight simulator studies were conducted to evaluate the low-speed flight characteristics of a twin-fuselage passenger transport airplane and to compare these characteristics with those of a large, single-fuselage (reference) transport configuration similar to the Lockheed C-5A airplane. The primary piloting task was the approach and landing task. The results of this study indicated that the twin-fuselage transport concept had acceptable but unsatisfactory longitudinal and lateral-directional low-speed flight characteristics, and that stability and control augmentation would be required in order to improve the handling qualities. Through the use of rate-command/attitude-hold augmentation in the pitch and roll axes, and the use of several turn coordination features, the handling qualities of the simulated transport were improved appreciably. The in-flight test results showed excellent agreement with those of the six-degree-of-freedom ground-based simulator handling qualities tests. As a result of the in-flight simulation study, a roll-control-induced normal acceleration criterion was developed. The handling qualities of the augmented twin-fuselage passenger transport airplane exhibited an improvement over the handling characteristics of the reference (single-fuselage) transport. B.W.

**DUAL TOWLINE SPIN-RECOVERY DEVICE Patent**
W. L. WHITE, inventor (to NASA) 3 Sep. 1985 9 p Filed 15 Sep. 1983 Supersedes N83-34934 (21 - 23, p 3738)
(NASA-CASE-LAR-13076-1; US-PATENT-4,538,778; US-PATENT-APPL-SN-532342; US-PATENT-CLASS-244-75-R; US-PATENT-CLASS-244-139; US-PATENT-CLASS-244-113)
Avail: US Patent and Trademark Office CSCL 01C

A device which corrects aerodynamic spin is described wherein a parachute exerts antispin forces on an aircraft to effect spin recovery. The dual parachute towlines and are each attached to the parachute and are attached to the rear fuselage equidistant to and on opposite sides of the aircraft centerline. As the parachute is deployed during spin, the parachute force acts through only the towing and exerts its force outboard of center on the aircraft. As a result, the parachute exerts not only an antispin torque, but additionally causes the aircraft to roll, creating a gyroscopic antispin rolling moment. The additional antispin rolling moment facilitates spin recovery by permitting a relatively smaller parachute to accomplish spin recovery equivalent to that of a larger parachute attached to the center of the rear fuselage.

(Contract NAG4-1)
(NASA-CR-176166; NAS 1.26:176166) Avail: NTIS HC A06/MF A01 CSCL 01C

Pilot/vehicle analysis techniques for optimizing aircraft handling qualities are presented. The analysis approach considered is based on the optimal control frequency domain techniques. These techniques stem from an optimal control approach of a Neal-Smith like analysis on aircraft attitude dynamics extended to analyze the flared landing task. Some modifications to the technique are suggested and discussed. An in depth analysis of the effect of the experimental variables, such as prefilter, is conducted to gain further insight into the flared land task for this class of vehicle dynamics.

As aircraft become larger and lighter due to design requirements for increased payload and improved fuel efficiency, they will also become more flexible. For highly flexible vehicles, the handling qualities may not be accurately predicted by conventional methods. This study applies two analysis methods to a family of flexible aircraft in order to investigate how and when structural (especially dynamic aeroelastic) effects affect the dynamic characteristics of aircraft. The first type of analysis is an open loop model analysis technique. This method considers the effects of modal residue magnitudes on determining vehicle handling qualities. The second method is a pilot in the loop analysis procedure that considers several closed loop system characteristics. Volume 1 consists of the development and application of the two analysis methods described above.

**A PRELIMINARY EVALUATION OF A FAILURE DETECTION FILTER FOR DETECTING AND IDENTIFYING CONTROL ELEMENT FAILURES IN A TRANSPORT AIRCRAFT**

W. T. BUNDICK Jul. 1985 85 p refs
(NASA-TM-87576; NAS 1.15:87576) Avail: NTIS HC A05/MF A01 CSCL 01C

The application of the failure detection filter to the detection and identification of aircraft control element failures was evaluated in a linear digital simulation of the longitudinal dynamics of a B-737 Aircraft. Simulation results show that with a simple correlator and threshold detector used to process the filter residuals, the failure detection performance is seriously degraded by the effects of turbulence.

**AN AEROELASTIC TESTING TECHNIQUE IN A STRAIGHT CASCADE WIND-TUNNEL**

E. SZECHENYI and PH. GIRAULT (ONERA, Chatillon-sous-Bagneux, France) IN: Measuring techniques for transonic and supersonic flow in cascades and turbomachines; Proceedings of the Seventh Symposium, Aachen, West Germany, September 21-23, 1983 . Aachen, Institut fuer Strahlantriebe und Turboarbeitsmaschinen, 1984, p. 4-1 to 4-8.

ONERA's straight cascade wind-tunnel situated in Modane can simulate two-dimensionally the transonic flow inside compressors at inlet Mach numbers varying from 0.5 to 1.0 and supersonic flow at Mach numbers of 1.2 and 1.4. Reynolds number simulation can be achieved by varying the tunnel pressure between the limits of 1.4 and 3 bar. The test cascade consists of six airfoil blades. Of these, the two central blades can be made to vibrate either in pitching or in heaving, though the test technique only requires one blade to vibrate. The possible frequencies of vibration are designed to simulate as far as possible the actual reduced frequencies of compressor blades. The unsteady aerodynamic measurements are made by means of pressure transducers mounted inside the airfoils. The pressure signals are treated digitally so as to give unsteady lift, moment, and pressure distributions in quasi-real time.

**EUROPEAN WORKSHOP ON PROBE CALIBRATIONS**

K.-D. BROICHHAUSEN, ED. (Aachen, Rheinisch-Westfaelische Technische Hochschule, West Germany) and T. FRANSSON, ED. (Lausanne, Ecole Polytechnique Federale, Switzerland) Aachen, West Germany, Institut fuer Strahlantriebe und Turboarbeitsmaschinen (Mitteilung, No. 84-02), 1984, 123 p. No individual items are abstracted in this volume.

Probe calibrations are presented for wind tunnel measurements of supersonic and transonic flow in turbomachines. Consideration is given to results from recent calibrations of the WP-11 wedge probe for the following wind-tunnel parameters: pitch angle coefficient; stagnation pressure coefficient; and static pressure coefficient. The design characteristics of a cone-shaped probe, the CP-L, are discussed. Calibration diagrams are presented for CP-L measurements in different nozzle configurations. Schematic diagrams of the probe calibration rigs are provided.

**WHY NOT HAVE A SIMULATOR TYPE FOR COMMUTER OPERATORS?**
S. ANDERSON (Rediffusion Simulation, Ltd., Crawley, England) ICAO Bulletin, vol. 40, May 1985, p. 12, 14, 15.

Almost all recurrent and conversion training can be carried out in a flight simulator, saving money and fuel, and limiting dangers of in-flight training. However, the high cost of the equipment and the lack of specific legislation have led to the exclusion of small commuters or regional operators from the use of flight simulators. The requirements and details of a projected scaled-down version of a flight simulator, advanced enough to replace the aircraft, but at a price justifiable to operators of smaller aircraft, than a commercial airliner, are discussed. The Seagull simulation computer system is described. I.S.

**CAUTRA ATC SIMULATOR STRIVES FOR REALISM**
A. PEYTAVIN (Direction Generale de l'Aviation Civile, Service Technique de la Navigation Aerienne, Paris, France) ICAO Bulletin, vol. 40, May 1985, p. 16-19.

The initial and advanced training for air traffic controllers provided by ENAC (Ecole Natitonale de l'Aviation Civile) is assisted by systematic use of the CAUTRA simulator, designed as a subsystem of the operational CAUTRA (Coordonnateur Automatique de Traffic Aerien) air traffic control system installed by ENAC in Toulouse. The CAUTRA simulator feeds simulation facilities, installed at all large French traffic control centers via the national telecommunications network. All new elements related to the airspace and aeronautical procedures that appear in the operational system are reproduced in the simulator subsystem. The components of the CAUTRA simulator, such as computers, telephony link, radar display, printers, etc., are described in detail. The School has 34 simulator positions, with a network comprising 37 remote positions. Currently 1500 exercises are available which represent 40,000 aircraft movements. The experiments carried out on the simulator may be designed to validate new airspace organization plans, the reorganization of the tasks of controllers manning a control position, or even the design of the controllers' work stations. I.S.

**ADVANCED FLIGHT TRAINING OFFERED TO CORPORATE AVIATORS**
E. J. SOWA (SimuFlite Training International, Inc., Dallas, TX) ICAO Bulletin, vol. 40, May 1985, p. 20-22.

The SimuFlite Training International flight training complex at the Dallas/Fort Worth International Airport uses new Phase-II level simulators and a new Line-Oriented Flight Training Operational approach to create realistic on-ground aircraft-flying experience. A Phase-II simulator employs a six-degree-of-freedom aircraft motion system, and accurately simulates near-ground, on-the-ground, and in-flight characteristics. It simulates the effects of crosswind, wind shear, wet and icy runway conditions and tire failures. The business-jet simulators employed at the training complex and capable of meeting the FAA Phase-II training requirements for operators of business/executive type aircraft, include SimuFlite's Learjet 35/36 system, and the simulators replicating the Learjet 55, Gulfstream III, Westwind 2, and Citation I/II. Simulators for the King Air 200 and Hawker-Siddeley 125-700 are soon scheduled for operation. I.S.

**A85-48859**
**GENERAL AVIATION NEEDS COST-EFFECTIVE FLIGHT SIMULATORS**
D. A. LOMBARDO (Frasca International, Inc., Champaign, IL) ICAO Bulletin, vol. 40, May 1985, p. 23-25.

Frasca's Models 141, 142, and 240 of fixed-wing GA aircraft, the GA helicopter simulators for Bell 206, Bell 212, and a VFR hover simulator were tested and are used in Frasca's model flight school situated at its own airport. In addition to these computer-based simulators, a new computer system, called computer interaction flight simulation (CIFS), has been recently developed under contract with NASA. In addition to normal simulator functions, CIFS provides many other possibilities. Multiple simulators, connected to a single instructor console will allow dramatically increased productivity, while the computer performs all record-keeping and grades student performance, allowing the instructor to be much more productive and creative. I.S.

**ROTORCRAFT SIMULATION AT AMES**
T. S. ALDERETE (NASA, Ames Research Center, Moffett Field, CA) IN: Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 . La Jolla, CA, Society for Computer Simulation, 1984, p. 39-49. refs

Attention is given to rotorcraft simulation experience at NASA's Ames research facility, which has involved complex mathematical modeling, high computational capability requirements, and strong influences from pilot motion and visual cues. A development history and performance assessment is presented for the rotorcraft simulation hardware, together with projections of near term development improvements of capabilities. Greater demand is anticipated for the simulation of all-digital helicopter flight control systems. O.C.

**A85-49019**

### ADVANCES IN FLIGHT SIMULATORS

J. A. SCHEPP (Singer Co., Link Flight Simulation Div., Binghamton, NY) IN: Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 . La Jolla, CA, Society for Computer Simulation, 1984, p. 192-206.

The primary impact of microprocessor development on flight training simulator design may be the encouragement of system architecture configurations in which computational functions associated with each major system are decoupled from each other. The systems are then complete with respect to both hardware and software; the only remaining links between simulator subdivisions are the paths by which common data are transmitted between major functions in a clearly identified and controlled global bus system. O.C.

**A85-49020**

### THE HISTORY AND FUTURE CONTRIBUTIONS OF CARCO SIMULATORS TO THE AEROSPACE INDUSTRY

J. M. CARTER (Carco Electronics, Menlo Park, CA) IN: Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 . La Jolla, CA, Society for Computer Simulation, 1984, p. 207-211.

A development history is presented for three-axis flight simulators designed for use in manned spacecraft and high performance missile and aircraft-related development programs. In order to satisfy gimbal stiffness, high mechanical resonance, good mechanical damping and low inertia, simulator gimbals fabricated from magnesium are used. Analog control systems remain popular with many users of these simulators. O.C.

### APPLYING SHEAR BEAM LOAD MEASURING TECHNIQUES TO PORTABLE PLATFORM SCALES FOR AIRCRAFT WEIGHING

H. NELSON (WEICO Corp., Lynnwood, WA) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 18 p.
(SAWE PAPER 1581)

An Aircraft Weighing System (AWS), in which the load weight is measured by sensitive shear deflection in the weighing platform structure, is described. Five portable components, the number of each determined by the types of aircraft to be weighed, compose the AWS: the platform scales, the scale access ramps, the spacer platforms, the cable assemblies, and the digital system electronics. One cable assembly connects each scale to the computer, which provides prompts, displays the gross weight to within 0.10 percent and the center of gravity to within 0.20 percent on the alpha-numeric display unit, and provides a printed record. The computer can also interface with the on-board WBTMS for the purpose of calibration from the ground, by use of a special interface card. Block diagrams are included. I.S.

**A85-49908**

### THE ROLE OF LOAD-CELL ROTATION IN AIRPLANE-WEIGHT DETERMINATION

E. J. GAUTHIER (Boeing Commercial Airplane Co., Seattle, WA) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 7 p.
(SAWE PAPER 1583)

Attention is given to a method of determining acceptable accuracy limits for an aircraft weighing test, and applying the acceptance criteria in such a way as to determine whether test results are acceptable or indicate that testing should continue. Acceptance testing includes a weighing process that involves physically moving the scales along the airplane jack points between the individual weighings. In multiple weighings, weight will appear to change and the center of gravity will appear to move; an analysis of the system allows the correlation of apparent center of gravity movement with weighing accuracy. O.C.

### SHOULD THEY FEEL JUST LIKE FLYING?

J. H. BRAHNEY Aerospace Engineering (ISSN 0736-2536), vol. 5, Sept. 1985, p. 9-15.

General capabilities and limitations of the existing ground-based flight simulators are reviewed. Attention is paid to synergistic six-degrees-of-freedom systems, Large-Amplitude Multimode Aerospace Simulator (LAMARS)-type systems, and the centrifuge-based Dynamic Flight Simulator (DFS). Their relative merits, such as the g onset rates, versatility, and complexity are discussed. The discussion also covers military rotorcraft simulators, which are capable of reproducing the nap-of-the-earth mission and low-altitude formation flights environment. Finally, the U.S. Air Force's Total In-Flight Simulator and the NT-33A in-flight simulator are described. L.T.

**A85-49948**

### SIMULATORS - HOW REAL DOES THE VISUAL SYSTEM NEED TO BE?

D. J. HOLT Aerospace Engineering (ISSN 0736-2536), vol. 5, Sept. 1985, p. 16-22.

An assessment is made of the degree of realism obtainable by means of computer-generated imagery (CGI) in state-of-the-art military aircraft mission simulators. CGI allows geographic data obtained from the U.S. Defense Mapping Agency or other intelligence sources to be programmed and projected in visually realistic terms, so that the pilot using the simulator can fly through a given region and get a strong sense of the terrain and other surface features; enemy tanks and aircraft, moreover, can be superposed on the given landscape to give a full combat scenario. O.C.

### A STUDY OF THE CONTROL OF PARTICULATE EMISSIONS FROM TURBINE ENGINE TEST CELLS Ph.D. Thesis

J. E. STEVENS, JR. 1984 197 p
Avail: Univ. Microfilms Order No. DA8508364

The United States Air Force has been cited in California for violation of visible opacity standards by the test cell buildings used for aircraft engine run-up during major engine overhaul. Recommendations to control emissions by conventional means, such as electrostatic precipitation or high-energy scrubbers with demisters, were deemed non-cost-effective (130 test cells at more than 1 million dollars per cell). As an alternative control measure, EPA Method 5 particulate sampling was used to characterize stack emissions during the incremental addition of cooling water to the engine exhaust/augmentator air discharge. Six water increments, from 230 (baseline) to 1200 gallons per minute, were tested. Increasing water injection rates to 801 gallons per minute significantly reduced engine-contributed test cell emissions for the J75-17 engine to 0.05 pounds particulate per million Btu. Water injection at 801 gallons per minute therefore represents the best available control technology for turbine engine test cells testing the J75 engine. Dissert. Abstr.

**IUS-1 - REDUNDANT INERTIAL MEASUREMENT UNIT TEST PLAN AND RESULTS**
L. W. MUELLER, L. DUBBERKE (Aerospace Corp., Los Angeles, CA), and J. VOLGER (USAF, Space Div., Los Angeles, CA) IN: Aerospace Applications Conference, Vail, CO, January 28-February 4, 1984, Digest . New York, IEEE, 1984, p. 59-77.

The Redundant Inertial Measurement Unit (RIMU) of the Inertial Upper Stage (IUS) rocket of the Shuttle has been tested according to a plan developed jointly by NASA and the USAF. The tests were carried out at the Eastern Launch Site (ELS) 16 hours before launch and consisted of five on pad calibrations and alignments (cal/aligns). RIMU gyrocompass alignments were compared to a reference optical alignment, and trend data were calculated. Comparison of the trend data showed that the difference between the RIMU cal/aligns and the reference alignments was within the maximum allowable range of error of + or - 325 arcsec. The location of the RIMU in the IUS avionics bay is shown in a diagram. I.H.

**MINIMAX OPTIMAL CONTROL AND ITS APPLICATION TO THE REENTRY OF A SPACE GLIDER**
A. MIELE and P. VENKATARAMAN (Rice University, Houston, TX) IN: Recent advances in the aerospace sciences . New York, Plenum Press, 1985, p. 21-40. refs
(Contract NSF ENG-79-18667)

Minimax problems of optimal control are presently converted into Mayer-Bolza problems of the calculus of variations by means of a transformation technique that requires the proper augmentation of the state vector, the control vector, and the parameter vector, as well as the proper augmentation of the constraining relations. By means of this transformation, the unknown minimax value of the performance index becomes a component of the vector parameter. Numerical results are obtained by means of the sequential gradient-restoration algorithm for solving optimal control problems on digital computers; attention is given to the hypervelocity regime in an exponential atmosphere, for a reentry glider whose trajectory is controlled by means of the angles of attack and banking. O.C.

**DESCENT VEHICLES [SPUSKAEMYE APPARATY]**
B. M. PANKRATOV Moscow, Izdatel'stvo Mashinostroenie, 1984, 232 p. In Russian. refs

The work examines the current status of design methods (including CAD) used in the development of descent vehicles intended for landing on planets of the solar system and for return to earth from orbits and interplanetary trajectories. The appropriate aerodynamic schemes are analyzed, and attention is given to methods for determining the main design parameters for ballistic, gliding, and sliding descent vehicles. Problems of thermal protection are discussed, and strength calculations are presented for fuel, instrument-payload, and engine systems. Finally, the use of a specially constructed descent vehicle to simulate the entry of a meteoroid into the earth's atmosphere is considered. B.J.

**ORBIT CONTROL OF A SYNCHRONOUS SATELLITE [UPRAVLENIE ORBITOI STATSIONARNOGO SPUTNIKA]**
G. M. CHERNIAVSKII, V. A. BARTENEV, and V. A. MALYSHEV Moscow, Izdatel'stvo Mashinostroenie, 1984, 144 p. In Russian. refs

The choice of a control strategy for the transfer of a synchronous satellite (SS) from the injection longitude to the operating longitude is considered. Attention is given to methods for controlling the longitudinal and latitudinal position of an SS with an accuracy that meets international standards. Particular consideration is given to the change in stationary-orbit elements under impulse control, the use of low thrust to transfer an SS, and stabilization of the orbital position of an SS. B.J.

**RESULTS OF TESTS OF THE SRB AFT SKIRT HEAT SHIELD CURTAIN IN THE MSFC HOT GAS FACILITY**
W. G. DEAN Feb. 1982 64 p refs
(Contract NAS8-32982)
(NASA-CR-170888; NAS 1.26:170888; LMSC-HREC-TM-D784643)
Avail: NTIS HC A04/MF A01 CSCL 21H

During the first two space shuttle flights the aft skirt heat shield curtain performed well during ascent but failed during reentry. This exposed the inside of the skirt and its subsystems to reentry heating. The resulting exposure damaged various expensive systems items and therefore a curtain reassessment is required. As a part of this reassessment, tests were conducted in the MSFC Hot Gas Facility (HGF). The purposes of these tests were to determine if the curtain would fail in a manner similar to that in flight and to demonstrate that meaningful tests of the curtain can be conducted in the HGF. **RESULTS OF TESTS OF MTA-2 TPS ON THE SRB HOLD-DOWN BOLT BLAST CONTAINER**
W. G. DEAN 30 Jun. 1982 13 p
(Contract NAS8-32982)
(NASA-CR-170891; NAS 1.26:170891; LMSC-HREC-TN-D867571)
Avail: NTIS HC A02/MF A01 CSCL 21H

The four solid rocket booster (SRB) hold-down posts are fastened to the mobile launch platform (MLP) with four large nuts. At liftoff the nuts are split with explosive changes to release the SRB/Shuttle. A blast container is placed over the nuts to protect the vehicle from flying debris. The blast container is a reusable part and has to be protected from aerodynamic heating during flight. The thermal protection system (TPS) used to protect these blast containers is cork. Fitting the flat cork sheet to this hemispherical shaped blast container is both time consuming and expensive. Another problem is removing the charred cork and epoxy glue from the blast containers. Replacements of this cork with another TPS material such as MTA-2 was examined. Heating rates along the centerline of the forward facing areas of the blast container were determined. The feasibility of using 1/2 in. MTA-2 on the SRB blast containers for protection from ascent, plume impingement and reentry heating is demonstrated. E.A.K.

**EFFECT OF TEMPERATURE ON THE FATIGUE AND FRACTURE PROPERTIES OF 7475-T761 ALUMINUM**

J. M. COX, D. E. PETTIT, and S. L. LANGENBECK (Lockheed-California Co., Burbank) IN: Fatigue at low temperatures; Proceedings of the Symposium, Louisville, KY, May 10, 1983 . Philadelphia, PA, ASTM, 1985, p. 241-256. refs

The effect of low-temperature toughness degradation on damage tolerance and life analysis methodology is discussed. Spectrum fatigue and fatigue crack growth tests were conducted and life predictions made on 7475-T761 aluminum. The retardation behavior was determined by conducting constant K single overload fatigue crack growth tests. The low-temperature environment (-54 C) improved the life of fatigue and fatigue crack growth tests subjected to several loading spectra. This may be partially attributable to stronger retardation effects at low temperatures. It is concluded that low temperature may be a factor in damage tolerance and life analysis only under certain conditions. Author

**A85-47974**

**LOW TEMPERATURE AND LOADING FREQUENCY EFFECTS ON CRACK GROWTH AND FRACTURE TOUGHNESS OF 2024 AND 7475 ALUMINUM**

P. R. ABELKIS, M. B. HARMON, E. L. HAYMAN, T. L. MACKAY (Douglas Aircraft Co., Long Beach, CA), and J. ORLANDO IN: Fatigue at low temperatures; Proceedings of the Symposium, Louisville, KY, May 10, 1983 . Philadelphia, PA, ASTM, 1985, p. 257-273. Research sponsored by the McDonnell Douglas Independent Research and Development Program. refs

An experimental program was conducted to investigate the effect of low temperature (219 K) on the crack growth and fracture toughness of two aluminum alloys, 2024-T351 and 7475-T7651. Crack growth tests were performed with center-cracked panels and constant-amplitude and spectrum loadings. The spectrum represented a transport wing lower surface. The results show the 2024 alloy properties at low temperature to be equal to or better than the properties of that alloy at room temperature (RT), whereas some of the 7475 alloy properties decreased. In addition, tests were performed at RT and low temperature on 2024-T3 to evaluate the effect of loading frequency on crack growth. The results indicated a faster crack growth rate at lower frequencies. Author

**SUPERALLOY MICROSTRUCTURAL VARIATIONS INDUCED BY GRAVITY LEVEL DURING DIRECTIONAL SOLIDIFICATION**

M. H. JOHNSTON, P. A. CURRERI, R. A. PARR, and W. S. ALTER (NASA, Marshall Space Flight Center, Huntsville, AL) Metallurgical Transactions A - Physical Metallurgy and Materials Science (ISSN 0360-2133), vol. 16A, Sept. 1985, p. 1683-1686. refs

The Ni-base superalloy MAR-M246 (Hf) was directionally solidified during low gravity maneuvers aboard a NASA KC-135 aircraft. Gravity force variations during this process yielded a concomitant variation in microstructure and microsegregation. Secondary dendrite arm spacings are noted to be larger in the low-g portion; this, in turn, decreases the extent of interdendritic segregation. The amount of Hf in both the carbides and interdendritic eutectic increases as the gravity force diminishes. Fewer carbides are present in the low-g regions. O.C.

**FIBRE REINFORCED COMPOSITES '84; PROCEEDINGS OF THE INTERNATIONAL CONFERENCE, UNIVERSITY OF LIVERPOOL, ENGLAND, APRIL 3-5, 1984**

Conference sponsored by the Plastics and Rubber Institute. London, Plastics and Rubber Institute, 1984, 332 p. For individual items see A85-48563 to A85-48574.

Among the topics discussed are phenolic resin matrix composites for high temperature and fire-exposure applications, novel resins for fiber-reinforced composite productivity improvement, the use of engineering textiles for mechanical property improvement in composites, the significance of aramid fiber reinforcement in composites, the energy absorption properties of Sheet Metal Compounds (SMCs) under crash conditions, and SMC impact behavior variations with temperature. Also covered are CFRP applications in high performance structures, composite helicopter main rotor blade technology, composite vehicular leaf springs, carbon fiber-reinforced thermoplastics, filament winding development status, the injection processing of fiber-reinforced thermoplastics, civil aircraft composite structure certification, composite radomes, design procedures for short fiber-reinforced thermoplastics, the strength limitations of mechanically fastened lap joints, environmental fatigue and creep in glass-reinforced materials, the effects of moisture on high performance laminates, the environmental behavior of SMC, and corrugated composites. O.C.

**CONTINUOUS FIBRE REINFORCED THERMOPLASTICS IN NEW GENERATION RADOMES**

C. K. HALL (British Aerospace, PLC, Dynamics Group, Stevenage, England) IN: Fibre reinforced composites '84; Proceedings of the International Conference, Liverpool, England, April 3-5, 1984 . London, Plastics and Rubber Institute, 1984, p. 19.1-19.13. Research supported by British Aerospace, PLC. refs

The paper discusses the use of thermoplastics for radome applications. The thermoplastics examined are those grouped generically as polyarylates, and in particular polyetheretherketone (PEEK). Properties of the matrices and reinforcements are given, and the four elements of radome design considerations are discussed: electrical, structural, environmental and manufacture. The manufacturing process utilizes modified stacking techniques and press moulding for glass fiber composites and powder sintering for PEEK syntactic foams. Author

**THERMAL STABILITY OF PLASMA-SPRAYED ZIRCONIA COATINGS AS RELATED TO SUBSTRATE SELECTION**

F. VASILIU, I. PENCEA, V. MANOLIU, I. DINCA (Institutul National pentru Creatie Stiintifica si Tehnica, Bucharest, Romania), and C. SARBU (Institute for Physics and Technology of Materials, Bucharest, Romania) American Ceramic Society Bulletin (ISSN 0002-7812), vol. 64, Sept. 1985, p. 1268-1271. refs

Plasma-sprayed zirconia coatings deposited on refractory substrates (Ni superalloys, AISI 314 steel) were subjected to thermal cycling tests to evaluate the influence of substrate selection on the thermal stability of the coating. The Y2O3and MgO-stabilized ZrO2 coatings, in general, perform better than CaO-stabilized coatings. The degradation and failure of a given thermal barrier system depends on the substrate used. Thermal cycling data are discussed in connection to the results of SEM and X-ray mapping investigations. Possible reasons for premature spalling of stabilized ZrO2 coatings on certain substrates are suggested. Author

**ADHESIVE SEALING FOR INTEGRAL FUEL TANKS**
F. W. AULD (General Dynamics Corp., Fort Worth, TX) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 14 p.
(SAWE PAPER 1573)

A significant degree of weight reduction was recently achieved for the F-16 fighter's integral fuel tanks in the course of a manufacturing technology development program. This two-part effort involved, first, the modification and evaluation of the existing 'Scotch-Weld' system to verify performance improvements obtainable at lower manufacturing costs. Then, two full scale fuselage integral fuel tank assemblies were sealed with the new product and subjected to a comprehensive cost comparison study without a break in the production flow. O.C.

**A85-49905**
**THE WEIGHT REDUCTION POTENTIAL OF ADVANCED COMPOSITES**
P. W. SCOTT (Douglas Aircraft Co., Long Beach, CA) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 18 p. refs
(SAWE PAPER 1579)

Attention is given to the weight-reduction potential of carbon/epoxy tape and cloth, Kevlar/epoxy cloth, and boron/epoxy tape, in various ply arrangements. These advanced composites are compared to aluminum and E-glass epoxy performance under compression and shear loading. Tension-loaded structural weights are also compared, assuming damage tolerance criteria, and an analysis is conducted for those cases in which rigidity is critical for deflection and/or flutter considerations. Forty cases of aircraft structural components that were first constructed of conventional materials and then redesigned using advanced composites, thereby yielding empirical weight reduction data, are evaluated in light of analytical weight reduction potentials. O.C.

An assessment of composite helicopter structures, exposed to environmental effects, after four years of commercial service is presented. This assessment is supported by test results of helicopter components and test panels which have been exposed to environmental effects since late 1979. Full scale static and fatigue tests are being conducted on composite components obtained from S-76 helicopters in commercial operations in the Gulf Coast region of Louisiana. Small scale tests are being conducted on coupons obtained from panels being exposed to outdoor conditions in Stratford, Connecticut and West Palm Beach, Florida. The panel layups represent S-76 components. Moisture evaluations and strength tests are being conducted, on the S-76 components and panels, over a period of eight years. Results are discussed for components and panels with up to four years of exposure. Author

Phosphorus-containing polyimides and copolyimides are synthesized in a two-step polycondensation reaction from 1-(diorganooxyphosphonl)methly 2,4- and 2,6-diaminobenzenes and tetracarboxylic anhydride. The diorgano position of the diorganooxyphosphonyl group includes alkyl, such as ethyl, substituted alkyl, such as 2-chloroethyl, and aryl such as phenyl. The tetracarboxylic anhydries include compounds such as pyromellitic dianhydride and benzophenone tetracarboxylic dianhydride. The glass transition temperature (Tg) of the polyimides is reduced by incorporation of the (dialkoxyphosphonyl)methyl groups. The phosphorus-containing copolyimides show a considerably higher degree of fire-resistance as compared to that of the corresponding common polyimides.

**MEASUREMENT AND CORRELATION OF JET FUEL VISCOSITIES AT LOW TEMPERATURES Final Report**
D. L. SCHRUBEN Aug. 1985 31 p refs
(Contract NAG3-488)
(NASA-CR-174911; NAS 1.26:174911) Avail: NTIS HC A03/MF A01 CSCL 21D

Apparatus and procedures were developed to measure jet fuel viscosity for eight current and future jet fuels at temperatures from ambient to near -60 C by shear viscometry. Viscosity data showed good reproducibility even at temperatures a few degrees below the measured freezing point. The viscosity-temperature relationship could be correlated by two linear segments when plotted as a standard log-log type representation (ASTM D 341). At high temperatures, the viscosity-temperature slope is low. At low temperatures, where wax precipitation is significant, the slope is higher. The breakpoint between temperature regions is the filter flow temperature, a fuel characteristic approximated by the freezing point. A generalization of the representation for the eight experimental fuels provided a predictive correlation for

**low-temperature viscosity, considered sufficiently accurate for many design or performance calculations.**

The external surface of the Solid Rocket Booster (SRB) will experience imposed thermal and shear environments due to aerodynamic heating and radiation heating during launch, staging and reentry. This report is concerned with the performance of the various TPS materials during the staging maneuver. During staging, the wash from the Space Shuttle Main Engine (SSME) exhust plumes impose severe, short duration, thermal environments on the SRB. Five different SRB TPS materials were tested in the 1 MW Arc Plasma Generator (APG) facility. The maximum simulated heating rate obtained in the APG facility was 248 Btu/sq ft./sec, however, the test duration was such that the total heat was more than simulated. Similarly, some local high shear stress levels of 0.04- psia were not simulated. Most of the SSME plume impingement area on the SRB experiences shear stress levels of 0.02 psia and lower. The shear stress levels on the test specimens were between 0.021 and 0.008 psia. The SSME plume stagnation conditions were also simulated.

(Contract NAS8-32982)
(NASA-CR-170889; NAS 1.26:170889; LMSC-HREC-TM-D784773) Avail: NTIS HC A03/MF A01 CSCL 11D

Tests were conducted to determine the effects of variable enthalpy levels on CPR-488 foam performance and/or recession. Also to be determined was whether the BX-250 thickness indicator plugs (TIP) concept is feasible for measuring recession rates of CPR-488 foam during external tank flight. The tests determined that the TIP plug idea works. The accuracy of the indicated recession depth is approximately + or - 1.16 in. The BX-250 plugs with TiO2 work better than the regular BX-250 plugs. Also, there is an effect of enthalpy on CPR-488 foam performance.

Turbine engine fuels are complex mixtures of hydrocarbons which have until recently, been obtained almost exclusively from petroleum. There is growing interest in developing alternative feedstocks for the eventual production of high-quality turbine engine fuels. The major analytical technique for separating the chemical constituents and analyzing fuels and synfuel feedstocks is high-resolution gas chromatography (HRGC), and the extreme chemical complexity of these hydrocarbon mixtures continues to challenge even the most sophisticated HRGC techniques. Therefore, the principal objective of this research was to identify and evaluate advanced HRGC instrumental procedures which show potential for improving the analysis of hydrocarbon jet fuels and various feedstocks. A gas chromatograph can be viewed as an assembly of individual components arranged to form a time invariant linear system. Accordingly, a systems approach has been used in this investigation to study, refine, and modify HRGC instrumentation.

**NITROGEN ANALYSIS BY CHEMILUMINESCENCE Final Report, Aug. 1982 - Dec. 1983**
R. C. STRIEBICH Apr. 1985 37 p
(AD-A156197; AFWAL-TR-84-2089) Avail: NTIS HC A03/MF A01 CSCL 21D

With high overall accuracy, a chemiluminescent detector can easily measure low ppm nitrogen levels in model mixtures and shale-derived jet fuel distillates. Forty model mixtures were analyzed

using an Antek Model 720C chemiluminescent detector to demonstrate the absolute accuracy and precision of the instrument. A severely hydrotreated shale JP-4 jet fuel was blended with selected model mixtures to obtain six fuels ranging from less than 1 to approximately 150 parts-per-million added nitrogen. Total nitrogen analysis was then accomplished by two different chemiluminescent detection systems, as well as by the micro-Kjeldahl and microcombustion methods. Results clearly point out the ability of the chemiluminescent method to measure the nitrogen level of low ppm shale-derived aviation turbine fuel.

**A WIDEBAND X100 LOW NOISE MICROWAVE FREQUENCY MULTIPLIER**

H. ENDLER (Systron Donner Corp., Microwave Div., Van Nuys, CA) IN: Aerospace Applications Conference, Vail, CO, January 28-February 4, 1984, Digest . New York, IEEE, 1984, p. 107-116.

A low-noise X100 frequency multiplier chain has been built for use in an airborne radar exciter/downconverter assembly. The input frequency band is 91-94 MHz, and the output frequency band is 9100-9400 MHz. The integrated downconverter assembly includes: dual receiver channels made from low-noise GaAs FETs; X-band preamplification; intermediate frequency filtering; and amplification. The entire assembly is packaged for installation in combat aircraft and occupies less than 135 cubic inches. The phase noise spectral density of the X100 multiplier is given for various frequencies in the range 1 MHz-100 Hz. Black and white photographs of the exciter downconverter assembly are provided.

**A NEW SINGLE FILAMENT SMOKE TUBE INJECTION DEVICE**

T. J. MUELLER, R. C. NELSON, J. T. KEGELMAN, and R. J. ZEHENTNER (Notre Dame, University, IN) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 45-48. refs

A new mechanism for introducing smoke into a wind tunnel which was devised to study forced and natural boundary layer transition around axisymmetric bodies is described. Previous devices had three fundamental short-comings: pulsating action of the smoke, nonuniform smoke, and a temperature difference between the smoke and the air in the tunnel, which caused the smoke to rise. The new design uses a trombone ball device with a relatively large contraction ratio. The smoke entering the contraction cone passes through a honeycomb and enters the settling chamber. The resulting smoke stream is extremely uniform and free of pulsations. The smoke temperature is closer to the ambient temperature, significantly reducing the 'roll-up' problem.

**FLOW VISUALIZATION USING COMPUTER-GENERATED COLOR VIDEO DISPLAYS OF FLOW FIELD SURVEY DATA**

A. E. WINKELMANN and C. P. TSAO (Maryland, University, College Park) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 175-179.

A computer driven color video display technique has been developed for the presentation of wind tunnel flow field survey data. The results of both qualitative and quantitative flow field surveys can be presented in high spatial resolution color coded displays. The display of data in this manner can be considered to be a new type of flow visualization. The technique enables one to present and interpret vast quantities of data which heretofore would have been difficult or impossible to comprehend. The technique has been used to display data obtained with a variety of wind tunnel type probe sensors, including hot-wire probes, pitot tubes, 5 and 7-tube pressure probes and a single channel laser velocimeter.

**THREE-DIMENSIONAL TOMOGRAPHIC RECONSTRUCTION OF THE FLOW AROUND A REVOLVING HELICOPTER ROTORBLADE - A NUMERICAL SIMULATION**

L. HESSELINK and R. SNYDER (Stanford University, CA) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 213-220.
(Contract NCC2-188)

This paper discusses tomographic data acquisition and reconstruction procedures for determining the flow around a revolving helicopter rotor blade. The data acquisition procedure is simulated using, as a testbed, a numerical representation of the flow and projections through this known field are computed. An investigation has been made of: (1) the effect of the number of projections on the accuracy of the reconstruction and (2) the fidelity of the reconstruction when the region of intersection of all projections is smaller than the spatial extent of the flow.

**THE USE OF VISUALIZATION AS A GUIDE IN THE NUMERICAL DETERMINATION OF THE FLOW AROUND AN ABRUPTLY ACCELERATED ELLIPTIC CYLINDER OR AIRFOIL**

P. MONNET, M. COUTANCEAU (Poitiers, Universite, France), O. DAUBE, and TA PHUOC LOC (CNRS, Laboratoire d'Informatique pour la Mecanique et les Sciences de l'Ingenieur, Orsay, France) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 363-368.

The time formation of the two-dimensional wake induced by an impulsively started thin profile is investigated both experimentally and numerically. The experimental technique is based on a precise visualization of the flow pattern with solid tracers from which quantitative data as well as qualitative information are deduced and used to improve the numerical simulation. This simulation is made by treating the Navier-Stokes equations with a high order compact finite difference scheme. The very good agreement exhibited by the results provided by the two methods makes it possible to give an accurate and detailed description of the evolution of the flow structure for both an elliptic cylinder and a NACA 0012 airfoil. These results are given for angles of attack ranging from 0 to 90 deg and for Reynolds numbers of 500, 1000, and 3000. Author

**VORTEX FLOW VISUALIZATION STUDIES OF A STRAKE-WING IN WATER TUNNEL**

B. ZHOU, M. LIU, S. XION, Z. LI, and W. SU (Beijing Institute of Aeronautics and Astronautics, People's Republic of China) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 402-407. refs

Results of water-tunnel tests conducted on a strake-wing and a basic wing using a dye visualization technique are reported. The technique described here is shown to provide three-dimensional flow patterns of the leading edge vortex and its bursting. The results are analogous to those obtained in wind tunnel tests for a strake-wing with a sharp leading edge. The main flow patterns of the moderate sweptback cropped delta wing in the water tunnel tests can also be compared with the results of low-speed wind tunnel tests in the case where the wing leading edge is sharp. **DETERMINATION OF LEADING-EDGE VORTEX TRAJECTORIES BY SCHLIEREN PHOTOGRAPHY**

J. ER-EL (Technion - Israel Institute of Technology, Haifa, Israel) IN: Flow visualization III; Proceedings of the Third International Symposium, Ann Arbor, MI, September 6-9, 1983 . Washington, DC, Hemisphere Publishing Corp., 1985, p. 676-680. refs

Flow on the leeside of a close-coupled canard-delta wing configuration is studied using the method of schlieren photography. The approach described here makes use of compressibility effects at the vortex core, which are a result of the subpressure generated by the azimuthal velocities, and of the increased axial velocities. These density changes, when sufficient, are detected by a schlieren system whose light rays are perpendicular to the vortex axis, while the knife-edge is parallel to it. Test results illustrating the effect of the canard sweep angle and longitudinal position on the leading-edge vortices and their breakdown characteristics are presented. V.L.

**A STUDY OF THE PHYSICAL MECHANISMS AND THE PERTURBATIONS CREATED BY THE ATTACHMENT OF AN ARC TO A CONDUCTING CYLINDER**

P. LEVESQUE, J. TAILLET, G. LABAUNE, S. LARIGALDIE, and J. C. ALLIOT (ONERA, Chatillon-sous-Bagneux, France) (International Conference on Lightning and Static Electricity, Paris, France, June 10-12, 1985) ONERA, TP, no. 1985-47, 1985, 9 p. DRET-supported research. refs
(ONERA, TP NO. 1985-47)

The typical phenomena related to voltage shock excitation of a suspended cylinder are analyzed in comparison with previous interpretations. The respective role, on the external electric field and on the internal voltage transients, of capacitive currents, streamers, leaders and arc transitions are emphasized. The rationale for voltage shock excitation aircraft testing is deduced from the conclusion of the study. Use of a medium-voltage fast rise-time Marx generator (300 kV, 50 ns) rather than a high voltage slow rise-time one (1.4 MV, 1 micron) is recommended. Author

**AN EXAMINATION OF TURBULENCE MODELS FOR A SEPARATING THREE-DIMENSIONAL TURBULENT BOUNDARY LAYER**

R. ABID, J. DELERY, and R. SCHMITT (ONERA, Chatillon-sous-Bagneux, France) (International Conference on Numerical Methods in Laminar and Turbulent Flows, 4th, University of Wales, Swansea, July 9-12, 1985) ONERA, TP, no. 1985-74, 1985, 13 p. refs
(ONERA, TP NO. 1985-74)

Turbulence modeling in separating 3-D boundary layers using an inverse method is discussed. The ability of models developed for 2-D flows to predict the separation of a 3-D boundary layer is examined, as is the influence of Rotta's (1977) hypothesis that the cause of the disagreement between calculative and experimental prediction of low speed flows with severe crossflow is an inadequate modeling of the pressure-strain correlation term of the Reynolds tensor transport equation. The validity of the considered models is tested by comparison with the well-known experiments of Van den Berg (1972) and Elsenaar (1974), which simulate an infinite swept wing situation. The boundary layer equations are solved by an inverse method with prescribed displacement thicknesses. C.D.

**CERAMIC HEAT EXCHANGERS FOR GAS TURBINES OR TURBOJETS [INTERET DES ECHANGEURS EN CERAMIQUE POUR TURBINE A GAZ OU TURBOREACTEURS]**

S. BOUDIGUES and J. FABRI (ONERA, Chatillon-sous-Bagneux, France) (NATO, AGARD, Symposium sur les Echanges Thermiques et Refroidissement dans les Moteurs a Turbines, 65th, Bergen, Norway, May 6-10, 1985) ONERA, TP, no. 1985-35, 1985, 14 p. In French.
(ONERA, TP NO. 1985-35)

The required performance goals and several proposed designs for SiC heat exchangers for aerospace turbines are presented. Ceramic materials are explored as a means for achieving higher operating temperatures while controlling the weight and cost of the heat exchangers. Thermodynamic analyses and model tests by ONERA have demonstrated the efficacy of introducing a recooling cycle and placing the heat exchangers between stages of the turbine. Sample applications are discussed for small general aviation aircraft and subsonic missiles equipped with single-flux exchangers. A double-flux exchanger is considered for an aircraft capable of Mach 0.8 speed and at least 11 km altitude for cruise. Finally, the results of initial attempts to manufacture SiC honeycomb heat exchangers are detailed. M.S.K.

### ULTRASONIC MICROSTRUCTURAL NOISE PARAMETERS IN A POWDER METAL ALLOY

B. R. TITTMANN, L. A. AHLBERG, and K. W. FERTIG (Rockwell International Science Center, Thousand Oaks, CA) IN: Review of progress in quantitative nondestructive evaluation. Volume 3A - Proceedings of the Tenth Annual Review, Santa Cruz, CA, August 7-12, 1983 . New York, Plenum Press, 1984, p. 57-63; Discussion, p. 63, 64. refs
(Contract W-7405-ENG-82)

The ultrasonic backscattering characteristics were measured for IN-100, a powder metallurgy alloy used for engine disk components. The data were obtained with a variety of different transducers placed either in a waterbath or in sample contact for a frequency range from 2 to 18 MHz and statistically averaged over numerous volume elements of the samples. Micrographical examination provided size and number distributions for grain and pore structure and showed that the predominant sources for backscatter were the larger micropores. Two samples with different micropore densities were used to demonstrate the feasibility of calculating microstructural parameters from the ultrasonic data. Author

### CRACK CHARACTERISATION IN TURBINE DISKS

L. J. BOND and N. SAFFARI (University College, London, England) IN: Review of progress in quantitative nondestructive evaluation. Volume 3A - Proceedings of the Tenth Annual Review, Santa Cruz, CA, August 7-12, 1983 . New York, Plenum Press, 1984, p. 251-260; Discussion, p. 261, 262. Research supported by the Ministry of Defence (Procurement Executive). refs

Nondestructive testing techniques which provide reliable quantitative defect characterization are of considerable importance for a full utilization of fracture mechanics approaches and the application of Retirement-for-Cause (RFC) concepts to critical aerospace components. In the present paper, ultrasonic techniques are presented which have been developed for the detection and characterization of small surface defects in aircraft engine turbine disks. These techniques are based on a utilization of the reflection of surface waves and the phenomena of body-to-surface mode-conversion found at surface breaking and near surface defects for features in the range from 0.05 to 1.0 mm. Possibilities concerning a crack characterization on the basis of the results obtained with the considered techniques are examined, taking into account the midfrequency regime where the defect depth is comparable to or just smaller than the wavelengths involved. G.R.

**A85-47402**

### DEVELOPMENT OF A QUANTITATIVE FLAW CHARACTERIZATION MODULE - A STATUS REPORT

G. J. GRUBER, G. J. HENDRIX, and T. A. MUELLER (Southwest Research Institute, San Antonio, TX) IN: Review of progress in quantitative nondestructive evaluation. Volume 3A - Proceedings of the Tenth Annual Review, Santa Cruz, CA, August 7-12, 1983 . New York, Plenum Press, 1984, p. 309-320; Discussion, p. 320, 321. refs
(Contract F33615-81-C-5066)

It is pointed out that life-management technology now being developed for the Air Force under the name 'retirement for cause' requires reliable and accurate ultrasonic techniques for characterizing internal bulk flaws in titanium- and nickel-based alloy disk materials. The present paper is concerned with the utilization of quantitative nondestructive evaluation techniques based on the interaction of ultrasound with internal bulk flaws. A flow diagram of the program established to qualify the Born inversion technique for sizing voids and inclusions in typical aircraft turbine-engine parts is considered. Ultrasound-flaw interaction models are discussed, taking into account the Born model for spherical inclusions, and the Franz-Gruber model for spherical voids. An algorithm performance evaluation is also conducted, giving attention to shear-wave measurements, and longitudinal-wave measurements. G.R.

### LABORATORY STUDIES RELATED TO IN-FLIGHT ACOUSTIC EMISSION MONITORING

S. R. LAMB (Department of Defence, Aeronautical Research Laboratories, Melbourne, Australia) IN: Review of progress in quantitative nondestructive evaluation. Volume 3B - Proceedings of the Tenth Annual Review, Santa Cruz, CA, August 7-12, 1983 . New York, Plenum Press, 1984, p. 729-734.

Laboratory tests undertaken to identify the source of acoustic emission (AE) detected in flight on the MACCHI aircraft are reported, and the results obtained using different equipment are compared. The test component was subjected to repeated application of a spectrum of loads representative of the previous flight history, simulating a sequence of 200 flights. A significant difference in the rates of AE counts with increasing crack length between in-flight tests and laboratory tests is found and discussed. C.D.

**A85-47469**

### MANUFACTURING TECHNOLOGY FOR NONDESTRUCTIVE EVALUATION (NDE) SYSTEM TO IMPLEMENT RETIREMENT FOR CAUSE (RFC) PROCEDURES FOR GAS TURBINE ENGINE COMPONENTS

F. M. TAYLOR, D. L. BIRX, and D. G. DOOLIN (Systems Research Laboratories, Inc., Dayton, OH) IN: Review of progress in quantitative nondestructive evaluation. Volume 3B - Proceedings of the Tenth Annual Review, Santa Cruz, CA, August 7-12, 1983 . New York, Plenum Press, 1984, p. 1331-1335; Discussion, p. 1335-1337.

An automated NDE inspection system capable of detecting 5 x 10 mil surface flaws and 15 mil inclusions in engine rotor components is being developed. This system represents an aid for the implementation of the 'Retirement for Cause' (RFC) philosophy according to which the large percentage of good, used engine rotor components are returned to service, and the small percentage of flawed components are retired for cause. Particular attention is given to the detection and characterization of critical flaws through a utilization of computer algorithms. It is pointed out that the Inspection Module's NDE Instrumentation represents the most advanced computer-controlled ultrasonic and eddy current instrumentation available. G.R.

**A85-47470**

**NDT-33 - A COMPUTERIZED EDDY CURRENT INSTRUMENT**

R. C. BODMER, C. L. FREDERICK, L. L. LANG, and J. J. PICKERD (NORTEC Corp., Kennewick, WA) IN: Review of progress in quantitative nondestructive evaluation. Volume 3B - Proceedings of the Tenth Annual Review, Santa Cruz, CA, August 7-12, 1983 . New York, Plenum Press, 1984, p. 1339-1346; Discussion, p. 1346, 1347.

In connection with the Air Force 'Retirement for Cause' Program, a high-speed computer-controlled multifrequency digital eddy current inspection instrument is being developed for automated aircraft engine disk inspection. The instrument is primarily digital and completely controlled by software for automatic computerized disk inspection. The use of new high-speed microprocessors allows fast scanning and processing of data for an automatic inspection system. The digital signal processing makes the unit versatile for many other inspections using manual or computer operation. Attention is given to a system diagram, system operation, the controller, the display, the oscillator, the detector and converter, the digital signal processor, the proximity probe, and the scanner drive electronics G.R.

**A85-47472**

**INNOVATIVE EDDY CURRENT PROBE COUPLING METHOD**

G. M. LIGHT, W. R. VAN DER VEER, W. D. PERRY, and G. L. BURKHARDT (Southwest Research Institute, San Antonio, TX) IN: Review of progress in quantitative nondestructive evaluation. Volume 3B - Proceedings of the Tenth Annual Review, Santa Cruz, CA, August 7-12, 1983 . New York, Plenum Press, 1984, p. 1359-1366; Discussion, p. 1367, 1368.

A design of an air-bearing eddy current probe, for use in the Retirement for Cause/Nondestructive Examination (RFC/NDE) program, to examine aircraft engine parts is presented. The air-bearing acts like a spring which interacts with the probe suspension spring in order to achieve equilibrium at a certain liftoff. The probe is to follow the surface of the suspension, while holding the thickness of the air-film constant, as the total distance from the probe surface to the suspension mount changes. For optimum stability and accuracy the stiffness of the air-bearing must be greater than the stiffness of the suspension; stiffness is determined by the surface area and air flow. The air-bearing eddy current probe was designed and tested for static and dynamic cases. In all cases, the stability of the air-bearing thickness was approximately + or - 0.0001 inch with an average liftoff of 0.0007 inch. I.F.

**A85-47473**

**DEVELOPMENT OF ACTIVE MICROWAVE FERROMAGNETIC RESONANCE EDDY CURRENT PROBES AND ASSOCIATED SIGNAL PROCESSING METHODS**

J. M. PRINCE (Battelle Pacific Northwest Laboratories, Richland, WA) and B. A. AULD (Stanford University, CA) IN: Review of progress in quantitative nondestructive evaluation. Volume 3B - Proceedings of the Tenth Annual Review, Santa Cruz, CA, August 7-12, 1983 . New York, Plenum Press, 1984, p. 1369-1376. (Contract F33615-82-C-5100)

A number of theoretical and experimental studies have been conducted with YIG (Yttrium Iron Garnet)-based FRM (ferromagnetic resonance) eddy current probes. A primary goal of this research was to develop a method of discriminating between liftoff and flaw signals. The present investigation has an additional aim which is related to the development and demonstration of a practical FMR-based flaw detection system for aircraft turbine engine component inspection. In order to overcome certain difficulties, it was decided to utilize the FMR probe in an active mode in which it operates as the resonant element of a microwave oscillator circuit (active FMR probe) at frequencies in the range from 600 to 1100 MHz. The experimental results presented in this paper demonstrate that two-parameter discrimination of flaw data from liftoff noise is realizable with a single active FMR probe and associated processing electronics. G.R.

**A85-47474**

**ELECTRIC CURRENT PERTURBATION INSPECTION OF SELECTED RETIREMENT-FOR-CAUSE TURBINE ENGINE COMPONENTS**

G. L. BURKHARDT, F. N. KUSENBERGER, and R. E. BEISSNER (Southwest Research Institute, San Antonio, TX) IN: Review of progress in quantitative nondestructive evaluation. Volume 3B - Proceedings of the Tenth Annual Review, Santa Cruz, CA, August 7-12, 1983 . New York, Plenum Press, 1984, p. 1377-1386; Discussion, p. 1387. USAF-supported research.

The Electric Current Perturbation (ECP) automated inspection system is currently undergoing optimization for the inspection of typical F100 turbofan engine component features, such as antirotation windows and blade slots. A computer-controlled laboratory breadboard ECP system has been fabricated for the scanning of these complex features. While ECP evaluations were initially performed on simple geometry specimens in order to demonstrate the method's sensitivity, preliminary results have recently been obtained on antirotation windows in the F100 engine 2nd-3rd fan stage seal, as well as on blade slots in the first stage fan disk. O.C.

**EVALUATION OF CAPTURED WATER COLUMN TECHNOLOGY FOR ADVANCED ULTRASONIC SIZING TECHNIQUES**

G. M. LIGHT, R. A. CERVANTES, and W. R. VAN DER VEER (Southwest Research Institute, San Antonio, TX) IN: Review of progress in quantitative nondestructive evaluation. Volume 3B - Proceedings of the Tenth Annual Review, Santa Cruz, CA, August 7-12, 1983 . New York, Plenum Press, 1984, p. 1389-1396; Discussion, p. 1397, 1398.

A fighter engine inspection system combining both ultrasonic and eddy current has been developed for the Air Force in connection with the Retirement For Cause/Nondestructive Examination (RFC/NDE) program. The design and testing of several captured water columns in the RFC/NDE system is discussed in comparison with conventional immersion-mode time-amplitude signal measurements and Born inversion techniques. The patented design features of the system include: a water guide to give even distribution of the two inlet water streams; a water focus extension collar to concentrate water flow at the lens of the transducer; and an extension collar to increase the range of focal distances. It is shown that the water column system did not degrade the quality of the reflected ultrasonic pulses in measurements of flaw size range. I.H.

**PREDICTION OF THE INCEPTION OF CAVITATION ON BLADE PROFILES OF HYDRAULIC TURBOMACHINES [VORAUSSAGE DES KAVITATIONSBEGINNS AN SCHAUFELPROFILEN HYDRAULISCHER TURBOMASCHINEN]**

J. STELLER (Polska Akademia Nauk, Instytut Maszyn Przeplywowych, Gdansk, Poland) Forschung im Ingenieurwesen (ISSN 0015-7899), vol. 51, July 1985, p. 123-131. In German. refs

A number of methods for the calculation of the velocity distribution on blade profiles have been developed after Scholz (1965) provided his presentation of the aerodynamics of cascades. The computational procedures discussed by Jacob (1963, 1969, 1976, 1981) deserve particular attention. It has also been possible to observe certain relations between cavitation inception and phenomena in the boundary layer. The concepts employed by Jacob are based on the theory of harmonic vector fields and the theoretical results reported by Martensen and von Sengbusch (1960). In the present study an approach is shown for utilizing Jacob's concepts for selected periodic profile configurations. Particular attention is given to the flow through a straight cascade and the flow around a wing located between parallel walls. A suitable FORTRAN program for the calculation of the flow between parallel walls has been developed by Steller (1983). The prediction of cavitation inception is illustrated with the aid of two examples involving NACA foils. G.R.

**A85-48084**
**ACOUSTIC EMISSION MONITORING OF FLAW GROWTH IN A GRAPHITE-EPOXY EXPERIMENTAL WING SEGMENT**
J. RODGERS (Acoustic Emission Technology Corp., Sacramento, CA) Journal of Acoustic Emission (ISSN 0730-0050), vol. 4, January-March 1985, p. 1-8. refs

Acoustic emission (AE) monitoring of flaw growth was performed on a composite wing segment. An 8-channel AE system with a microcomputer to acquire and process AE data was used to monitor a graphite-epoxy upper wing segment during load testing. A tension limit load cycle was conducted; then the wing was loaded in compression to limit load, where it failed after 30 sec by buckling along the inboard flange. At low load levels the AE data revealed damage in the outboard flange. The low felicity ratio signaled the onset of creep instability. The results corresponded well to previous tests. It is concluded that AE monitoring could provide great assistance in early assessment of fiber composite materials. I.F.

**COMPUTATIONAL METHODS FOR DISCONTINUITIES IN FLUIDS**
O. A. MCBRYAN (New York University, NY) IN: Large-scale computations in fluid mechanics; Proceedings of the Fifteenth Summer Seminar on Applied Mathematics, La Jolla, CA, June 27-July 8, 1983. Part 2 . Providence, RI, American Mathematical Society, 1985, p. 63-79. refs
(Contract DE-AC02-78ER-03077; NSF DMS-83-12229)

In the present paper, a description is provided of a range of computational methods for fluid flows in which shocks or discontinuities occur. Collectively, these methods constitute the method of front tracking. Front tracking refers to certain computational methods in which special degrees of freedom are placed at fronts or discontinuities in order to obtain increased resolution in those areas. In shock tracking, an extra lower-dimensional grid is introduced, geometrically fitting the shocks. Attention is given to discontinuities in fluid physics, numerical computations, shock tracking methods, current applications of tracking, efficient elliptic solution methods, finite element and discontinuities, high-order solutions by ADI (Alternating Direction Implicit) preconditioning, multigrid solutions, and interfaces and discontinuities. G.R.

**A85-48224**
**SOME CONTRIBUTIONS TO THE MODELLING OF DISCONTINUOUS FLOWS**
P. L. ROE (Royal Aircraft Establishment, Bedford, England) IN: Large-scale computations in fluid mechanics; Proceedings of the Fifteenth Summer Seminar on Applied Mathematics, La Jolla, CA, June 27-July 8, 1983. Part 2 . Providence, RI, American Mathematical Society, 1985, p. 163-193. refs

Roe (1980) advanced the claim that 'almost any' good numerical technique for solving the linear scalar wave equation could be converted, by a fairly simple mechanism, into an equally good numerical technique for solving quasi-linear systems of conservation laws. It is pointed out that the particular attraction of that mechanism lay in its ability to generalize the class of asymmetric, or 'upwinded' finite-difference schemes, in a simple and natural way. In the present investigation, Roe's claim is reviewed and revised in the light of two and a half years of additional experience. A fairly general form of the flux difference splitting concept, applicable to one-dimensional conservation laws, is discussed. Attention is given to the 'monotone' second-order scheme, the designing of the B-functions, and problems regarding satisfying entropy. G.R.

**NEW AWOS PROVIDES SYNTHESIZED-VOICE WEATHER INFORMATION**
A. GREENBERG, J. STERN, and W. HACKENBERG (General Signal Corp., Cardion Electronics Div., Woodbury, NY) ICAO Bulletin, vol. 40, April 1985, p. 16-19.

A complete Automated Weather Observation System (AWOS) that measures wind direction and speed, wind gusts, temperature, dew point, precipitation, visibility, cloud height and cover, altimeter setting, and density altitude is described. AWOS averages the continuously measured weather parameters, converting them into a synthesized-voice output that can modulate a VHF transmitter or navaids voice channel for transmission directly to a pilot in flight. Remote access to the weather message is achieved by a telephone coupler, while a modem allows access to the recorded digital weather data. A newer version of AWOS comprised of four interaction systems, the weather reporting station (data collection and dissemination), two remote sensing facilities, the center-field site and the runway site, and the weather message transmission capability, is also described in detail. I.S.

(Contract DRET-80-321; DRET-83-403)
(AAAF PAPER NT 84-12)

Techniques are presented for finite element solution of the Navier-Stokes equations (NSE) for steady and unsteady flows of incompressible and compressible viscous fluid flows. A time-step discretization is performed in Hilbert space by means of a decomposition of operators. Two schemes are described for the

decomposition, and applications with the NSE are developed to illustrate methods of separating the incompressibility and nonlinearity of the NSE. The models are extended to the case of compressible fluids, and results are provided from several two- and three-dimensional calculations for the flow into a jet engine intake duct at high angles of attack.

**RADAR TARGETS REVEAL ALL TO AUTOMATED TESTER**

R. E. HARTMAN (Flam and Russell, Inc., Horsham, PA) Microwaves & RF (ISSN 0745-2993), vol. 24, Sept. 1985, p. 101, 102, 104, 106, 107.

Technological developments in the field of automated test equipment for low radar-cross-section (RCS) systems are reviewed. Emphasis is given to an Automated Digital Analysis and Measurement (ADAM) system for measuring, scattering, and evaluating RCS using a minicomputer in combination with a vector network analyzer and a positioner programmer. ADAM incorporates a stepped CW measurement technique to obtain RCS as a function of both range and frequency at a fixed aspect angle. The operating characteristics and calibration procedures of the ADAM system are described and estimates of RCS sensitivity are obtained. The response resolution of the ADAM system is estimated to be 36 cm per measurement bandwidth (in GHz) for a minimum window. A block diagram of the error checking routine of the ADAM system is provided.

**EFFECTS CAUSED BY SMALL DISCRETE TWO-DIMENSIONAL ROUGHNESS ELEMENTS IMMERSED IN TURBULENT BOUNDARY LAYERS**

H.-H. NIGIM (Birzeit University, Jordan) and D. J. COCKRELL (Leicester, University, England) Journal of Fluid Mechanics (ISSN 0022-1120), vol. 153, April 1985, p. 17-30. refs

In order to determine the downstream consequences of the presence of small discrete surface discontinuities situated on otherwise smooth surfaces and subjected to six equilibrium two-dimensional adverse-pressure-gradient turbulent boundary-layer flows, these conditions were first established in a special purpose wind tunnel. A surface discontinuity is small if it lies within the logarithmic region of the undisturbed boundary layer. Immediately downstream of such discontinuities flow separation ensues. After the subsequent reattachment, measurements were made of the downstream boundary-layer development. Even in strong adverse pressure gradients the local increments of momentum thickness caused by these roughness elements were well predicted by Gaudet and Johnson's (1970) zero-pressure-gradient correlation. With highly adverse pressure gradients it was found that these small surface discontinuities have little influence on the flow downstream. The essential outcome of this work is that the incremental drag of small roughness elements depends solely on local wall variables. Thus, when the pressure gradient is strongly adverse and the local skin friction is correspondingly small, the incremental drag of the roughness element becomes similarly small. After reattachment, it has an insignificant effect on the flow downstream of it.

**TEMPERATURE FLUCTUATIONS AND HEAT FLUX IN GRID-GENERATED ISOTROPIC TURBULENCE WITH STREAMWISE AND TRANSVERSE MEAN-TEMPERATURE GRADIENTS**

R. BUDWIG, S. CORRSIN (Johns Hopkins University, Baltimore, MD), and S. TAVOULARIS (Ottawa, University, Canada) Journal of Fluid Mechanics (ISSN 0022-1120), vol. 153, April 1985, p. 441-460. NSF-supported research. refs

A screen of closely spaced, parallel, thin wires was placed downstream of a grid generating nearly isotropic turbulence. The screen was normal to the flow and was heated in one of two modes: (1) periodically in time, to generate a train of transversely uniform streamwise thermal ramps, each with a uniform streamwise gradient, and (2) steadily, with transverse non-uniformity, to generate a uniform transverse thermal ramp. The simple temperature and temperature-gradient fluctuation statistical properties in both cases were found to be comparable to those encountered in earlier works with a steadily heated grid producing a uniform transverse thermal ramp. In both modes of heating the temperature fluctuations decreased initially behind the screen and then increased monotonically. The turbulent heat-transfer correlation coefficient attained an asymptotic magnitude between 0.7 and 0.8 for both modes of heating. The skewness of the temperature fluctuation derivative in the direction of the mean gradient was found to be non-zero despite the absence of mean shear.

**ANNUAL RELIABILITY AND MAINTAINABILITY SYMPOSIUM, SAN FRANCISCO, CA, JANUARY 24-26, 1984, PROCEEDINGS**

Symposium sponsored by IEEE, AIAA, ASME, et al. New York, IEEE, 1984, 576 p. For individual items see A85-49527 to A85-49589.

The present conference addresses topics in computer-aided reliability and maintainability, mechanical reliability, the management of reliability and maintainability (R&M), the status of the U.S. Department of Defense/industry R&M study, reliability assessment, testing, and screening, testability and automatic testing, dormant reliability, the use of R&M field data, software reliability, built-in testing (BIT), modeling and simulation methods, robotics and automation, operational readiness, reliability growth, and maintainability. Specific attention is given to electronic equipment thermal management, MTBF predictions, BIT self-verification, expert systems in software maintainability, spacecraft anomalies and lifetimes, fiber-optics reliability, and lower limits for total ship reliability.

**ELECTRONIC EQUIPMENT THERMAL MANAGEMENT**

R. L. BERGER and L. C. JENKINS (USAF, Aeronautical Systems Div., Wright-Patterson AFB, OH) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 17-22.

An assessment is made of the importance of thermal management in electronic equipment design, illustrating the ways in which CAD technology may be used to improve electronic equipment thermal management programs. Attention is given to the Electronic Equipment Thermal Management portion of the aircraft system-level Thermal Management Control (TMC) program. TMC establishes the process by which the airframe's environmental control system and the electronic equipment are integrated to optimize system reliability through life cycle cost minimization, by allocating available cooling capacity to system elements on the basis of derived benefits.

**MAINTAINABILITY ASPECTS IN MAINTENANCE MANAGEMENT**

W. R. DOWNS (Wm. Downs Technical/Management Services, Rancho Palos Verdes, CA) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 62-66. refs

This paper discusses the need for the operator of equipment to continue the efforts of the manufacturer in the user environment in order to assure the maintainability performance potential built into the system. The maintainability performance predicted for the system is usually based on an operations model that is assumed to be real but may differ in many ways from the actual operations environment. Downtime, availability, and maintenance manhours, the common maintainability performance criteria, can vary widely as a function of maintenance concepts and maintenance planning to control those elements that are crucial to the attainment of maintainability performance objectives. Data relating to operations are presented in regard to the maintainability performance parameters they affect, and analyses are presented as examples of the types of analyses system operators may perform in order to optimize maintainability performance in the field. **DOD/INDUSTRY - R&M TECHNOLOGY STUDY ANALYSIS**

H. B. LYON, JR. (Texas Instruments, Inc., Arlington, VA) and K. P. LASALA (U.S. Navy, Naval Material Command, Arlington, VA) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 99-102.

Attention is given to the Technology Study portion of the Institute for Defense Analyses' Reliability and Maintainability (R&M) study, which focused on processes for the derivation of technology requirements, the identification of 'ripple effects' associated with novel technologies' introduction and mutual interaction, and an approach to the 'off-line' maturation of technologies. The R&M study has uniquely constituted a comprehensive joint government/industry review of important emerging technologies. O.C.

**ESTABLISHING REALISTIC REQUIREMENTS FOR RELIABILITY, MAINTAINABILITY, AND BUILT-IN-TEST**

R. C. TRAKAS (U.S. Navy, Naval Air Systems Command, Washington, DC) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 103-107.

Steps have been taken within the Naval Air Systems Command to provide a repeatable, logical approach to establishing realistic requirements for reliability, maintainability, and built-in-test (BIT). This approach prevents problems on programs under development where failure to meet specified requirements in the areas of reliability, maintainability, and BIT could be attributed to establishment of arbitrary, unrealistic requirements with little or no basis in fact. The approach taken ensures the proper relationship between the program thresholds within the Navy and the contractually specified requirements. This provides for a cost-effective and realistic method for ensuring that adequate inherent reliability, maintainability, and BIT capabilities are designed into the equipment to meet the stated operational requirements. Author

**A MANAGEMENT GUIDE TO RELIABILITY PREDICTIONS**

F. A. STOVALL (Lockheed-Georgia Co., Marietta, GA) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 114-116.

Although reasonably accurate reliability predictions are obtainable through the procedure contained in military standard MIL-HDBK-217, if enough is known about operational environment, equipment design, vendor manufacturing capability, and delivery schedule, a less costly procedure may sometimes be required for the assessment of vendor-claimed reliability levels or the estimation of probable equipment reliability level. Attention is presently given to a simplified prediction chart which, while not as accurate as MIL-HDBK-217, may nevertheless be useful in the preliminary determination pf probable need for part screening, thermal imaging, reliability growth tests, etc. O.C.

**AN M PRINCIPLE - PAY ME NOW OR SPEND MORE LATER**

W. B. DALRYMPLE (Boeing Aerospace Co., Seattle, WA) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 493-498. refs

The basic principles of a good maintainability (M) program are presented with reference to the reduction of aircraft and aircraft weapons system development costs. Common boundaries between M and interfacing functions are discussed. Particular attention is given to fault isolation, mathematical modeling, maintenance manhours improvements, and mockups. It is concluded that integration is the key element in keeping the cost of M reasonable. B.J.

**A85-49586**

**A SYSTEMATIC APPROACH TO DESIGNING FOR TESTABILITY**

R. JAGER (Westinghouse Electric Corp., Baltimore, MD) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 520-524.

The purpose of this paper is to describe a systematic, formalized, and timely approach to designing avionics for testability at all maintenance levels, which will reduce many of the current problems in the field, such as 'RETEST OKs' and 'CANNOT DUPLICATEs'. The approach was developed to be used by avionics designers, and is recommended for program office personnel who specify requirements for avionics design. It was developed to provide a high level of testability to meet specified standards and to maximize the compatibility of the avionics with its support equipment. The objective of this approach to testability in design is to maximize the availability of the avionics system and minimize repair time, spares, and logistics support requirements. Key features of this paper are the systematic approach to designing for all maintenance levels and an integrated maintenance concept which will allow compatible system support, even if separate contractors perform the support at different maintenance levels. **R&M ANALYSIS TECHNIQUES FOR FAULT-TOLERANT SYSTEMS**

M. H. VEATCH, A. B. CALVO (Analytic Sciences Corp., Reading, MA), and J. L. MCMANUS (USAF, Logistics and Human Factors Div., Wright-Patterson AFB, OH) IN: Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings . New York, IEEE, 1984, p. 530-536. refs

Reliability and logistics support analysis techniques for fault-tolerant avionics systems are presented. The systems considered contain integration and dynamic reconfigurability as part of their fault-tolerant design. These characteristics, combined with the need for analysis during the early stages of development, pose unique modeling requirements. The techniques developed address this need by providing design criteria based on reliability and maintainability during the early stages of design. They are applicable to the Integrated Communication, Navigation and Identification Avionics (ICNIA) architectures which are currently entering the advanced development phase. Author

**BONDED REPAIR OF DAMAGE**
R. JONES (Defence Science and Technology Organization, Aeronautical Research Laboratories, Melbourne, Australia) Aeronautical Society of India, Journal (ISSN 0001-9267), vol. 36, Aug. 1984, p. 193-201. refs

Two approaches developed for the analysis and design of repairs of damaged metallic structures by use of fiber-reinforced patches are presented. The finite element approach, discussed along with the formulation of the finite element and derivation of the element stiffness matrix, is illustrated by considering the repair of cracks in the lower wing skin of a Mirage III aircraft. An analytical approach is used in the repair design of a center-notched thin sheet, and is presented along with an approximate closed-form solution. The structural design considerations are emphasized and are illustrated by considering the design of several recent aircraft repair schemes. I.S.

**RECENT ADVANCES IN FATIGUE CRACK GROWTH PREDICTIONS**
G. MARCI (DFVLR, Institut fuer Werkstoff-Forschung, Cologne, West Germany) Aeronautical Society of India, Journal (ISSN 0001-9267), vol. 36, Aug. 1984, p. 237-254. refs

The capability of accurate fatigue crack growth (FCG) life prediction is essential for optimizing the structural safety and economic operation of modern aircraft. FCG prediction schemes which compute the crack growth rate cycle by cycle and are based on the effective stress intensity concept of Elber (1971) are examined. The basic FCG-rate equations relevant to the Elber model are reviewed, and it is shown that the relatively simple exponential FCG-rate equations have to be modified to accommodate the observed FCG behavior. Procedures for determining the stress intensity factor at which a fatigue crack opens are then discussed. as are some characteristics of the crack growth behavior implied by Newman's approach (1981). It is pointed out that more experimental work is required to refine the modeling of compressive loading in fatigue. V.L.

**MANUFACTURE OF COMPOSITE PROPELLER BLADES FOR COMMUTER AIRCRAFT**
R. MCCARTHY (Dowty Rotol, Ltd., Gloucester, England) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 11 p.
(SAE PAPER 850875)

A manufacturing method employing a resin injection process which yields good fiber volume fractions, and correspondingly high structural strength, has been developed for the composite propeller blades that will be used by next-generation turboprop commuter aircraft. NDT and quality control methods are incorporated into this manufacturing process to ensure high quality, as corroborated by a certification procedure for propellers of this new type that encompassed both structural and environmental stresses. The environmental tests include lightning strike and bird strike effects. Flight testing has been conducted with Saab-Fairchild 340, Cheyenne IV, and Fokker 50 twin turboprop aircraft. O.C.

**AGE FORMING TECHNOLOGY EXPANDED IN AN AUTOCLAVE**
D. M. HAMBRICK (Avco Corp., Avco Aerostructure Div., Nashville, TN) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 18 p.
(SAE PAPER 850885)

Development of the autoclave forming aluminum (AFA) process has advanced current technology of age forming. Using an autoclave for application of aging heat and forming pressure, the process has been used to form 50 feet long, 2124 and 2419 aluminum wing skins containing integrally machined stiffeners and varying in thickness from 0.1 to 2.5 inches with thick pads in the middle of thin sections. The process produces smooth contours with no visible evidence of abrupt changes in thickness. The skins are believed to be the largest and most complex parts ever to be age creep formed in the history of the aircraft industry. Author

Avail: US Patent and Trademark Office CSCL 11A

The sealing of the gas path in a gas turbine engine at the blade tips is improved by maintaining a minimum clearance between the rotor blade tips and the gas path seal. This is accomplished by taking advantage of an increase in volume during controlled oxidation of certain intermetallic compounds which have high melting points. The increase in volume closes the clearance subsequent to a rub between the blades and the seal. Thus, these compounds re-form the tip seal surface to assure continued engine efficiency.

**HEAT TRANSFER CHARACTERISTICS FOR TWO-DIMENSIONAL ARRAYS OF IMPINGING JETS WITH INITIAL CROSSFLOW Ph.D. Thesis**

C. C. J. SU 1984 252 p

Avail: Univ. Microfilms Order No. DA8501324

Two-dimensional arrays of circular air jets impinging on a heat transfer surface parallel to the jet orifice plate are considered. The jet flow, after impingement, is constrained to exit in a single direction along the channel formed by the jet orifice plate and heat transfer surface. In addition to the crossflow that originates from the jets following impingement, an initial crossflow is present that approaches the array through an upstream extension of the channel. The configurations considered are intended to model the impingement cooled midchord region of gas turbine airfoils in cases where an initial crossflow is also present. Spanwise averaged heat fluxes, resolved in the streamwise direction to one streamwise jet hole spacing, referred to as regional average fluxes, were measured for twelve arrays each having a different combination of geometric parameter values (streamwise hole spacing, spanwise hole spacing, and channel height each measured relative to jet hole diameter). Measurements were made over a range of jet flow rates and also for a range of initial crossflow rates relative to jet flow rate.

**COMPUTATION OF THREE-DIMENSIONAL SHOCK WAVE AND BOUNDARY-LAYER INTERACTIONS**

C. M. HUNG Aug. 1985 15 p refs

(NASA-TM-86780; NAS 1.15:86780; REPT-85350) Avail: NTIS HC A02/MF A01 CSCL 20D

Computations of the impingement of an oblique shock wave on a cylinder and a supersonic flow past a blunt fin mounted on a plate are used to study three dimensional shock wave and boundary layer interaction. In the impingement case, the problem of imposing a planar impinging shock as an outer boundary condition is discussed and the details of particle traces in windward and leeward symmetry planes and near the body surface are presented. In the blunt fin case, differences between two dimensional and three dimensional separation are discussed, and the existence of an unique high speed, low pressure region under the separated spiral vortex core is demonstrated. The accessibility of three dimensional separation is discussed. E.A.K.

(NASA-CR-176192; NAS 1.26:176192) Avail: NTIS HC A02/MF A01 CSCL 20D

The interaction of a turbulent boundary layer on a flat plate with a strong artificially generated longitudinal vortex which may or may not actually enter the boundary layer is studied. The vortices are generated by a delta wing suspended ahead of the test plate so that the configuration is approximately that of a close coupled carnard with zero main-wing sweep and an invisible body. All necessary configuration and parametric checks are completed, and data acquisition and analysis on the first configuration chosen for detailed study, in which the vortex starts to merge with the boundary layer a short distance downstream of the leading edge of the test plate, are nearly complete. A two-phase program is conducted to develop heat flux sensors capable of making heat flux measurements throughout the hot section of gas turbine engines. In Phase 1, three types of heat flux sensors are selected; embedded thermocouple, laminated, and Gardon gauge sensors. A demonstration of the ability of these sensors to operate in an actual engine environment is reported. A segmented liner of each of two combustors being used in the Broad Specification Fuels Combustor program is instrumented with the three types of heat flux sensors then tested in a high pressure combustor rig. Radiometer probes are also used to measure the radiant heat loads to more fully characterize the combustor environment. Test results show the heat flux sensors to be in good agreement with radiometer probes and the predicted data trends. In general, heat flux sensors have strong potential for use in combustor development programs. Author

**STUDY OF NSI AND RELATED CABLE PERFORMANCE DURING TESTS PERFORMED IN THE NASA HOT GAS FACILITY**

Z. S. KARU Jan. 1982 32 p
(Contract NAS8-32952)
(NASA-CR-170886; NAS 1.26:170886; LMSC-HREC-TM-D784644)
Avail: NTIS HC A03/MF A01 CSCL 20K

Some seven different configurations of the NSI and other cables were tested in the NASA-MSFC Hot Gas Facility (HGF). The tests were conducted to study what happens to the cables when they are exposed to hot flow as was the case in the first two Shuttle flights, the STS-1 and STS-2. Protection of these components is vital for various functions especially to attain proper nozzle separation. The tests in the HGF demonstrated the severity of the aerodynamic forces combined with aero heating environment on the test cables and helped, in general, to evaluate the cable wrap materials and cable mounting hardware and technique. Blastape 2 cable wrap which is adequate for thermal protection of the cables must be properly clamped at its ends. The nylon clamps (or ties) used to secure cables to metal components inside the skirt could not withstand the heating. K5NA closeout material used on the outboard surface of the aft skirt when troweled over the cables performed excellently in protecting the cables and mounting hardware.

(Contract F33615-83-C-3252)
(AD-A155774; AFWAL-TR-84-3116) Avail: NTIS HC A03/MF A01 CSCL 12A

Shot peening is used extensively in many aircraft structural and engine applications to enhance fatigue life and stress corrosion resistance. Recent research indicates that high shot peening intensities can produce a phenomenon called peened surface extrusion folds (PSEF) which is hypothesized to result in fatigue life reductions. In this investigation more than one hundred specimens of 7075-T6 and 7075-T73 aluminum material were manufactured and treated at various levels of shot peening intensity, almen saturation level, and peening media size. Specimens were subsequently fatigue tested under axial loading conditions. The longest fatigue life was obtained at relatively low almen intensities with the smallest size glass bead at 100 to 110% almen saturation. Intensity vs fatigue life patterns were similar for both materials. The optimum intensity level was substantially below that specified in MIL-STD-852. Scanning electron microscopy and metallography showed increasing depth and quantity of PSEF and embedded glass bead particles at the surface as peening intensity increased. Test work demonstrated statistically significant effects of PSEF, embedded glass particles, percent of almen saturation, part material hardness, and peening media size on specimen fatigue life. Multiple linear statistical regression of these four variables accounted for a high percentage of the variance in specimen fatigue life.

**IN-FLIGHT ELECTRICAL CONDUCTIVITY MEASUREMENTS**

P. GONDOT and A. DELANNOY (ONERA, Chatillon-sous-Bagneux, France) (International Conference on Lightning and Static Electricity, Paris, France, June 10-12, 1985) ONERA, TP, no. 1985-61, 1985, 6 p. DRET-supported research. refs
(ONERA, TP NO. 1985-61)

Convective cloud electrical behavior is related to such global parameters as the atmospheric electric field, and to such local phenomena as the electrical charge of drops and droplets and their ionic conductivity. ONERA has conducted cloud conductivity sensor development efforts based on the Gerdien design, and deployed such sensors aboard a Transall aircraft during a thundercloud and lightning flash study campaign in southwestern France held in the spring of 1984. The three different sensors used were respectively distinguished by (1) automatic bias for conductivity, ionic density, and mobility measurements, (2) high voltage bias with a multireceiver electrode for fast analysis of cloud transition zones, and (3) adjustable bipolar high voltage bias.

**REFLECTION PLANE TESTS OF A WIND TURBINE BLADE TIP SECTION WITH AILERONS Final Report**

J. M. SAVINO, T. W. NYLAND, A. G. BIRCHENOUGH, F. L. JORDAN (NASA, Langley Research Center), and N. K. CAMPBELL (NASA, Langley Research Center) Aug. 1985 57 p refs
(Contract DE-AI01-79ET-20320)
(NASA-TM-87018; E-2564; DOE/NASA/20320-65; NAS 1.15:87018) Avail: NTIS HC A04/MF A01 CSCL 10A

Tests were conducted in the NASA Langley 30 by 60 foot Wind Tunnel on a full scale 7.31 m (24 ft) long tip section of a wind turbine rotor blade. The blade tip section was built with ailerons on the trailing edge. The ailerons, which spanned a length of 6.1 m (20 ft), were designed so that two types could be evaluated: the plain and the balanced. The ailerons were hinged on the suction surface at the 0.62 X chord station behind the leading edge. The purpose of the tests was to measure the aerodynamic characteristics of the blade section for: an angle of attack range from 0 deg to 90 deg aileron deflections from 0 deg to -90 deg, and Reynolds numbers of 0.79 and 1.5 x 10 to the 6th power. These data were then used to determine which aileron configuration had the most desirable rotor control and aerodynamic braking characteristics. Tests were also run to determine the effects of vortex generators, leading edge roughness, and the gaps between the aileron sections on the lift, drag, and chordwise force coefficients of the blade tip section.

**COMPARATIVE ANALYSIS OF OPERATIONAL FORECASTS VERSUS ACTUAL WEATHER CONDITIONS IN AIRLINE FLIGHT PLANNING, VOLUME 1**

J. F. KEITZ Apr. 1982 83 p 5 Vol.
(Contract NAS3-22748)
(NASA-CR-167862; NAS 1.26:167862) Avail: NTIS HC A05/MF A01 CSCL 04B

The impact of more timely and accurate weather data on airline flight planning with the emphasis on fuel savings is studied. This volume of the report discusses the results of Task 1 of the four major tasks included in the study. Task 1 compares flight plans based on forecasts with plans based on the verifying analysis from 33 days during the summer and fall of 1979. The comparisons show that: (1) potential fuel savings conservatively estimated to be between 1.2 and 2.5 percent could result from using more timely and accurate weather data in flight planning and route selection; (2) the Suitland forecast generally underestimates wind speeds; and (3) the track selection methodology of many airlines operating on the North Atlantic may not be optimum resulting in their selecting other than the optimum North Atlantic Organized Track about 50 percent of the time. **COMPARATIVE ANALYSIS OF OPERATIONAL FORECASTS VERSUS ACTUAL WEATHER CONDITIONS IN AIRLINE FLIGHT PLANNING, VOLUME 2**

J. F. KEITZ Apr. 1982 54 p 5 Vol.
(Contract NAS3-22748)
(NASA-CR-167863; NAS 1.26:167863) Avail: NTIS HC A04/MF A01 CSCL 04B

The impact of more timely and accurate weather data on airline flight planning with the emphasis on fuel savings is studied. This volume of the report discusses the results of Task 2 of the four major tasks included in the study. Task 2 compares various catagories of flight plans and flight tracking data produced by a simulation system developed for the Federal Aviation Administrations by SRI International. (Flight tracking data simulate actual flight tracks of all aircraft operating at a given time and provide for rerouting of flights as necessary to resolve traffic conflicts.) The comparisons of flight plans on the forecast to flight plans on the verifying analysis confirm Task 1 findings that wind speeds are generally underestimated. Comparisons involving flight tracking data indicate that actual fuel burn is always higher than planned, in either direction, and even when the same weather data set is used. Since the flight tracking model output results in more diversions than is known to be the case, it was concluded that there is an error in the flight tracking algorithm. Author

**COMPARATIVE ANALYSIS OF OPERATIONAL FORECASTS VERSUS ACTUAL WEATHER CONDITIONS IN AIRLINE FLIGHT PLANNING, VOLUME 3**

J. F. KEITZ Apr. 1982 96 p 5 Vol.
(Contract NAS3-22748)
(NASA-CR-167864; NAS 1.26:167864) Avail: NTIS HC A05/MF A01 CSCL 04B

The impact of more timely and accurate weather data on airline flight planning with the emphasis on fuel savings is studied. This volume of the report discusses the results of Task 3 of the four major tasks included in the study. Task 3 compares flight plans developed on the Suitland forecast with actual data observed by the aircraft (and averaged over 10 degree segments). The results show that the average difference between the forecast and observed wind speed is 9 kts. without considering direction, and the average difference in the component of the forecast wind parallel to the direction of the observed wind is 13 kts. - both indicating that the Suitland forecast underestimates the wind speeds. The Root Mean Square (RMS) vector error is 30.1 kts. The average absolute difference in direction between the forecast and observed wind is 26 degrees and the temperature difference is 3 degree Centigrade. These results indicate that the forecast model as well as the verifying analysis used to develop comparison flight plans in Tasks 1 and 2 is a limiting factor and that the average potential fuel savings or penalty are up to 3.6 percent depending on the direction of flight. Author

**COMPARATIVE ANALYSIS OF OPERATIONAL FORECASTS VERSUS ACTUAL WEATHER CONDITIONS IN AIRLINE FLIGHT PLANNING, VOLUME 4**

J. F. KEITZ Apr. 1982 93 p 5 Vol.
(Contract NAS3-22748)
(NASA-CR-167865; NAS 1.26:167865) Avail: NTIS HC A05/MF A01 CSCL 04B

The impact of more timely and accurate weather data on airline flight planning with the emphasis on fuel savings is studied. This volume of the report discusses the results of Task 4 of the four major tasks included in the study. Task 4 uses flight plan segment wind and temperature differences as indicators of dates and geographic areas for which significant forecast errors may have occurred. An in-depth analysis is then conducted for the days identified. The analysis show that significant errors occur in the operational forecast on 15 of the 33 arbitrarily selected days included in the study. Wind speeds in an area of maximum winds are underestimated by at least 20 to 25 kts. on 14 of these days. The analysis also show that there is a tendency to repeat the same forecast errors from prog to prog. Also, some perceived forecast errors from the flight plan comparisons could not be verified by visual inspection of the corresponding National Meteorological Center forecast and analyses charts, and it is likely that they are the result of weather data interpolation techniques or some other data processing procedure in the airlines' flight planning systems. Author

**COMPARATIVE ANALYSIS OF OPERATIONAL FORECASTS VERSUS ACTUAL WEATHER CONDITIONS IN AIRLINE FLIGHT PLANNING: SUMMARY REPORT**

J. F. KEITZ Apr. 1982 47 p 5 Vol.
(Contract NAS3-22748)
(NASA-CR-167866; NAS 1.26:167866) Avail: NTIS HC A03/MF A01 CSCL 04B

The impact of more timely and accurate weather data on airline flight planning with the emphasis on fuel savings is studied. This summary report discusses the results of each of the four major tasks of the study. Task 1 compared airline flight plans based on operational forecasts to plans based on the verifying analyses and found that average fuel savings of 1.2 to 2.5 percent are possible with improved forecasts. Task 2 consisted of similar comparisons but used a model developed for the FAA by SRI International that simulated the impact of ATC diversions on the flight plans. While parts of Task 2 confirm the Task 1 findings, inconsistency with other data and the known impact of ATC suggests that other Task 2 findings are the result of errors in the model. Task 3 compares segment weather data from operational flight plans with the weather actually observed by the aircraft and finds the average error could result in fuel burn penalties (or savings) of up to 3.6 percent for the average 8747 flight. In Task 4 an in-depth analysis of the weather forecast for the 33 days included in the study finds that significant errors exist on 15 days. Wind speeds in the area of maximum winds are underestimated by 20 to 50 kts., a finding confirmed in the other three tasks. Author

**A PRELIMINARY INTERCOMPARISON BETWEEN NUMERICAL UPPER WIND FORECASTS AND RESEARCH AIRCRAFT MEASUREMENTS OF JET STREAMS**

M. A. SHAPIRO 15 Apr. 1982 10 p Sponsored by NASA
(NASA-CR-167884; NAS 1.26:167884) Avail: NTIS HC A02/MF A01 CSCL 04B

During the past several years, research on the structure of extra-tropical jet streams has been carried out with direct measurements with instrumented research aircraft from the National Center for Atmospheric Research (NCAR). These measurements have been used to describe the wind, temperature, turbulence and chemical characteristics of jet streams. A fundamental question is one of assessing the potential value of existing operational numerical forecast models for forecasting the meteorological conditions along commercial aviation flight routes so as to execute Minimum Flight Time tracks and thus obtain the maximum efficiency in aviation fuel consumption. As an initial attempt at resolving this question, the 12 hour forecast output from two models was expressed in terms of a common output format to ease their intercomparison. The chosen models were: (1) the Fine-Mesh Spectral hemispheric and (2) the Limited Area Fine Mesh (LFM) model. Author

**THE PHYSICAL AND EMPIRICAL BASIS FOR A SPECIFIC CLEAR-AIR TURBULENCE RISK INDEX Final Report**

J. L. KELLER Aug. 1985 47 p refs
(Contract NAS8-34678)
(NASA-CR-178522; NAS 1.26:178522; UDR-TR-85-94) Avail: NTIS HC A03/MF A01 CSCL 04B

An improved operational CAT detection and forecasting technique is developed and detailed. This technique is the specific clear air turbulence risk (SCATR) index. This index shows some promising results. The improvements seen using hand analyzed data, as a result of the more realistic representation of the vertical shear of the horizontal wind, are also realized in the data analysis used in the PROFS/CWP application. The SCATR index should improve as database enhancements such as profiler and VAS satellite data, which increase the resolution in space and time, are brought into even more sophisticated objective analysis schemes. **PROCEEDINGS OF METEOROLOGICAL MOTOR GLIDER (MEMO) WORKSHOP '84**

Jan. 1985 213 p refs Partly in ENGLISH and GERMAN Proc. held at Oberpfaffenhofen, West Ger., 1-5 Oct. 1985 Report will also be announced as translation (ESA-TT-945)
(DFVLR-MITT-85-04; ISSN-0176-7739) Avail: NTIS HC A10/MF A01

Motor glider meteorology and the history of motor gliders used for meteorological flight are reviewed. Vertical wind velocity determination using aircraft motion is discussed. Meteorological data from the Falcon aircraft and the ASK 16 motor glider are compared. Atmospheric boundary layer turbulence is investigated. Environmental meteorological data in urban areas are examined. The concept of Lagrangian partitioning was applied to turbulent energy transport. Horizontal and vertical structure of the boundary layer, and the energy budgets above rural and urban areas are treated. Lee circulation in a Foehn wind is studied. Meteorological measuring campaigns with instrumented motor gliders in Poland are reviewed. A data acquisition system for meteorological measurements onboard light aircraft is developed. Accuracy and error analysis of meteorological measuring data is considered. The principles of wind velocity measurements onboard research aircraft are presented.

Avail: NTIS HC A10/MF A01

A measuring method for the determination of the vertical wind velocity using small measuring aircraft (e.g., motor gliders) is developed. During the flight through a wind field, wind velocity fluctuations act on the aircraft in the form of additional forces. Aircraft reactions to these perturbations depend strongly on the steering maneuvers of the pilot. From this response behavior of the aircraft conclusions can be drawn as to the wind behavior if the aircraft dynamics are precisely known. The wind determination procedure can be simplified if only vertical wind is taken into account and if stationary behavior is assumed. The validity domain of these simplifying assumptions and the effect of measuring quantity errors (investigated by simulations) are discussed. Author (ESA)

Avail: NTIS HC A10/MF A01

The concept of Lagrangian partitioning is applied to motor glider meteorological flight measuring series in order to study which single processes contribute to the turbulent net vertical transport of sensible and latent heat. Normalization and data evaluation procedures are described. It is found that in the upper level of the inversion layer the net fluxes consist of much higher single contributions than in the lower level, especially for the sensible heat flux. At both levels the moist, then hot, wakes give the largest contribution to the direct circulations, while the hot wakes give the largest contribution to the indirect circulations. For sensible heat the intensities of the processes due to hot air dominate at both levels. For latent heat the intensities of the processes due to moist air only dominate at the lower level. Avail: NTIS HC A10/MF A01

The three components of the wind vector are computed in real time by taking the difference between the inertial velocity and the true airspeed. To perform this calculation, it is necessary to transform the true airspeed from the aerodynamic to the Earth-fixed coordinate system. This coordinate transformation contains numerous trigonometric functions (sine and cosine functions), which yield nonlinear relations for the determination of the wind vector components. These relations present the theoretical principles for measuring winds onboard an aircraft. Author (ESA)

**FLIGHT MANAGEMENT SYSTEMS CREATE NEW CREW TRAINING NEEDS**

M. K. DEJONGE (Lear Siegler, Inc., Instrument Div., Grand Rapids, MI) ICAO Bulletin, vol. 40, May 1985, p. 29-31.

Flight Management Computer Systems (FMCS) are now part of every newly introduced aircraft. These systems interface with the pilot through a control/display unit, the design of which varies considerably according to the manufacturer of the aircraft or the FMCS, making it necessary to train the pilot for every new or upgraded FMCS. To supplement the training manuals, the existing audio-visual slide-show packages, and the touch-screen systems, a novel hands-on method involving a table-top flight simulator interfaced with the actual FMCS hardware has been introduced. In a set-up developed for Boeing, the FMCS for the B-737-300 is interfaced with an inexpensive Commodore personal computer, which is programmed to provide a simulator of the flight instruments and controls, the autopilot, autothrottle, and the aircraft and engine dynamics, enabling the students to operate the FMCS in a dynamic flight situation, with an aircraft's own navigation data base in the FMCS. **PARAMETER SPACE DESIGN OF CONTROL SYSTEMS USING INTERACTIVE COMPUTER GRAPHICS**

P. PUTZ and M. J. WOZNY (Rensselaer Polytechnic Institute, Troy, NY) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 105-114. Research supported by the Rensselaer Polytechnic Institute and General Electric Co. refs
(Contract NSF ISP-70-20240)

This paper presents contributions to computer-aided control system design in the parameter space approach. Newly developed modeling algorithms allow the use of three-dimensional interactive computer graphics as a powerful and very flexible tool for multivariable control system design. Robustness with respect to plant variation and sensor failures, actuator constraints, sensor noise and quantization effects in addition to specifications about stability, damping, and bandwidth are handled in a direct geometric way by working with admissible regions of several design parameters. An interactive CAD software package with these capabilities is discussed and several design examples demonstrate the potential and versatility of the method. Author

**A REAL-TIME FORTRAN IMPLEMENTATION OF A SENSOR FAILURE DETECTION, ISOLATION AND ACCOMMODATION ALGORITHM**
J. C. DELAAT (NASA, Lewis Research Center, Cleveland, OH) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 1 . New York, IEEE, 1984, p. 572, 573. refs

An advanced, sensor failure detection, isolation, and accomodation algorithm has been developed by NASA for the F100 turbofan engine. The algorithm takes advantage of the analytical redundancy of the sensors to improve the reliability of the sensor set. The method requires the controls computer, to determine when a sensor failure has occurred without the help of redundant hardware sensors in the control system. The controls computer provides an estimate of the correct value of the output of the failed sensor. The algorithm has been programmed in FORTRAN using a real-time microprocessor-based controls computer. A detailed description of the algorithm and its implementation on a microprocessor is given. **MODAL INSENSITIVITY WITH OPTIMALITY**
A. J. CALISE and K. V. RAMAN (Drexel University, Philadelphia, PA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 2 . New York, IEEE, 1984, p. 949-953. refs
(Contract N00014-77-C-0642; NAG1-243)

This paper deals with the design of a constant gain, feedback controller which results in selected modal insensitivity, and at the same time optimizes a quadratic performance index representative of desired system performance for nominal plant parameter values. Both full state and output feedback control are considered. A constraint is established for the feedback gain matrix that results in modal insensitivity, and necessary conditions for optimality subject to this constraint are given. This forms the basis for a numerical algorithm to compute the optimal feedback gain. To illustrate the procedure, a design is carried out using the lateral dynamics of an L-1011 aircraft. Author

**A NEW APPROACH TO THE MANEUVERING TARGET TRACKING PROBLEM**
N. O. SPEAKMAN (USAF, Armament Laboratory, Eglin AFB, FL) and T. E. BULLOCK (Florida, University, Gainesville) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 3 . New York, IEEE, 1984, p. 1404, 1405. refs

A description is given of the theoretical basis for a new autoregressive moving-average (ARMA) model identification method. Attention is given to an algorithm which determines the minimum order n of an ARMA model, relationships to the Kalman filter, and applications to target dynamic modelling. By applying a new method to an identification of ARMA model parameters, it is shown that a simulated aircraft acceleration can be accurately modeled with ARMA models. Applications to the design of tracking filter dynamic models appear to be obvious. G.R.

**A DISTRIBUTED AEROACOUSTIC TRACKING ALGORITHM**
R. R. TENNEY (MIT, Cambridge, MA) and J. R. DELANEY (MIT, Lexington, MA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 3 . New York, IEEE, 1984, p. 1440-1450. DARPA-supported research. refs

A distributed algorithm is being developed for tracking very-low-flying, subsonic aircraft using geographically dispersed acoustic sensors and colocated data processors linked by a digital radio broadcast communication network. Development of the algorithm serves as a case study of the applicability and limitations of state-of-the-art distributed estimation theory. Three major components of the algorithm are described: the local estimation algorithm, the distributed estimation algorithm, and the communications policy. The local estimation algorithm uses single sensor measurements to improve state estimates in one sensor/processor node. The distributed estimation algorithm combines state estimates computed at different nodes. The communications policy governs the exchange of state estimates between nodes. Performance of the algorithm in simulated tracking experiments is reported. Author

**COMPUTER-AIDED DESIGN OF CONTROL SYSTEMS VIA PARAMETER OPTIMIZATION METHOD (CADCS/POM) - AN INTERACTIVE GRAPHICS APPROACH**
T. SADEGHI (Fairchild Republic Co., Farmingdale, NY) and M. WOZNY (Rensselaer Polytechnic Institute, Troy, NY) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 3 . New York, IEEE, 1984, p. 1634-1640. refs

This paper describes an interactive graphics approach for computer-aided design of control systems via a parameter optimization method. The approach integrates: (1) an optimal proportional-plus-integral control law to achieve tracking, (2) an algorithmic optimization technique to satisfy linear and non-linear constraints, and (3) an interactive graphics approach to utilize the heuristic optimization (human knowledge, experience, and intuition). Where each of the preceding concepts has its unique features, the integrated aproach allows minimization of computer and design time beyond minimizing a cost function. Author

**CONTROL SYSTEM RECONFIGURATION**
W. E. VANDER VELDE (MIT, Cambridge, MA) IN: 1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volume 3 . New York, IEEE, 1984, p. 1741-1745.
(Contract NAG1-126)

The problem of reconfiguring a control system to accommodate the failure of a sensor or actuator is discussed in the context of several different system configurations. First, some ground rules under which the reconfiguration algorithms are to function are established. A variety of control system configurations is then considered, and it is found that the approach to reconfiguration is obvious in some cases but not clear in others. Several possible strategies for reconfiguration, applicable to different situations, are examined. V.L.

**COMPUTER AND INFORMATION TECHNOLOGY IN THE YEAR 2000 - A PROJECTION**
S. F. LUNDSTROM (Microelectronics and Computer Technology Corp., Austin, TX) and R. L. LARSEN (Maryland, University, College Park) Computer (ISSN 0018-9162), vol. 18, Sept. 1985, p. 68-79. refs

The reasoning and conclusions drawn by a panel of experts from the National Research Council who, at the request of NASA, considered information and computer technologies which would be available in the year 2000 are reported. The deliberations covered microelectronics and components, processors, software, AI and expert systems, man-machine interfaces, systems development and implementation and high-integrity systems. It was projected that components would be 2-3 orders of magnitude more cost- and size-effective by the turn of the century. Airborne systems would carry 50 Mb RAM and perform operations at 1 GIPS. Supercomputers would have been pushed to 1 Tflops with 10 Gwords of RAM and 100-100,000 processing elements. The parallel progress in aerospace technologies will directly depend on the degree aerospace engineers access the new computing power. M.S.K.

**RECENT ADVANCES IN COMPUTER IMAGE GENERATION**
P. K. DOENGES (Evans and Sutherland Computer Corp., Salt Lake City, UT) IN: Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 . La Jolla, CA, Society for Computer Simulation, 1984, p. 27-38.

Polygon/area Computer Image Generation (CIG) technology, currently known in product form as CT5, employs parallel processing in order to expand the number of display channels and raster resolution; it also incorporates strongly hierarchical database management and culling. CIG architecture has demonstrated configuration flexibility and growth potential; attention is presently given to the last five years' experience with applications of the CT5 architecture, as well as to the prospects for meeting advanced operational and functional performance objectives with such an architecture in the future. O.C.

The present computerized reliability predictor for digital fault-tolerant systems whose sizes are of the order of one million Markovian equivalent states, employs advanced stochastic modeling techniques and implements a mixed Markov model that enables it to drastically reduce the state size of hitherto computationally unobtainable models. Attention is given to the concepts of failure, fault, and error, in the context of the novel system's fault/error-handling models. Examples are drawn from the system's user-friendly interface dialog. The relative roles of large scale scientific computers and physical experiments in several science and engineering disciplines are discussed. Increasing dependence on computers is shown to be motivated both by the rapid growth in computer speed and memory, which permits accurate numerical simulation of complex physical phenomena, and by the rapid reduction in the cost of performing a calculation, which makes computation an increasingly attractive complement to experimentation. Computer speed and memory requirements are presented for selected areas of such disciplines as fluid dynamics, aerodynamics, aerothermodynamics, chemistry, atmospheric sciences, astronomy, and astrophysics, together with some examples of the complementary nature of computation and experiment. Finally, the impact of the emerging role of computers in the technical disciplines is discussed in terms of both the requirements for experimentation and the attainment of previously inaccessible information on physical processes. **A MORE MODERN THEORY OF COMBUSTION NOISE**
W. C. STRAHLE (Georgia Institute of Technology, Atlanta) IN: Recent advances in the aerospace sciences . New York, Plenum Press, 1985, p. 103-114. refs
(Contract NSF CME-80-22366)

Some of the newer concepts that have emerged in the theory of turbulent reacting flows are applied to the problem of combustion-generated noise. A general theory is constructed for noise radiation from a turbulent combustion region in the practical limit of low frequency and low Mach number. The theory is specialized to simple cases of premixed and nonpremixed jet flames radiating to a free field. Comparison with experiment is given for premixed flames. A new interpretation is given for the frequency content of combustion noise, which is in accord with experiment. Author

**NOISE TRANSMISSION CHARACTERISTICS OF AIRCRAFT-TYPE COMPOSITE PANELS**
V. L. METCALF (U.S. Army, Research and Technology Laboratories, Hampton, VA) and F. W. GROSVELD (Bionetics Corp., Hampton, VA) SAE, General Aviation Aircraft Meeting and Exposition, Wichita, KS, Apr. 16-19, 1985. 18 p. refs
(SAE PAPER 850878)

The noise transmission loss characteristics of 28 flat, fiber reinforced, composite panels and 4 aluminum panels, with dimensions of 24.1 cm by 40.6 cm, have been experimentally investigated in the NASA Langley Research Center noise transmission loss apparatus. To support the acoustic data, modal frequencies and modal damping for several mode shapes of each of the test panels were extracted experimentally, using impulse testing with a Computer Aided Test system. It was determined that the modal frequencies and damping ratios are affected by the fiber orientation in the composite panel. The transmission loss of composite panels is compared with that of aluminum panels of equal critical shear load. The effects of applying structural foam and damping material are indicated. Author

**COST EFFECTIVE SINGLE CRYSTALS: THE ROLLS ROYCE APPROACH**
M. J. GOULETTE, P. D. SPILLING, and R. P. ARTHEY 1 Nov. 1984 11 p refs Presented at 5th Intern. Symp. on Superalloys, Seven Springs, England, 1984
(PNR-90262) Avail: NTIS HC A02/MF A01

The development of a cost effective single crystal technology, including single crystal casting technique, alloy development, and orientation measurement, is described. The first aspect led to the adoption of the technically more difficult seeding technique as a result of its greater flexibility. The second resulted in the development of a series of three alloys to meet specific turbine applications. The third requirement is met by the development of a rapid and accurate orientation measurement technique suitable for the production environment. Author (ESA)

**WEIGHT CONTROL - A PROCUREMENT AGENCY PERSPECTIVE**
D. M. CATE (U.S. Naval Air Systems Command, Washington, DC) SAWE, Annual Conference, 43rd, Atlanta, GA, May 21-23, 1984. 14 p.
(SAWE PAPER 1594)

A procurement agency perspective on the factors which make success in weight control efforts difficult to achieve is presented, with attention to technological uncertainty, psychological pressures toward optimistic estimates, insufficient resources, and competing priorities. It is suggested that these factors can be significantly balanced by undertaking weighings for estimate verification, by the use of derivation and modification programs, and by means of center-of-gravity control. O.C.

(SH-1.4-6) Avail: NTIS HC as boxed set only $200/MF A01 per volume or E99 per entire set CSCL 03B

The EOSCOR 3 detector, designed to measure the flux of solar neutrons, was flown on a long duration RACOON balloon flight from Australia during Jan. through Feb. 1983. The Circum-global flight lasted 22 days. No major solar activity occurred during the flight and thus only an upper limit to the solar flare neutrons flux is given. The atmospheric neutron response is compared with that obtained on earlier flights from Palestine, Texas. Author

(HE-3.7-9) Avail: NTIS HC as boxed set only $200/MF A01 per volume or E99 per entire set CSCL 03B

The compilation of ultra high energy jets suggests at present the existence of a bump in primary energy spectrum (with the standard concept of high energy collisions). The pseudo-rapidity distribution exhibits some typical anomalies, more than the (P sub t) behavior, which are (may be) the fingerprints of quark gluon plasma transition. The next results of Emulsion Chamber on Supersonic (ECHOS) will be in both cases determinant to confirm those tendancies, as well as an important effort of the cosmic ray community to develop in that sense a flying emulsion chamber experiment. (NASA-TM-87585; NAS 1.15:87585) Avail: NTIS HC A05/MF A01 CSCL 05D

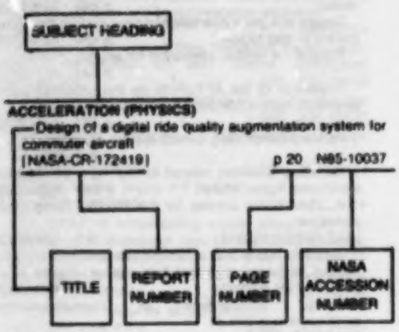
The role of the Langley Research Center is to perform basic and applied research necessary for the advancement of aeronautics and space flight, to generate new and advanced concepts for the accomplishment of related national goals, and to provide research advice, technological support, and assistance to other NASA installations, other government agencies, and industry. Some of the significant tests which were performed during calendar year 1984 in Langley test facilities are highlighted. The broad range of the research and technology activities at the Langley Research Center and the contributions of this work toward maintaining United States leadership in aeronautics and space research are illustrated. R.J.F.

# SUBJECT INDEX

## Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

Computer and information technology in the year 2000 - A projection p 917 A85-48024
Aerospace radiography - The last three decades p 906 A85-49100
**AEROSPACE SYSTEMS**
The history and future contributions of Carco simulators to the aerospace industry p 898 A85-49020
**AEROTHERMODYNAMICS**
Temperature fluctuations and heat flux in grid-generated isotropic turbulence with streamwise and transverse mean-temperature gradients p 908 A85-48359
**AFTERBODIES**
The subsonic near-wake of an axisymmetric semielliptical afterbody p 869 A85-48534
Study of NSI and related cable performance during tests performed in the NASA Hot Gas Facility [NASA-CR-170886] p 912 N85-35423
**AGING (MATERIALS)**
Age forming technology expanded in an autoclave [SAE PAPER 850885] p 910 A85-50113
**AILERONS**
Reflection plane tests of a wind turbine blade tip section with ailerons [NASA-TM-87018] p 912 N85-34444
**AIR CONDITIONING**
Air-cycle air conditioning of turbine-powered general aviation and commuter aircraft [SAE PAPER 850901] p 885 A85-50118
**AIR COOLING**
Single-engine propulsion improvement through intercooling [SAE PAPER 850894] p 890 A85-50114
**AIR CURRENTS**
The physical and empirical basis for a specific clear-air turbulence risk index [NASA-CR-178522] p 914 N85-35540
**AIR DEFENSE**
How much does it cost/how much does it weigh? [SAWE PAPER 1593] p 919 A85-49913
**AIR FLOW**
The unsteady properties of a flow within a schematic air intake [AAAF PAPER NT 84-09] p 870 A85-48989
Turbulence in air inlets [AAAF PAPER NT 84-10] p 870 A85-48990
A finite difference model for flows around an air intake [AAAF PAPER NT 84-11] p 870 A85-48991
Numerical simulations of viscous fluid flows in air intakes at high angles of attack [AAAF PAPER NT 84-12] p 907 A85-48992
The characteristics of unsteady flow in air intakes [AAAF PAPER NT 84-13] p 870 A85-48993
Calculation of the flow in an air intake duct by numerical solution of the Euler equations [AAAF PAPER NT 84-24] p 870 A85-48998
The influence of helicopter tail shape on drag: An aerodynamic study using a low speed wind tunnel [AD-A156304] p 876 N85-35174
**AIR INTAKES**
The unsteady properties of a flow within a schematic air intake [AAAF PAPER NT 84-09] p 870 A85-48989
Turbulence in air inlets [AAAF PAPER NT 84-10] p 870 A85-48990
A finite difference model for flows around an air intake [AAAF PAPER NT 84-11] p 870 A85-48991
Numerical simulations of viscous fluid flows in air intakes at high angles of attack [AAAF PAPER NT 84-12] p 907 A85-48992
The characteristics of unsteady flow in air intakes [AAAF PAPER NT 84-13] p 870 A85-48993
Calculation of the flow in an air intake duct by numerical solution of the Euler equations [AAAF PAPER NT 84-24] p 870 A85-48998
**AIR NAVIGATION**
Status and development trends of navigation systems for general aviation p 879 A85-48175
One-Eleven trailblazers p 866 A85-49657
**AIR TO SURFACE MISSILES**
Next generation gunship [AD-A156361] p 887 N85-35193
**AIR TRAFFIC**
Reconnoitering the electromagnetic spectrum p 879 A85-49094
The contribution made by flight mechanics to civil aviation p 878 N85-35169
**AIR TRAFFIC CONTROL**
Concepts and algorithms for terminal-area traffic management p 878 A85-47683
The flight planning - flight management connection p 877 A85-47684
Simulation of time-control procedures for the advanced air traffic control system p 878 A85-47686
The imposition of flow control avoids ATC overloads p 879 A85-48851
Initial European Central Data Bank of air traffic demand now in operational trials p 879 A85-48852
Automation in air traffic management p 879 A85-49171
Effect of interference on the performance of a minimum TCAS 2 [FAA-PM-84-33] p 880 N85-34131
Introduction to European air traffic control [AD-A156329] p 878 N85-35176
FAA requirements for model to support capacity, delay, noise and energy programs [AD-A155815] p 880 N85-35179
**AIR TRAFFIC CONTROLLERS (PERSONNEL)**
CAUTRA ATC simulator strives for realism p 897 A85-48857
U.S. Civil airmen statistics for calendar year 1984 [AD-A156326] p 866 N85-35153
**AIRBORNE EQUIPMENT**
The principles of wind measurement with the help of aircraft p 916 N85-35558
**AIRBORNE SURVEILLANCE RADAR**
Meeting the challenge of ESM/ECM integration p 889 A85-49091
Reconnoitering the electromagnetic spectrum p 879 A85-49094
**AIRBORNE/SPACEBORNE COMPUTERS**
Validation of fault-free behavior of a reliable multiprocessor system - FTMP: A case study — Fault-Tolerant Multi-Processor avionics p 888 A85-47757
Development and operation of a measuring data acquisition system for use in light airplanes p 912 N85-35556
**AIRCRAFT ACCIDENTS**
Handling qualities related to stall/spin accidents of supersonic fighter aircraft p 894 A85-49132
**AIRCRAFT ANTENNAS**
Reconnoitering the electromagnetic spectrum p 879 A85-49094
**AIRCRAFT COMMUNICATION**
A fault and damage tolerant network for an advanced transport aircraft p 888 A85-47760
**AIRCRAFT COMPARTMENTS**
Pool fire-ventilation crossflow experiments in a simulated aircraft cabin interior p 877 A85-49130
Acoustic intensity techniques for airplane cabin applications p 919 A85-49137
Flight investigation of cabin noise control treatments for a light turboprop aircraft [SAE PAPER 850876] p 885 A85-50109
Air-cycle air conditioning of turbine-powered general aviation and commuter aircraft [SAE PAPER 850901] p 885 A85-50118
Aviation safety (aircraft passenger survivability and cabin safety) [GPO-39-847] p 878 N85-34130
**AIRCRAFT CONFIGURATIONS**
A three-dimensional, block-structured finite element grid generation scheme — for flow around aircraft modeling p 869 A85-48530
Grid generation and flow calculations for aircraft geometries p 871 A85-49129
An evaluation of improved analytically based weight estimation methodologies [SAWE PAPER 1616] p 883 A85-49920
Flight testing the fixed-wing configuration of the Rotor Systems Research Aircraft (RSRA) [NASA-TM-86762] p 886 N85-34135
**AIRCRAFT CONSTRUCTION MATERIALS**
Review of aeronautical fatigue investigations in France during the period 1983-1985 [ONERA, TP NO. 1985-42] p 860 A85-47256
Low temperature and loading frequency effects on crack growth and fracture toughness of 2024 and 7475 aluminum p 900 A85-47974
The composite technology of a main rotor blade p 865 A85-48567
Application of carbon fibre reinforced thermoplastic (PEEK) composite to aero engine component manufacture p 900 A85-48568
Aspects of certification of civil aircraft structures in composite materials p 865 A85-48570
Structural plastics in sporting and general aviation aircraft p 865 A85-48571
The first British designed and built composite sailplane p 865 A85-48573
Rolls' Tay engine meets schedule for Gulfstream 4 first flight p 890 A85-49090
The weight reduction potential of advanced composites [SAWE PAPER 1579] p 901 A85-49905
Manufacture of composite propeller blades for commuter aircraft [SAE PAPER 850875] p 910 A85-50108
**AIRCRAFT CONTROL**
Active control of the buffeting response on a large modern civil airplane configuration in wind tunnel [ONERA, TP NO. 1985-26] p 893 A85-47253
Feedback control for fuel-optimal descents using singular perturbation techniques p 893 A85-47688
Design of optimal low-sensitivity controllers with prespecified eigenvalues - Application to aircraft lateral motion p 893 A85-47696
Design of a pitch orientation control system for aircraft control in stall region p 893 A85-47701
Fluidics - A reliable alternative for aircraft control p 894 A85-47790
Evaluation of the AFTI/F-16 on the LAMARS (large amplitude multi-mode aerospace research simulator) p 891 A85-49008
Forward-Swept Wing control system development p 894 A85-49011
Handling qualities related to stall/spin accidents of supersonic fighter aircraft p 894 A85-49132
A full-time yaw damper for the Starship flying scale prototype [SAE PAPER 850912] p 895 A85-50123
Simulation study of an automatic trim system for reducing the control forces on a light twin after an engine failure [SAE PAPER 850913] p 895 A85-50124
Energy management of three-dimensional minimum-time intercept [NASA-CR-176174] p 887 N85-35186
Control variables in vertical wind determination using simple flight-mechanical equations p 914 N85-35546
**AIRCRAFT DESIGN**
Continuous fibre reinforced thermoplastics in new generation radomes p 900 A85-48572
Simulation's role in the development of the fuel efficient Boeing 757 and 767 airplanes p 881 A85-49012
Sunrise, the world's first solar-powered airplane p 865 A85-49127
Project advantage of an oblique wing design on a fleet air defense mission p 881 A85-49135
Fokker improves transport design based on launch customer demand p 882 A85-49199
Star in the making — Astra business aircraft with swept supercritical wing p 882 A85-49656
JVX design to cost methodology — Joint Services Advanced Vertical Lift Aircraft Program [SAWE PAPER 1591] p 883 A85-49912
Weight control - A procurement agency perspective [SAWE PAPER 1594] p 919 A85-49914
AFTI MAW - Wing of the future — Advanced Fighter Technology Integrator flight test program for Mission Adaptive Wing concept [SAWE PAPER 1617] p 883 A85-49921
Computer aided determination of rotor blade mass properties [SAWE PAPER 1628] p 884 A85-49926
The USAF's CREST program — CRew EScape Technologies p 884 A85-49944
Generalized Escape System Simulation - Its purpose, recent modifications, and potential p 884 A85-49946
Crashworthy design considerations for general aviation seats [SAE PAPER 850855] p 884 A85-50101
Noise constraints effecting optimal propeller designs [SAE PAPER 850871] p 874 A85-50106
Advanced systems for the Gulfstream IV [SAE PAPER 850900] p 885 A85-50117
USAF damage tolerance methods applied to general aviation aircraft design and analysis [SAE PAPER 850915] p 885 A85-50126
Sport aircraft design trends - Shaping the future of general aviation [SAE PAPER 850881] p 886 A85-50130
A guide to USAF helicopter instrument flight procedures [AD-A156102] p 880 N85-35182
Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing [NASA-CR-3917] p 886 N85-35184
Proceedings of the 14th Army Science Conference. Volume 2: Principal authors I through O [AD-A149201] p 919 N85-35690
A research program to reduce the interior noise in general aviation aircraft, index and summary [NASA-CR-176178] p 919 N85-35695
**AIRCRAFT DETECTION**
A likelihood function method for multiple aircraft maneuver tracking p 888 A85-47699
A distributed aeroacoustic tracking algorithm p 917 A85-47774

**AIRCRAFT ENGINES**
Ultrasonic detection of cracks in web geometries
p 905 A85-47380
Crack characterisation in turbine disks
p 905 A85-47396
NDT-33 - A computerized eddy current instrument
p 906 A85-47470
Evaluation of captured water column technology for advanced ultrasonic sizing techniques
p 906 A85-47475
A real-time FORTRAN implementation of a sensor failure detection, isolation and accommodation algorithm
p 917 A85-47704
Application of carbon fibre reinforced thermoplastic (PEEK) composite to aero engine component manufacture p 900 A85-48568
Rolls' Tay engine meets schedule for Gulfstream 4 first flight p 890 A85-49090
Single-engine propulsion improvement through intercooling
[SAE PAPER 850894] p 890 A85-50114
Porsche aircraft engine P F M 3200
[SAE PAPER 850895] p 890 A85-50115
Certification of reciprocating engine aircraft oils and additives by supplemental type certification procedures
[SAE PAPER 850899] p 901 A85-50116
Conversion of small aircraft to Allison turbine power
[SAE PAPER 850906] p 890 A85-50120
An electronic limiter for aircraft engines
[SAE PAPER 850910] p 890 A85-50122
Aerodynamics of liquid-cooled aircraft engine installations
[SAE PAPER 850896] p 891 A85-50132
Performance improvements from surfacing in aero engine components
[PNR-90257] p 891 N85-34142
Directionally solidified gas turbine alloys
[PNR-90264] p 901 N85-34279
Towards the year 2000: Developments in inspection and product assurance to be anticipated during the next 15 years --- aircraft engines
[PNR-90258] p 911 N85-34421
Cost effective single crystals: The Rolls Royce approach — gas turbine components
[PNR-90262] p 919 N85-34717
**AIRCRAFT EQUIPMENT**
Improved capabilities of the new general aviation digital autopilots
[SAE PAPER 850914] p 895 A85-50125
**AIRCRAFT FUEL SYSTEMS**
Adhesive sealing for integral fuel tanks
[SAWE PAPER 1573] p 901 A85-49901
**AIRCRAFT FUELS**
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 1
[NASA-CR-167862] p 913 N85-35534
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4
[NASA-CR-167865] p 913 N85-35537
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning: Summary report
[NASA-CR-167866] p 913 N85-35538
**AIRCRAFT GUIDANCE**
Concepts and algorithms for terminal-area traffic management p 878 A85-47683
Simulation of time-control procedures for the advanced air traffic control system p 878 A85-47686
Time-controlled aircraft guidance in uncertain winds and temperatures p 879 A85-47687
**AIRCRAFT HAZARDS**
E and H fields measurements on the Transall C160 aircraft during lightning flashes
[ONERA, TP NO. 1985-48] p 876 A85-47259
Aircraft icing must never be underestimated
p 877 A85-48862
Pool fire-ventilation crossflow experiments in a simulated aircraft cabin interior p 877 A85-49130
**AIRCRAFT HYDRAULIC SYSTEMS**
An adaptive control of an electro-hydraulic position control system p 893 A85-47702
**AIRCRAFT INDUSTRY**
DOD Value Engineering Conference report. Value Engineering (VE): A tool that benefits line management held at Leesburg, Virginia on 1-2 November 1984. Part 2. Plenary session
[AD-A156066] p 919 N85-35811
**AIRCRAFT INSTRUMENTS**
A wideband X100 low noise microwave frequency multiplier p 903 A85-47060
The design of a fluidic low-airspeed sensor
p 888 A85-47791
Determination of instrument errors by compatibility checking: Results from dynamic flight test data
[ARL/AERO-R-162] p 889 N85-34137
**AIRCRAFT LANDING**
Time-controlled aircraft guidance in uncertain winds and temperatures p 879 A85-47687
The integrated manual and automatic control of complex flight systems
[NASA-CR-176166] p 896 N85-35201
**AIRCRAFT MAINTENANCE**
Maintainability aspects in maintenance management
p 909 A85-49536
Determining operating and support costs with USAF DO56 maintenance data collection system
p 865 A85-49553
Modeling combat maintenance operations
p 866 A85-49571
Modeling aircraft combat damage repair
p 866 A85-49576
The Eagle - A classic study in reliability growth
p 882 A85-49579
An M principle - Pay me now or spend more later
p 909 A85-49581
F-15 readiness - The maintainability contribution
p 882 A85-49582
Squadron Maintenance and Repair Techniques (SMART) validation test report p 866 A85-49584
F/A-18 supportability assurance readiness program
p 866 A85-49585
Bonded repair of damage p 910 A85-50063
Implications of artificial intelligence on the design of future onboard systems
[SFENA-DPS/C/S3/84252A] p 918 N85-34596
**AIRCRAFT MANEUVERS**
A likelihood function method for multiple aircraft maneuver tracking p 886 A85-47699
A new approach to the maneuvering target tracking problem p 917 A85-47769
Control variables in vertical wind determination using simple flight-mechanical equations p 914 N85-35546
**AIRCRAFT MODELS**
Flow Cones for airplane flight test flow visualization
p 903 A85-47085
Quantification of downwash and ground vortex of a lifting rotor model by flow visualization technique
p 867 A85-47134
The theoretical minimum induced drag of three-surface airplanes in trim p 894 A85-49128
GIV - Gulfstream goes further p 882 A85-49658
**AIRCRAFT NOISE**
Acoustic intensity techniques for airplane cabin applications p 919 A85-49137
Flight investigation of cabin noise control treatments for a light turboprop aircraft
[SAE PAPER 850876] p 885 A85-50109
Mechanisms of transmission and control of low-frequency sound in aircraft interiors
[SAE PAPER 850879] p 885 A85-50111
Langley aeronautics and space test highlights, 1984
[NASA-TM-87585] p 920 N85-35151
**AIRCRAFT PARTS**
Development of a quantitative flaw characterization module - A status report p 905 A85-47402
**AIRCRAFT PERFORMANCE**
Advanced technologies promise sales boost for general aviation aircraft p 865 A85-49069
The Delco Performance Management System
p 895 A85-49172
The extended range operation of twin-engined public transport aircraft. I p 881 A85-49173
First operational Marine Corps AV-8B squadron begins service p 882 A85-49200
Propulsive efficiency and aircraft drag determined from steady state flight test data
[SAE PAPER 850872] p 885 A85-50107
Garrett TPE331-12 engine provides improved altitude performance for high-speed executive turboprop aircraft
[SAE PAPER 850908] p 890 A85-50121
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 1
[NASA-CR-167862] p 913 N85-35534
**AIRCRAFT PRODUCTION**
In-production aircraft weight control
[SAWE PAPER 1597] p 583 A85-49915
Weight control of composite parts in production
[SAWE PAPER 1629] p 866 A85-49927
Contour assessment of formed wing panels
[SAE PAPER 850884] p 886 A85-50131
**AIRCRAFT RELIABILITY**
Laboratory studies related to in-flight acoustic emission monitoring p 905 A85-47428
Aspects of certification of civil aircraft structures in composite materials p 865 A85-48570
A management guide to reliability predictions
p 909 A85-49541
The Eagle - A classic study in reliability growth
p 882 A85-49579
**AIRCRAFT SAFETY**
Fast-jet aircrew safety p 916 A85-48069
Adaptive operation of escape systems - A look at design requirements p 884 A85-49945
Flight testing a liquid ice protection system on a single-engine airplane
[SAE PAPER 850923] p 885 A85-50129
Aviation safety (aircraft passenger survivability and cabin safety)
[GPO-39-847] p 878 N85-34130
Investigation of experimental lightweight firewall materials for A/C engine bay applications
[AD-A155765] p 878 N85-35175
**AIRCRAFT SPIN**
Handling qualities related to stall/spin accidents of supersonic fighter aircraft p 894 A85-49132
Dual towline spin-recovery device
[NASA-CASE-LAR-13076-1] p 895 N85-35200
**AIRCRAFT STABILITY**
Theory of wing rock p 895 A85-49139
Analysis of asymmetric natural vibrations of an aeroplane with moving deformable control surfaces
p 883 A85-49672
Analysis of natural vibrations of a deformable aeroplane with fixed control systems p 883 A85-49673
A full-time yaw damper for the Starship flying scale prototype
[SAE PAPER 850912] p 895 A85-50123
Simulation study of an automatic trim system for reducing the control forces on a light twin after an engine failure
[SAE PAPER 850913] p 865 A85-50124
**AIRCRAFT STRUCTURES**
Aerospace radiography - The last three decades
p 908 A85-49100
Applying shear beam load measuring techniques to portable platform scales for aircraft weighing
[SAWE PAPER 1581] p 898 A85-49906
The role of load-cell rotation in airplane-weight determination
[SAWE PAPER 1583] p 898 A85-49908
Weight control of composite parts in production
[SAWE PAPER 1629] p 866 A85-49927
Recent advances in fatigue crack growth predictions
p 910 A85-50065
Noise transmission characteristics of aircraft-type composite panels
[SAE PAPER 850876] p 919 A85-50110
Age forming technology expanded in an autoclave
[SAE PAPER 850885] p 910 A85-50113
Flight service evaluation of composite helicopter components
[NASA-CR-172562] p 901 N85-34222
An automated technique for encasing specific payloads with low-drag fairings p 886 N85-35183
Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 887 N85-35187
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 1: Analysis methods
[NASA-CR-177943-VOL-1] p 896 N85-35202
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 2: Data
[NASA-CR-177943-VOL-2] p 896 N85-35203
**AIRCRAFT SURVIVABILITY**
Modeling aircraft combat damage repair
p 866 A85-49576
**AIRCRAFT WAKES**
The use of visualization as a guide in the numerical determination of the flow around an abruptly accelerated elliptic cylinder or airfoil p 904 A85-47127
A flow visualization study of the effect of wing-tip jets on wake vortex development p 867 A85-47129
**AIRFOIL PROFILES**
Use of titanium tetrachloride for visualization of accelerating flow around airfoils p 903 A85-47090
Comparison of a computed transonic flow and interferometric measurements around the leading edge of a two dimensional aerofoil asymmetrically mounted in a wind tunnel p 868 A85-47164
Prediction of the inception of cavitation on blade profiles of hydraulic turbomachines p 906 A85-47849
Contribution to theory of similitude of subsonic flow
p 868 A85-48189
Some contributions to the modelling of discontinuous flows p 907 A85-48224
A study of laminar separation bubble in the concave region of an airfoil using laser velocimetry
p 868 A85-48520
Numerical optimization of circulation control airfoil at high subsonic speed p 871 A85-49131
The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers p 873 A85-49674

An investigation into the three-dimensional stall development on a modified NACA 23012 aerofoil
[GU-AERO-8414] p 875 N85-34124

**AIRFOILS**

The use of visualization as a guide in the numerical determination of the flow around an abruptly accelerated elliptic cylinder or airfoil p 904 A85-47127

Flow instabilities in transonic small-disturbance theory
p 869 A85-48531

Numerical analysis of transonic flow around a two-dimensional airfoil by solving full Navier-Stokes equations p 869 A85-48875

Modeling techniques for transonic airfoils
p 871 A85-49014

An evaluation of three helicopter rotor sections
[NASA-TM-86719] p 874 N85-34115

A design procedure to modify the trailing edge upper surface pressure gradient of a given aerofoil
[GU-AERO-8408] p 874 N85-34120

Modelling of unsteady, incompressible separation on an aerofoil using an inviscid flow algorithm
[GU-AERO-8412] p 874 N85-34122

The collected data for ramp function tests on a NACA 23012 aerofoil. Volume 1: Description and pressure data
[GU-AERO-8413-VOL-1] p 875 N85-34123

A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow
[ISL-CO-219/84] p 875 N85-34127

A stream function approach to solving the conservative Euler equations for transonic flows p 875 N85-35156

Heat transfer characteristics for two-dimensional arrays of impinging jets with initial crossflow
p 911 N85-35365

**AIRFRAMES**

Manufacturing tolerances for natural laminar flow airframe surfaces
[SAE PAPER 850863] p 884 A85-50103

**AIRPORT PLANNING**

New AWOS provides synthesized-voice weather information p 907 A85-48853

**AIRSPACE**

Introduction to European air traffic control
[AD-A156328] p 878 N85-35176

**AIRSPEED**

The design of a fluidic low-airspeed sensor
p 866 A85-47791

**ALADIN 2 AIRCRAFT**

Presentation of the acoustic and aerodynamic results of the Aladin 2 concept qualification testing
[NASA-TM-77883] p 876 N85-35161

**ALGORITHMS**

Inviscid and viscous flows in cascades with an explicit multiple-grid algorithm p 869 A85-48539

Modelling of unsteady, incompressible separation on an aerofoil using an inviscid flow algorithm
[GU-AERO-8412] p 874 N85-34122

Energy management of three-dimensional minimum-time intercept
[NASA-CR-176174] p 887 N85-35186

Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2
[NASA-CR-167863] p 913 N85-35535

**ALIGNMENT**

IUS-1 - Redundant inertial measurement unit test plan and results p 899 A85-47057

**ALUMINUM**

Age forming technology expanded in an autoclave
[SAE PAPER 850885] p 910 A85-50113

**ALUMINUM ALLOYS**

Effect of temperature on the fatigue and fracture properties of 7475-T761 aluminum p 900 A85-47973

Low temperature and loading frequency effects on crack growth and fracture toughness of 2024 and 7475 aluminum p 900 A85-47974

Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 887 N85-35187

Development of a mathematical model for predicting the percentage fatigue life increase resulting from shot peened components
[AD-A155774] p 912 N85-35425

**AMMUNITION**

Laboratory vibration schedules
[AD-A155856] p 887 N85-35188

**APPROACH**

Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing
[NASA-TP-2451] p 895 N85-34144

**APPROACH AND LANDING TESTS (STS)**

Some real-time simulation applications to Space Shuttle approach and landing design and test
p 899 A85-49016

**APPROACH CONTROL**

Concepts and algorithms for terminal-area traffic management p 878 A85-47683

Time-controlled aircraft guidance in uncertain winds and temperatures p 879 A85-47687

Guidelines for the evaluation of visual approach slope indicators
[ARL/SYS-R-32] p 880 N85-34132

The integrated manual and automatic control of complex flight systems
[NASA-CR-176166] p 896 N85-35201

**APPROXIMATION**

Approximate calculation of flow field in an inlet with arbitrary cross sections and curved axis
p 872 A85-49652

Research on implicit approximate-factorization finite-difference method for the Euler equation
p 873 A85-49706

**ARCHITECTURE (COMPUTERS)**

CAUTRA ATC simulator strives for realism
p 897 A85-48657

Recent advances in computer image generation
p 918 A85-49005

**ARMED FORCES (UNITED STATES)**

U.S. Civil airmen statistics for calendar year 1984
[AD-A156326] p 856 N85-35153

Laboratory vibration schedules
[AD-A155856] p 887 N85-35188

**ARRAYS**

Arrays of bodies of revolution for minimum wave drag
p 881 A85-49136

Heat transfer characteristics for two-dimensional arrays of impinging jets with initial crossflow
p 911 N85-35365

**ARTIFICIAL INTELLIGENCE**

Implications of artificial intelligence on the design of future onboard systems
[SFENA-DPS/C/S3/8425[illegible]] p 918 N85-34596

**ASSURANCE**

Towards the year 2000: Developments in inspection and product assurance to be anticipated during the next 15 years --- aircraft engines
[PNR-90258] p 911 N85-34421

**ATMOSPHERIC BOUNDARY LAYER**

Measurements for the determination of the vertical structure of the convective boundary layer --- atmospheric boundary layer p 915 N85-35550

Partitioning of the vertical turbulent energy transport into positive and negative contributions --- meteorology
p 915 N85-35551

Aircraft measurements during the Bonn Experiment (BONEX 1) --- meteorology p 915 N85-35552

**ATMOSPHERIC CIRCULATION**

Case studies for flux measurements along a low-flying route to the south of Munich p 915 N85-35548

The determination of lee circulation during the foehn wind p 915 N85-35554

**ATMOSPHERIC ELECTRICITY**

In-flight electrical conductivity measurements
[ONERA, TP NO. 1985-61] p 912 A85-47264

**ATMOSPHERIC ENTRY**

Descent vehicles --- Russian book
p 899 A85-49435

Results of tests of the SRB aft skirt heat shield curtain in the MSFC Hot Gas Facility
[NASA-CR-170888] p 899 N85-35223

**ATMOSPHERIC HEAT BUDGET**

Partitioning of the vertical turbulent energy transport into positive and negative contributions --- meteorology
p 915 N85-35551

Aircraft measurements during the Bonn Experiment (BONEX 1) --- meteorology p 915 N85-35552

**ATMOSPHERIC PHYSICS**

Proceedings of Meteorological Motor Glider (MEMO) Workshop '84
[DFVLR-MITT-85-04] p 914 N85-35542

**ATMOSPHERIC TURBULENCE**

Environmental-physical measurements and determination of atmospheric turbulence with the ASK-16 motor glider p 915 N85-35549

**ATTACKING (ASSAULTING)**

Next generation gunship
[AD-A156361] p 887 N85-35193

**AUTOCLAVES**

Age forming technology expanded in an autoclave
[SAE PAPER 850885] p 910 A85-50113

**AUTOMATED EN ROUTE ATC**

Automation in air traffic management
p 879 A85-49171

**AUTOMATIC CONTROL**

Automation in air traffic management
p 879 A85-49171

**AUTOMATIC CONTROL VALVES**

An adaptive control of an electro-hydraulic position control system p 893 A85-47702

**AUTOMATIC FLIGHT CONTROL**

Concepts and algorithms for terminal-area traffic management p 878 A85-47683

The integrated manual and automatic control of complex flight systems
[NASA-CR-176166] p 896 N85-35201

**AUTOMATIC LANDING CONTROL**

Concepts and algorithms for terminal-area traffic management p 878 A85-47683

Simulation of time-control procedures for the advanced air traffic control system p 878 A85-47686

**AUTOMATIC PILOTS**

How autopilot requirements constrain the aerodynamic design of homing missiles p 894 A85-47717

Improved capabilities of the new general aviation digital autopilots
[SAE PAPER 850914] p 895 A85-50125

**AUTOMATIC TEST EQUIPMENT**

NDT-33 - A computerized eddy current instrument
p 906 A85-47470

Radar targets reveal all to automated tester
p 908 A85-49346

**AUTOMATIC WEATHER STATIONS**

New AWOS provides synthesized-voice weather information p 907 A85-48853

**AUTOMOBILE ENGINES**

Porsche aircraft engine P F M 3200
[SAE PAPER 850895] p 890 A85-50115

**AUTOREGRESSIVE PROCESSES**

A new approach to the maneuvering target tracking problem p 917 A85-47760

**AVAILABILITY**

Maintainability aspects in maintenance management
p 909 A85-49536

**AVIONICS**

Validation of fault-free behavior of a reliable multiprocessor system - FTMP: A case study --- Fault-Tolerant Multi-Processor avionics
p 888 A85-47757

Advanced avionics for the next generation military helicopters p 888 A85-48072

Flight testing of avionic systems on the ground
p 897 A85-49002

Evaluation of the benefits of advanced avionics system technologies through computer simulation
p 880 A85-49003

The display subsystem in the aircraft simulator - Simulate or stimulate? p 897 A85-49004

Electronic Equipment Thermal Management
p 908 A85-49530

ITAD - A CAD system for environmental reliability design --- Intregrated Thermal Avionic Design
p 918 A85-49531

A management guide to reliability predictions
p 909 A85-49541

A systematic approach to designing for testability
p 909 A85-49586

R&M analysis techniques for fault-tolerant systems
p 909 A85-49568

One-Eleven trailblazers p 866 A85-49657

Will advanced fighter avionics operate when needed?
p 889 A85-49949

Improved capabilities of the new general aviation digital autopilots
[SAE PAPER 850914] p 895 A85-50125

**AXIAL FLOW**

Wingtip vortex propeller
[NASA-CASE-LAR-13019-1] p 892 N85-35194

**AXISYMMETRIC FLOW**

The subsonic near-wake of an axisymmetric semielliptical afterbody p 869 A85-48534

Variational principle families for hybrid problems of blade-to-blade flow along axisymmetric stream-sheet - A unified variable-domain approach p 872 A85-49703

## B

**BAC 111 AIRCRAFT**

One-Eleven trailblazers p 866 A85-49657

**BALLOON SOUNDING**

Environmental-physical measurements and determination of atmospheric turbulence with the ASK-16 motor glider p 915 N85-35549

Partitioning of the vertical turbulent energy transport into positive and negative contributions --- meteorology
p 915 N85-35551

Aircraft measurements during the Bonn Experiment (BONEX 1) --- meteorology p 915 N85-35552

Electronic Equipment Thermal Management p 906 A85-49530

ITAD - A CAD system for environmental reliability design — Intregrated Thermal Avionic Design p 918 A85-49531

A management guide to reliability predictions p 909 A85-48541

**CIRCULAR CYLINDERS**

A note on the steady high-Reynolds-number flow about a circular cylinder p 872 A85-49369

**CIRCULATION CONTROL AIRFOILS**

Numerical optimization of circulation control airfoil at high subsonic speed p 871 A85-49131

**CIVIL AVIATION**

Status and development trends of navigation systems for general aviation p 879 A85-48175

Why not have a simulator type for commuter operators? p 897 A85-48856

The growing impact of general aviation on the world's aviation system p 877 A85-48861

U.S. Civil airmen statistics for calendar year 1984 [AD-A156326] p 866 N85-35153

The contribution made by flight mechanics to civil aviation p 878 N85-35169

Introduction to European air traffic control [AD-A156328] p 878 N85-35176

**CLEAR AIR TURBULENCE**

The physical and empirical basis for a specific clear-air turbulence risk index [NASA-CR-176522] p 914 N85-35540

**CLOUD PHYSICS**

In-flight electrical conductivity measurements [ONERA, TP NO. 1985-61] p 912 A85-47264

**COAXIAL FLOW**

Parametric analysis of the acoustic power emitted by coaxial jets p 918 A85-48179

**COCKPIT SIMULATORS**

The display subsystem in the aircraft simulator - Simulate or stimulate? p 897 A85-49004

**COCKPITS**

Simplifying the cockpit p 888 A85-48074

Flight Management Systems create new crew training needs p 916 A85-48860

**COLOR CODING**

Flow visualization using computer-generated color video displays of flow field survey data p 903 A85-47089

**COMBAT**

Modeling combat maintenance operations p 866 A85-49571

Modeling aircraft combat damage repair p 866 A85-49576

**COMBUSTIBLE FLOW**

A more modern theory of combustion noise p 918 A85-47309

**COMBUSTION CHAMBERS**

Flow modifying device [NASA-CASE-LEW-13562-2] p 892 N85-35195

Development of advanced high-temperature heat flux sensors. Phase 2: Verification testing [NASA-CR-174973] p 911 N85-35391

**COMMERCIAL AIRCRAFT**

Advanced systems for the Gulfstream IV [SAE PAPER 850900] p 885 A85-50117

U.S. Civil airmen statistics for calendar year 1984 [AD-A156326] p 866 N85-35153

**COMMUNICATION NETWORKS**

A fault and damage tolerant network for an advanced transport aircraft p 888 A85-47760

**COMPATIBILITY**

Determination of instrument errors by compatibility checking: Results from dynamic flight test data [ARL/AERO-R-162] p 889 N85-34137

**COMPENSATORS**

Design of a pitch orientation control system for aircraft control in stall region p 893 A85-47701

**COMPONENT RELIABILITY**

High pressure compressor component performance report [NASA-CR-168245] p 891 N85-34138

**COMPOSITE MATERIALS**

Structural plastics in sporting and general aviation aircraft p 865 A85-48571

Weight control of composite parts in production
[SAWE PAPER 1629] p 886 A85-49927

**COMPOSITE STRUCTURES**

Acoustic emission monitoring of flaw growth in a graphite-epoxy experimental wing segment
p 907 A85-48084

Aspects of certification of civil aircraft structures in composite materials p 865 A85-48570

The first British designed and built composite sailplane
p 865 A85-48573

Manufacture of composite propeller blades for commuter aircraft
[SAE PAPER 850875] p 910 A85-50108

The structural dynamics of Electro-Impulse De-icing on the Lear Fan Kevlar Composite leading edge
[SAE PAPER 850917] p 885 A85-50127

**COMPRESSIBLE FLOW**

A computational study of complex three-dimensional compressible turbulent flowfields p 869 A85-48526

Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method
[NASA-CR-174975] p 876 N85-35162

**COMPRESSIBLE FLUIDS**

Variational principle for two dimensional flows of the compressible ideal fluid with incontinuous surfaces
p 900 A85-48704

**COMPRESSION LOADS**

The weight reduction potential of advanced composites
[SAWE PAPER 1579] p 901 A85-49905

**COMPRESSORS**

High pressure compressor component performance report
[NASA-CR-168245] p 891 N85-34138

Combined cold compressor/ejector helium refrigerator
[DE85-006408] p 910 N85-34326

**COMPUTATIONAL FLUID DYNAMICS**

Computed static stall of a supercritical airfoil
p 867 A85-47103

Extension and use of numerical procedure for the three dimensional unsteady transonic flows
[ONERA, TP NO. 1985-67] p 868 A85-47269

An examination of turbulence models for a separating three-dimensional turbulent boundary layer
[ONERA, TP NO. 1985-74] p 904 A85-47273

Aerodynamic models for propellers for fast aircraft
[ONERA, TP NO. 1985-55] p 868 A85-47301

Prediction of the inception of cavitation on blade profiles of hydraulic turbomachines p 906 A85-47849

Computational methods for discontinuities in fluids
p 907 A85-48220

Some contributions to the modelling of discontinuous flows p 907 A85-48224

A computational study of complex three-dimensional compressible turbulent flowfields p 869 A85-48526

Theoretical and experimental study of nonadiabatic transonic shock/boundary-layer interaction
p 869 A85-48529

Calculation of three-dimensional flowfields by the unsteady method of characteristics p 869 A85-48532

Numerical analysis of transonic flow around a two-dimensional airfoil by solving full Navier-Stokes equations p 869 A85-48575

A finite difference model for flows around an air intake
[AAAF PAPER NT 84-11] p 870 A85-48991

Numerical simulations of viscous fluid flows in air intakes at high angles of attack
[AAAF PAPER NT 84-12] p 907 A85-48992

Calculation of the flow in an air intake duct by numerical solution of the Euler equations
[AAAF PAPFR NT 84-24] p 870 A85-48998

Modeling techniques for transonic airfoils
p 871 A85-49014

Verification of calculation methods for unsteady airloads in the prediction of transonic flutter
[AIAA PAPER 84-0871] p 871 A85-49126

Grid generation and flow calculations for aircraft geometries p 871 A85-49129

Numerical optimization of circulation control airfoil at high subsonic speed p 871 A85-49131

Full potential solutions of three-dimensional supersonic flows p 871 A85-49133

A wind tunnel inlet flow simulation
p 871 A85-49141

Unsteady lifting-line theory as a singular-perturbation problem p 871 A85-49353

Computation of inviscid incompressible flow with rotation p 871 A85-49356

A note on the steady high-Reynolds-number flow about a circular cylinder p 872 A85-49360

Approximate calculation of flow field in an inlet with arbitrary cross sections and curved axis
p 872 A85-49652

On the abrupt turbulent reattachment downstream of leading-edge laminar separation p 872 A85-49698

A simple and effective difference scheme in aerodynamics p 872 A85-49702

Variational principle families for hybrid problems of blade-to-blade flow along axisymmetric stream-sheet - A unified variable-domain approach p 872 A85-49700

A calculating method of the breakdown feature of the leading-edge separating vortex for slender delta wings
p 873 A85-49707

Analytical solutions for unsteady Prandtl-Meyer flow
p 873 A85-49710

**COMPUTATIONAL GRIDS**

A three-dimensional, block-structured finite element grid generation scheme -- for flow around aircraft modeling
p 869 A85-48530

Inviscid and viscous flows in cascades with an explicit multiple-grid algorithm p 869 A85-48539

Grid generation and flow calculations for aircraft geometries p 871 A85-49129

Use of a hyperbolic grid generation scheme in simulating supersonic viscous flow about three-dimensional winged configuration
[NASA-TM-86044] p 874 N85-34116

**COMPUTER AIDED DESIGN**

Parameter space design of control systems using interactive computer graphics p 916 A85-47681

Computer-aided design of control systems via parameter optimization method (CADCS/POM) - An interactive graphics approach p 917 A85-47784

Electronic Equipment Thermal Management
p 908 A85-48530

ITAD - A CAD system for environmental reliability design -- Integrated Thermal Avionic Design
p 918 A85-49501

A user's view of CARE III -- computer aided reliability estimation p 918 A85-49570

An evaluation of improved analytically based weight estimation methodologies
[SAWE PAPER 1616] p 883 A85-49920

Computer aided determination of rotor blade mass properties
[SAWE PAPER 1638] p 884 A85-49938

**COMPUTER GRAPHICS**

Flow visualization using computer-generated color video displays of flow field survey data p 903 A85-47099

Parameter space design of control systems using interactive computer graphics p 916 A85-47681

Computer-aided design of control systems via parameter optimization method (CADCS/POM) - An interactive graphics approach p 917 A85-47784

Recent advances in computer image generation
p 918 A85-49005

**COMPUTER PROGRAMMING**

Development of NATOPS (Naval Air Training and Operating Procedure Standardization) performance software for the H-46D helicopter
[AD-A156069] p 887 N85-35190

**COMPUTER PROGRAMS**

A generalized computer code for developing dynamic gas turbine engine models (DIGTEM)
p 890 A85-48021

Handheld computer weight and balance computations for military aircraft
[SAWE PAPER 1582] p 877 A85-49907

Component-specific modeling
[NASA-CR-174765] p 891 N85-34140

Analysis of incompressible cascade flows using state-of-the-art computer programs
[AD-A155850] p 876 N85-35173

Development of NATOPS performance software for the SH-3D and SH-3H helicopters
[AD-A156140] p 887 N85-35192

**COMPUTER TECHNIQUES**

Computer and information technology in the year 2000 - A projection p 917 A85-48024

**COMPUTER VISION**

Simulators - How real does the visual system need to be? p 898 A85-49948

**COMPUTERIZED SIMULATION**

General aviation needs cost-effective flight simulators
p 897 A85-48869

Flight Management Systems create new crew training needs p 916 A85-48880

Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 p 897 A85-49001

Evaluation of the benefits of advanced avionics system technologies through computer simulation
p 889 A85-49003

Recent advances in computer image generation
p 918 A85-49005

Rotorcraft simulation at Ames p 897 A85-49006

Evaluation of the AFTI/F-16 on the LAMARS (large amplitude multi-mode aerospace research simulator)
p 881 A85-49008

A wind tunnel inlet flow simulation
p 871 A85-49141

Modeling combat maintenance operations
p 866 A85-49571

Modeling aircraft combat damage repair
p 866 A85-49576

Generalized Escape System Simulation - Its purpose, recent modifications, and potential p 864 A85-49946

Simulators - How real does the visual system need to be? p 898 A85-49948

The impact of supercomputers on experimentation: A view from a national laboratory
[NASA-TM-86822] p 916 N85-34510

Energy management of three-dimensional minimum-time intercept
[NASA-CR-176174] p 887 N85-35186

**CONFERENCES**

1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volumes 1, 2 & 3
p 916 A85-47676

European Workshop on Probe Calibrations
p 896 A85-48523

Fibre reinforced composites '84; Proceedings of the International Conference, University of Liverpool, England, April 3-5, 1984 p 900 A85-48562

Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 p 897 A85-49001

Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings
p 908 A85-49526

Proceedings of Meteorological Motor Glider (MEMO) Workshop '84
[DFVLR-MITT-85-04] p 914 N85-35642

Proceedings of the 14th Army Science Conference. Volume 2: Principal authors I through O
[AD-A149201] p 919 N85-35690

**CONGRESSIONAL REPORTS**

Aviation safety (aircraft passenger survivability and cabin safety)
[GPO-39-847] p 876 N85-34130

**CONICAL FLOW**

Flow Cones for airplane flight test flow visualization
p 903 A85-47096

**CONICAL NOZZLES**

Nozzle wall roughness effects on free-stream noise and transition in the pilot low-disturbance tunnel
[NASA-TM-86389] p 910 N85-34355

**CONSTRAINTS**

The extended range operation of twin-engined public transport aircraft. I p 881 A85-49173

Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing
[NASA-CR-3917] p 866 N85-35164

**CONTAINMENT**

Fuel containment and damage tolerance for large composite primary aircraft structures. Phase 1: Testing
[NASA-CR-166091] p 902 N85-35241

**CONTAMINATION**

Flight evaluation of an insect contamination protection system for laminar flow wings
[SAE PAPER 850860] p 884 A85-50102

**CONTOURS**

Contour assessment of formed wing panels
[SAE PAPER 850884] p 866 A85-50131

**CONTRACT MANAGEMENT**

Establishing realistic requirements for reliability, maintainability, and built-in-test p 909 A85-49539

**CONTROL CONFIGURED VEHICLES**

Further application of output predictive algorithmic control to terrain following p 894 A85-47734

**CONTROL SIMULATION**

Simulation study of an automatic trim system for reducing the control forces on a light twin after an engine failure
[SAE PAPER 850913] p 895 A85-50124

A preliminary evaluation of a failure detection filter for detecting and identifying control element failures in a transport aircraft
[NASA-TM-87576] p 896 N85-35204

**CONTROL STABILITY**

1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volumes 1, 2 & 3
p 916 A85-47676

Design of a pitch orientation control system for aircraft control in stall region p 893 A85-47701

**CONTROL SURFACES**

Analysis of asymmetric natural vibrations of an aeroplane with moving deformable control surfaces
p 883 A85-49672

Analysis of natural vibrations of a deformable aeroplane with fixed control systems p 883 A85-49673

**CONTROL SYSTEMS DESIGN**

1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volumes 1, 2 & 3
p 916 A85-47676

Parameter space design of control systems using interactive computer graphics p 916 A85-47681

Time-controlled aircraft guidance in uncertain winds and temperatures p 879 A85-47687

Design of optimal low-sensitivity controllers with prespecified eigenvalues - Application to aircraft lateral motion p 893 A85-47696

Design of decoupled longitudinal flight control laws utilizing eigensystem assignment p 893 A85-47697

Design of a pitch orientation control system for aircraft control in stall region p 893 A85-47701

Modal insensitivity with optimality --- in feedback control p 917 A85-47735

Computer-aided design of control systems via parameter optimization method (CADCS/POM) - An interactive graphics approach p 917 A85-47784

A fluidic flight control system demonstrator p 894 A85-47798

Performance evaluation of an electrofluidic flight control actuator p 894 A85-47799

Control system reconfiguration p 917 A85-47793

A new era of fuel controls p 889 A85-48073

Forward-Swept Wing control system development p 894 A85-49011

**CONTROL THEORY**

1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volumes 1, 2 & 3 p 916 A85-47676

Orbit control of a synchronous satellite --- Russian book p 899 A85-49446

**CONTROLLABILITY**

Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing [NASA-TP-2451] p 895 N85-34144

Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 1: Analysis methods [NASA-CR-177943-VOL-1] p 896 N85-35202

Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 2: Data [NASA-CR-177943-VOL-2] p 896 N85-35203

**CONVECTION CURRENTS**

Measurements for the determination of the vertical structure of the convective boundary layer --- atmospheric boundary layer p 915 N85-35550

**COOLING SYSTEMS**

Air-cycle air conditioning of turbine-powered general aviation and commuter aircraft [SAE PAPER 850901] p 885 A85-50118

**CORNER FLOW**

Some contributions to the modelling of discontinuous flows p 907 A85-48224

Experimental method for the study of corner flows [AAAF PAPER NT 84-08] p 870 A85-48988

**CORROSION RESISTANCE**

Development of a mathematical model for predicting the percentage fatigue life increase resulting from shot peened components [AD-A156774] p 912 N85-35425

**COSMIC RAY SHOWERS**

Ultra high energy events in ECHOS series and primary energy spectrum [HE-3.7-9] p 920 N85-35986

**COST ANALYSIS**

Energy Efficient Engine Program technology benefit/cost study, volume 1 [NASA-CR-174766-VOL-1] p 892 N85-35197

Energy Efficient Engine Program technology benefit/cost study, volume 2 [NASA-CR-174766-VOL-2] p 892 N85-35198

**COST EFFECTIVENESS**

General aviation needs cost-effective flight simulators p 887 A85-48859

Cost effective single crystals: The Rolls Royce approach --- gas turbine components [PNR-90262] p 919 N85-34717

**COST ESTIMATES**

Determining operating and support costs with USAF DO56 maintenance data collection system p 865 A85-49553

How much does it cost/how much does it weigh? [SAWE PAPER 1580] p 919 A85-49913

**COST REDUCTION**

An M principle - Pay me now or spend more later p 909 A85-49581

**COUNTER ROTATION**

The analysis of counter-rotating propeller systems [SAE PAPER 850869] p 873 A85-50104

Laser velocimeter measurements of the flow fields around single- and counter-rotation propeller models [SAE PAPER 850870] p 873 A85-50105

**COUPLING CIRCUITS**

A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder [ONERA, TP NO. 1985-47] p 904 A85-47258

**CRACK GEOMETRY**

Bonded repair of damage p 910 A85-50083

**CRACK PROPAGATION**

Low temperature and loading frequency effects on crack growth and fracture toughness of 2024 and 7475 aluminum p 900 A85-47974

Acoustic emission monitoring of flaw growth in a graphite-epoxy experimental wing segment p 907 A85-48084

Recent advances in fatigue crack growth predictions p 910 A85-50065

Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra [ARL-STRUC-R-415] p 887 N85-35187

**CRASHWORTHINESS**

Crashworthy design considerations for general aviation seats [SAE PAPER 850855] p 884 A85-50101

Aviation safety (aircraft passenger survivability and cabin safety) [GPO-39-847] p 878 N85-34130

Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing [NASA-CR-3917] p 886 N85-35184

**CROSS FLOW**

Visualization of the vortex flow over delta and double-delta wings p 867 A85-47149

Pool fire-ventilation crossflow experiments in a simulated aircraft cabin interior p 877 A85-49130

Wingtip vortex propeller [NASA-CASE-LAR-13019-1] p 892 N85-35194

**CRYOGENIC EQUIPMENT**

Results of variable enthalpy tests of CPR-488 TIP panels in MSFC Hot Gas Facility [NASA-CR-170889] p 902 N85-35237

**CURTAINS**

Results of tests of the SRB aft skirt heat shield curtain in the MSFC Hot Gas Facility [NASA-CR-170886] p 899 N85-35223

**CYLINDERS**

A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder [ONERA, TP NO. 1985-47] p 904 A85-47258

## D

**DAMAGE**

Fuel containment and damage tolerance for large composite primary aircraft structures. Phase 1: Testing [NASA-CR-166091] p 902 N85-35241

**DAMPING**

The rolling vortex-damping of supersonic wing p 872 A85-49705

A research program to reduce the interior noise in general aviation aircraft, index and summary [NASA-CR-176178] p 919 N85-35695

**DATA ACQUISITION**

Determining operating and support costs with USAF DO56 maintenance data collection system p 865 A85-49553

Determination of instrument errors by compatibility checking: Results from dynamic flight test data [ARL/AERO-R-162] p 889 N85-34137

Development and operation of a measuring data acquisition system for use in light airplanes p 912 N85-35556

**DATA BASES**

Initial European Central Data Bank of air traffic demand now in operational trials p 879 A85-48852

**DATA PROCESSING**

Control system reconfiguration p 917 A85-47793

Will advanced fighter avionics operate when needed? p 889 A85-49049

**DATA TRANSMISSION**

Meeting the challenge of ESM/ECM integration p 889 A85-49001

**DEGREES OF FREEDOM**

Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing [NASA-TP-2451] p 895 N85-34144

**DEICING**

Advanced technologies promise sales boost for general aviation aircraft p 865 A85-49089

The structural dynamics of Electro-Impulse De-icing on the Lear Fan Kevlar Composite leading edge [SAE PAPER 850917] p 885 A85-50127

Flight testing a liquid ice protection system on a single-engine airplane [SAE PAPER 850923] p 885 A85-50129

**DELAY**

FAA requirements for model to support capacity, delay, noise and energy programs [AD-A155815] p 880 N85-35179

**DELTA WINGS**

Visualization of the vortex flow over delta and double-delta wings p 867 A85-47149

Determination of leading-edge vortex trajectories by schlieren photography p 904 A85-47150

Some results of experimental and analytical buffeting investigations on a delta wing [ONERA, TP NO. 1985-59] p 868 A85-47262

A calculating method of the breakdown feature of the leading-edge separating vortex for slender delta wings p 873 A85-49707

Vortex boundary-layer interactions [NASA-CR-176192] p 911 N85-35373

**DESCENT PROPULSION SYSTEMS**

Descent vehicles --- Russian book p 899 A85-49435

**DESCENT TRAJECTORIES**

Time-controlled aircraft guidance in uncertain winds and temperatures p 879 A85-47687

Feedback control for fuel-optimal descents using singular perturbation techniques p 893 A85-47688

**DESIGN ANALYSIS**

How autopilot requirements constrain the aerodynamic design of homing missiles p 894 A85-47717

Modal insensitivity with optimality --- in feedback control p 917 A85-47735

A systematic approach to designing for testability p 909 A85-49586

Advanced escape systems p 877 A85-49825

An evaluation of improved analytically based weight estimation methodologies [SAWE PAPER 1616] p 883 A85-49920

USAF damage tolerance methods applied to general aviation aircraft design and analysis [SAE PAPER 850915] p 885 A85-50126

Sport aircraft design trends - Shaping the future of general aviation [SAE PAPER 850881] p 886 A85-50130

Aerodynamics of liquid-cooled aircraft engine installations [SAE PAPER 850836] p 891 A85-50132

**DESIGN TO COST**

JVX design to cost methodology --- Joint Services Advanced Vertical Lift Aircraft Program [SAWE PAPER 1591] p 883 A85-49912

**DETECTION**

A preliminary evaluation of a failure detection filter for detecting and identifying control element failures in a transport aircraft [NASA-TM-87576] p 896 N85-35204

**DETONATION**

A model of hypersonic two-dimensional oblique detonation wave ramjet [UTIAS-TN-257] p 891 N85-34139

**DETONATION WAVES**

A model of hypersonic two-dimensional oblique detonation wave ramjet [UTIAS-TN-257] p 891 N85-34139

**DIFFERENCE EQUATIONS**

A simple and effective difference scheme in aerodynamics p 872 A85-49702

**DIGITAL SIMULATION**

A preliminary evaluation of a failure detection filter for detecting and identifying control element failures in a transport aircraft [NASA-TM-87576] p 896 N85-35204

**DIGITAL SYSTEMS**

An adaptive control of an electro-hydraulic position control system p 893 A85-47702

A user's view of CARE III --- computer aided reliability estimation p 918 A85-49570

Improved capabilities of the new general aviation digital autopilots [SAE PAPER 850914] p 895 A85-50125

**DIGITAL TECHNIQUES**

Digital fringe reduction techniques applied to the measurement of three-dimensional transonic flow fields p 907 A85-48521

**DIMENSIONAL ANALYSIS**

Computation of three-dimensional shock wave and boundary-layer interactions [NASA-TM-86780] p 911 N85-35372

**DIRECTIONAL SOLIDIFICATION (CRYSTALS)**

Superalloy microstructural variations induced by gravity level during directional solidification p 900 A85-48274

Directionally solidified gas turbine alloys [PNR-90264] p 901 N85-34279

**DIRECTIONAL STABILITY**

Theory of wing rock p 895 A85-49139

**DISPLACEMENT**

The collected data for ramp function tests on a NACA 23012 aerofoil. Volume 1: Description and pressure data [GU-AERO-8413-VOL-1] p 875 N85-34123

**DISPLAY DEVICES**
Flow visualization using computer-generated color video displays of flow field survey data p 903 A85-47099
The display subsystem in the aircraft simulator - Simulate or stimulate? p 897 A85-49004
Head-up displays for general aviation [SAE PAPER 850902] p 889 A85-50119
**DISTILLATION**
Nitrogen analysis by chemiluminescence [AD-A156197] p 902 N85-35308
**DISTRIBUTED PARAMETER SYSTEMS**
A distributed aeroacoustic tracking algorithm p 917 A85-47774
**DOWNWASH**
Quantification of downwash and ground vortex of a lifting rotor model by flow visualization technique p 867 A85-47134
**DRAFTING (DRAWING)**
An evaluation of improved analytically based weight estimation methodologies [SAWE PAPER 1616] p 883 A85-49920
**DRAG CHUTES**
Advanced escape systems p 877 A85-49625
**DRAG REDUCTION**
Arrays of bodies of revolution for minimum wave drag p 881 A85-49135
An automated technique for encasing specific payloads with low-drag fairings p 886 N85-35183
Wingtip vortex propeller [NASA-CASE-LAR-13019-1] p 892 N85-35194
**DUCTED FLOW**
Multiple transonic shock-wave/turbulent boundary-layer interaction in a circular duct p 869 A85-48533
Calculation of the flow in an air intake duct by numerical solution of the Euler equations [AAAF PAPER NT 84-24] p 870 A85-48998
**DYNAMIC CHARACTERISTICS**
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 1: Analysis methods [NASA-CR-177943-VOL-1] p 896 N85-35202
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 2: Data [NASA-CR-177943-VOL-2] p 896 N85-35203
**DYNAMIC MODELS**
Design of optimal low-sensitivity controllers with prespecified eigenvalues - Application to aircraft lateral motion p 893 A85-47596

**E**

**EDDY CURRENTS**
NDT-33 - A computerized eddy current instrument p 906 A85-47470
Innovative eddy current probe coupling method p 906 A85-47472
Development of active microwave ferromagnetic resonance eddy current probes and associated signal processing methods p 906 A85-47473
**EDUCATION**
Development of NATOPS (Naval Air Training and Operating Procedure Standardization) performance software for the H-46D helicopter [AD-A156069] p 887 N85-35190
**EIGENVALUES**
Design of optimal low-sensitivity controllers with prespecified eigenvalues - Application to aircraft lateral motion p 893 A85-47596
**EJECTION SEATS**
Advanced escape systems p 877 A85-49625
The USAF's CREST program — CRew EScape Technologies p 884 A85-49944
Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing [NASA-CR-3917] p 886 N85-35184
**EJECTORS**
Combined cold compressor/ejector helium refrigerator [DE85-006406] p 910 N85-34326
**ELECTRIC ARCS**
A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder [ONERA, TP NO. 1985-47] p 904 A85-47258
**ELECTRIC CONTROL**
An adaptive control of an electro-hydraulic position control system p 893 A85-47702
**ELECTRIC CURRENT**
Electric Current Perturbation inspection of selected retirement-for-cause turbine engine components p 906 A85-47474
**ELECTRICAL RESISTIVITY**
In-flight electrical conductivity measurements [ONERA, TP NO. 1985-61] p 912 A85-47264
**ELECTROMAGNETIC INTERFERENCE**
Effect of interference on the performance of a minimum TCAS 2 [FAA-PM-84-33] p 880 N85-34131
**ELECTROMAGNETIC MEASUREMENT**
E and H fields measurements on the Transall C160 aircraft during lightning flashes [ONERA, TP NO. 1985-48] p 876 A85-47259
**ELECTROMAGNETIC SPECTRA**
Reconnoitering the electromagnetic spectrum p 879 A85-49094
**ELECTRONIC AIRCRAFT**
Reconnoitering the electromagnetic spectrum p 879 A85-49094
DOD Value Engineering Conference report. Value Engineering (VE): A tool that benefits line management held at Leesburg, Virginia on 1-2 November 1984. Part 2. Plenary session [AD-A156069] p 919 N85-35811
**ELECTRONIC CONTROL**
A real-time FORTRAN implementation of a sensor failure detection, isolation and accommodation algorithm p 917 A85-47704
An electronic limiter for aircraft engines [SAE PAPER 850910] p 890 A85-50122
**ELECTRONIC COUNTERMEASURES**
Meeting the challenge of ESM/ECM integration p 889 A85-49091
**ELECTRONIC EQUIPMENT**
How much does it cost/how much does it weigh? [SAWE PAPER 1593] p 919 A85-49913
**ELECTRONIC EQUIPMENT TESTS**
A systematic approach to designing for testability p 909 A85-49586
**ELECTRONIC WARFARE**
INEWS ignites technology trade-offs and competition p 879 A85-49096
**ELECTROSTATIC PRECIPITATORS**
A study of the control of particulate emissions from turbine engine test cells p 896 N85-35205
**ELLIPTIC DIFFERENTIAL EQUATIONS**
Computational methods for discontinuities in fluids p 907 A85-48220
**ELLIPTICAL CYLINDERS**
The use of visualization as a guide in the numerical determination of the flow around an abruptly accelerated elliptic cylinder or airfoil p 904 A85-47127
**EMULSIONS**
Ultra high energy events in ECHOS series and primary energy spectrum [HE-3.7-9] p 920 N85-35966
**ENERGY ABSORPTION**
Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing [NASA-CR-3917] p 886 N85-35184
**ENERGY CONSERVATION**
Energy Efficient Engine Program technology benefit/cost study, volume 2 [NASA-CR-174766-VOL-2] p 892 N85-35198
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 1 [NASA-CR-167862] p 913 N85-35534
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2 [NASA-CR-167863] p 913 N85-35535
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 3 [NASA-CR-167864] p 913 N85-35536
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4 [NASA-CR-167865] p 913 N85-35537
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning: Summary report [NASA-CR-167866] p 913 N85-35538
**ENERGY CONVERSION EFFICIENCY**
Energy Efficient Engine Program technology benefit/cost study, volume 1 [NASA-CR-174766-VOL-1] p 892 N85-35197
**ENERGY SPECTRA**
Ultra high energy events in ECHOS series and primary energy spectrum [HE-3.7-9] p 920 N85-35966
**ENGINE CONTROL**
A real-time FORTRAN implementation of a sensor failure detection, isolation and accommodation algorithm p 917 A85-47704
An electronic limiter for aircraft engines [SAE PAPER 850910] p 890 A85-50122
**ENGINE COOLANTS**
Single-engine propulsion improvement through intercooling [SAE PAPER 850894] p 890 A85-50114
Aerodynamics of liquid-cooled aircraft engine installations [SAE PAPER 850906] p 891 A85-50132
**ENGINE DESIGN**
Rolls' Tay engine meets schedule for Gulfstream 4 first flight p 890 A85-49090
Prop jet singles have arrived [SAE PAPER 850892] p 890 A85-50112
Porsche aircraft engine P F M 3200 [SAE PAPER 850895] p 890 A85-50115
Conversion of small aircraft to Allison turbine power [SAE PAPER 850909] p 890 A85-50120
Garrett TPE331-12 engine provides improved altitude performance for high-speed executive turboprop aircraft [SAE PAPER 850908] p 890 A85-50121
Energy efficient engine. Fan and quarter-stage component performance report [NASA-CR-168070] p 891 N85-34141
Shroud segments for unshrouded blade turbines [PNR-90260] p 891 N85-34143
**ENGINE FAILURE**
Simulation study of an automatic trim system for reducing the control forces on a light twin after an engine failure [SAE PAPER 850913] p 895 A85-50124
**ENGINE INLETS**
Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method [NASA-CR-174975] p 876 N85-35162
**ENGINE PARTS**
Ultrasonic detection of cracks in web geometries p 905 A85-47360
Ultrasonic microstructural noise parameters in a powder metal alloy p 905 A85-47361
Manufacturing technology for nondestructive evaluation (NDE) system to implement retirement for cause (RFC) procedures for gas turbine engine components p 905 A85-47469
Innovative eddy current probe coupling method p 906 A85-47472
Electric Current Perturbation inspection of selected retirement-for-cause turbine engine components p 906 A85-47474
Evaluation of captured water column technology for advanced ultrasonic sizing techniques p 906 A85-47475
Application of carbon fibre reinforced thermoplastic (PEEK) composite to aero engine component manufacture p 900 A85-48588
**ENGINE TESTS**
Energy efficient engine. Fan and quarter-stage component performance report [NASA-CR-168070] p 891 N85-34141
A study of the control of particulate emissions from turbine engine test cells p 896 N85-35205
**ENTHALPY**
Results of variable enthalpy tests of CPR-488 TIP panels in MSFC Hot Gas Facility [NASA-CR-170889] p 902 N85-35237
**ENVIRONMENTAL SURVEYS**
Environmental-physical measurements and determination of atmospheric turbulence with the ASK-16 motor glider p 915 N85-35549
**ENVIRONMENTAL TESTS**
Flight service evaluation of composite helicopter components [NASA-CR-172562] p 901 N85-34222
**ENVIRONMENTS**
International flight planning handbook [AD-A156330] p 876 N85-35177
**EPOXY MATRIX COMPOSITES**
The weight reduction potential of advanced composites [SAWE PAPER 1579] p 901 A85-49905
**ERROR ANALYSIS**
A comparison between Falcon data and motor glider data p 914 N85-35547
Accuracy and error analysis — airborne instruments p 916 N85-35557
**ERRORS**
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4 [NASA-CR-167865] p 913 N85-35537
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning: Summary report [NASA-CR-167866] p 913 N85-35538
**ESCAPE SYSTEMS**
Advanced escape systems p 877 A85-49625
Adaptive operation of escape systems - A look at design requirements p 884 A85-49945

Generalized Escape System Simulation - Its purpose, recent modifications, and potential p 884 A85-49946
Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing
[NASA-CR-3917] p 886 N85-35184
**ESTIMATING**
Estimation of flight mechanical variables by means of Kalman filters p 876 N85-35171
**EULER EQUATIONS OF MOTION**
Flow instabilities in transonic small-disturbance theory p 869 A85-48531
Calculation of the flow in an air intake duct by numerical solution of the Euler equations
[AAAF PAPER NT 84-24] p 870 A85-48996
Finite element simulation of transonic flows by modified potential and stream function methods p 871 A85-49149
Research on implicit approximate-factorization finite-difference method for the Euler equation p 873 A85-49706
A stream function approach to solving the conservative Euler equations for transonic flows p 875 N85-35156
**EUROPE**
Introduction to European air traffic control
[AD-A158326] p 878 N85-35176
**EVALUATION**
Effect of interference on the performance of a minimum TCAS 2

Design of decoupled longitudinal flight control laws utilizing eigensystem assignment p 893 A85-47697
Evaluation of the AFTI/F-16 on the LAMARS (large amplitude multi-mode aerospace research simulator) p 881 A85-49008
**F-18 AIRCRAFT**
F/A-18 supportability assurance readiness program p 866 A85-49585
**FACTORIZATION**
Research on implicit approximate-factorization finite-difference method for the Euler equation p 873 A85-49706
**FAIL-SAFE SYSTEMS**
A user's view of CARE III — computer aided reliability estimation p 918 A85-49570
**FAILURE ANALYSIS**
Squadron Maintenance and Repair Techniques (SMART) validation test report p 866 A85-49584
A preliminary evaluation of a failure detection filter for detecting and identifying control element failures in a transport aircraft
[NASA-TM-87576] p 896 N85-35204
**FAIRINGS**
An automated technique for encasing specific payloads with low-drag fairings p 886 N85-35183
**FAN BLADES**
Energy Efficient Engine Program technology benefit/cost study, volume 1
[NASA-CR-174766-VOL-1] p 892 N85-35197
**FATIGUE (MATERIALS)**
Review of aeronautical fatigue investigations in France during the period 1983-1985
[ONERA, TP NO. 1985-42] p 880 A85-47256
**FATIGUE LIFE**
Effect of temperature on the fatigue and fracture properties of 7475-T761 aluminum p 900 A85-47973
Recent advances in fatigue crack growth predictions p 910 A85-50065
Development of a mathematical model for predicting the percentage fatigue life increase resulting from shot peened components
[AD-A155774] p 912 N85-35425
**FATIGUE TESTS**
Review of aeronautical fatigue investigations in France during the period 1983-1985
[ONERA, TP NO. 1985-42] p 880 A85-47256
Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 887 N85-35187
**FAULT TOLERANCE**
Validation of fault-free behavior of a reliable multiprocessor system - FTMP: A case study — Fault-Tolerant Multi-Processor avionics p 858 A85-47757
A fault and damage tolerant network for an advanced transport aircraft p 888 A85-47760
Control system reconfiguration p 917 A85-47793
A user's view of CARE III — computer aided reliability estimation p 918 A85-49570
R&M analysis techniques for fault-tolerant systems p 909 A85-49565
Will advanced fighter avionics operate when needed? p 889 A85-49949
USAF damage tolerance methods applied to general aviation aircraft design and analysis
[SAE PAPER 850915] p 885 A85-50126
**FEATHERING**
Optimally designed propellers constrained by noise p 892 N85-35196
**FEEDBACK CONTROL**
Parameter space design of control systems using interactive computer graphics p 916 A85-47681
Feedback control for fuel-optimal descents using singular perturbation techniques p 893 A85-47688
Design of optimal low-sensitivity controllers with prespecified eigenvalues - Application to aircraft lateral motion p 893 A85-47696
Modal insensitivity with optimality — in feedback control p 917 A85-47735
Control system reconfiguration p 917 A85-47793
**FERROMAGNETIC RESONANCE**
Development of active microwave ferromagnetic resonance eddy current probes and associated signal processing methods p 906 A85-47473
**FIBER COMPOSITES**
The composite technology of a main rotor blade p 865 A85-48567
**FIBER REINFORCED COMPOSITES**
Fibre reinforced composites '84; Proceedings of the International Conference, University of Liverpool, England, April 3-5, 1984 p 900 A85-48562
Continuous fibre reinforced thermoplastics in new generation radomes p 900 A85-48572
Bonded repair of damage p 910 A85-50063
Noise transmission characteristics of aircraft-type composite panels
[SAE PAPER 850878] p 919 A85-50110
A research program to reduce the interior noise in general aviation aircraft, index and summary
[NASA-CR-176176] p 919 N85-35895
**FIGHTER AIRCRAFT**
Further application of output predictive algorithmic control to terrain following p 894 A85-47734
Fast-jet aircrew safety p 916 A85-48099
Meeting the challenge of ESM/ECM integration p [illegible] A85-49091
INEWS ignites technology trade-offs and competition p 879 A85-49096
Handling qualities related to stall/spin accidents of supersonic fighter aircraft p 894 A85-49132
Project advantage of an oblique wing design on a fleet air defense mission p 881 A85-49135
DoD/industry - R&M technology study analysis p 909 A85-49538
Will advanced fighter avionics operate when needed? p 889 A85-49949
Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 887 N85-35187
RAFTS: A T-38 replacement for the 21st century
[AD-A156103] p 887 N85-35191
**FILLERS**
Results of tests of weathered K5NA closeout material in the MSFC Hot Gas Facility
[NASA-CR-170893] p 902 N85-35239
**FINITE DIFFERENCE THEORY**
Numerical analysis of transonic flow around a two-dimensional airfoil by solving full Navier-Stokes equations p 869 A85-48875
A finite difference model for flows around an air intake
[AAAF PAPER NT 84-11] p 870 A85-48991
A simple and effective difference scheme in aerodynamics p 872 A85-49702
Research on implicit approximate-factorization finite-difference method for the Euler equation p 873 A85-49706
Use of a hyperbolic grid generation scheme in simulating supersonic viscous flow about three-dimensional winged configuration
[NASA-TM-85344] p 874 N85-34116
**FINITE ELEMENT METHOD**
A three-dimensional, block-structured finite element grid generation scheme — for flow around aircraft modeling p 869 A85-48530
Finite element simulation of transonic flows by modified potential and stream function methods p 871 A85-49149
Contour assessment of formed wing panels
[SAE PAPER 850884] p 886 A85-50131
Analysis of incompressible cascade flows using state-of-the-art computer programs
[AD-A155850] p 876 N85-35173
**FIRE PREVENTION**
Investigation of experimental lightweight firewall materials for A/C engine bay applications
[AD-A155765] p 878 N85-35175
**FIREPROOFING**
Aviation safety (aircraft passenger survivability and cabin safety)
[GPO-39-847] p 878 N85-34130
Investigation of experimental lightweight firewall materials for A/C engine bay applications
[AD-A155765] p 878 N85-35175
**FIRES**
Pool fire-ventilation crossflow experiments in a simulated aircraft cabin interior p 877 A85-49130
Aviation safety (aircraft passenger survivability and cabin safety)
[GPO-39-847] p 878 N85-34130
**FIXED WINGS**
Flight testing the fixed-wing configuration of the Rotor Systems Research Aircraft (RSRA)
[NASA-TM-86762] p 885 N85-34135
**FLAME PROPAGATION**
Pool fire-ventilation crossflow experiments in a simulated aircraft cabin interior p 877 A85-49130
**FLAME RETARDANTS**
Investigation of experimental lightweight firewall materials for A/C engine bay applications
[AD-A155765] p 878 N85-35175
**FLAME SPRAYING**
Thermal barrier coating system
[NASA-CASE-LEW-14057-1] p 902 N85-35233
**FLAT PLATES**
Vortex boundary-layer interactions
[NASA-CR-176192] p 911 N85-35373
**FLEXIBLE BODIES**
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 1: Analysis methods
[NASA-CR-177943-VOL-1] p 896 N85-35202
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 2: Data
[NASA-CR-177943-VOL-2] p 896 N85-35203
**FLEXIBLE WINGS**
Unsteady lifting-line theory as a singular-perturbation problem p 871 A85-49353
**FLIGHT CHARACTERISTICS**
Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing
[NASA-TP-2451] p 895 N85-34144
Estimation of flight mechanical variables by means of Kalman filters p 876 N85-35171
**FLIGHT CONDITIONS**
The flight planning - flight management connection p 877 A85-47684
Time-controlled aircraft guidance in uncertain winds and temperatures p 879 A85-47687
**FLIGHT CONTROL**
Parameter space design of control systems using interactive computer graphics p 916 A85-47681
Design of decoupled longitudinal flight control laws utilizing eigensystem assignment p 893 A85-47697
How autopilot requirements constrain the aerodynamic design of homing missiles p 894 A85-47717
Further application of output predictive algorithmic control to terrain following p 894 A85-47734
Modal insensitivity with optimality — in feedback control p 917 A85-47735
A fluidic flight control system demonstrator p 894 A85-47788

Control system reconfiguration p 917 A85-47793
One-Eleven trailblazers p 866 A85-49857
Intelligent redundant actuation system requirements and preliminary system design
[NASA-CR-177366] p 886 N85-34136

FLIGHT CREWS
U.S. Civil airmen statistics for calendar year 1984
[AD-A156326] p 866 N85-35153
Introduction to European air traffic control
[AD-A156328] p 878 N85-35176

FLIGHT HAZARDS
The structural dynamics of Electro-Impulse De-icing on the Lear Fan Kevlar Composite leading edge
[SAE PAPER 850917] p 885 A85-50127

FLIGHT INSTRUMENTS
A guide to USAF helicopter instrument flight procedures
[AD-A156102] p 880 N85-35182
Accuracy and error analysis — airborne instruments p 916 N85-35557

FLIGHT MANAGEMENT SYSTEMS
Concepts and algorithms for terminal-area traffic management p 878 A85-47683
The flight planning - flight management connection p 877 A85-47684
Flight Management Systems create new crew training needs p 916 A85-48860

FLIGHT MECHANICS
The contribution made by flight mechanics to civil aviation p 878 N85-35169
Estimation of flight mechanical variables by means of Kalman filters p 876 N85-35171
Control variables in vertical wind determination using simple flight-mechanical equations p 914 N85-35546

FLIGHT OPTIMIZATION
The flight planning - flight management connection p 877 A85-47684
Feedback control for fuel-optimal descents using singular perturbation techniques p 883 A85-47686
The Delco Performance Management System p 885 A85-49172

FLIGHT PATHS
The extended range operation of twin-engined public transport aircraft. I p 881 A85-49173
The extended range operation of twin-engined public transport aircraft. III p 882 A85-49175
Guidelines for the evaluation of visual approach slope indicators
[ARL/SYS-R-32] p 880 N85-34132
Determination of instrument errors by compatibility checking: Results from dynamic flight test data
[ARL/AERO-R-162] p 889 N85-34137
International flight planning handbook
[AD-A156330] p 878 N85-35177
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2
[NASA-CR-167863] p 913 N85-35535
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 3
[NASA-CR-167864] p 913 N85-35536
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4
[NASA-CR-167865] p 913 N85-35537
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning: Summary report
[NASA-CR-167866] p 913 N85-35538

FLIGHT PLANS
The flight planning - flight management connection p 877 A85-47684
International flight planning handbook
[AD-A156330] p 878 N85-35177
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 1
[NASA-CR-167862] p 913 N85-35534
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2
[NASA-CR-167863] p 913 N85-35535
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning: Summary report
[NASA-CR-167866] p 913 N85-35538

FLIGHT SIMULATION
Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 p 897 A85-49001
Flight testing of avionic systems on the ground p 897 A85-49002
Rotorcraft simulation at Ames p 897 A85-49006
Structural mode real-time simulation p 881 A85-49007
Evaluation of the AFTI/F-16 on the LAMARS (large amplitude multi-mode aerospace research simulator) p 881 A85-49009
Some real-time simulation applications to Space Shuttle approach and landing design and test p 899 A85-49016
Advances in flight simulators p 898 A85-49019
Energy management of three-dimensional minimum-time intercept
[NASA-CR-176174] p 887 N85-35196
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2
[NASA-CR-167863] p 913 N85-35535

FLIGHT SIMULATORS
Why not have a simulator type for commuter operations? p 897 A85-48856
Advanced flight training offered to corporate aviators p 897 A85-48858
General aviation needs cost-effective flight simulators p 887 A85-48859
Flight Management Systems create new crew training needs p 916 A85-48860
Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 p 897 A85-49001
The display subsystem in the aircraft simulator - Simulator or stimulator? p 897 A85-49004
Forward-Swept Wing control system development p 894 A85-49011
Simulation's role in the development of the fuel efficient Boeing 757 and 767 airplanes p 881 A85-49012
Advances in flight simulators p 898 A85-49019
The history and future contributions of Cargo simulators to the aerospace industry p 898 A85-49020
Should they feel just like flying? p 898 A85-49047
Simulators - How real does the visual system need to be? p 899 A85-49048
Langley aeronautics and space test highlights, 1984
[NASA-TM-87586] p 920 N85-35151

FLIGHT TESTS
Flow Cones for airplane flight test flow visualization p 903 A85-47085
The MCA method of determining thrust of jet aircraft in flight — Mass Consumption-Acceleration p 881 A85-49134
Flight evaluation of an insect contamination protection system for laminar flow wings
[SAE PAPER 850860] p 884 A85-50102
Propulsive efficiency and aircraft drag determined from steady state flight test data
[SAE PAPER 850872] p 885 A85-50107
Flight testing a liquid ice protection system on a single-engine airplane
[SAE PAPER 850923] p 885 A85-50129
Flight testing the fixed-wing configuration of the Rotor Systems Research Aircraft (RSRA)
[NASA-TM-86762] p 886 N85-34135
Determination of instrument errors by compatibility checking: Results from dynamic flight test data
[ARL/AERO-R-162] p 889 N85-34137
A comparison between Falcon data and motor glider data p 914 N85-35547

FLIGHT TIME
The extended range operation of twin-engined public transport aircraft. II p 881 A85-49174
The extended range operation of twin-engined public transport aircraft. III p 882 A85-49175

FLIGHT TRAINING
Why not have a simulator type for commuter operators? p 897 A85-48856
Advanced flight training offered to corporate aviators p 897 A85-48858

FLOW CHARACTERISTICS
Characteristics of a trailing-edge flow with turbulent boundary-layer separation p 872 A85-49386

FLOW DEFLECTION
Use of titanium tetrachloride for visualization of accelerating flow around airfoils p 903 A85-47090
Some contributions to the modelling of discontinuous flows p 907 A85-48224

FLOW DISTRIBUTION
A computational study of complex three-dimensional compressible turbulent flowfields p 869 A85-48528
Calculation of three-dimensional flowfields by the unsteady method of characteristics p 869 A85-48532
Inviscid and viscous flows in cascades with an explicit multiple-grid algorithm p 869 A85-48539
A wind tunnel inlet flow simulation p 871 A85-49141
Variational principle families for hybrid problems of blade-to-blade flow along axisymmetric stream-sheet - A unified variable-domain approach p 872 A85-49703
On rolling resonance and small asymmetrical aerodynamic force of re-entry body p 873 A85-49708
A three-dimensional viscous flow analysis for the helicopter tip vortex generation problem
[NASA-CR-3906] p 874 N85-34114
A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow
[ISL-CO-219/84] p 875 N85-34127
Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method
[NASA-CR-174975] p 876 N85-35162

FLOW GEOMETRY
The use of flow visualization for vortex trajectory mapping p 867 A85-47132
Approximate calculation of flow field in an inlet with arbitrary cross sections and curved axis p 872 A85-49652

FLOW MEASUREMENT
On the accuracy of boundary layer measurements in cascades at high subsonic speeds p 867 A85-47163
Comparison of a computed transonic flow and interferometric measurements around the leading edge of a two dimensional airfoil asymmetrically mounted in a wind tunnel p 868 A85-47164
Experimental results on edge-tone oscillations in high-speed subsonic jets p 918 A85-43527
Experimental method for the study of corner flows
[AAAF PAPER NT 84-06] p 870 A85-48988
Laser velocimeter measurements of the flow fields around single- and counter-rotation propeller models
[SAE PAPER 850870] p 873 A85-50105

FLOW STABILITY
Some contributions to the modelling of discontinuous flows p 907 A85-48224
Flow instabilities in transonic small-disturbance theory p 869 A85-48531

FLOW THEORY
Contribution to theory of similitude of subsonic flow p 868 A85-48189
Supplements to 'Theory of secondary flow in cascades' p 869 A85-48874

FLOW VELOCITY
Use of titanium tetrachloride for visualization of accelerating flow around airfoils p 903 A85-47090
A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow
[ISL-CO-219/84] p 875 N85-34127
Flow modifying device
[NASA-CASE-LEW-13562-2] p 892 N85-35195

FLOW VISUALIZATION
A new single filament smoke tube injection device p 903 A85-47082
Flow Cones for airplane flight test flow visualization p 903 A85-47085
Use of titanium tetrachloride for visualization of accelerating flow around airfoils p 903 A85-47090
Flow visualization using computer-generated color video displays of flow field survey data p 903 A85-47099
The use of visualization as a guide in the numerical determination of the flow around an abruptly accelerated elliptic cylinder or airfoil p 904 A85-47127
A flow visualization study of the effect of wing-tip jets on wake vortex development p 867 A85-47129
Vortex flow visualization studies of a strake-wing in water tunnel p 904 A85-47131
The use of flow visualization for vortex trajectory mapping p 867 A85-47132
Quantification of downwash and ground vortex of a lifting rotor model by flow visualization technique p 867 A85-47134
Visualization studies of jet impingement flows at McDonnell Douglas Research Laboratories p 867 A85-47144
Visualization of the vortex flow over delta and double-delta wings p 867 A85-47149
Determination of leading-edge vortex trajectories by schlieren photography p 904 A85-47150
Digital fringe reduction techniques applied to the measurement of three-dimensional transonic flow fields p 907 A85-48521
The influence of helicopter tail shape on drag: An aerodynamic study using a low speed wind tunnel
[AD-A156304] p 876 N85-35174

FLUID FLOW
Flow modifying device
[NASA-CASE-LEW-13562-2] p 892 N85-35195

FLUIDIC CIRCUITS
A fluidic flight control system demonstrator p 894 A85-47788
Performance evaluation of an electrofluidic flight control actuator p 894 A85-47789
The design of a fluidic low-airspeed sensor p 888 A85-47791

**FLUIDICS**
Fluidics - A reliable alternative for aircraft control p 894 A85-47790
**FLUTTER**
Unsteady aerodynamic forces induced by aeroelastic vibrations of a turbojet engine in a nacelle [ONERA, TP NO. 1985-56] p 880 A85-47302
**FLUTTER ANALYSIS**
An aeroelastic testing technique in a straight cascade wind-tunnel p 896 A85-47161
Verification of calculation methods for unsteady airloads in the prediction of transonic flutter [AIAA PAPER 84-0871] p 871 A85-49128
Analysis of asymmetric natural vibrations of an aeroplane with moving deformable control surfaces p 883 A85-49672
Analysis of natural vibrations of a deformable aeroplane with fixed control systems p 883 A85-49673
**FLUX (RATE)**
A search for solar neutrons on a long duration balloon flight [SH-1.4-6] p 920 N85-34766
**FLY BY TUBE CONTROL**
Fluidics - A reliable alternative for aircraft control p 894 A85-47790
**FLY BY WIRE CONTROL**
Performance evaluation of an electrofluidic flight control actuator p 894 A85-47789
**FOAMS**
Results of variable enthalpy tests of CPR-488 TIP panels in MSFC Hot Gas Facility [NASA-CR-170889] p 902 N85-35237
**FOKKER AIRCRAFT**
Fokker improves transport design based on launch customer demand p 882 A85-49199
**FORCE DISTRIBUTION**
A nonlinear solution for parachute suspension line deformation p 877 A85-49140
**FORMING TECHNIQUES**
Age forming technology expended in an autoclave [SAE PAPER 850885] p 910 A85-50113
**FORTRAN**
A generalized computer code for developing dynamic gas turbine engine models (DIGTEM) p 890 A85-49021
**FRACTOGRAPHY**
Laboratory studies related to in-flight acoustic emission monitoring p 905 A85-47428
**FRACTURE MECHANICS**
Recent advances in fatigue crack growth predictions p 910 A85-50065
**FRACTURE STRENGTH**
Effect of temperature on the fatigue and fracture properties of 7475-T761 aluminum p 900 A85-47973
Low temperature and loading frequency effects on crack growth and fracture toughness of 2024 and 7475 aluminum p 900 A85-47974
**FREE FLIGHT**
Is any free flight/wind tunnel equivalence concept valid for unsteady viscous flow? p 871 A85-49138
**FREE FLOW**
Nozzle wall roughness effects on free-stream noise and transition in the pilot low-disturbance tunnel [NASA-TM-86369] p 910 N85-34355
**FREQUENCY MULTIPLIERS**
A wideband X100 low noise microwave frequency multiplier p 903 A85-47060
**FUEL CONSUMPTION**
Feedback control for fuel-optimal descents using singular perturbation techniques p 883 A85-47666
Simulation's role in the development of the fuel efficient Boeing 757 and 767 airplanes p 881 A85-49012
The MCA method of determining thrust of jet aircraft in flight --- Mass Consumption-Acceleration p 881 A85-49134
The Delco Performance Management System p 895 A85-49172
FAA requirements for model to support capacity, delay, noise and energy programs [AD-A155815] p 880 N85-35179
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 1 [NASA-CR-167862] p 913 N85-35534
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2 [NASA-CR-167863] p 913 N85-35535
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 3 [NASA-CR-167864] p 913 N85-35536
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4 [NASA-CR-167865] p 913 N85-35537
**FUEL CONTROL**
A new era of fuel controls p 889 A85-48073
An electronic limiter for aircraft engines [SAE PAPER 850910] p 890 A85-50122
**FUEL TANKS**
Adhesive sealing for integral fuel tanks [SAWE PAPER 1573] p 901 A85-49901
Fuel containment and damage tolerance for large composite primary aircraft structures. Phase 1: Testing [NASA-CR-166091] p 902 N85-35241
**FUEL-AIR RATIO**
Flow modifying device [NASA-CASE-LEW-13562-2] p 892 N85-35195
**FUSELAGES**
Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing [NASA-TP-2451] p 895 N85-34144

G

**GAMMA RAY BURSTS**
Ultra high energy events in ECHOS series and primary energy spectrum [HE-3.7-9] p 920 N85-35966
**GAS BEARINGS**
Innovative eddy current probe coupling method p 906 A85-47472
**GAS CHROMATOGRAPHY**
Aspects of high-resolution gas chromatography as applied to the analysis of hydrocarbon fuels and other complex organic mixtures. Volume 1 [AD-A156154] p 902 N85-35257
**GAS FLOW**
Unsteady transonic heat transfer in a transient facility [NASA-CR-176145] p 910 N85-34354
**GAS TURBINE ENGINES**
Crack characterisation in turbine disks p 905 A85-47396
Manufacturing technology for nondestructive evaluation (NDE) system to implement retirement for cause (RFC) procedures for gas turbine engine components p 905 A85-47469
Evaluation of captured water column technology for advanced ultrasonic sizing techniques p 906 A85-47475
Shroud segments for unshrouded blade turbines [PNR-90260] p 891 N85-34143
Directionally solidified gas turbine alloys [PNR-90264] p 901 N85-34279
Oxidizing seal for a turbine tip gas path [NASA-CASE-LEW-14053-1] p 911 N85-34402
Cost effective single crystals: The Rolls Royce approach --- gas turbine components [PNR-90262] p 919 N85-34717
Energy Efficient Engine Program technology benefit/cost study, volume 2 [NASA-CR-174766-VOL-2] p 892 N85-35198
Energy efficient engine, high pressure turbine thermal barrier coating. Support technology report [NASA-CR-168037] p 892 N85-35199
Development of advanced high-temperature heat flux sensors. Phase 2: Verification testing [NASA-CR-174973] p 911 N85-35391
**GAS TURBINES**
Ceramic heat exchangers for gas turbines or turbojets [ONERA, TP NO. 1985-35] p 904 A85-47288
Heat transfer characteristics for two-dimensional arrays of impinging jets with initial crossflow p 911 N85-35365
**GEAR TEETH**
Planetary-gear-support bearing test rig design [NASA-CR-174927] p 886 N85-35185
**GEARS**
Some problems in high speed gears and gearing p 910 N85-34312
Planetary-gear-support bearing test rig design [NASA-CR-174927] p 886 N85-35185
**GENERAL AVIATION AIRCRAFT**
Structural plastics in sporting and general aviation aircraft p 865 A85-48571
Advanced flight training offered to corporate aviators p 897 A85-48858
The growing impact of general aviation on the world's aviation system p 877 A85-48861
Advanced technologies promise sales boost for general aviation aircraft p 865 A85-49069
Star in the making --- Astra business aircraft with swept supercritical wing p 882 A85-49656
Crashworthy design considerations for general aviation seats [SAE PAPER 850855] p 884 A85-50101
Single-engine propulsion improvement through intercooling [SAE PAPER 850884] p 890 A85-50114
Porsche aircraft engine P F M 3200 [SAE PAPER 850895] p 890 A85-50115
Air-cycle air conditioning of turbine-powered general aviation and commuter aircraft [SAE PAPER 850901] p 885 A85-50118
Head-up displays for general aviation [SAE PAPER 850902] p 889 A85-50119
Conversion of small aircraft to Allison turbine power [SAE PAPER 850906] p 890 A85-50120
Improved capabilities of the new general aviation digital autopilots [SAE PAPER 850914] p 895 A85-50125
USAF damage tolerance methods applied to general aviation aircraft design and analysis [SAE PAPER 850915] p 885 A85-50126
Flight testing a liquid ice protection system on a single-engine airplane [SAE PAPER 850923] p 885 A85-50129
Sport aircraft design trends - Shaping the future of general aviation [SAE PAPER 850881] p 886 A85-50130
**GENERAL DYNAMICS AIRCRAFT**
Adhesive sealing for integral fuel tanks [SAWE PAPER 1573] p 901 A85-49901
**GEOSYNCHRONOUS ORBITS**
Orbit control of a synchronous satellite --- Russian book p 899 A85-49448
**GLIDERS**
Minimax optimal control and its application to the reentry of a space glider p 899 A85-47306
The first British designed and built composite sailplane p 865 A85-48573
Proceedings of Meteorological Motor Glider (MEMO) Workshop '84 [DFVLR-MITT-85-04] p 914 N85-35542
Motor glider meteorology p 914 N85-35543
Typical and historical aspects of motor gliders as meteorological measuring aircraft p 888 N85-35544
A comparison between Falcon data and motor glider data p 914 N85-35547
Environmental-physical measurements and determination of atmospheric turbulence with the ASK-16 motor glider p 915 N85-35549
Partitioning of the vertical turbulent energy transport into positive and negative contributions --- meteorology p 915 N85-35551
Aircraft measurements during the Bonn Experiment (BONEX 1) --- meteorology p 915 N85-35552
Meteorological measurements with motor gliders in Poland p 915 N85-35555
**GLYCOLS**
Flight testing a liquid ice protection system on a single-engine airplane [SAE PAPER 850923] p 885 A85-50129
**GOVERNMENT PROCUREMENT**
Establishing realistic requirements for reliability, maintainability, and built-in-test p 909 A85-49539
**GOVERNMENT/INDUSTRY RELATIONS**
DoD/industry - R&M technology study analysis p 909 A85-49538
**GRAPHITE-EPOXY COMPOSITES**
Acoustic emission monitoring of flaw growth in a graphite-epoxy experimental wing segment p 907 A85-48084
Flight service evaluation of composite helicopter components [NASA-CR-172562] p 901 N85-34222
Fuel containment and damage tolerance for large composite primary aircraft structures. Phase 1: Testing [NASA-CR-166091] p 902 N85-35241
**GROUND BASED CONTROL**
Should they feel just like flying? p 898 A85-49947
**GROUND EFFECT (AERODYNAMICS)**
Quantification of downwash and ground vortex of a lifting rotor model by flow visualization technique p 867 A85-47134
**GROUND TESTS**
Flight testing of avionic systems on the ground p 897 A85-49002
**GROUND WIND**
The determination of lee circulation during the foehn wind p 915 N85-35554
**GUNS (ORDNANCE)**
Next generation gunship [AD-A156361] p 887 N85-35193

H

**HANDBOOKS**
International flight planning handbook [AD-A156330] p 878 N85-35177
**HARMONIC OSCILLATION**
Flow instabilities in transonic small-disturbance theory p 869 A85-48531

**HARRIER AIRCRAFT**
First operational Marine Corps AV-8B squadron begins service p 882 A85-48200

**HEAD-UP DISPLAYS**
Head-up displays for general aviation [SAE PAPER 850902] p 889 A85-50119

**HEAT EXCHANGERS**
Ceramic heat exchangers for gas turbines or turbojets [ONERA, TP NO. 1985-35] p 904 A85-47288
Single-engine propulsion improvement through intercooling [SAE PAPER 850894] p 890 A85-50114

**HEAT FLUX**
Temperature fluctuations and heat flux in grid-generated isotropic turbulence with streamwise and transverse mean-temperature gradients p 908 A85-49359
Development of advanced high-temperature heat flux sensors. Phase 2: Verification testing [NASA-CR-174973] p 911 N85-35391
Case studies for flux measurements along a low-flying route to the south of Munich p 915 N85-35548

**HEAT RESISTANT ALLOYS**
Superalloy microstructural variations induced by gravity level during directional solidification p 900 A85-48274
Directionally solidified gas turbine alloys [PNR-90264] p 901 N85-34279

**HEAT SHIELDING**
Results of tests of the SRB aft skirt heat shield curtain in the MSFC Hot Gas Facility [NASA-CR-170888] p 899 N85-35223

**HEAT TRANSFER**
Ceramic heat exchangers for gas turbines or turbojets [ONERA, TP NO. 1985-35] p 904 A85-47288
Theoretical and experimental study of nonadiabatic transonic shock/boundary-layer interaction p 869 A85-48529
Component-specific modeling [NASA-CR-174765] p 891 N85-34140
Heat transfer characteristics for two-dimensional arrays of impinging jets with initial crossflow p 911 N85-35365

**HELICOPTER DESIGN**
Simplifying the cockpit p 888 A85-48074
The composite technology of a main rotor blade p 865 A85-48567
A glance at Soviet helicopter weight trends and a weight-prediction method [SAWE PAPER 1627] p 883 A85-49925

**HELICOPTER ENGINES**
A new era of fuel controls p 889 A85-48073

**HELICOPTER PERFORMANCE**
The effects of parameter variation on helicopter performance [AD-A156027] p 887 N85-35189
Development of NATOPS performance software for the SH-3D and SH-3H helicopters [AD-A156140] p 887 N85-35192

**HELICOPTERS**
A three-dimensional viscous flow analysis for the helicopter tip vortex generation problem [NASA-CR-3906] p 874 N55-34114
An evaluation of three helicopter rotor sections [NASA-TM-86719] p 874 N85-34115
Flight service evaluation of composite helicopter components [NASA-CR-172562] p 901 N85-34222
Some problems in high speed gears and gearing p 910 N85-34312
U.S. Civil airmen statistics for calendar year 1984 [AD-A156326] p 866 N85-35153
Laboratory vibration schedules [AD-A155856] p 867 N85-35188
Development of NATOPS (Naval Air Training and Operating Procedure Standardization) performance software for the H-46D helicopter [AD-A156089] p 887 N85-35190
Development of NATOPS performance software for the SH-3D and SH-3H helicopters [AD-A156140] p 887 N85-35192

**HELIUM**
Combined cold compressor/ejector helium refrigerator [DE85-006408] p 910 N85-34326

**HELMHOLTZ RESONATORS**
A research program to reduce the interior noise in general aviation aircraft, index and summary [NASA-CR-176178] p 919 N85-35695

**HIGH PRESSURE**
High pressure compressor component performance report [NASA-CR-168245] p 891 N85-34136

**HIGH REYNOLDS NUMBER**
A note on the steady high-Reynolds-number flow about a circular cylinder p 872 A85-48369

**HIGH TEMPERATURE ENVIRONMENTS**
Thermal barrier coating system [NASA-CASE-LEW-14057-1] p 902 N85-35233

**HIGH TEMPERATURE GASES**
Results of tests of weathered KSNA closeout material in the MSFC Hot Gas Facility [NASA-CR-170890] p 902 N85-35239
Study of NSI and related cable performance during tests performed in the NASA Hot Gas Facility [NASA-CR-170888] p 912 N85-35423

**HISTORIES**
Typical and historical aspects of motor gliders as meteorological measuring aircraft p 886 N85-35544

**HOLDERS**
Results of tests of MTA-2 TPS on the SRB hold-down bolt blast container [NASA-CR-170891] p 899 N85-35224

**HOLOGRAPHIC INTERFEROMETRY**
Digital fringe reduction techniques applied to the measurement of three-dimensional transonic flow fields p 907 A85-48521
Practical aspects of laser holographic interferometry in wind tunnels [NASA-TM-86786] p 911 N85-34378

**HOT SURFACES**
Component-specific modeling [NASA-CR-174765] p 891 N85-34140

**HOT-WIRE ANEMOMETERS**
Experimental method for the study of corner flows [AAAF PAPER NT 84-06] p 870 A85-48988

**HOVERING**
Visualization studies of jet impingement flows at McDonnell Douglas Research Laboratories p 867 A85-47144

**HUMAN FACTORS ENGINEERING**
Simplifying the cockpit p 888 A85-48074

**HYDRAULIC CONTROL**
An adaptive control of an electro-hydraulic position control system p 890 A85-47702
A fluidic flight control system demonstrator p 894 A85-47788
Performance evaluation of an electrofluidic flight control actuator p 894 A85-47789
Fluidics - A reliable alternative for aircraft control p 894 A85-47790

**HYDROCARBON FUELS**
Aspects of high-resolution gas chromatography as applied to the analysis of hydrocarbon fuels and other complex organic mixtures. Volume 1 [AD-A156154] p 902 N85-35257

**HYPERBOLIC DIFFERENTIAL EQUATIONS**
Use of a hyperbolic grid generation scheme in simulating supersonic viscous flow about three-dimensional winged configuration [NASA-TM-86344] p 874 N85-34116

**HYPERSONIC FLOW**
Mach 14 flow restrictor thermal stress analysis [AD-A156215] p 896 N85-35206

**HYPERSONIC VEHICLES**
A model of hypersonic two-dimensional oblique detonation wave ramjet [UTIAS-TN-257] p 891 N85-341[illegible]

**HYPERSONIC WIND TUNNELS**
Mach 14 flow restrictor thermal stress analysis [AD-A156215] p 896 N85-35206

## I

**ICE FORMATION**
Aircraft icing must never be underestimated p 877 A85-48862

**ICE PREVENTION**
Flight evaluation of an insect contamination protection system for laminar flow wings [SAE PAPER 850860] p 884 A85-50102
Flight testing a liquid ice protection system on a single-engine airplane [SAE PAPER 850923] p 885 A85-50129

**IDEAL FLUIDS**
Variational principle for two dimensional flows of the compressible ideal fluid with incontinuous surfaces p 909 A85-49704

**IMAGE PROCESSING**
Digital fringe reduction techniques applied to the measurement of three-dimensional transonic flow fields p 907 A85-48521
Recent advances in computer image generation p 918 A85-49005
Simulators - How real does the visual system need to be? p 898 A85-49948

**IMAGE RECONSTRUCTION**
Three-dimensional tomographic reconstruction of the flow around a revolving helicopter rotorblade - A numerical simulation p 903 A85-47108
Digital fringe reduction techniques applied to the measurement of three-dimensional transonic flow fields p 907 A85-48521

**IMPACT TESTS**
Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing [NASA-CR-3917] p 886 N85-35184

**IMPACT TOLERANCES**
Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing [NASA-CR-3917] p 886 N85-35184

**IMPINGEMENT**
Computation of three-dimensional shock wave and boundary-layer interactions [NASA-TM-86780] p 911 N85-35372

**IN-FLIGHT MONITORING**
E and H fields measurements on the Transall C160 aircraft during lightning flashes [ONERA, TP NO. 1985-48] p 878 A85-47259
Laboratory studies related to in-flight acoustic emission monitoring p 905 A85-47428
Acoustic intensity techniques for airplane cabin applications p 919 A85-49137

**INCOMPRESSIBLE FLOW**
Computation of inviscid incompressible flow with rotation p 871 A85-49356
Modelling of unsteady, incompressible separation on an aerofoil using an inviscid flow algorithm [GU-AERO-8412] p 874 N85-34122

**INDEPENDENT VARIABLES**
The effects of parameter variation on helicopter performance [AD-A156027] p 887 N85-35189

**INDEXES (DOCUMENTATION)**
A research program to reduce the interior noise in general aviation aircraft, index and summary [NASA-CR-176178] p 919 N85-35695

**INDUSTRIAL MANAGEMENT**
DOD Value Engineering Conference report. Value Engineering (VE): A tool that benefits line management held at Leesburg, Virginia on 1-2 November 1984. Part 2. Plenary session [AD-A156068] p 919 N85-35811

**INERTIAL UPPER STAGE**
IUS-1 - Redundant inertial measurement unit test plan and results p 899 A85-47057

**INJECTION**
A new single filament smoke tube injection device p 903 A85-47062

**INLET FLOW**
The unsteady properties of a flow within a schematic air intake [AAAF PAPER NT 84-09] p 870 A85-48989
Turbulence in air inlets [AAAF PAPER NT 84-10] p 870 A85-48990
A wind tunnel inlet flow simulation p 871 A85-49141
Approximate calculation of flow field in an inlet with arbitrary cross sections and curved axis p 872 A85-49652

**INSECTS**
Flight evaluation of an insect contamination protection system for laminar flow wings [SAE PAPER 850860] p 884 A85-50102

**INSPECTION**
Innovative eddy current probe coupling method p 906 A85-47472
Towards the year 2000: Developments in inspection and product assurance to be anticipated during the next 15 years — aircraft engines [PNR-90258] p 911 N85-34421

**INSTRUMENT FLIGHT RULES**
A guide to USAF helicopter instrument flight procedures [AD-A156102] p 880 N85-35182

**INSULATION**
Results of variable enthalpy tests of CPR-488 TIP panels in MSFC Hot Gas Facility [NASA-CR-170889] p 902 N85-35237

**INTAKE SYSTEMS**
Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method [NASA-CR-174975] p 876 N85-35162

**INTEGRATED CIRCUITS**
Will advanced fighter avionics operate when needed? p 889 A85-49949

**INTERACTIONAL AERODYNAMICS**
Unsteady aerodynamic forces induced by aeroelastic vibrations of a turbojet engine in a nacelle [ONERA, TP NO. 1985-56] p 880 A85-47302
A simple and effective difference scheme in aerodynamics p 872 A85-49702

**INTERFEROMETRY**
Comparison of a computed transonic flow and interferometric measurements around the leading edge of a two dimensional aerofoil asymmetrically mounted in a wind tunnel p 868 A85-47164
**INTERMETALLICS**
Oxidizing seal for a turbine tip gas path
[NASA-CASE-LEW-14053-1] p 911 N85-34402
**INVISCID FLOW**
Inviscid and viscous flows in cascades with an explicit multiple-grid algorithm p 869 A85-48539
Finite element simulation of transonic flows by modified potential and stream function methods
p 871 A85-49149
Unsteady lifting-line theory as a singular-perturbation problem p 871 A85-49353
Computation of inviscid incompressible flow with rotation p 871 A85-49356
Modelling of unsteady, incompressible separation on an aerofoil using an inviscid flow algorithm
[GU-AERO-8412] p 874 N85-34122
**IRON ALLOYS**
Thermal barrier coating system
[NASA-CASE-LEW-14057-1] p 902 N85-35233
**ISOTROPIC TURBULENCE**
Temperature fluctuations and heat flux in grid-generated isotropic turbulence with streamwise and transverse mean-temperature gradients p 908 A85-49359

**J**

**JAMMING**
Meeting the challenge of ESM/ECM integration
p 860 A85-49091
**JET AIRCRAFT**
The MCA method of determining thrust of jet aircraft in flight --- Mass Consumption-Acceleration
p 881 A85-49134
Advanced systems for the Gulfstream IV
[SAE PAPER 850900] p 885 A85-50117
**JET AIRCRAFT NOISE**
A more modern theory of combustion noise
p 918 A85-47309
Parametric analysis of the acoustic power emitted by coaxial jets p 918 A85-48179
**JET ENGINE FUELS**
Measurement and correlation of jet fuel viscosities at low temperatures
[NASA-CR-174911] p 901 N85-34295
Nitrogen analysis by chemiluminescence
[AD-A156197] p 902 N85-35306
**JET ENGINES**
Component-specific modeling
[NASA-CR-174765] p 891 N85-34140
**JET FLOW**
A flow visualization study of the effect of wing-tip jets on wake vortex development p 867 A85-47129
Visualization studies of jet impingement flows at McDonnell Douglas Research Laboratories
p 867 A85-47144
Experimental results on edge-tone oscillations [illegible] high-speed subsonic jets p 918 A85-4[illegible]
Heat transfer characteristics for two-dimensional [illegible] of impinging jets with initial crossflow
p 911 N85-35[illegible]
**JET IMPINGEMENT**
Visualization studies of jet impingement flows at McDonnell Douglas Research Laboratories
p 867 A85-47144
**JET STREAMS (METEOROLOGY)**
A preliminary intercomparison between numerical upper wind forecasts and research aircraft measurements of jet streams
[NASA-CR-167884] p 914 N85-35530

**K**

**KALMAN FILTERS**
Estimation of flight mechanical variables by means of Kalman filters p 876 N85-35171
**KEVLAR (TRADEMARK)**
Flight service evaluation of composite helicopter components
[NASA-CR-172582] p 901 N85-34222

**L**

**L-1011 AIRCRAFT**
Modal insensitivity with optimality --- in feedback control p 917 A85-47735
**LAMINAR BOUNDARY LAYER**
A study of laminar separation bubble in the concave region of an airfoil using laser velocimetry
p 868 A85-48520
On the abrupt turbulent reattachment downstream of leading-edge laminar separation p 872 A85-49698
**LAMINAR FLOW**
Manufacturing tolerances for natural laminar flow airframe surfaces
[SAE PAPER 850863] p 884 A85-50103
**LAMINAR FLOW AIRFOILS**
Flight evaluation of an insect contamination protection system for laminar flow wings
[SAE PAPER 850860] p 884 A85-50102
**LAMINATES**
The weight reduction potential of advanced composites
[SAWE PAPER 1579] p 901 A85-49905
**LANDING**
Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing
[NASA-TP-2451] p 895 N85-34144
**LANDING MODULES**
Descent vehicles --- Russian book
p 899 A85-49435
**LANDING SIMULATION**
Simulation of time-control procedures for the advanced air traffic control system p 878 A85-47686
**LASER APPLICATIONS**
Visualization of the vortex flow over delta and double-delta wings p 867 A85-47149
**LASER DOPPLER VELOCIMETERS**
A study of laminar separation bubble in the concave region of an airfoil using laser velocimetry
p 868 A85-48520
Laser velocimeter measurements of the flow fields around single- and counter-rotation propeller models
[SAE PAPER 850870] p 873 A85-50105
A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow
[ISL-CO-219/84] p 875 N85-34127
Study of boundary layer separation on a supercritical profile with a spoiler by means of a laser Doppler velocimeter
[ISL-CO-225/84] p 875 N85-34128
**LASER INTERFEROMETRY**
Practical aspects of laser holographic interferometry in wind tunnels
[NASA-TM-86786] p 911 N85-34378
**LATERAL STABILITY**
Theory of wing rock p 895 A85-49139
**LEADING EDGE SLATS**
Presentation of the acoustic and aerodynamic results of the Aladin 2 concept qualification testing
[NASA-TM-77883] p 876 N85-35161
**LEADING EDGES**
Determination of leading-edge vortex trajectories by schlieren photography p 904 A85-47150
Comparison of a computed transonic flow and interferometric measurements around the leading edge of a two dimensional aerofoil asymmetrically mounted in a wind tunnel p 868 A85-47164
Experimental results on edge-tone oscillations in high-speed subsonic jets p 918 A85-48527
On the abrupt turbulent reattachment downstream of leading-edge laminar separation p 872 A85-49698
A calculating method of the breakdown feature of the leading-edge separating vortex for slender delta wings
p 873 A85-49707
Flight evaluation of an insect contamination protection system for laminar flow wings
[SAE PAPER 850860] p 884 A85-50102
The structural dynamics of Electro-Impulse De-icing on the Lear Fan Kevlar Composite leading edge
[SAE PAPER 850917] p 885 A85-50127
**LEE WAVES**
The determination of lee circulation during the foehn wind p 915 N85-35554
**LIFE CYCLE COSTS**
Electronic Equipment Thermal Management
p 906 A85-49530
ITAD - A CAD system for environmental reliability design --- Intrograted Thermal Avionic Design
p 918 A85-49531
**LIFT AUGMENTATION**
Presentation of the acoustic and aerodynamic results of the Aladin 2 concept qualification testing
[NASA-TM-77883] p 876 N85-35161
**LIFT DRAG RATIO**
The influence of helicopter tail shape on drag: An aerodynamic study using a low speed wind tunnel
[AD-A156304] p 876 N85-35174
**LIFTING REENTRY VEHICLES**
Minimax optimal control and its application to the reentry of a space glider p 899 A85-47306
**LIFTING ROTORS**
Quantification of downwash and ground vortex of a lifting rotor model by flow visualization technique
p 867 A85-47134
**LIGHT AIRCRAFT**
Flight investigation of cabin noise control treatments for a light turboprop aircraft
[SAE PAPER 850876] p 885 A85-50109
Prop jet singles have arrived
[SAE PAPER 850882] p 890 A85-50112
Sport aircraft design trends - Shaping the future of general aviation
[SAE PAPER 850881] p 886 A85-50130
Development and operation of a measuring data acquisition system for use in light airplanes
p 912 N85-35556
**LIGHTNING**
A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder
[ONERA, TP NO. 1985-47] p 904 A85-47258
E and H fields measurements on the Transall C160 aircraft during lightning flashes
[ONERA, TP NO. 1985-48] p 876 A85-47259
**LIMITER CIRCUITS**
An electronic limiter for aircraft engines
[SAE PAPER 850910] p 890 A85-50122
**LININGS**
Development of advanced high-temperature heat flux sensors. Phase 2: Verification testing
[NASA-CR-174973] p 911 N85-35391
**LIQUID COOLING**
Aerodynamics of liquid-cooled aircraft engine installations
[SAE PAPER 850896] p 891 A85-50132
**LOAD TESTS**
Acoustic emission monitoring of flaw growth in a graphite-epoxy experimental wing segment
p 907 A85-48084
**LOGISTICS MANAGEMENT**
Modeling aircraft combat damage repair
p 866 A85-49576
R&M analysis techniques for fault-tolerant systems
p 909 A85-49588
**LONGERONS**
Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 887 N85-35187
**LONGITUDINAL CONTROL**
Design of decoupled longitudinal flight control laws utilizing eigensystem assignment p 893 A85-47697
Design of a pitch orientation control system for aircraft control in stall region p 893 A85-47701
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 1: Analysis methods
[NASA-CR-177943-VOL-1] p 896 N85-35202
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 2: Data
[NASA-CR-177943-VOL-2] p 896 N85-35203
**LOW ASPECT RATIO WINGS**
The rolling vortex-damping of supersonic wing
p 872 A85-49705
**LOW FREQUENCIES**
Mechanisms of transmission and control of low-frequency sound in aircraft interiors
[SAE PAPER 850879] p 885 A85-50111
**LOW GRAVITY MANUFACTURING**
Superalloy microstructural variations induced by gravity level during directional solidification p 900 A85-48274
**LOW REYNOLDS NUMBER**
The aerodynamic charactoristics of a GU25-5(11)8 aerofoil for low Reynolds numbers p 873 A85-49674
**LOW SPEED WIND TUNNELS**
A wind tunnel inlet flow simulation
p 871 A85-49141
The influence of helicopter tail shape on drag: An aerodynamic study using a low speed wind tunnel
[AD-A156304] p 876 N85-35174
**LOW TEMPERATURE**
Measurement and correlation of jet fuel viscosities at low temperatures
[NASA-CR-174911] p 901 N85-34295
**LOW TEMPERATURE TESTS**
Effect of temperature on the fatigue and fracture properties of 7475-T761 aluminum p 900 A85-47973
Low temperature and loading frequency effects on crack growth and fracture toughness of 2024 and 7475 aluminum p 900 A85-47974
**LUBRICANT TESTS**
Certification of reciprocating engine aircraft oils and additives by supplemental type certification procedures
[SAE PAPER 850899] p 901 A85-50116

## M

**MACH NUMBER**
An evaluation of three helicopter rotor sections
[NASA-TM-86719] p 874 N85-34115
**MAINTAINABILITY**
Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings
p 908 A85-49526
Maintainability aspects in maintenance management
p 909 A85-49536
DoD/industry - R&M technology study analysis
p 909 A85-49538
Establishing realistic requirements for reliability, maintainability, and built-in-test p 909 A85-49539
An M principle - Pay me now or spend more later
p 909 A85-49551
F-15 readiness - The maintainability contribution
p 882 A85-49882
**MAINTENANCE**
A systematic approach to designing for testability
p 909 A85-49586
**MAN MACHINE SYSTEMS**
Development of NATOPS performance software for the SH-3D and SH-3H helicopters
[AD-A156140] p 887 N85-35192
The integrated manual and automatic control of complex flight systems
[NASA-CR-176186] p 896 N85-35201
**MANAGEMENT**
DOD Value Engineering Conference report. Value Engineering (VE): A tool that benefits line management held at Leesburg, Virginia on 1-2 November 1984. Part 2. Plenary session
[AD-A156068] p 919 N85-35811
**MANAGEMENT METHODS**
The imposition of flow control avoids ATC overloads
p 879 A85-48851
Automation in air traffic management
p 879 A85-49171
**MANAGEMENT SYSTEMS**
Initial European Central Data Bank of air traffic demand now in operational trials p 879 A85-48852
The Delco Performance Management System
p 895 A85-49172
DOD Value Engineering Conference report. Value Engineering (VE): A tool that benefits line management held at Leesburg, Virginia on 1-2 November 1984. Part 2. Plenary session
[AD-A156068] p 919 N85-35811
**MANUAL CONTROL**
The integrated manual and automatic control of complex flight systems
[NASA-CR-176186] p 896 N85-35201
**MANUFACTURING**
Manufacturing tolerances for natural laminar flow airframe surfaces
[SAE PAPER 850863] p 884 A85-50103
**MARKOV PROCESSES**
A user's view of CARE III — computer aided reliability estimation p 918 A85-49570
**MASS DISTRIBUTION**
Computer aided determination of rotor blade mass properties
[SAWE PAPER 1628] p 884 A85-49926
**MATERIALS HANDLING**
Laboratory vibration schedules
[AD-A155856] p 887 N85-35186
**MATERIALS SCIENCE**
Fibre reinforced composites '84; Proceedings of the International Conference, University of Liverpool, England, April 3-5, 1984 p 900 A85-48562
**MATERIALS TESTS**
The first British designed and built composite sailplane
p 865 A85-48573
**MATHEMATICAL MODELS**
Component-specific modeling
[NASA-CR-174765] p 891 N85-34140
Development of a mathematical model for predicting the percentage fatigue life increase resulting from shot peened components
[AD-A155774] p 912 N85-35425
**MAXIMUM LIKELIHOOD ESTIMATES**
A likelihood function method for multiple aircraft maneuver tracking p 888 A85-47699
**MEASURING INSTRUMENTS**
Development of advanced high-temperature heat flux sensors. Phase 2: Verification testing
[NASA-CR-174973] p 911 N85-35391
**MEDICAL SCIENCE**
Proceedings of the 14th Army Science Conference. Volume 2: Principal authors I through O
[AD-A149201] p 919 N85-35880
**MELTING POINTS**
Measurement and correlation of jet fuel viscosities at low temperatures
[NASA-CR-174911] p 901 N85-34295
**METAL BONDING**
Bonded repair of damage p 910 A85-50883
**METAL FATIGUE**
Effect of temperature on the fatigue and fracture properties of 7475-T761 aluminum p 900 A85-47973
Low temperature and loading frequency effects on crack growth and fracture toughness of 2024 and 7475 aluminum p 900 A85-47974
**METEOROLOGICAL FLIGHT**
E and H fields measurements on the Transall C160 aircraft during lightning flashes
[ONERA, TP NO. 1985-48] p 876 A85-47256
In-flight electrical conductivity measurements
[ONERA, TP NO. 1985-61] p 912 A85-47264
Proceedings of Meteorological Motor Glider (MEMO) Workshop '84
[DFVLR-MITT-85-04] p 914 N85-35542
Motor glider meteorology p 914 N85-35543
Typical and historical aspects of motor gliders as meteorological measuring aircraft p 886 N85-35544
Determination of vertical air velocity using measurements of the aircraft motion
p 914 N85-35545
A comparison between Falcon data and motor glider data p 914 N85-35547
Case studies for flux measurements along a low-flying route to the south of Munich p 915 N85-35548
Environmental-physical measurements and determination of atmospheric turbulence with the ASK-16 motor glider p 915 N85-35549
Partitioning of the vertical turbulent energy transport into positive and negative contributions — meteorology
p 915 N85-35551
Aircraft measurements during the Bonn Experiment (BONEX 1) — meteorology p 915 N85-35552
Meteorological measurements with motor gliders in Poland p 915 N85-35555
The principles of wind measurement with the help of aircraft p 916 N85-35554
**METEOROLOGICAL INSTRUMENTS**
New AWOS provides synthesized-voice weather information p 907 A85-48853
**METEOROLOGICAL RESEARCH AIRCRAFT**
A preliminary intercomparison between numerical upper wind forecasts and research aircraft measurements of jet streams
[NASA-CR-167884] p 914 N85-35539
**METHOD OF CHARACTERISTICS**
Calculation of three-dimensional flowfields by the unsteady method of characteristics p 869 A85-48532
**MICROCOMPUTERS**
A research program to reduce the interior noise in general aviation aircraft, index and summary
[NASA-CR-176179] p 919 N85-35886
**MICROGRAVITY APPLICATIONS**
Superalloy microstructural variations induced by gravity level during directional solidification p 900 A85-48274
**MICROPROCESSORS**
A generalized computer code for developing dynamic gas turbine engine models (DIGTEM)
p 890 A85-49021
**MICROSTRUCTURE**
Ultrasonic microstructural noise parameters in a powder metal alloy p 905 A85-47361
**MICROWAVE FREQUENCIES**
A wideband X100 low noise microwave frequency multiplier p 903 A85-47080
**MICROWAVE OSCILLATORS**
Development of active microwave ferromagnetic resonance eddy current probes and associated signal processing methods p 906 A85-47473
**MILITARY AIRCRAFT**
Flight testing of avionic systems on the ground
p 897 A85-49002
Evaluation of the benefits of advanced avionics system technologies through computer simulation
p 889 A85-49003
Determining operating and support costs with USAF D056 maintenance data collection system
p 865 A85-49553
Squadron Maintenance and Repair Techniques (SMART) validation test report p 866 A85-49564
Handheld computer weight and balance computations for military aircraft
[SAWE PAPER 1582] p 877 A85-49907
How much does it cost/how much does it weigh?
[SAWE PAPER 1583] p 919 A85-49913
**MILITARY AVIATION**
Development of NATOPS (Naval Air Training and Operating Procedure Standardization) performance software for the H-46D helicopter
[AD-A156069] p 887 N85-35190
**MILITARY HELICOPTERS**
Advanced avionics for the next generation military helicopters p 866 A85-48072
Modeling combat maintenance operations
p 866 A85-49571
**MILITARY OPERATIONS**
Introduction to European air traffic control
[AD-A156329] p 878 N85-35176
A guide to USAF helicopter instrument flight procedures
[AD-A156102] p 880 N85-35182
RAFTS: A T-38 replacement for the 21st century
[AD-A156103] p 887 N85-35191
Next generation gunship
[AD-A156361] p 887 N85-35193
**MILITARY TECHNOLOGY**
DoD/industry - R&M technology study analysis
p 909 A85-49538
Establishing realistic requirements for reliability, maintainability, and built-in-test p 909 A85-49539
Proceedings of the 14th Army Science Conference. Volume 2: Principal authors I through O
[AD-A149201] p 919 N85-35880
**MINIMUM DRAG**
Arrays of bodies of revolution for minimum wave drag
p 861 A85-49136
**MISSILE DESIGN**
How autopilot requirements constrain the aerodynamic design of homing missiles p 894 A85-47717
**MIXTURES**
Nitrogen analysis by chemiluminescence
[AD-A156197] p 902 N85-35306
**MODAL RESPONSE**
Model insensitivity with optimality — in feedback control p 917 A85-47735
**MODELS**
The impact of supercomputers on experimentation: A view from a national laboratory
[NASA-TM-86822] p 918 N85-34510
FAA requirements for model to support capacity, delay, noise and energy programs
[AD-A155815] p 880 N85-35179
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2
[NASA-CR-167863] p 913 N85-35535
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning: Summary report
[NASA-CR-167866] p 913 N85-35536
**MONTE CARLO METHOD**
Ultra high energy events in ECHOS series and primary energy spectrum
[HE-3.7-6] p 920 N85-35966
**MTBF**
A management guide to reliability predictions
p 909 A85-49541
**MULTIPROCESSING (COMPUTERS)**
Validation of fault-free behavior of a reliable multiprocessor system - FTMP: A case study — Fault-Tolerant Multi-Processor avionics
p 888 A85-47757
Will advanced fighter avionics operate when needed?
p 889 A85-48940

## N

**NAVIER-STOKES EQUATION**
A computational study of complex three-dimensional compressible turbulent flowfields p 869 A85-48526
Numerical analysis of transonic flow around a two-dimensional airfoil by solving full Navier-Stokes equations p 869 A85-48875
A three-dimensional viscous flow analysis for the helicopter tip vortex generation problem
[NASA-CR-3906] p 874 N85-34114
Comments on the prediction of dynamic stall
[GU-AERO-8501] p 875 N85-34125
**NAVIGATION INSTRUMENTS**
Status and development trends of navigation systems for general aviation p 879 A85-48175
**NAVIGATORS**
International flight planning handbook
[AD-A156330] p 878 N85-35177
**NAVY**
Development of NATOPS (Naval Air Training and Operating Procedure Standardization) performance software for the H-46D helicopter
[AD-A156069] p 887 N85-35190
**NEAR WAKES**
The subsonic near-wake of an axisymmetric semielliptical afterbody p 869 A85-48534

**NEUTRONS**
A search for solar neutrons on a long duration balloon flight
[SH-1.4-6] p 920 N85-34766

**NICKEL ALLOYS**
Superalloy microstructural variations induced by gravity level during directional solidification p 900 A85-48274

**NITROGEN**
Nitrogen analysis by chemiluminescence
[AD-A156197] p 902 N85-35308

**NOISE (SOUND)**
Some problems in high speed gears and gearing
p 910 N85-34312

**NOISE GENERATORS**
A more modern theory of combustion noise
p 918 A85-47309
Acoustic intensity techniques for airplane cabin applications p 919 A85-49137

**NOISE MEASUREMENT**
Acoustic intensity techniques for airplane cabin applications p 919 A85-49137

**NOISE PREDICTION (AIRCRAFT)**
Noise transmission characteristics of aircraft-type composite panels
[SAE PAPER 850878] p 919 A85-50110
Some problems in high speed gears and gearing
p 910 N85-34312
Optimally designed propellers constrained by noise
p 882 N85-35196

**NOISE PROPAGATION**
Noise transmission characteristics of aircraft-type composite panels
[SAE PAPER 850878] p 919 A85-50110
Some problems in high speed gears and gearing
p 910 N85-34312

**NOISE REDUCTION**
Noise constraints effecting optimal propeller designs
[SAE PAPER 850871] p 874 A85-50106
Flight investigation of cabin noise control treatments for a light turboprop aircraft
[SAE PAPER 850876] p 885 A85-50109
Mechanisms of transmission and control of low-frequency sound in aircraft interiors
[SAE PAPER 850879] p 885 A85-50111
Some problems in high speed gears and gearing
p 910 N85-34312
Langley aeronautics and space test highlights, 1984
[NASA-TM-87585] p 920 N85-35151
Optimally designed propellers constrained by noise
p 882 N85-35196
A research program to reduce the interior noise in general aviation aircraft, index and summary
[NASA-CR-176178] p 919 N85-35695

**NONDESTRUCTIVE TESTS**
Ultrasonic detection of cracks in web geometries
p 905 A85-47380
Crack characterisation in turbine disks
p 905 A85-47396
Development of a quantitative flaw characterization module - A status report p 905 A85-47402
Manufacturing technology for nondestructive evaluation (NDE) system to implement retirement for cause (RFC) procedures for gas turbine engine components
p 905 A85-47469
NDT-33 - A computerized eddy current instrument
p 906 A85-47470
Innovative eddy current probe coupling method
p 906 A85-47472
Development of active microwave ferromagnetic resonance eddy current probes and associated signal processing methods p 906 A85-47473
Electric Current Perturbation inspection of selected retirement-for-cause turbine engine components
p 906 A85-47474
Evaluation of captured water column technology for advanced ultrasonic sizing techniques
p 906 A85-47475
Aerospace radiography - The last three decades
p 908 A85-49100

**NONFLAMMABLE MATERIALS**
Investigation of experimental lightweight firewall materials for A/C engine bay applications
[AD-A155765] p 878 N85-35175

**NONLINEAR EQUATIONS**
A nonlinear solution for parachute suspension line deformation p 877 A85-49140

**NOZZLE FLOW**
Nozzle wall roughness effects on free-stream noise and transition in the pilot low-disturbance tunnel
[NASA-TM-86389] p 910 N85-34355

**NUMERICAL ANALYSIS**
The impact of supercomputers on experimentation: A view from a national laboratory
[NASA-TM-86822] p 918 N85-34510

**NUMERICAL FLOW VISUALIZATION**
Three-dimensional tomographic reconstruction of the flow around a revolving helicopter rotorblade - A numerical simulation p 903 A85-47106
The use of visualization as a guide in the numerical determination of the flow around an abruptly accelerated elliptic cylinder or airfoil p 904 A85-47127
Some contributions to the modelling of discontinuous flows p 907 A85-48224
A wind tunnel inlet flow simulation
p 871 A85-49141

**O**

**OBLIQUE WINGS**
Project advantage of an oblique wing design on a fleet air defense mission p 881 A85-49135

**OBSERVATION AIRCRAFT**
Motor glider meteorology p 914 N85-35543

**OIL ADDITIVES**
Certification of reciprocating engine aircraft oils and additives by supplemental type certification procedures
[SAE PAPER 850899] p 901 A85-50116

**ONBOARD DATA PROCESSING**
The flight planning - flight management connection
p 877 A85-47684
Simulation of time-control procedures for the advanced air traffic control system p 878 A85-47686
Implications of artificial intelligence on the design of future onboard systems
[SFENA-DPS/C/S3/84252A] p 918 N85-34586

**OPERATING COSTS**
Determining operating and support costs with USAF DO56 maintenance data collection system
p 865 A85-49553

**OPERATIONS RESEARCH**
Maintainability aspects in maintenance management
p 909 A85-49536

**OPTIMAL CONTROL**
Minimax optimal control and its application to the reentry of a space glider p 899 A85-47306
1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volumes 1, 2 & 3
p 916 A85-47676
Design of optimal low-sensitivity controllers with prespecified eigenvalues - Application to aircraft lateral motion p 893 A85-47696
Further application of output predictive algorithmic control to terrain following p 894 A85-47734

**OPTIMIZATION**
Computer-aided design of control systems via parameter optimization method (CADCS/POM) - An interactive graphics approach p 917 A85-47764
Numerical optimization of circulation control airfoil at high subsonic speed p 871 A85-49131
Noise constraints effecting optimal propeller designs
[SAE PAPER 850871] p 874 A85-50106
High pressure compressor component performance report
[NASA-CR-168245] p 891 N85-34136
An automated technique for encasing specific payloads with low-drag fairings p 886 N85-35183
Energy management of three-dimensional minimum-time intercept
[NASA-CR-176174] p 887 N85-35186

**ORBITAL MANEUVERS**
Orbit control of a synchronous satellite --- Russian book p 899 A85-49448

**ORGANIC COMPOUNDS**
Aspects of high-resolution gas chromatography as applied to the analysis of hydrocarbon fuels and other complex organic mixtures. Volume 1
[AD-A156154] p 902 N85-35257

**OXIDATION RESISTANCE**
Thermal barrier coating system
[NASA-CASE-LEW-14057-1] p 902 N85-35233

**OXIDE FILMS**
Thermal barrier coating system
[NASA-CASE-LEW-14057-1] p 902 N85-35233

**P**

**PANEL FLUTTER**
The role of damping on supersonic panel flutter
p 907 A85-48557

**PANEL METHOD (FLUID DYNAMICS)**
Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method
[NASA-CR-174975] p 876 N85-35162

**PANELS**
A research program to reduce the interior noise in general aviation aircraft, index and summary
[NASA-CR-176178] p 919 N85-35695

**PARACHUTES**
A nonlinear solution for parachute suspension line deformation p 877 A85-49140
Dual towline spin-recovery device
[NASA-CASE-LAR-13076-1] p 895 N85-35200

**PARAMETER IDENTIFICATION**
A new approach to the maneuvering target tracking problem p 917 A85-47769

**PARAMETERIZATION**
Parameter space design of control systems using interactive computer graphics p 916 A85-47681

**PARTICULATE SAMPLING**
A study of the control of particulate emissions from turbine engine test cells p 898 N85-35205

**PASSENGER AIRCRAFT**
The extended range operation of twin-engined public transport aircraft. III p 882 A85-49175
GIV - Gulfstream goes further p 882 A85-49858
Advanced systems for the Gulfstream IV
[SAE PAPER 850900] p 885 A85-50117
Air-cycle air conditioning of turbine-powered general aviation and commuter aircraft
[SAE PAPER 850901] p 885 A85-50118

**PASSENGERS**
Aviation safety (aircraft passenger survivability and cabin safety)
[GPO-39-847] p 878 N85-34130

**PAYLOADS**
An automated technique for encasing specific payloads with low-drag fairings p 886 N85-35183

**PERFORMANCE PREDICTION**
The Delco Performance Management System
p 895 A85-49172
Maintainability aspects in maintenance management
p 909 A85-49536
A management guide to reliability predictions
p 909 A85-49541
The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers p 873 A85-49874

**PERFORMANCE TESTS**
Performance evaluation of an electrofluidic flight control actuator p 894 A85-47789
Effect of interference on the performance of a minimum TCAS 2
[FAA-PM-84-33] p 880 N85-34131
Planetary-gear-support bearing testing design
[NASA-CR-174927] p 886 N85-35185
Development of NATOPS (Naval Air Training and Operating Procedure Standardization) performance software for the H-46D helicopter
[AD-A156069] p 867 N85-35190

**PERSONNEL**
U.S. Civil airmen statistics for calendar year 1984
[AD-A156326] p 866 N85-35153

**PERTURBATION THEORY**
Unsteady lifting-line theory as a singular-perturbation problem p 871 A85-49353

**PHOSPHORUS**
Fire-resistant phosphorus containing polyimides and copolyimides
[NASA-CASE-ARC-11522-2] p 901 N85-34280

**PILOT TRAINING**
RAFTS: A T-38 replacement for the 21st century
[AD-A156103] p 867 N85-35191

**PILOTS (PERSONNEL)**
U.S. Civil airmen statistics for calendar year 1984
[AD-A156326] p 866 N85-35153
International flight planning handbook
[AD-A156330] p 878 N85-35177

**PISTON ENGINES**
Certification of reciprocating engine aircraft oils and additives by supplemental type certification procedures
[SAE PAPER 850899] p 901 A85-50116

**PITCHING MOMENTS**
An evaluation of three helicopter rotor sections
[NASA-TM-86719] p 874 N85-34115

**PITOT TUBES**
A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow
[ISL-CO-219/84] p 875 N85-34127

**PLANETARY LANDING**
Descent vehicles --- Russian book
p 899 A85-49435

**PLASMA SPRAYING**
Thermal stability of plasma-sprayed zirconia coatings as related to substrate selection p 900 A85-48758
Thermal barrier coating system
[NASA-CASE-LEW-14057-1] p 902 N85-35233

**PLASTIC AIRCRAFT STRUCTURES**
Structural plastics in sporting and general aviation aircraft p 865 A85-48571

**POLAND**
Meteorological measurements with motor gliders in Poland p 915 N85-35555

**POLYIMIDES**
Fire-resistant phosphorus containing polyimides and copolyimides
[NASA-CASE-ARC-11522-2] p 901 N85-34280
**POLYMER MATRIX COMPOSITES**
Fibre reinforced composites '84; Proceedings of the International Conference, University of Liverpool, England, April 3-5, 1984 p 900 A85-48562
**PORTABLE EQUIPMENT**
Applying shear beam load measuring techniques to portable platform scales for aircraft weighing
[SAWE PAPER 1581] p 898 A85-49906
**POTENTIAL FLOW**
Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method
[NASA-CR-174975] p 876 N85-35162
**POTENTIAL THEORY**
Full potential solutions of three-dimensional supersonic flows p 871 A85-49133
Finite element simulation of transonic flows by modified potential and stream function methods
p 871 A85-49149
**POWDER METALLURGY**
Ultrasonic microstructural noise parameters in a powder metal alloy p 906 A85-47381
**POWER EFFICIENCY**
Winglip vortex propeller
[NASA-CASE-LAR-13019-1] p 892 N85-35194
**PRANDTL-MEYER EXPANSION**
Analytical solutions for unsteady Prandtl-Meyer flow
p 873 A85-49710
**PREDICTION ANALYSIS TECHNIQUES**
A glance at Soviet helicopter weight trends and a weight-prediction method
[SAWE PAPER 1627] p 883 A85-49925
Recent advances in fatigue crack growth predictions
p 910 A85-50065
Comments on the prediction of dynamic stall
[GU-AERO-8501] p 875 N85-34125
Development of a mathematical model for predicting the percentage fatigue life increase resulting from shot peened components
[AD-A155774] p 912 N85-35425
**PRESSURE GRADIENTS**
A design procedure to modify the trailing edge upper surface pressure gradient of a given aerofoil
[GU-AERO-8408] p 874 N85-34120
**PRESSURE RATIO**
High pressure compressor component performance report
[NASA-CR-168245] p 891 N85-34138
**PRIMARY COSMIC RAYS**
Ultra high energy events in ECHOS series and primary energy spectrum
[HE-3.7-9] p 920 N85-35966
**PRIMERS (COATINGS)**
Results of tests of weathered K5NA closeout material in the MSFC Hot Gas Facility
[NASA-CR-170883] p 902 N85-35239
**PROCUREMENT MANAGEMENT**
Weight control - A procurement agency perspective
[SAWE PAPER 1594] p 919 A85-49914
**PRODUCT DEVELOPMENT**
Cost effective single crystals: The Rolls Royce approach --- gas turbine components
[PNR-90262] p 919 N85-34717
Development and operation of a measuring data acquisition system for use in light airplanes
p 912 N85-35556
**PROPELLER BLADES**
Aerodynamic models for propellers for fast aircraft
[ONERA, TP NO. 1985-55] p 866 A85-47301
Noise constraints effecting optimal propeller designs
[SAE PAPER 850871] p 874 A85-50106
Manufacture of composite propeller blades for commuter aircraft
[SAE PAPER 850875] p 910 A85-50108
Optimally designed propellers constrained by noise
p 892 N85-35196
**PROPELLER EFFICIENCY**
The analysis of counter-rotating propeller systems
[SAE PAPER 850869] p 873 A85-50104
Propulsive efficiency and aircraft drag determined from steady state flight test data
[SAE PAPER 850872] p 865 A85-50107
Optimally designed propellers constrained by noise
p 892 N85-35196
**PROPELLERS**
Laser velocimeter measurements of the flow fields around single- and counter-rotation propeller models
[SAE PAPER 850870] p 873 A85-50105
Wingtip vortex propeller
[NASA-CASE-LAR-13019-1] p 892 N85-35194
**PROPULSION SYSTEM CONFIGURATIONS**
Presentation of the acoustic and aerodynamic results of the Aladin 2 concept qualification testing
[NASA-TM-77883] p 876 N85-35161
**PROPULSIVE EFFICIENCY**
The MCA method of determining thrust of jet aircraft in flight --- Mass Consumption-Acceleration
p 881 A85-49134
Single-engine propulsion improvement through intercooling
[SAE PAPER 850894] p 860 A85-50114
**PROTECTIVE CLOTHING**
Fast-jet aircrew safety p 916 A85-48099
**PROTECTORS**
Results of tests of MTA-2 TPS on the SRB hold-down bolt blast container
[NASA-CR-170[illegible]] p 899 N85-35224
**PULSE HEATING**
The structural dynamics of Electro-Impulse De-icing on the Lear Fan Kevlar Composite leading edge
[SAE PAPER 850917] p 865 A85-50127
**PUMPS**
Combined cold compressor/ejector helium refrigerator
[DE85-006406] p 910 N85-34326
**PURSUIT TRACKING**
A new approach to the maneuvering target tracking problem p 917 A85-47769

## R

**RADAR CROSS SECTIONS**
Radar targets reveal all to automated tester
p 908 A85-49346
**RADAR HOMING MISSILES**
How autopilot requirements constrain the aerodynamic design of homing missiles p 884 A85-47717
**RADAR RECEIVERS**
Meeting the challenge of ESM/ECM integration
p 889 A85-49091
**RADAR SCATTERING**
Radar targets reveal all to automated tester
p 908 A85-49346
**RADAR TARGETS**
Radar targets reveal all to automated tester
p 908 A85-49346
**RADAR TRACKING**
A likelihood function method for multiple aircraft maneuver tracking p 888 A85-47699
**RADAR TRANSMITTERS**
A wideband X100 low noise microwave frequency multiplier p 903 A85-47060
**RADIANT HEATING**
Development of advanced high-temperature heat flux sensors. Phase 2: Verification testing
[NASA-CR-174973] p 911 N85-35391
**RADIOGRAPHY**
Aerospace radiography - The last three decades
p 908 A85-49100
**RADIOMETERS**
Development of advanced high-temperature heat flux sensors. Phase 2: Verification testing
[NASA-CR-174973] p 911 N85-35391
**RADOME MATERIALS**
Continuous fibre reinforced thermoplastics in new generation radomes p 900 A85-48572
**RAMJET ENGINES**
A model of hypersonic two-dimensional oblique detonation wave ramjet
[UTIAS-TN-257] p 891 N85-34139
**RAMP FUNCTIONS**
The collected data for ramp function tests on a NACA 23012 aerofoil. Volume 1: Description and pressure data
[GU-AERO-8413-VOL-1] p 875 N85-34123
**RAREFIED GAS DYNAMICS**
Unsteady transonic heat transfer in a transient facility
[NASA-CR-176145] p 910 N85-34354
**REAL TIME OPERATION**
A generalized computer code for developing dynamic gas turbine engine models (DIGTEM)
p 890 A85-49021
Reconnoitering the electromagnetic spectrum
p 879 A85-48094
**RECESSION**
Results of variable enthalpy tests of CPR-488 TIP panels in MSFC Hot Gas Facility
[NASA-CR-170889] p 902 N85-35237
**RECIPROCATION**
Certification of reciprocating engine aircraft oils and additives by supplemental type certification procedures
[SAE PAPER 850889] p 901 A85-50116
**REDUNDANCY**
Intelligent redundant actuation system requirements and preliminary system design
[NASA-CR-177366] p 886 N85-34136
**REDUNDANT COMPONENTS**
Control system reconfiguration p 917 A85-47793
Intelligent redundant actuation system requirements and preliminary system design
[NASA-CR-177366] p 886 N85-34136
**REENTRY TRAJECTORIES**
Minimax optimal control and its application to the reentry of a space glider p 899 A85-47306
**REENTRY VEHICLES**
On rolling resonance and small asymmetrical aerodynamic force of re-entry body p 873 A85-49708
**REFRIGERATORS**
Combined cold compressor/ejector helium refrigerator
[DE85-006406] p 910 N85-34326
**REGRESSION ANALYSIS**
Development of NATOPS performance software for the SH-3D and SH-3H helicopters
[AD-A156140] p 887 N85-35192
**REGULATIONS**
The extended range operation of twin-engined public transport aircraft. II p 881 A85-49174
The extended range operation of twin-engined public transport aircraft. III p 882 A85-49175
**RELIABILITY**
Determining operating and support costs with USAF DO56 maintenance data collection system
p 865 A85-49553
**RELIABILITY ANALYSIS**
A fault and damage tolerant network for an advanced transport aircraft p 888 A85-47760
Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings
p 908 A85-49526
DoD/industry - R&M technology study analysis
p 909 A85-49538
Establishing realistic requirements for reliability, maintainability, and built-in-test p 909 A85-49539
A management guide to reliability predictions
p 909 A85-49541
A user's view of CARE III --- computer aided reliability estimation p 918 A85-49570
The Eagle - A classic study in reliability growth
p 882 A85-49579
R&M analysis techniques for fault-tolerant systems
p 909 A85-49586
**RELIABILITY ENGINEERING**
Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings
p 908 A85-49526
Electronic Equipment Thermal Management
p 908 A85-49530
ITAD - A CAD system for environmental reliability design --- Intregrated Thermal Avionic Design
p 918 A85-49531
F/A-18 supportability assurance readiness program
p [illegible] A85-49585
**RESEARCH AND DEVELOPMENT**

JVX design to cost methodology --- Joint Services Advanced Vertical Lift Aircraft Program
[SAWE PAPER 1591] p 883 A85-49912
A glance at Soviet helicopter weight trends and a weight-prediction method
[SAWE PAPER 1627] p 883 A85-49925
The USAF's CREST program --- CRew EScape Technologies p 884 A85-49944
Adaptive operation of escape systems - A look at design requirements p 884 A85-49945
Generalized Escape System Simulation - Its purpose, recent modifications, and potential p 884 A85-49946
Recent advances in fatigue crack growth predictions
p 910 A85-50065
**RESEARCH FACILITIES**
Langley aeronautics and space test highlights, 1984
[NASA-TM-87586] p 920 N85-35151
**RESIDUAL STRESS**
Development of a mathematical model for predicting the percentage fatigue life increase resulting from shot peened components
[AD-A155774] p 912 N85-35425
**RESONANT VIBRATION**
On rolling resonance and small asymmetrical aerodynamic force of re-entry body p 873 A85-49708
**RETIREMENT FOR CAUSE**
Manufacturing technology for nondestructive evaluation (NDE) system to implement retirement for cause (RFC) procedures for gas turbine engine components
p 905 A85-47469
NDT-33 - A computerized eddy current instrument
p 906 A85-47470
Electric Current Perturbation inspection of selected retirement-for-cause turbine engine components
p 906 A85-47474

**REYNOLDS NUMBER**

The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers [GU-AERO-8410] p 874 N85-34121

**RIGID WINGS**

The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers [GU-AERO-8410] p 874 N85-34121

**RISK**

The physical and empirical basis for a specific clear-air turbulence risk index [NASA-CR-178522] p 914 N85-35540

**ROLL**

The rolling vortex-damping of supersonic wing p 872 A85-49705

On rolling resonance and small asymmetrical aerodynamic force of re-entry body p 873 A85-49708

**ROLLER BEARINGS**

Planetary-gear-support bearing test rig design [NASA-CR-174927] p 886 N85-35185

**ROOT-MEAN-SQUARE ERRORS**

Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 3 [NASA-CR-167864] p 913 N85-35536

**ROTARY WINGS**

Three-dimensional tomographic reconstruction of the flow around a revolving helicopter rotorblade - A numerical simulation p 903 A85-47106

The composite technology of a main rotor blade p 865 A85-48567

A three-dimensional viscous flow analysis for the helicopter tip vortex generation problem [NASA-CR-3906] p 874 N85-34114

An evaluation of three helicopter rotor sections [NASA-TM-86719] p 874 N85-34115

The effects of parameter variation on helicopter performance [AD-A156027] p 887 N85-35169

**ROTATING DISKS**

Crack characterisation in turbine disks p 905 A85-47396

**ROTATING FLUIDS**

Computation of inviscid incompressible flow with rotation p 871 A85-49356

**ROTATION**

Optimally designed propellers constrained by noise p 892 N85-35196

**ROTOR AERODYNAMICS**

The analysis of counter-rotating propeller systems [SAE PAPER 850869] p 873 A85-50104

Laser velocimeter measurements of the flow fields around single- and counter-rotation propeller models [SAE PAPER 850870] p 873 A85-50105

**ROTOR BLADES (TURBOMACHINERY)**

Variational principle families for hybrid problems of blade-to-blade flow along axisymmetric stream-sheet - A unified variable-domain approach p 872 A85-49703

Computer aided determination of rotor blade mass properties [SAWE PAPER 1628] p 884 A85-49926

Reflection plane tests of a wind turbine blade tip section with ailerons [NASA-TM-87018] p 912 N85-34444

**ROTOR SYSTEMS RESEARCH AIRCRAFT**

Flight testing the fixed-wing configuration of the Rotor Systems Research Aircraft (RSRA) [NASA-TM-86762] p 886 N85-34135

**ROTORCRAFT AIRCRAFT**

Rotorcraft simulation at Ames p 897 A85-49006

**RUNWAYS**

Guidelines for the evaluation of visual approach slope indicators [ARL/SYS-R-32] p 880 N85-34132

## S

**SAFETY DEVICES**

Fast-jet aircrew safety p 916 A85-48099

**SATELLITE CONTROL**

Orbit control of a synchronous satellite -- Russian book p 899 A85-49448

**SCHLIEREN PHOTOGRAPHY**

Determination of leading-edge vortex trajectories by schlieren photography p 904 A85-47150

**SCRUBBERS**

A study of the control of particulate emissions from turbine engine test cells p 898 N85-35205

**SEALING**

Adhesive sealing for integral fuel tanks [SAWE PAPER 1573] p 901 A85-49901

**SEALS (STOPPERS)**

Oxidizing seal for a turbine tip gas path [NASA-CASE-LEW-14053-1] p 911 N85-34402

**SEATS**

Crashworthy design considerations for general aviation seats [SAE PAPER 850855] p 884 A85-50101

**SECONDARY FLOW**

Supplements to 'Theory of secondary flow in cascades' p 869 A85-48674

**SENSORS**

A real-time FORTRAN implementation of a sensor failure detection, isolation and accommodation algorithm p 917 A85-47704

**SEPARATED FLOW**

The rolling vortex-damping of supersonic wing p 872 A85-49705

A calculating method of the breakdown feature of the leading-edge separating vortex for slender delta wings p 873 A85-49707

Modelling of unsteady, incompressible separation on an aerofoil using an inviscid flow algorithm [GU-AERO-8412] p 874 N85-34122

**SERVICE LIFE**

Performance improvements from surfacing in aero engine components [PNR-90257] p 891 N85-34142

**SHALE OIL**

Aspects of high-resolution gas chromatography as applied to the analysis of hydrocarbon fuels and other complex organic mixtures. Volume 1 [AD-A156154] p 902 N85-35257

**SHEAR FLOW**

Turbulence in air inlets [AAAF PAPER NT 84-10] p 870 A85-48990

**SHEAR PROPERTIES**

Applying shear beam load measuring techniques to portable platform scales for aircraft weighing [SAWE PAPER 1581] p 898 A85-49906

**SHEAR STRESS**

An examination of turbulence models for a separating three-dimensional turbulent boundary layer [ONERA, TP NO. 1985-74] p 904 A85-47273

**SHOCK DISCONTINUITY**

Computational methods for discontinuities in fluids p 907 A85-48220

Variational principle for two dimensional flows of the compressible ideal fluid with incontinuous surfaces p 909 A85-49704

**SHOCK TESTS**

A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder [ONERA, TP NO. 1985-47] p 904 A85-47258

**SHOCK WAVE INTERACTION**

Theoretical and experimental study of nonadiabatic transonic shock/boundary-layer interaction p 869 A85-48529

Multiple transonic shock-wave/turbulent boundary-layer interaction in a circular duct p 869 A85-48533

**SHOCK WAVES**

Computation of three-dimensional shock wave and boundary-layer interactions [NASA-TM-86780] p 911 N85-35372

**SHORT HAUL AIRCRAFT**

Manufacture of composite propeller blades for commuter aircraft [SAE PAPER 850875] p 910 A85-50108

**SHORT TAKEOFF AIRCRAFT**

Presentation of the acoustic and aerodynamic results of the Aladin 2 concept qualification testing [NASA-TM-77883] p 876 N85-35161

**SHOT PEENING**

Development of a mathematical model for predicting the percentage fatigue life increase resulting from shot peened components [AD-A155774] p 912 N85-35425

**SHROUDED TURBINES**

Shroud segments for unshrouded blade turbines [PNR-90260] p 891 N85-34143

**SHROUDS**

Shroud segments for unshrouded blade turbines [PNR-90260] p 891 N85-34143

**SIGNAL PROCESSING**

Development of active microwave ferromagnetic resonance eddy current probes and associated signal processing methods p 906 A85-47473

**SIKORSKY AIRCRAFT**

Weight control of composite parts in production [SAWE PAPER 1629] p 866 A85-49927

**SILICON CARBIDES**

Ceramic heat exchangers for gas turbines or turbojets [ONERA, TP NO. 1985-35] p 904 A85-47288

**SIMILITUDE LAW**

Contribution to theory of similitude of subsonic flow p 868 A85-48189

**SIMULATION**

Effect of interference on the performance of a minimum TCAS 2 [FAA-PM-84-33] p 880 N85-34131

Ultra high energy events in ECHOS series and primary energy spectrum [HE-3.7-9] p 920 N85-35966

**SINGLE CRYSTALS**

Cost effective single crystals: The Rolls Royce approach -- gas turbine components [PNR-90262] p 919 N85-34717

**SKIN (STRUCTURAL MEMBER)**

Age forming technology expanded in an autoclave [SAE PAPER 850885] p 910 A85-50113

**SKIRTS**

Study of NSI and related cable performance during tests performed in the NASA Hot Gas Facility [NASA-CR-170886] p 912 N85-35423

**SLEDS**

Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing [NASA-CR-3917] p 886 N85-35184

**SLENDER BODIES**

The use of flow visualization for vortex trajectory mapping p 867 A85-47132

**SLENDER WINGS**

A calculating method of the breakdown feature of the leading-edge separating vortex for slender delta wings p 873 A85-49707

**SLOPES**

Guidelines for the evaluation of visual approach slope indicators [ARL/SYS-R-32] p 880 N85-34132

**SMALL PERTURBATION FLOW**

Effects caused by small discrete two-dimensional roughness elements immersed in turbulent boundary layers p 908 A85-49351

**SMOKE TRAILS**

A new single filament smoke tube injection device p 903 A85-47062

**SOLAR ACTIVITY EFFECTS**

A search for solar neutrons on a long duration balloon flight [SH-1.4-6] p 920 N85-34766

**SOLAR ELECTRIC PROPULSION**

Sunrise, the world's first solar-powered airplane p 865 A85-49127

**SOLAR FLARES**

A search for solar neutrons on a long duration balloon flight [SH-1.4-6] p 920 N85-34766

**SOLAR POWERED AIRCRAFT**

Sunrise, the world's first solar-powered airplane p 865 A85-49127

**SOLID SURFACES**

Unsteady transonic heat transfer in a transient facility [NASA-CR-176145] p 910 N85-34354

**SOUND TRANSMISSION**

Noise transmission characteristics of aircraft-type composite panels [SAE PAPER 850878] p 919 A85-50110

Mechanisms of transmission and control of low-frequency sound in aircraft interiors [SAE PAPER 850879] p 885 A85-50111

**SPACE SHUTTLE BOOSTERS**

SRB thermal protection systems materials test results in an arc-heated nitrogen environment [NASA-CR-170881] p 902 N85-35236

Study of NSI and related cable performance during tests performed in the NASA Hot Gas Facility [NASA-CR-170886] p 912 N85-35423

**SPACE SHUTTLE MAIN ENGINE**

SRB thermal protection systems materials test results in an arc-heated nitrogen environment [NASA-CR-170881] p 902 N85-35236

**SPACE SHUTTLE ORBITERS**

Use of a hyperbolic grid generation scheme in simulating supersonic viscous flow about three-dimensional winged configuration [NASA-TM-85344] p 874 N85-34116

**SPACE SHUTTLES**

Some real-time simulation applications to Space Shuttle approach and landing design and test p 899 A85-49016

Results of tests of the SRB aft skirt heat shield curtain in the MSFC Hot Gas Facility [NASA-CR-170888] p 899 N85-35223

**SPACECRAFT DESIGN**

Descent vehicles -- Russian book p 899 A85-49435

**SPACECRAFT ELECTRONIC EQUIPMENT**

IUS-1 - Redundant inertial measurement unit test plan and results p 899 A85-47057

**SPACECRAFT INSTRUMENTS**
IUS-1 - Redundant inertial measurement unit test plan and results p 899 A85-47057
**SPACECRAFT REENTRY**
Minimax optimal control and its application to the reentry of a space glider p 899 A85-47306
**SPACECRAFT STRUCTURES**
Aerospace radiography - The last three decades p 906 A85-49100
**SPEED INDICATORS**
The design of a fluidic low-airspeed sensor p 886 A85-47791
**SPIN DYNAMICS**
Dual towline spin-recovery device [NASA-CASE-LAR-13076-1] p 895 N85-35200
**SPOILERS**
Study of boundary layer separation on a supercritical profile with a spoiler by means of a laser Doppler velocimeter [ISL-CO-225/84] p 875 N85-34128
**SPRAYED COATINGS**
Thermal stability of plasma-sprayed zirconia coatings as related to substrate selection p 900 A85-48758
**STANDARDIZATION**
Development of NATOPS (Naval Air Training and Operating Procedure Standardization) performance software for the H-46D helicopter [AD-A156089] p 887 N85-35190
**STATE ESTIMATION**
A distributed aeroacoustic tracking algorithm p 917 A85-47774
**STATIC DEFORMATION**
A nonlinear solution for parachute suspension line deformation p 877 A85-49140
**STEADY FLOW**
A new single filament smoke tube injection device p 903 A85-47082
A note on the steady high-Reynolds-number flow about a circular cylinder p 872 A85-49369
Approximate calculation of flow field in an inlet with arbitrary cross sections and curved axis p 872 A85-49652
Research on implicit approximate-factorization finite-difference method for the Euler equation p 873 A85-49706
**STORAGE TANKS**
Results of variable enthalpy tests of CPR-488 TIP panels in MSFC Hot Gas Facility [NASA-CR-170889] p 902 N85-35237
**STRAKES**
Vortex flow visualization studies of a strake-wing in water tunnel p 904 A85-47131
**STREAM FUNCTIONS (FLUIDS)**
Finite element simulation of transonic flows by modified potential and stream function methods p 871 A85-49149
A stream function approach to solving the conservative Euler equations for transonic flows p 875 N85-35156
**STRUCTURAL RELIABILITY**
Aspects of certification of civil aircraft structures in composite materials p 865 A85-48570
USAF damage tolerance methods applied to general aviation aircraft design and analysis [SAE PAPER 850915] p 885 A85-50126
**STRUCTURAL VIBRATION**
Structural mode real-time simulation p 881 A85-49007
Analysis of natural vibrations of a deformable aeroplane with fixed control systems p 863 A85-49673
**STRUCTURAL WEIGHT**
Applying shear beam load measuring techniques to portable platform scales for aircraft weighing [SAWE PAPER 1581] p 898 A85-49906
The role of load-cell rotation in airplane-weight determination [SAWE PAPER 1583] p 898 A85-49908
How much does it cost/how much does it weigh? [SAWE PAPER 1593] p 919 A85-49913
In-production aircraft weight control [SAWE PAPER 1597] p 883 A85-49915
An evaluation of improved analytically based weight estimation methodologies [SAWE PAPER 1616] p 863 A85-49920
A glance at Soviet helicopter weight trends and a weight-prediction method [SAWE PAPER 1627] p 883 A85-49925
Computer aided determination of rotor blade mass properties [SAWE PAPER 1628] p 864 A85-49926
Weight control of composite parts in production [SAWE PAPER 1629] p 866 A85-49927
**SUBSONIC AIRCRAFT**
Parametric analysis of the acoustic power emitted by coaxial jets p 918 A85-48179
**SUBSONIC FLOW**
On the accuracy of boundary layer measurements in cascades at high subsonic speeds p 867 A85-47163
Contribution to theory of similitude of subsonic flow p 868 A85-48169
Experimental results on edge-tone oscillations in high-speed subsonic jets p 918 A85-48527
Calculation of three-dimensional flowfields by the unsteady method of characteristics p 869 A85-48532
The subsonic near-wake of an axisymmetric semielliptical afterbody p 869 A85-48534
A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow [ISL-CO-219/84] p 875 N85-34127
**SUBSONIC SPEED**
Numerical optimization of circulation control airfoil at high subsonic speed p 871 A85-49131
**SUBSTRATES**
Thermal stability of plasma-sprayed zirconia coatings as related to substrate selection p 900 A85-48758
Thermal barrier coating system [NASA-CASE-LEW-14057-1] p 902 N85-35233
**SUMMARIES**
A research program to reduce the interior noise in general aviation aircraft, index and summary [NASA-CR-176178] p 919 N85-35695
**SUPERCOMPUTERS**
The impact of supercomputers on experimentation: A view from a national laboratory [NASA-TM-86822] p 918 N85-34510
**SUPERCRITICAL AIRFOILS**
Computed static stall of a supercritical airfoil p 867 A85-47103
**SUPERCRITICAL WINGS**
Extension and use of numerical procedure for the three dimensional unsteady transonic flows [ONERA, TP NO. 1985-67] p 868 A85-47269
Study of boundary layer separation on a supercritical profile with a spoiler by means of a laser Doppler velocimeter [ISL-CO-225/84] p 875 N85-34128
**SUPERHIGH FREQUENCIES**
A wideband X100 low noise microwave frequency multiplier p 903 A85-47060
**SUPERSONIC AIRCRAFT**
Handling qualities related to stall/spin accidents of supersonic fighter aircraft p 894 A85-49132
**SUPERSONIC AIRFOILS**
Project advantage of an oblique wing design on a fleet air defense mission p 881 A85-49135
**SUPERSONIC FLOW**
Full potential solutions of three-dimensional supersonic flows p 871 A85-49133
The rolling vortex-damping of supersonic wing p 872 A85-49705
Analytical solutions for unsteady Prandtl-Meyer flow p 873 A85-49710
Use of a hyperbolic grid generation scheme in simulating supersonic viscous flow about three-dimensional winged configuration [NASA-TM-85344] p 874 N85-34116
**SUPERSONIC FLUTTER**
The role of damping on supersonic panel flutter p 907 A85-48557
**SURFACE CRACKS**
Laboratory studies related to in-flight acoustic emission monitoring p 905 A85-47428
**SURFACE DEFECTS**
Electric Current Perturbation inspection of selected retirement-for-cause turbine engine components p 906 A85-47474
Manufacturing tolerances for natural laminar flow airframe surfaces [SAE PAPER 850863] p 884 A85-50103
**SURFACE FINISHING**
Performance improvements from surfacing in aero engine components [PNR-90257] p 891 N85-34142
Results of tests of weathered K5NA closeout material in the MSFC Hot Gas Facility [NASA-CR-170893] p 902 N85-35239
**SURFACE PROPERTIES**
Variational principle for two dimensional flows of the compressible ideal fluid with incontinuous surfaces p 909 A85-49704
**SURFACE ROUGHNESS EFFECTS**
Effects caused by small discrete two-dimensional roughness elements immersed in turbulent boundary layers p 908 A85-49351
**SURGES**
A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder [ONERA, TP NO. 1985-47] p 904 A85-47258
**SURVIVAL**
Advanced escape systems p 877 A85-49625
Aviation safety (aircraft passenger survivability and cabin safety) [GPO-39-847] p 878 N85-34130
**SWEPT FORWARD WINGS**
Forward-Swept Wing control system development p 884 A85-49011
**SWEPT WINGS**
An examination of turbulence models for a separating three-dimensional turbulent boundary layer [ONERA, TP NO. 1985-74] p 904 A85-47273
**SWIRLING**
Flow modifying device [NASA-CASE-LEW-13562-2] p 892 N85-35195
**SYNCHRONOUS SATELLITES**
Orbit control of a synchronous satellite — Russian book p 899 A85-49448
**SYNTHESIS (CHEMISTRY)**
Fire-resistant phosphorus containing polyimides and copolyimides [NASA-CASE-ARC-11522-2] p 901 N85-34280
**SYNTHETIC FUELS**
Aspects of high-resolution gas chromatography as applied to the analysis of hydrocarbon fuels and other complex organic mixtures. Volume 1 [AD-A156154] p 902 N85-35257
**SYSTEM FAILURES**
A real-time FORTRAN implementation of a sensor failure-detection, isolation and accommodation algorithm p 917 A85-47704
Squadron Maintenance and Repair Techniques (SMART) validation test report p 886 A85-49584
**SYSTEMS ENGINEERING**
Flow Cones for airplane flight test flow visualization p 903 A85-47085
Adaptive operation of escape systems - A look at design requirements p 884 A85-49945
**SYSTEMS INTEGRATION**
R&M analysis techniques for fault-tolerant systems p 909 A85-49588
The integrated manual and automatic control of complex flight systems [NASA-CR-176166] p 896 N85-35201
**SYSTEMS SIMULATION**
Generalized Escape System Simulation - Its purpose, recent modifications, and potential p 884 A85-49946

**T**

**T TAIL SURFACES**
Design of a pitch orientation control system for aircraft control in stall region p 893 A85-47701
**TAIL ASSEMBLIES**
The influence of helicopter tail shape on drag: An aerodynamic study using a low speed wind tunnel [AD-A156304] p 876 N85-35174
**TECHNOLOGICAL FORECASTING**
Computer and information technology in the year 2000 - A projection p 917 A85-48024
Towards the year 2000: Developments in inspection and product assurance to be anticipated during the next 15 years --- aircraft engines [PNR-90258] p 911 N85-34421
**TECHNOLOGY ASSESSMENT**
Status and development trends of navigation systems for general aviation p 879 A85-48175
The composite technology of a main rotor blade p 865 A85-48567
Evaluation of the benefits of advanced avionics system technologies through computer simulation p 889 A85-49003
Recent advances in computer image generation p 918 A85-49005
Advances in flight simulators p 898 A85-49019
The history and future contributions of Carco simulators to the aerospace industry p 898 A85-49020
INEWS ignites technology trade-offs and competition p 879 A85-49096
DoD/industry - R&M technology study analysis p 909 A85-49536
Analysis of incompressible cascade flows using state-of-the-art computer programs [AD-A155850] p 876 N85-35173
Energy Efficient Engine Program technology benefit/cost study, volume 2 [NASA-CR-174766-VOL-2] p 892 N85-35198
**TECHNOLOGY UTILIZATION**
AFTI MAW - Wing of the future — Advanced Fighter Technology Integrator flight test program for Mission Adaptive Wing concept [SAWE PAPER 1617] p 883 A85-49921
Energy Efficient Engine Program technology benefit/cost study, volume 1 [NASA-CR-174766-VOL-1] p 892 N85-35197

Motor glider meteorology p 914 N85-35543
**TEMPERATURE CONTROL**
Electronic Equipment Thermal Management p 908 A85-49530
ITAD - A CAD system for environmental reliability design — Intregrated Thermal Avionic Design p 916 A85-49531
**TEMPERATURE GRADIENTS**
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4 [NASA-CR-167865] p 913 N85-35537
**TEMPERATURE MEASUREMENT**
Measurement and correlation of jet fuel viscosities at low temperatures [NASA-CR-174911] p 901 N85-34295
**TERRAIN FOLLOWING AIRCRAFT**
Further application of output predictive algorithmic control to terrain following p 894 A85-47734
**TEST FACILITIES**
Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing [NASA-CR-3917] p 886 N85-35184
A study of the control of particulate emissions from turbine engine test cells p 898 N85-35205
**TETRACHLORIDES**
Use of titanium tetrachloride for visualization of accelerating flow around airfoils p 903 A85-47090
**THERMAL CONTROL COATINGS**
Energy efficient engine, high pressure turbine thermal barrier coating. Support technology report [NASA-CR-168037] p 892 N85-35199
**THERMAL INSULATION**
Study of NSI and relatad cable performance during tests performed in the NASA Hot Gas Facility [NASA-CR-170886] p 912 N85-35423
**THERMAL PROTECTION**
Investigation of experimental lightweight firewall materials for A/C engine bay applications [AD-A155765] p 878 N85-35175
Results of tests of the SRB aft skirt heat shield curtain in the MSFC Hot Gas Facility [NASA-CR-170888] p 899 N85-35223
Results of tests of MTA-2 TPS on the SRB hold-down bolt blast container [NASA-CR-170891] p 899 N85-35224
SRB thermal protection systems materials test results in an arc-heated nitrogen environment [NASA-CR-170881] p 902 N85-35236
Results of tests of weathered K5NA closeout material in the MSFC Hot Gas Facility [NASA-CR-170893] p 902 N85-35239
**THERMAL RESISTANCE**
Investigation of experimental lightweight firewall materials for A/C engine bay applications [AD-A155765] p 878 N85-35175
**THERMAL STABILITY**
Thermal stability of plasma-sprayed zirconia coatings as related to substrate selection p 900 A85-48758
**THERMAL STRESSES**
Mach 14 flow restrictor thermal stress analysis [AD-A156215] p 898 N85-35208
**THERMOPLASTIC RESINS**
Application of carbon fibre reinforced thermoplastic (PEEK) composite to aero engine component manufacture p 900 A85-48568
Continuous fibre reinforced thermoplastics in new generation radomes p 900 A85-48572
**THREE DIMENSIONAL BODIES**
The theoretical minimum induced drag of three-surface airplanes in trim p 894 A85-49128
**THREE DIMENSIONAL BOUNDARY LAYER**
An examination of turbulence models for a separating three-dimensional turbulent boundary layer [ONERA, TP NO. 1985-74] p 904 A85-47273
**THREE DIMENSIONAL FLOW**
Three-dimensional tomographic reconstruction of the flow around a revolving helicopter rotorblade - A numerical simulation p 903 A85-47106
Extension and use of numerical procedure for the three dimensional unsteady transonic flows [ONERA, TP NO. 1985-67] p 868 A85-47269
Aerodynamic models for propellers for fast aircraft [ONERA, TP NO. 1985-55] p 868 A85-47301
Contribution to theory of similitude of subsonic flow p 868 A85-48189
A computational study of complex three-dimensional compressible turbulent flowfields p 869 A85-48526
A three-dimensional, block-structured finite element grid generation scheme — for flow around aircraft modeling p 869 A85-48530
Calculation of three-dimensional flowfields by the unsteady method of characteristics p 869 A85-48532
Full potential solutions of three-dimensional supersonic flows p 871 A85-49133
A three-dimensional viscous flow analysis for the helicopter tip vortex generation problem [NASA-CR-3906] p 874 N85-34114
**THREE DIMENSIONAL MOTION**
Computation of three-dimensional shock wave and boundary-layer interactions [NASA-TM-86780] p 911 N85-35372
**THRUST MEASUREMENT**
The MCA method of determining thrust of jet aircraft in flight — Mass Consumption-Acceleration p 881 A85-49134
**TIME OPTIMAL CONTROL**
Simulation of time-control procedures for the advanced air traffic control system p 878 A85-47686
**TIP SPEED**
Energy efficient engine. Fan and quarter-stage component performance report [NASA-CR-168070] p 891 N85-34141
**TITANIUM ALLOYS**
Development of a quantitative flaw characterization module - A status report p 905 A85-47402
**TITANIUM CHLORIDES**
Use of titanium tetrachloride for visualization of accelerating flow around airfoils p 903 A85-47090
**TOLERANCES (MECHANICS)**
Manufacturing tolerances for natural laminar flow airframe surfaces [SAE PAPER 850863] p 884 A85-50103
**TOMOGRAPHY**
Three-dimensional tomographic reconstruction of the flow around a revolving helicopter rotorblade - A numerical simulation p 903 A85-47106
**TORQUE**
Dual towline spin-recovery device [NASA-CASE-LAR-13076-1] p 895 N85-35200
**TRACKING (POSITION)**
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 1 [NASA-CR-167862] p 913 N85-35534
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2 [NASA-CR-167863] p 913 N85-35535
**TRACKING FILTERS**
A distributed aeroacoustic tracking algorithm p 917 A85-47774
**TRACKING NETWORKS**
A distributed aeroacoustic tracking algorithm p 917 A85-47774
**TRACKING PROBLEM**
A likelihood function method for multiple aircraft maneuver tracking p 888 A85-47699
A new approach to the maneuvering target tracking problem p 917 A85-47769
**TRAILING EDGES**
Characteristics of a trailing-edge flow with turbulent boundary-layer separation p 872 A85-49366
A design procedure to modify the trailing edge upper surface pressure gradient of a given aerofoil [GU-AERO-8408] p 874 N85-34120
Reflection plane tests of a wind turbine blade tip section with ailerons [NASA-TM-87018] p 912 N85-34444
**TRAINING AIRCRAFT**
RAFTS: A T-38 replacement for the 21st century [AD-A156103] p 887 N85-35191
**TRAINING SIMULATORS**
CAUTRA ATC simulator strives for realism p 897 A85-48857
Advances in flight simulators p 898 A85-49019
**TRAJECTORY CONTROL**
Further application of output predictive algorithmic control to terrain following p 894 A85-47734
**TRAJECTORY OPTIMIZATION**
Minimax optimal control and its application to the reentry of a space glider p 899 A85-47306
**TRANSDUCERS**
Innovative eddy current probe coupling method p 906 A85-47472
**TRANSFER ORBITS**
Orbit control of a synchronous satellite --- Russian book p 899 A85-49448
**TRANSITION FLOW**
Nozzle wall roughness effects on free-stream noise and transition in the pilot low-disturbance tunnel [NASA-TM-86389] p 910 N85-34355
**TRANSONIC FLIGHT**
Modeling techniques for transonic airfoils p 871 A85-49014
**TRANSONIC FLOW**
Comparison of a computed transonic flow and interferometric measurements around the leading edge of a two dimensional aerofoil asymmetrically mounted in a wind tunnel p 868 A85-47164
Extension and use of numerical procedure for the three dimensional unsteady transonic flows [ONERA, TP NO. 1985-67] p 868 A85-47269
Some contributions to the modelling of discontinuous flows p 907 A85-48224
Digital fringe reduction techniques applied to the measurement of three-dimensional transonic flow fields p 907 A85-48521
Theoretical and experimental study of nonadiabatic transonic shock/boundary-layer interaction p 869 A85-48529
Calculation of three-dimensional flowfields by the unsteady method of characteristics p 869 A85-48532
Numerical analysis of transonic flow around a two-dimensional airfoil by solving full Navier-Stokes equations p 869 A85-48875
Finite element simulation of transonic flows by modified potential and stream function methods p 871 A85-49149
Unsteady transonic heat transfer in a transient facility [NASA-CR-176145] p 910 N85-34354
A stream function approach to solving the conservative Euler equations for transonic flows p 875 N85-35156
**TRANSONIC FLUTTER**
Extension and use of numerical procedure for the three dimensional unsteady transonic flows [ONERA, TP NO. 1985-67] p 868 A85-47269
Verification of calculation methods for unsteady airloads in the prediction of transonic flutter [AIAA PAPER 84-0871] p 871 A85-49126
**TRANSONIC SPEED**
Aerodynamic models for propellers for fast aircraft [ONERA, TP NO. 1985-55] p 868 A85-47301
**TRANSONIC WIND TUNNELS**
Aerodynamic models for propellers for fast aircraft [ONERA, TP NO. 1985-55] p 868 A85-47301
**TRANSPORT AIRCRAFT**
Active control of the buffeting response on a large modern civil airplane configuration in wind tunnel [ONERA, TP NO. 1985-26] p 893 A85-47253
Feedback control for fuel-optimal descents using singular perturbation techniques p 893 A85-47688
A fault and damage tolerant network for an advanced transport aircraft p 888 A85-47760
The Delco Performance Management System p 895 A85-49172
The extended range operation of twin-engined public transport aircraft. I p 881 A85-49173
The extended range operation of twin-engined public transport aircraft. II p 881 A85-49174
Fokker improves transport design based on launch customer demand p 882 A85-49199
Guidelines for the evaluation of visual approach slope indicators [ARL/SYS-R-32] p 880 N85-34132
Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing [NASA-TP-2451] p 895 N85-34144
**TURBINE BLADES**
Prediction of the inception of cavitation on blade profiles of hydraulic turbomachines p 906 A85-47849
**TURBINE ENGINES**
Electric Current Perturbation inspection of selected retirement-for-cause turbine engine components p 906 A85-47474
A generalized computer code for developing dynamic gas turbine engine models (DIGTEM) p 890 A85-49021
Energy efficient engine, high pressure turbine thermal barrier coating. Support technology report [NASA-CR-168037] p 892 N85-35199
A study of the control of particulate emissions from turbine engine test cells p 898 N85-35205
**TURBINE INSTRUMENTS**
A real-time FORTRAN implementation of a sensor failure detection, isolation and accommodation algorithm p 917 A85-47704
**TURBINE WHEELS**
Crack characterisation in turbine disks p 905 A85-47396
**TURBOCOMPRESSORS**
Is any free flight/wind tunnel equivalence concept valid for unsteady viscous flow? p 871 A85-49138
**TURBOFAN ENGINES**
Energy Efficient Engine Program technology benefit/cost study, volume 1 [NASA-CR-174766-VOL-1] p 892 N85-35197
Energy Efficient Engine Program technology benefit/cost study, volume 2 [NASA-CR-174766-VOL-2] p 892 N85-35198
**TURBOFANS**
Energy efficient engine. Fan and quarter-stage component performance report [NASA-CR-168070] p 891 N85-34141

**TURBOJET ENGINES**
Ceramic heat exchangers for gas turbines or turbojets [ONERA, TP NO. 1985-35] p 904 A85-47288
Unsteady aerodynamic forces induced by aeroelastic vibrations of a turbojet engine in a nacelle [ONERA, TP NO. 1985-56] p 880 A85-47302

**TURBOMACHINE BLADES**
Directionally solidified gas turbine alloys [PNR-90264] p 901 N85-34279

**TURBOMACHINERY**
Inviscid and viscous flows in cascades with an explicit multiple-grid algorithm p 869 A85-48539

**TURBOPROP AIRCRAFT**
Flight investigation of cabin noise control treatments for a light turboprop aircraft [SAE PAPER 850876] p 885 A85-50109
Garrett TPE331-12 engine provides improved altitude performance for high-speed executive turboprop aircraft [SAE PAPER 850906] p 890 A85-50121

**TURBOPROP ENGINES**
Prop jet singles have arrived [SAE PAPER 850882] p 890 A85-50112
Conversion of small aircraft to Allison turbine power [SAE PAPER 850906] p 890 A85-50120
Garrett TPE331-12 engine provides improved altitude performance for high-speed executive turboprop aircraft [SAE PAPER 850908] p 890 A85-50121
An electronic limiter for aircraft engines [SAE PAPER 850910] p 890 A85-50122

**TURBOSHAFTS**
Prop jet singles have arrived [SAE PAPER 850882] p 890 A85-50112

**TURBULENCE EFFECTS**
The physical and empirical basis for a specific clear-air turbulence risk index [NASA-CR-178522] p 914 N85-35540

**TURBULENT BOUNDARY LAYER**
An examination of turbulence models for a separating three-dimensional turbulent boundary layer [ONERA, TP NO. 1985-74] p 904 A85-47273
Multiple transonic shock-wave/turbulent boundary-layer interaction in a circular duct p 869 A85-48533
Effects caused by small discrete two-dimensional roughness elements immersed in turbulent boundary layers p 908 A85-49351
Characteristics of a trailing-edge flow with turbulent boundary-layer separation p 872 A85-49366
On the abrupt turbulent reattachment downstream of leading-edge laminar separation p 872 A85-49698
Vortex boundary-layer interactions [NASA-CR-176192] p 911 N85-35373

**TURBULENT FLOW**
Computed static stall of a supercritical airfoil p 867 A85-47103
A more modern theory of combustion noise p 918 A85-47309
A computational study of complex three-dimensional compressible turbulent flowfields p 869 A85-48526
Turbulence in air inlets [AAAF PAPER NT 84-10] p 870 A85-48890
Temperature fluctuations and heat flux in grid-generated isotropic turbulence with streamwise and transverse mean-temperature gradients p 908 A85-49359

**TURBULENT JETS**
Parametric analysis of the acoustic power emitted by coaxial jets p 918 A85-48179

**TURBULENT WAKES**
The use of flow visualization for vortex trajectory mapping p 867 A85-47132
The subsonic near-wake of an axisymmetric semielliptical afterbody p 869 A85-48534

**TWO DIMENSIONAL BODIES**
The theoretical minimum induced drag of three-surface airplanes in trim p 884 A85-49128

**TWO DIMENSIONAL FLOW**
Contribution to theory of similitude of subsonic flow p 868 A85-48189
Flow instabilities in transonic small-disturbance theory p 869 A85-48531
Variational principle for two dimensional flows of the compressible ideal fluid with incontinuous surfaces p 909 A85-49704
Research on implicit approximate-factorization finite-difference method for the Euler equation p 873 A85-49706
Analytical solutions for unsteady Prandtl-Meyer flow p 873 A85-49710

## U

**ULTRASONIC FLAW DETECTION**
Ultrasonic detection of cracks in web geometries p 905 A85-47380
Crack characterisation in turbine disks p 905 A85-47396
Development of a quantitative flaw characterization module - A status report p 905 A85-47402
Evaluation of captured water column technology for advanced ultrasonic sizing techniques p 906 A85-47475

**ULTRASONIC TESTS**
Ultrasonic microstructural noise parameters in a powder metal alloy p 905 A85-47381

**UNSTEADY FLOW**
Computed static stall of a supercritical airfoil p 867 A85-47103
Extension and use of numerical procedure for the three dimensional unsteady transonic flows [ONERA, TP NO. 1985-67] p 868 A85-47286
Calculation of three-dimensional flowfields by the unsteady method of characteristics p 869 A85-48532
The unsteady properties of a flow within a schematic air intake [AAAF PAPER NT 84-09] p 870 A85-48889
The characteristics of unsteady flow in air intakes [AAAF PAPER NT 84-13] p 870 A85-48893
Verification of calculation methods for unsteady airloads in the prediction of transonic flutter [AIAA PAPER 84-0871] p 871 A85-49126
Is any free flight/wind tunnel equivalence concept valid for unsteady viscous flow? p 871 A85-49138
Unsteady lifting line theory as a singular-perturbation problem p 871 A85-49353
Analytical solutions for unsteady Prandtl-Meyer flow p 873 A85-49710
Modelling of unsteady, incompressible separation on an aerofoil using an inviscid flow algorithm [GU-AERO-8412] p 874 N85-34122
Unsteady transonic heat transfer in a transient facility [NASA-CR-176145] p 910 N85-34354

**USER MANUALS (COMPUTER PROGRAMS)**
Development of NATOPS performance software for the SH-3D and SH-3H helicopters [AD-A156140] p 887 N85-35192

**USER REQUIREMENTS**
Maintainability aspects in maintenance management p 909 A85-48536

## V

**VALUE ENGINEERING**
DOD Value Engineering Conference report. Value Engineering (VE): A tool that benefits line management held at Leesburg, Virginia on 1-2 November 1984. Part 2. Plenary session [AD-A156086] p 919 N85-35811

**VARIABLE SWEEP WINGS**
Project advantage of an oblique wing design on a fleet air defense mission p 881 A85-49135
AFTI MAW - Wing of the future — Advanced Fighter Technology Integrator flight test program for Mission Adaptive Wing concept [SAWE PAPER 1617] p 883 A85-49921

**VARIATIONAL PRINCIPLES**
Variational principle families for hybrid problems of blade-to-blade flow along axisymmetric stream-sheet - A unified variable-domain approach p 872 A85-49703
Variational principle for two dimensional flows of the compressible ideal fluid with incontinuous surfaces p 909 A85-49704

**VARIATIONS**
The effects of parameter variation on helicopter performance [AD-A156027] p 887 N85-35189

**VELOCITY DISTRIBUTION**
A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow [ISL-CO-219/84] p 875 N85-34127

**VELOCITY MEASUREMENT**
The design of a fluidic low-airspeed sensor p 888 A85-47791
Laser velocimeter measurements of the flow fields around single- and counter-rotation propeller models [SAE PAPER 850870] p 873 A85-50105
Determination of vertical air velocity using measurements of the aircraft motion p 914 N85-35545

**VERTICAL AIR CURRENTS**
Determination of vertical air velocity using measurements of the aircraft motion p 914 N85-35545
Measurements for the determination of the vertical structure of the convective boundary layer — atmospheric boundary layer p 915 N85-35550

**VERTICAL DISTRIBUTION**
Partitioning of the vertical turbulent energy transport into positive and negative contributions — meteorology p 915 N85-35551
Aircraft measurements during the Bonn Experiment (BONEX 1) — meteorology p 915 N85-35552

**VERTICAL LANDING**
Visualization studies of jet impingement flows at McDonnell Douglas Research Laboratories p 867 A85-47144

**VERTICAL TAKEOFF**
Visualization studies of jet impingement flows at McDonnell Douglas Research Laboratories p 867 A85-47144

**VERTICAL TAKEOFF AIRCRAFT**
JVX design to cost methodology — Joint Services Advanced Vertical Lift Aircraft Program [SAWE PAPER 1581] p 883 A85-49912

**VIBRATION**
Laboratory vibration schedules [AD-A156856] p 887 N85-35188

**VIBRATION MODE**
Analysis of asymmetric natural vibrations of an aeroplane with moving deformable control surfaces p 883 A85-49672
Analysis of natural vibrations of a deformable aeroplane with fixed control systems p 883 A85-49673

**VISCOELASTIC DAMPING**
The role of damping on supersonic panel flutter p 907 A85-48667

**VISCOSITY**
Measurement and correlation of jet fuel viscosities at low temperatures [NASA-CR-174911] p 901 N85-34286

**VISCOUS FLOW**
Inviscid and viscous flows in cascades with an explicit multiple-grid algorithm p 869 A85-48539
Numerical simulations of viscous fluid flows in air intakes at high angles of attack [AAAF PAPER NT 84-12] p 907 A85-48892
A three-dimensional viscous flow analysis for the helicopter tip vortex generation problem [NASA-CR-3906] p 874 N85-34114

**VISUAL CONTROL**
Guidelines for the evaluation of visual approach slope indicators [ARL/SYS-R-32] p 880 N85-34132

**VISUAL TASKS**
Simulators - How real does the visual system need to be? p 888 A85-49946

**VOICE COMMUNICATION**
New AWOS provides synthesized-voice weather information p 907 A85-48853

**VOIDS**
Development of a quantitative flaw characterization module - A status report p 905 A85-47402

**VORTEX BREAKDOWN**
The use of flow visualization for vortex trajectory mapping p 867 A85-47132
A calculating method of the breakdown feature of the leading-edge separating vortex for slender delta wings p 873 A85-49707

**VORTEX GENERATORS**
Wingtip vortex propeller [NASA-CASE-LAR-13019-1] p 892 N85-35194
Vortex boundary-layer interactions [NASA-CR-176192] p 911 N85-35373

**VORTEX SHEETS**
Computation of inviscid incompressible flow with rotation p 871 A85-49356

**VORTICES**
A flow visualization study of the effect of wing-tip jets on wake vortex development p 867 A85-47129
Vortex flow visualization studies of a strake-wing in water tunnel p 904 A85-47131
Quantification of downwash and ground vortex of a lifting rotor model by flow visualization technique p 867 A85-47134
Visualization of the vortex flow over delta and double-delta wings p 867 A85-47149
Determination of leading-edge vortex trajectories by schlieren photography p 904 A85-47150
Supplements to 'Theory of secondary flow in cascades' p 869 A85-48874
The rolling vortex-damping of supersonic wing p 872 A85-49705
A three-dimensional viscous flow analysis for the helicopter tip vortex generation problem [NASA-CR-3906] p 874 N85-34114
Comments on the prediction of dynamic stall [GU-AERO-8501] p 875 N85-34125

## W

**WALL FLOW**
Prediction of the inception of cavitation on blade profiles of hydraulic turbomachines p 906 A85-47849

Theoretical and experimental study of nonadiabatic transonic shock/boundary-layer interaction
p 899 A85-48529

**WATER TUNNEL TESTS**
Vortex flow visualization studies of a strake-wing in water tunnel p 904 A85-47131

**WAVE DRAG**
Arrays of bodies of revolution for minimum wave drag
p 881 A85-49136

**WAVE INTERACTION**
Computation of three-dimensional shock wave and boundary-layer interactions
[NASA-TM-86780] p 911 N85-35372

**WEAPON SYSTEMS**
Advanced avionics for the next generation military helicopters p 898 A85-49072
Establishing realistic requirements for reliability, maintainability, and built-in-test p 908 A85-48539
An M principle - Pay me now or spend more later
p 909 A85-49581
F/A-18 supportability assurance readiness program
p 888 A85-49585
Next generation gunship
[AD-A156361] p 887 N85-35193

**WEATHER DATA RECORDERS**
New AWOS provides synthesized-voice weather information p 907 A85-48853

**WEATHER FORECASTING**
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 1
[NASA-CR-167862] p 913 N85-35534
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2
[NASA-CR-167863] p 913 N85-35535
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 3
[NASA-CR-167864] p 913 N85-35536
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4
[NASA-CR-167865] p 913 N85-35537
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning: Summary report
[NASA-CR-167866] p 913 N85-35538
A preliminary intercomparison between numerical upper wind forecasts and research aircraft measurements of jet streams
[NASA-CR-167884] p 914 N85-35539
The physical and empirical basis for a specific clear-air turbulence risk index
[NASA-CR-178522] p 914 N85-35540

**WEBS**
Ultrasonic detection of cracks in web geometries
p 905 A85-47380

**WEIGHT (MASS)**
Handheld computer weight and balance computations for military aircraft
[SAWE PAPER 1582] p 877 A85-49907

**WEIGHT ANALYSIS**
The role of load-cell rotation in airplane-weight determination
[SAWE PAPER 1583] p 898 A85-49908
An evaluation of improved analytically based weight estimation methodologies
[SAWE PAPER 1616] p 883 A85-49920

**WEIGHT MEASUREMENT**
Applying shear beam load measuring techniques to portable platform scales for aircraft weighing
[SAWE PAPER 1581] p 898 A85-47906

**WEIGHT REDUCTION**
The weight reduction potential of advanced composites
[SAWE PAPER 1579] p 901 A85-49905
Weight control - A procurement agency perspective
[SAWE PAPER 1594] p 919 A85-49914
In-production aircraft weight control
[SAWE PAPER 1597] p 883 A85-49915
A glance at Soviet helicopter weight trends and a weight-prediction method
[SAWE PAPER 1627] p 883 A85-49925
Aeroelastic constraints for a wing weight minimization procedure
[FFA-TN-1985-4] p 875 N85-34126

**WIND EFFECTS**
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4
[NASA-CR-167865] p 913 N85-35537

**WIND PROFILES**
Determination of vertical air velocity using measurements of the aircraft motion
p 914 N85-35545
Control variables in vertical wind determination using simple flight-mechanical equations p 914 N85-35546

**WIND TUNNEL APPARATUS**
European Workshop on Probe Calibrations
p 896 A85-48523

**WIND TUNNEL CALIBRATION**
European Workshop on Probe Calibrations
p 896 A85-48523

**WIND TUNNEL MODELS**
Comparison of a computed transonic flow and interferometric measurements around the leading edge of a two dimensional aerofoil asymmetrically mounted in a wind tunnel p 868 A85-47164

**WIND TUNNEL TESTS**
An aeroelastic testing technique in a straight cascade wind-tunnel p 896 A85-47161
Active control of the buffeting response on a large modern civil airplane configuration in wind tunnel
[ONERA, TP NO. 1985-26] p 893 A85-47253
Is any free flight/wind tunnel equivalence concept valid for unsteady viscous flow? p 871 A85-49138
Effects caused by small discrete two-dimensional roughness elements immersed in turbulent boundary layers p 908 A85-49351
The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers p 873 A85-49674
The collected data for ramp function tests on a NACA 23012 aerofoil. Volume 1: Description and pressure data
[GU-AERO-8413-VOL-1] p 875 N85-34123
An investigation into the three-dimensional stall development on a modified NACA 23012 aerofoil
[GU-AERO-8414] p 875 N85-34124
Reflection plane tests of a wind turbine blade tip section with ailerons
[NASA-TM-87018] p 912 N85-34444
Presentation of the acoustic and aerodynamic results of the Aladin 2 concept qualification testing
[NASA-TM-77883] p 876 N85-35161
The influence of helicopter tail shape on drag: An aerodynamic study using a low speed wind tunnel
[AD-A156304] p 876 N85-35174

**WIND TUNNELS**
Practical aspects of laser holographic interferometry in wind tunnels
[NASA-TM-86786] p 911 N85-34378
Langley aeronautics and space test highlights, 1984
[NASA-TM-87585] p 920 N85-35151

**WIND TURBINES**
Reflection plane tests of a wind turbine blade tip section with ailerons
[NASA-TM-87018] p 912 N85-34444

**WIND VELOCITY**
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 1
[NASA-CR-167862] p 913 N85-35534
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2
[NASA-CR-167863] p 913 N85-35535
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 3
[NASA-CR-167864] p 913 N85-35536
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4
[NASA-CR-167865] p 913 N85-35537
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning: Summary report
[NASA-CR-167866] p 913 N85-35538

**WIND VELOCITY MEASUREMENT**
Control variables in vertical wind determination using simple flight-mechanical equations p 914 N85-35546
The principles of wind measurement with the help of aircraft p 916 N85-35558

**WING CAMBER**
AFTI MAW - Wing of the future --- Advanced Fighter Technology Integrator flight test program for Mission Adaptive Wing concept
[SAWE PAPER 1617] p 883 A85-49921

**WING FLOW METHOD TESTS**
Vortex flow visualization studies of a strake-wing in water tunnel p 904 A85-47131

**WING NACELLE CONFIGURATIONS**
Unsteady aerodynamic forces induced by aeroelastic vibrations of a turbojet engine in a nacelle
[ONERA, TP NO. 1985-56] p 880 A85-47302

**WING OSCILLATIONS**
Some results of experimental and analytical buffeting investigations on a delta wing
[ONERA, TP NO. 1985-59] p 868 A85-47262
Theory of wing rock p 895 A85-49139
Unsteady lifting-line theory as a singular-perturbation problem p 871 A85-49353
Analysis of asymmetric natural vibrations of an aeroplane with moving deformable control surfaces
p 883 A85-49672

**WING PANELS**
Contour assessment of formed wing panels
[SAE PAPER 850884] p 886 A85-50131

**WING PROFILES**
Analytical solutions for unsteady Prandtl-Meyer flow
p 873 A85-49710
AFTI MAW - Wing of the future --- Advanced Fighter Technology Integrator flight test program for Mission Adaptive Wing concept
[SAWE PAPER 1617] p 883 A85-49921

**WING TIPS**
A flow visualization study of the effect of wing-tip jets on wake vortex development p 867 A85-47129
Wingtip vortex propeller
[NASA-CASE-LAR-13019-1] p 892 N85-35194

**WINGS**
Acoustic emission monitoring of flaw growth in a graphite-epoxy experimental wing segment
p 907 A85-48064
Aeroelastic constraints for a wing weight minimization procedure
[FFA-TN-1985-4] p 875 N85-34126
Fuel containment and damage tolerance for large composite primary aircraft structures. Phase 1: Testing
[NASA-CR-166091] p 902 N85-35241

## X

**X RAYS**
Ultra high energy events in ECHOS series and primary energy spectrum
[HE-3.7-9] p 920 N85-35966

**X-29 AIRCRAFT**
Forward-Swept Wing control system development
p 894 A85-49011

## Y

**YAW**
A full-time yaw damper for the Starship flying scale prototype
[SAE PAPER 850912] p 895 A85-50123

**YIELD POINT**
Fuel containment and damage tolerance for large composite primary aircraft structures. Phase 1: Testing
[NASA-CR-166091] p 902 N85-35241

**YTTERBIUM**
Thermal barrier coating system
[NASA-CASE-LEW-14057-1] p 902 N85-35233

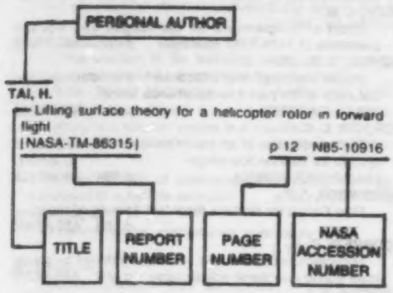
## Z

**ZIRCONIUM**
Thermal barrier coating system
[NASA-CASE-LEW-14057-1] p 902 N85-35233

**ZIRCONIUM OXIDES**
Thermal stability of plasma-sprayed zirconia coatings as related to substrate selection p 900 A85-48758

# PERSONAL AUTHOR INDEX

## Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

## A

**ABELKIS, P. R.**
Low temperature and loading frequency effects on crack growth and fracture toughness of 2024 and 7475 aluminum p 900 A85-47974

**ABID, R.**
An examination of turbulence models for a seperating three-dimensional turbulent boundary layer
[ONERA, TP NO. 1985-74] p 904 A85-47273

**AGARWAL, P.**
Energy efficient engine, high pressure turbine thermal barrier coating. Support technology report
[NASA-CR-168037] p 892 N85-35199

**AHLBERG, L. A.**
Ultrasonic microstructural noise parameters in a powder metal alloy p 905 A85-47381

**AHMADI, A.**
Unsteady lifting-line theory as a singular-perturbation problem p 871 A85-49353

**AHUJA, K. K.**
Experimental results on edge-tone oscillations in high-speed subsonic jets p 918 A85-48527

**ALDERETE, T. S.**
Rotorcraft simulation at Ames p 897 A85-49006

**ALFARO-BOU, E.**
Crashworthy design considerations for general aviation seats
[SAE PAPER 850855] p 884 A85-50101

**ALLIOT, J. C.**
A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder
[ONERA, TP NO. 1985-47] p 904 A85-47258
E and H fields measurements on the Transall C160 aircraft during lightning flashes
[ONERA, TP NO. 1985-48] p 876 A85-47259

**ALTER, W. S.**
Superalloy microstructural variations induced by gravity level during directional solidification p 900 A85-48274

**ANDERSON, S.**
Why not have a simulator type for commuter operators? p 897 A85-48856

**ANDERSON, S. B.**
Handling qualities related to stall/spin accidents of supersonic fighter aircraft p 894 A85-49132

**ANGELINI, J. J.**
Extension and use of numerical procedure for the three dimensional unsteady transonic flows
[ONERA, TP NO. 1985-67] p 868 A85-47260
Unsteady aerodynamic forces induced by aeroelastic vibrations of a turbojet engine in a nacelle
[ONERA, TP NO. 1985-56] p 880 A85-47302

**ARCHDEACON, J. L.**
The display subsystem in the aircraft simulator - Simulate or stimulate? p 897 A85-49004

**ARNOLD, J. O.**
The impact of supercomputers on experimentation: A view from a national laboratory
[NASA-TM-86822] p 918 N85-34510

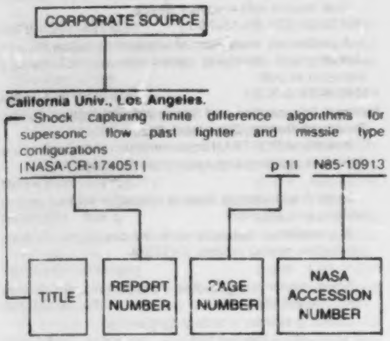
# CORPORATE SOURCE INDEX

### Typical Corporate Source Index Listing



CORPORATE SOURCE
California Univ., Los Angeles.
Shock capturing finite difference algorithms for supersonic flow past fighter and missile type configurations
[NASA-CR-174051] p 11 N85-10913
TITLE
REPORT NUMBER
PAGE NUMBER
NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

## A

**Aeronautical Research Inst. of Sweden, Stockholm.**

Aeroelastic constraints for a wing weight minimization procedure
[FFA-TN-1985-4] p 875 N85-34126

**Aeronautical Research Labs., Melbourne (Australia).**

Guidelines for the evaluation of visual approach slope indicators
[ARL/SYS-R-32] p 880 N85-34132

Determination of instrument errors by compatibility checking: Results from dynamic flight test data
[ARL/AERO-R-162] p 889 N85-34137

Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 887 N85-35187

**Aerospace Corp., El Segundo, Calif.**

A search for solar neutrons on a long duration balloon flight
[SH-1.4-6] p 920 N85-34766

**Air Command and Staff Coll., Maxwell AFB, Ala.**

Introduction to European air traffic control
[AD-A156328] p 878 N85-35176

International flight planning handbook
[AD-A156330] p 878 N85-35177

A guide to USAF helicopter instrument flight procedures
[AD-A156102] p 880 N85-35182

RAFTS: A T-38 replacement for the 21st century
[AD-A156103] p 887 N85-35191

Next generation gunship
[AD-A156361] p 887 N85-35193

**Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.**

Investigation of experimental lightweight firewall materials for A/C engine bay applications
[AD-A155765] p 878 N85-35175

**Air Force Wright Aeronautical Labs., Wright-Patterson AFB, Ohio.**

Nitrogen analysis by chemiluminescence
[AD-A156197] p 902 N85-35306

**Airtech Precision Shot Peening, Livonia, Mich.**

Development of a mathematical model for predicting the percentage fatigue life increase resulting from shot peened components
[AD-A155774] p 912 N85-35425

**Akron Univ., Ohio.**

Measurement and correlation of jet fuel viscosities at low temperatures
[NASA-CR-174911] p 901 N85-34295

**Analytical Mechanics Associates, Inc., Mountain View, Calif.**

The flight planning - flight management connection
p 877 A85-47684

**Analytical Services and Materials, Inc., Tabb, Va.**

A study of laminar separation bubble in the concave region of an airfoil using laser velocimetry
p 868 A85-48520

**Arizona State Univ., Tempe.**

Heat transfer characteristics for two-dimensional arrays of impinging jets with initial crossflow
p 911 N85-35365

**Army Structures Lab., Hampton, Va.**

Laser velocimeter measurements of the flow fields around single- and counter-rotation propeller models
[SAE PAPER 850870] p 873 A85-50105

**Army Test and Evaluation Command, Aberdeen Proving Ground, Md.**

Laboratory vibration schedules
[AD-A155856] p 887 N85-35188

## B

**Bolt, Beranek, and Newman, Inc., Canoga Park, Calif.**

Flight investigation of cabin noise control treatments for a light turboprop aircraft
[SAE PAPER 850876] p 885 A85-50109

**Bonn Univ. (West Germany).**

Motor glider meteorology p 914 N85-35543

Partitioning of the vertical turbulent energy transport into positive and negative contributions p 915 N85-35551

Aircraft measurements during the Bonn Experiment (BONEX 1) p 915 N85-35552

**Bordeaux 1 Univ., Gradignan (France).**

Ultra high energy events in ECHOS series and primary energy spectrum
[HE-3.7-9] p 920 N85-35966

## C

**Carnegie-Mellon Univ., Pittsburgh, Pa.**

Validation of fault-free behavior of a reliable multiprocessor system - FTMP: A case study
p 888 A85-47757

**Committee on Public Works and Transportation (U. S. House).**

Aviation safety (aircraft passenger survivability and cabin safety)
[GPO-39-847] p 878 N85-34130

**Cranfield Inst. of Tech., Bedford (England).**

Some problems in high speed gears and gearing
p 910 N85-34312

## D

**Dayton Univ., Ohio.**

Aspects of high-resolution gas chromatography as applied to the analysis of hydrocarbon fuels and other complex organic mixtures. Volume 1
[AD-A156154] p 902 N85-35257

The physical and empirical basis for a specific clear-air turbulence risk index
[NASA-CR-178522] p 914 N85-35540

**Department of Energy, Washington, D. C.**

Combined cold compressor/ejector helium refrigerator
[DE85-006408] p 910 N85-34326

**Deputy Chief of Staff for Research Development and Acquisition (Army), Washington, D.C.**

Proceedings of the 14th Army Science Conference. Volume 2: Principal authors I through O
[AD-A149201] p 919 N85-35690

**Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt, Oberpfaffenhofen (West Germany).**

Proceedings of Meteorological Motor Glider (MEMO) Workshop '84
[DFVLR-MITT-85-04] p 914 N85-35542

Typical and historical aspects of motor gliders as meteorological measuring aircraft p 888 N85-35544

A comparison between Falcon data and motor glider data p 914 N85-35547

Case studies for flux measurements along a low-flying route to the south of Munich p 915 N85-35548

Measurements for the determination of the vertical structure of the convective boundary layer
p 915 N85-35550

The determination of lee circulation during the foehn wind p 915 N85-35554

Accuracy and error analysis p 916 N85-35557

**DOD Product Engineering Services Office, Alexandria, Va.**

DOD Value Engineering Conference report. Value Engineering (VE): A tool that benefits line management held at Leesburg, Virginia on 1-2 November 1984. Part 2. Plenary session
[AD-A156066] p 919 N85-35811

**Douglas Aircraft Co., Inc., Long Beach, Calif.**

Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method
[NASA-CR-174975] p 876 N85-35162

**Drexel Univ., Philadelphia, Pa.**

Modal insensitivity with optimality p 917 A85-47735

## E

**Eidgenoessisches Inst. fuer Reaktorforschung, Wuerenlingen (Switzerland).**

Determination of vertical air velocity using measurements of the aircraft motion
p 914 N85-35545

Environmental-physical measurements and determination of atmospheric turbulence with the ASK-16 motor glider p 915 N85-35549

**European Space Agency, Paris (France).**

The contribution made by flight mechanics to civil aviation p 878 N85-35169

Estimation of flight mechanical variables by means of Kalman filters p 876 N85-35171

## F

**Federal Aviation Administration, Atlantic City, N.J.**

Simulation of time-control procedures for the advanced air traffic control system p 878 A85-47686

**Federal Aviation Agency, Washington, D.C.**

U.S. Civil airmen statistics for calendar year 1984
[AD-A156326] p 866 N85-35153

## G

**General Electric Co., Cincinnati, Ohio.**

High pressure compressor component performance report
[NASA-CR-168245] p 891 N85-34138

Component-specific modeling
[NASA-CR-174765] p 891 N85-34140

Energy efficient engine. Fan and quarter-stage component performance report
[NASA-CR-168070] p 891 N85-34141

Flow modifying device
[NASA-CASE-LEW-13562-2] p 892 N85-35195

Energy efficient engine, high pressure turbine thermal barrier coating. Support technology report
[NASA-CR-168037] p 892 N85-35199

**Glasgow Univ. (Scotland).**

A design procedure to modify the trailing edge upper surface pressure gradient of a given aerofoil
[GU-AERO-8408] p 874 N85-34120

The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers
[GU-AERO-8410] p 874 N85-34121

Modelling of unsteady, incompressible separation on an aerofoil using an inviscid flow algorithm
[GU-AERO-8412] p 874 N85-34122

The collected data for ramp function tests on a NACA 23012 aerofoil. Volume 1: Description and pressure data
[GU-AERO-8413-VOL-1] p 875 N85-34123

An investigation into the three-dimensional stall development on a modified NACA 23012 aerofoil
[GU-AERO-8414] p 875 N85-34124

Comments on the prediction of dynamic stall
[GU-AERO-8501] p 875 N85-34125

## H

**Hydraulic Research Textron, Irvine, Calif.**

Intelligent redundant actuation system requirements and preliminary system design
[NASA-CR-177366] p 886 N85-34136

## I

**Imperial Coll. of Science and Technology, London (England).**

Vortex boundary-layer interactions
[NASA-CR-176192] p 911 N85-35373

**Institut Franco-Allemand de Recherches, St. Louis (France).**

A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow
[ISL-CO-219/84] p 875 N85-34127

Study of boundary layer separation on a supercritical profile with a spoiler by means of a laser Doppler velocimeter
[ISL-CO-225/84] p 875 N85-34128

## J

**Jet Propulsion Lab., California Inst. of Tech., Pasadena.**

Pool fire-ventilation crossflow experiments in a simulated aircraft cabin interior p 877 A85-49130

## K

**Kansas Univ., Lawrence.**

Theory of wing rock p 895 A85-49139

**Kansas Univ. Center for Research, Inc., Lawrence.**

A research program to reduce the interior noise in general aviation aircraft, index and summary
[NASA-CR-176178] p 919 N85-35895

**Kentron International, Inc., Hampton, Va.**

Manufacturing tolerances for natural laminar flow airframe surfaces
[SAE PAPER 850863] p 884 A85-50103

## L

**Lincoln Lab., Mass. Inst. of Tech., Lexington.**

Effect of interference on the performance of a minimum TCAS 2
[FAA-PM-84-33] p 880 N85-34131

**Lockheed-California Co., Burbank.**

Fuel containment and damage tolerance for large composite primary aircraft structures. Phase 1: Testing
[NASA-CR-166091] p 902 N85-35241

**Lockheed Missiles and Space Co., Huntsville, Ala.**

Results of tests of the SRB aft skirt heat shield curtain in the MSFC Hot Gas Facility
[NASA-CR-170888] p 899 N85-35223

Results of tests of MTA-2 TPS on the SRB hold-down bolt blast container
[NASA-CR-170891] p 899 N85-35224

SRB thermal protection systems materials test results in an arc-heated nitrogen environment
[NASA-CR-170881] p 902 N85-35236

Results of variable enthalpy tests of CPR-488 TIP panels in MSFC Hot Gas Facility
[NASA-CR-170889] p 902 N85-35237

Results of tests of weathered K5NA closeout material in the MSFC Hot Gas Facility
[NASA-CR-170893] p 902 N85-35239

Study of NSI and related cable performance during tests performed in the NASA Hot Gas Facility
[NASA-CR-170886] p 912 N85-35423

## M

**Massachusetts Inst. of Tech., Cambridge.**

Control system reconfiguration p 917 A85-47793

Unsteady lifting-line theory as a singular-perturbation problem p 871 A85-49353

**Mitre Corp., McLean, Va.**

FAA requirements for model to support capacity, delay, noise and energy programs
[AD-A155815] p 880 N85-35179

## N

**National Academy of Sciences - National Research Council, Washington, D. C.**

Fire-resistant phosphorus containing polyimides and copolyimides
[NASA-CASE-ARC-11522-2] p 901 N85-34280

**National Aeronautics and Space Administration, Washington, D. C.**

Aeronautical engineering: A continuing bibliography with indexes, supplement 190
[NASA-SP-7037(190)] p 866 N85-35152

Presentation of the acoustic and aerodynamic results of the Aladin 2 concept qualification testing
[NASA-TM-77883] p 876 N85-35161

**National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.**

Concepts and algorithms for terminal-area traffic management p 878 A85-47683

Simulation of time-control procedures for the advanced air traffic control system p 878 A85-47686

Digital fringe reduction techniques applied to the measurement of three-dimensional transonic flow fields p 907 A85-48521

A computational study of complex three-dimensional compressible turbulent flowfields p 869 A85-48526

Rotorcraft simulation at Ames p 897 A85-49006

Numerical optimization of circulation control airfoil at high subsonic speed p 871 A85-49131

Handling qualities related to stall/spin accidents of supersonic fighter aircraft p 894 A85-49132

Arrays of bodies of revolution for minimum wave drag p 881 A85-49136

A wind tunnel inlet flow simulation p 871 A85-49141

An evaluation of three helicopter rotor sections
[NASA-TM-86719] p 874 N85-34115

Use of a hyperbolic grid generation scheme in simulating supersonic viscous flow about three-dimensional winged configuration
[NASA-TM-85344] p 874 N85-34116

Flight testing the fixed-wing configuration of the Rotor Systems Research Aircraft (RSRA)
[NASA-TM-86762] p 886 N85-34135

Fire-resistant phosphorus containing polyimides and copolyimides
[NASA-CASE-ARC-11522-2] p 901 N85-34280

Practical aspects of laser holographic interferometry in wind tunnels
[NASA-TM-86788] p 911 N85-34378

The impact of supercomputers on experimentation: A view from a national laboratory
[NASA-TM-86822] p 918 N85-34510

Computation of three-dimensional shock wave and boundary-layer interactions
[NASA-TM-86780] p 911 N85-35372

**National Aeronautics and Space Administration. Johnson (Lyndon B.) Space Center,**

Some real-time simulation applications to Space Shuttle approach and landing design and test p 899 A85-49016

**National Aeronautics and Space Administration. Langley Research Center, Hampton, Va.**

Feedback control for fuel-optimal descents using singular perturbation techniques p 893 A85-47888

A study of laminar separation bubble in the concave region of an airfoil using laser velocimetry p 868 A85-48520

Flow instabilities in transonic small-disturbance theory p 869 A85-48531

Full potential solutions of three-dimensional supersonic flows p 871 A85-49133

A user's view of CARE III p 918 A85-49570

Crashworthy design considerations for general aviation seats
[SAE PAPER 850855] p 884 A85-50101

Flight evaluation of an insect contamination protection system for laminar flow wings
[SAE PAPER 850860] p 884 A85-50102

Manufacturing tolerances for natural laminar flow airframe surfaces
[SAE PAPER 850863] p 884 A85-50103

Laser velocimeter measurements of the flow fields around single- and counter-rotation propeller models
[SAE PAPER 850870] p 873 A85-50105

Flight investigation of cabin noise control treatments for a light turboprop aircraft
[SAE PAPER 850876] p 885 A85-50109

Simulation study of an automatic trim system for reducing the control forces on a light twin after an engine failure
[SAE PAPER 850913] p 896 A85-50124

Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing
[NASA-TP-2451] p 895 N85-34144

Nozzle wall roughness effects on free-stream noise and transition in the pilot low-disturbance tunnel
[NASA-TM-86389] p 910 N85-34355

Langley aeronautics and space test highlights, 1984
[NASA-TM-87585] p 920 N85-35151

Wingtip vortex propeller
[NASA-CASE-LAR-13019-1] p 892 N85-35194

Dual towline spin-recovery device
[NASA-CASE-LAR-13076-1] p 895 N85-35200

A preliminary evaluation of a failure detection filter for detecting and identifying control element failures in a transport aircraft
[NASA-TM-87576] p 896 N85-35204

**National Aeronautics and Space Administration. Lewis Research Center, Cleveland, Ohio.**

A real-time FORTRAN implementation of a sensor failure detection, isolation and accommodation algorithm p 917 A85-47704

Inviscid and viscous flows in cascades with an explicit multiple-grid algorithm p 869 A85-48539

A generalized computer code for developing dynamic gas turbine engine models (DIGTEM) p 890 A85-49021

Noise constraints effecting optimal propeller designs
[SAE PAPER 850871] p 874 A85-50106

Oxidizing seal for a turbine tip gas path
[NASA-CASE-LEW-14053-1] p 911 N85-34402

Reflection plane tests of a wind turbine blade tip section with ailerons
[NASA-TM-87018] p 912 N85-34444

Flow modifying device
[NASA-CASE-LEW-13582-2] p 892 N85-35195

Thermal barrier coating system
[NASA-CASE-LEW-14057-1] p 902 N85-35233

**National Aeronautics and Space Administration. Marshall Space Flight Center, Huntsville, Ala.**

Superalloy microstructural variations induced by gravity level during directional solidification p 900 A85-48274

**Naval Postgraduate School, Monterey, Calif.**

Analysis of incompressible cascade flows using state-of-the-art computer programs
[AD-A155850] p 876 N85-35173

The influence of helicopter tail shape on drag: An aerodynamic study using a low speed wind tunnel
[AD-A156304] p 876 N85-35174

The effects of parameter variation on helicopter performance
[AD-A156027] p 887 N85-35189

Development of NATOPS (Naval Air Training and Operating Procedure Standardization) performance software for the H-46D helicopter
[AD-A156089] p 887 N85-35190

Development of NATOPS performance software for the SH-3D and SH-3H helicopters
[AD-A156140] p 887 N85-35192

**Naval Ship Research and Development Center, Bethesda, Md.**

Numerical optimization of circulation control airfoil at high subsonic speed p 871 A85-49131

**Naval Surface Weapons Center, White Oak, Md.**

Mach 14 flow restrictor thermal stress analysis
[AD-A156215] p 898 N85-35208

**North Carolina State Univ., Raleigh.**

A stream function approach to solving the conservative Euler equations for transonic flows p 875 N85-35156

An automated technique for encasing specific payloads with low-drag fairings p 886 N85-35183

## O

**Ohio State Univ., Columbus.**

Modeling techniques for transonic airfoils p 871 A85-49014

Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 2: Data
[NASA-CR-177943-VOL-2] p 896 N85-35203

## R

**Rockwell International Science Center, Thousand Oaks, Calif.**
Full potential solutions of three-dimensional supersonic flows p 871 A85-49133

**Rolls-Royce Ltd., Derby (England).**
Performance improvements from surfacing in aero engine components
[PNR-90257] p 891 N85-34142
Shroud segments for unshrouded blade turbines
[PNR-90260] p 891 N85-34143
Directionally solidified gas turbine alloys
[PNR-90264] p 901 N85-34279
Towards the year 2000: Developments in inspection and product assurance to be anticipated during the next 15 years
[PNR-90258] p 911 N85-34421
Cost effective single crystals: The Rolls Royce approach
[PNR-90262] p 919 N85-34717

## S

**Scientific Research Associates, Inc., Glastonbury, Conn.**
A three-dimensional viscous flow analysis for the helicopter tip vortex generation problem
[NASA-CR-3906] p 874 N85-34114

**Sikorsky Aircraft, Stratford, Conn.**
Flight service evaluation of composite helicopter components
[NASA-CR-172562] p 901 N85-34222

**Simula, Inc., Phoenix, Ariz.**
Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing
[NASA-CR-3917] p 886 N85-35184

**SKF Industries, Inc., King of Prussia, Pa.**
Planetary-gear-support bearing test rig design
[NASA-CR-174927] p 886 N85-35185

**Societe Francaise d'Instruments de Mesure, Massy (France).**
Implications of artificial intelligence on the design of future onboard systems
[SFENA-DPS/C/S3/84252A] p 918 N85-34596

**Stanford Univ., Calif.**
Three-dimensional tomographic reconstruction of the flow around a revolving helicopter rotorblade - A numerical simulation p 903 A85-47106

**Syracuse Univ., N. Y.**
Unsteady transonic heat transfer in a transient facility
[NASA-CR-176145] p 910 N85-34354

## T

**Technische Univ., Brunswick (West Germany).**
Control variables in vertical wind determination using simple flight-mechanical equations p 914 N85-35546
The principles of wind measurement with the help of aircraft p 916 N85-35558

**Technische Univ., Munich (West Germany).**
Development and operation of a measuring data acquisition system for use in light airplanes
p 912 N85-35556

**Texas Univ., Austin.**
A study of the control of particulate emissions from turbine engine test cells p 898 N85-35205

**Toronto Univ. (Ontario).**
A model of hypersonic two-dimensional oblique detonation wave ramjet
[UTIAS-TN-257] p 891 N85-34139

## U

**University Corp. for Atmospheric Research, Boulder, Colo.**
A preliminary intercomparison between numerical upper wind forecasts and research aircraft measurements of jet streams
[NASA-CR-167884] p 914 N85-35539

## V

**Virginia Polytechnic Inst. and State Univ., Blacksburg.**
Mechanisms of transmission and control of low-frequency sound in aircraft interiors
[SAE PAPER 850879] p 885 A85-50111
Energy management of three-dimensional minimum-time intercept
[NASA-CR-176174] p 887 N85-35186

## W

**Warsaw Univ. (Poland).**
Meteorological measurements with motor gliders in Poland p 915 N85-35555

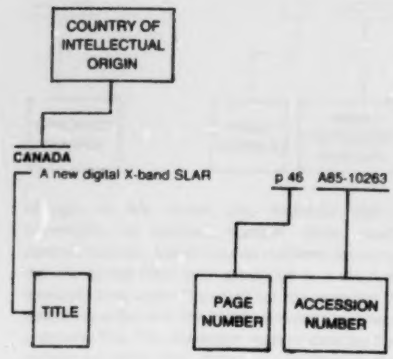
**Washington Univ., Seattle.**
Multiple transonic shock-wave/turbulent boundary-layer interaction in a circular duct p 869 A85-48533

# FOREIGN TECHNOLOGY INDEX

**AERONAUTICAL ENGINEERING** / *A Continuing Bibliography (Supplement 195)*

JANUARY 1986

## Typical Foreign Technology Index Listing



Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

### A

**AUSTRALIA**

Laboratory studies related to in-flight acoustic emission monitoring p 905 A85-47428
Bonded repair of damage p 910 A85-50063
Guidelines for the evaluation of visual approach slope indicators
[ARL/SYS-R-32] p 880 N85-34132
Determination of instrument errors by compatibility checking: Results from dynamic flight test data
[ARL/AERO-R-162] p 889 N85-34137
Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 887 N85-35187

### C

**CANADA**

Finite element simulation of transonic flows by modified potential and stream function methods p 871 A85-49149
An electronic limiter for aircraft engines
[SAE PAPER 850910] p 890 A85-50122
A model of hypersonic two-dimensional oblique detonation wave ramjet
[UTIAS-TN-257] p 891 N85-34139

**CHINA, PEOPLE'S REPUBLIC OF**

Vortex flow visualization studies of a strake-wing in water tunnel p 904 A85-47131
Approximate calculation of flow field in an inlet with arbitrary cross sections and curved axis p 872 A85-49652
A simple and effective difference scheme in aerodynamics p 872 A85-49702
Variational principle families for hybrid problems of blade-to-blade flow along axisymmetric stream-sheet - A unified variable-domain approach p 872 A85-49703
Variational principle for two dimensional flows of the compressible ideal fluid with incontinuous surfaces p 909 A85-49704
The rolling vortex-damping of supersonic wing p 872 A85-49705
Research on implicit approximate-factorization finite-difference method for the Euler equation p 873 A85-49706
A calculating method of the breakdown feature of the leading-edge separating vortex for slender delta wings p 873 A85-49707
On rolling resonance and small asymmetrical aerodynamic force of re-entry body p 873 A85-49708
Analytical solutions for unsteady Prandtl-Meyer flow p 873 A85-49710

### F

**FRANCE**

The use of visualization as a guide in the numerical determination of the flow around an abruptly accelerated elliptic cylinder or airfoil p 904 A85-47127
An aeroelastic testing technique in a straight cascade wind-tunnel p 896 A85-47161
Active control of the buffeting response on a large modern civil airplane configuration in wind tunnel
[ONERA, TP NO. 1985-26] p 893 A85-47253
Review of aeronautical fatigue investigations in France during the period 1983-1985
[ONERA, TP NO. 1985-42] p 880 A85-47256
A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder
[ONERA, TP NO. 1985-47] p 904 A85-47258
E and H fields measurements on the Transall C160 aircraft during lightning flashes
[ONERA, TP NO. 1985-48] p 876 A85-47259
In-flight electrical conductivity measurements
[ONERA, TP NO. 1985-61] p 912 A85-47264
Extension and use of numerical procedure for the three dimensional unsteady transonic flows
[ONERA, TP NO. 1985-67] p 868 A85-47269
An examination of turbulence models for a separating three-dimensional turbulent boundary layer
[ONERA, TP NO. 1985-74] p 904 A85-47273
Ceramic heat exchangers for gas turbines or turbojets
[ONERA, TP NO. 1985-35] p 904 A85-47288
Aerodynamic models for propellers for fast aircraft
[ONERA, TP NO. 1985-55] p 868 A85-47301
Unsteady aerodynamic forces induced by aeroelastic vibrations of a turbojet engine in a nacelle
[ONERA, TP NO. 1985-56] p 880 A85-47302
CAUTRA ATC simulator strives for realism p 897 A85-48857
Experimental method for the study of corner flows
[AAAF PAPER NT 84-06] p 870 A85-48988
The unsteady properties of a flow within a schematic air intake
[AAAF PAPER NT 84-09] p 870 A85-48989
Turbulence in air inlets
[AAAF PAPER NT 84-10] p 870 A85-48990
A finite difference model for flows around an air intake
[AAAF PAPER NT 84-11] p 870 A85-48991
Numerical simulations of viscous fluid flows in air intakes at high angles of attack
[AAAF PAPER NT 84-12] p 907 A85-48992
The characteristics of unsteady flow in air intakes
[AAAF PAPER NT 84-13] p 870 A85-48993
Calculation of the flow in an air intake duct by numerical solution of the Euler equations
[AAAF PAPER NT 84-24] p 870 A85-48998
A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow
[ISL-CO-219/84] p 875 N85-34127
Study of boundary layer separation on a supercritical profile with a spoiler by means of a laser Doppler velocimeter
[ISL-CO-225/84] p 875 N85-34128
Implications of artificial intelligence on the design of future onboard systems
[SFENA-DPS/C/S3/84252A] p 918 N85-34596
Presentation of the acoustic and aerodynamic results of the Aladin 2 concept qualification testing
[NASA-TM-77883] p 876 N85-35161
Ultra high energy events in ECHOS series and primary energy spectrum
[HE-3.7-9] p 920 N85-35966

### G

**GERMANY,FEDERAL REPUBLIC OF**

On the accuracy of boundary layer measurements in cascades at high subsonic speeds p 867 A85-47163
Some results of experimental and analytical buffeting investigations on a delta wing
[ONERA, TP NO. 1985-59] p 868 A85-47262
Status and development trends of navigation systems for general aviation p 879 A85-48175
European Workshop on Probe Calibrations p 896 A85-48523
The MCA method of determining thrust of jet aircraft in flight p 881 A85-49134
Recent advances in fatigue crack growth predictions p 910 A85-50065
Porsche aircraft engine P F M 3200
[SAE PAPER 850895] p 890 A85-50115
The contribution made by flight mechanics to civil aviation p 878 N85-35169
Estimation of flight mechanical variables by means of Kalman filters p 878 N85-35171
Proceedings of Meteorological Motor Glider (MEMO) Workshop '84
[DFVLR-MITT-85-04] p 914 N85-35542
Motor glider meteorology p 914 N85-35543
Typical and historical aspects of motor gliders as meteorological measuring aircraft p 888 N85-35544
Control variables in vertical wind determination using simple flight-mechanical equations p 914 N85-35546
A comparison between Falcon data and motor glider data p 914 N85-35547
Case studies for flux measurements along a low-flying route to the south of Munich p 915 N85-35548
Environmental-physical measurements and determination of atmospheric turbulence with the ASK 16 motor glider p 915 N85-35549
Measurements for the determination of the vertical structure of the convective boundary layer p 915 N85-35550
Partitioning of the vertical turbulent energy transport into positive and negative contributions p 915 N85-35551
Aircraft measurements during the Bonn Experiment (BONEX 1) p 915 N85-35552
The determination of lee circulation during the foehn wind p 915 N85-35554
Development and operation of a measuring data acquisition system for use in light airplanes p 912 N85-35556
Accuracy and error analysis p 916 N85-35557
The principles of wind measurement with the help of aircraft p 916 N85-35558

### I

**INDIA**

Design of a pitch orientation control system for aircraft control in stall region p 893 A85-47701
An adaptive control of an electro-hydraulic position control system p 893 A85-47702

**INTERNATIONAL ORGANIZATION**

The imposition of flow control avoids ATC overloads p 879 A85-48851
Initial European Central Data Bank of air traffic demand now in operational trials p 879 A85-48852
The growing impact of general aviation on the world's aviation system p 877 A85-48861

**ISRAEL**

Determination of leading-edge vortex trajectories by schlieren photography p 904 A85-47150

The role of damping on supersonic panel flutter p 907 A85-48557

J

JAPAN
Quantification of downwash and ground vortex of a lifting rotor model by flow visualization technique p 867 A85-47134
Supplements to 'Theory of secondary flow in cascades' p 869 A85-48674
Numerical analysis of transonic flow around a two-dimensional airfoil by solving full Navier-Stokes equations p 869 A85-48675
JORDAN
Effects caused by small discrete two-dimensional roughness elements immersed in turbulent boundary layers p 908 A85-49351

N

NETHERLANDS
Visualization of the vortex flow over delta and double-delta wings p 867 A85-47149
Verification of calculation methods for unsteady airloads in the prediction of transonic flutter [AIAA PAPER 84-0871] p 871 A85-49126

P

POLAND
Prediction of the inception of cavitation on blade profiles of hydraulic turbomachines p 906 A85-47849
Analysis of asymmetric natural vibrations of an aeroplane with moving deformable control surfaces p 883 A85-49672
Analysis of natural vibrations of a deformable aeroplane with fixed control systems p 883 A85-49673
Meteorological measurements with motor gliders in Poland p 915 N85-35555

R

ROMANIA (RUMANIA)
Thermal stability of plasma-sprayed zirconia coatings as related to substrate selection p 900 A85-48758

S

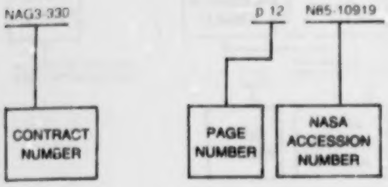
SWEDEN
Computation of inviscid incompressible flow with rotation p 871 A85-49356
Aeroelastic constraints for a wing weight minimization procedure [FFA-TN-1985-4] p 875 N85-34126
SWITZERLAND
Determination of vertical air velocity using measurements of the aircraft motion p 914 N85-35545

U

U.S.S.R.
Parametric analysis of the acoustic power emitted by coaxial jets p 918 A85-48179
Contribution to theory of similitude of subsonic flow p 868 A85-48189
Aircraft icing must never be underestimated p 877 A85-48862
Descent vehicles p 899 A85-49435
Orbit control of a synchronous satellite p 899 A85-49448
UNITED ARAB REPUBLIC
Design of optimal low-sensitivity controllers with prespecified eigenvalues - Application to aircraft lateral motion p 893 A85-47696
UNITED KINGDOM
Comparison of a computed transonic flow and interferometric measurements around the leading edge of a two dimensional aerofoil asymmetrically mounted in a wind tunnel p 868 A85-47164
Crack characterisation in turbine disks p 905 A85-47396
Fast-jet aircrew safety p 916 A85-48099
Some contributions to the modelling of discontinuous flows p 907 A85-48224
Fibre reinforced composites '84; Proceedings of the International Conference, University of Liverpool, England, April 3-5, 1984 p 900 A85-48562
The composite technology of a main rotor blade p 865 A85-48567
Application of carbon fibre reinforced thermoplastic (PEEK) composite to aero engine component manufacture p 900 A85-48568
Aspects of certification of civil aircraft structures in composite materials p 865 A85-48570
Structural plastics in sporting and general aviation aircraft p 865 A85-48571
Continuous fibre reinforced thermoplastics in new generation radomes p 900 A85-48572
The first British designed and built composite sailplane p 865 A85-48573
Why not have a simulator type for commuter operators? p 897 A85-48856
Grid generation and flow calculations for aircraft geometries p 871 A85-49129
Automation in air traffic management p 879 A85-49171
The Delco Performance Management System p 895 A85-49172
The extended range operation of twin-engined public transport aircraft. I p 881 A85-49173
The extended range operation of twin-engined public transport aircraft. II p 881 A85-49174
The extended range operation of twin-engined public transport aircraft. III p 882 A85-49175
Characteristics of a trailing-edge flow with turbulent boundary-layer separation p 872 A85-49366
A note on the steady high-Reynolds-number flow about a circular cylinder p 872 A85-49369
Advanced escape systems p 877 A85-49625
Star in the making p 882 A85-49656
One-Eleven trailblazers p 866 A85-49657
GIV - Gulfstream goes further p 882 A85-49658
On the abrupt turbulent reattachment downstream of leading-edge laminar separation p 872 A85-49698
The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers p 873 A85-49874
Manufacture of composite propeller blades for commuter aircraft [SAE PAPER 850875] p 910 A85-50108
A design procedure to modify the trailing edge upper surface pressure gradient of a given aerofoil [GU-AERO-8408] p 874 N85-34120
The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers [GU-AERO-8410] p 874 N85-34121
Modelling of unsteady, incompressible separation on an aerofoil using an inviscid flow algorithm [GU-AERO-8412] p 874 N85-34122
The collected data for ramp function tests on a NACA 23012 aerofoil. Volume 1: Description and pressure data [GU-AERO-8413-VOL-1] p 875 N85-34123
An investigation into the three-dimensional stall development on a modified NACA 23012 aerofoil [GU-AERO-8414] p 875 N85-34124
Comments on the prediction of dynamic stall [GU-AERO-8501] p 875 N85-34125
Performance improvements from surfacing in aero engine components [PNR-90257] p 891 N85-34142
Shroud segments for unshrouded blade turbines [PNR-90260] p 891 N85-34143
Directionally solidified gas turbine alloys [PNR-90264] p 901 N85-34279
Some problems in high speed gears and gearing p 910 N85-34312
Towards the year 2000: Developments in inspection and product assurance to be anticipated during the next 15 years [PNR-90258] p 911 N85-34421
Cost effective single crystals: The Rolls Royce approach [PNR-90262] p 919 N85-34717
Vortex boundary-layer interactions [NASA-CR-176192] p 911 N85-35373

# CONTRACT NUMBER INDEX

### Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

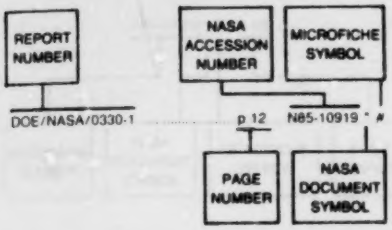
# REPORT NUMBER INDEX

### Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The page number indicates the page on which the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

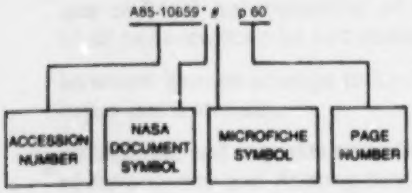
# ACCESSION NUMBER INDEX

### Typical Accession Number Index Listing



Listings in this index are arranged alphanumerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A85-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche(1) of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N85-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page viii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page vii.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

## GENERAL AVAILABILITY

All publications abstracted in this bibliography are available to the public through the sources as indicated in the *STAR Entries* and *IAA Entries* sections. It is suggested that the bibliography user contact his own library or other local libraries prior to ordering any publication inasmuch as many of the documents have been widely distributed by the issuing agencies, especially NASA.

## PUBLIC COLLECTIONS OF NASA DOCUMENTS

**DOMESTIC:** NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

**EUROPEAN:** An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

### FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. Over 1,300 other depositories also exists. A list of the regional GPO libraries appears on the inside back cover.

**DEVELOPMENT AND APPLICATIONS OF ALGORITHMS FOR CALCULATING THE TRANSONIC FLOW ABOUT HARMONICALLY OSCILLATING WINGS**
F. E. EHLERS, W. H. WEATHERILL, and E. L. YIP Oct. 1984
152 p refs
(Contract NAS1-16297)
(NASA-CR-172376; NAS 1.26:172376) Avail: NTIS HC A08/MF A01 CSCL 01A

A finite difference method to solve the unsteady transonic flow about harmonically oscillating wings was investigated. The procedure is based on separating the velocity potential into steady and unsteady parts and linearizing the resulting unsteady differential equation for small disturbances. The differential equation for the unsteady velocity potential is linear with spatially varying coefficients and with the time variable eliminated by assuming harmonic motion. An alternating direction implicit procedure was investigated, and a pilot program was developed for both two and three dimensional wings. This program provides a relatively efficient relaxation solution without previously encountered solution instability problems. Pressure distributions for two rectangular wings are calculated. Conjugate gradient techniques were developed for the asymmetric, indefinite problem. The conjugate gradient procedure is evaluated for applications to the unsteady transonic problem. Different equations for the alternating direction procedure are derived using a coordinate transformation for swept and tapered wing planforms. Pressure distributions for swept, untaped wings of vanishing thickness are correlated with linear results for sweep angles up to 45 degrees. E.A.K.

**A85-18511*#** Virginia Polytechnic Inst. and State Univ., Blacksburg.
**A VORTEX-LATTICE METHOD FOR GENERAL, UNSTEADY AERODYNAMICS**
P. KONSTADINOPOULOS, D. F. THRASHER, D. T. MOOK, A. H NAYFEH, and L. WATSON (Virginia Polytechnic Institute and State University, Blacksburg, VA) Journal of Aircraft (ISSN 0021-8669), vol. 22, Jan. 1985, p. 43-49. refs
(Contract N00014-79-C-0103; NSG-1262)

A general method of calculating unsteady, incompressible, inviscid, three-dimensional flows around arbitrary planforms has been developed. The method is an extension of the vortex-lattice technique. It is not limited by aspect ratio, camber, or angle of attack, as long as vortex breakdown does not occur above the surface of the wing and separation occurs only along sharp edges. As the wing performs arbitrary maneuvers, the position of the wake and the distribution of circulation on the wing and in the wake are obtained as functions of time. One desirable feature of the present method is its ability to treat steady lifting flows very efficiently. Several examples of steady and unsteady flows are presented. These include rectangular wings, with and without flaps, delta, and cropped delta wings. Author

# FEDERAL DEPOSITORY LIBRARY PROGRAM

The Federal Depository Library Program provides Government publications to designated libraries throughout the United States. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and inter-library loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself.

# INTRODUCTION

## WHAT THIS CUMULATIVE INDEX IS

This publication is a cumulative index to the abstracts contained in NASA SP-7037(184) through NASA SP-7037(195) of *Aeronautical Engineering: A Continuing Bibliography,* NASA SP-7037, and its supplements have been compiled through the cooperative efforts of the American Institute of Aeronautics and Astronautics (AIAA), and the National Aeronautics and Space Administration (NASA). Entries prepared by the two contributing organizations are identified as follows:

1. NASA entries by their *STAR* accession numbers (N85-10000 series).
2. AIAA entries by their *IAA* accession numbers (A85-10000 series).

## HOW THIS CUMULATIVE INDEX IS ORGANIZED

This Cumulative Index includes a subject, personal author, and corporate source index.

## HOW TO USE THE SUBJECT INDEX

Two types of cross-references appear in the subject index:

1. Use (U) references indicate that the subject term is not "postable," i.e., not a valid term, and that the following term or terms are used instead. For example:

   AIRCRAFT PROTUBERANCES
   U PROTUBERANCES
   FLIGHT PERFORMANCE
   U FLIGHT CHARACTERISTICS

2. Narrower Term (NT) references refer the user to more specific headings in the same subject area, under which additional material on the subject may be found. For example:

   FLOW RESISTANCE
   NT AERODYNAMIC DRAG
   NT FRICTION DRAG
   NT SUPERSONIC DRAG

In addition, a searcher may use the title or title and title extension in the index to narrow further his quest for particular items; this is because subject terms may include documents on different aspects of the same subject. For example:

AIRLINE OPERATIONS
All-weather operations, including pilot role, instrument landing systems and guidance aids.
Airport congestion as constraint on air travel, considering runway capacity and adjusted demand.

## HOW TO USE THE PERSONAL AUTHOR INDEX

All personal authors used in the abstract-section citations in the individual Supplements appear in the index. Differences in translation schemes may require multiple searching of the index for variants of an author's name. For example:

EMELIANOV, M. D.
and
YEMELYANOV, M. D.

## HOW TO USE THE CORPORATE SOURCE INDEX

The corporate source index entries are abridged versions of the corporate sources used in the abstract-section citations in the individual Supplements. The corporate source supplementary (organizational component) does not appear in the index. For example:

BOEING CO., SEATTLE, WASH. MILITARY AIRCRAFT SYSTEMS DIV. (Source citation entry)
BOEING CO., SEATTLE, WASH. (Source index entry)

## HOW TO USE THE CONTRACT NUMBER INDEX

All contract numbers that are identified in the abstract-section citations in the individual Supplements appear in this index. Changes by agencies in the style in which contract numbers are presented may require multiple searching for variants. For example:

AF 33(615)-71-C-1758
F33615 71-C-1758

## HOW TO USE THE REPORT/ACCESSION NUMBER INDEX

All report numbers that have been assigned by the corporate source, monitoring agency or cataloging activity appear in this index. Variations in initial cataloging may result in different report number series. For example:

TP-924
ONERA-TP-924

## IDENTIFICATION OF DESIRED SUPPLEMENT

The abstract and descriptive cataloging for any accession number selected from the indexes may be found in the appropriate Supplement. The page-number range of each Supplement appears on the inside front cover of this index. Once the range of page numbers containing the selected accession number is located in the second column, the desired Supplement number will be found in the first column. For example:

Page 257 will be found in Supplement 187.

## AVAILABILITY OF DOCUMENTS

Information concerning the availability of documents announced in *Aeronautical Engineering* supplements is found in the Introduction to the most currently issued supplement.

## PUBLIC COLLECTIONS OF NASA DOCUMENTS

**DOMESTIC:** NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

**EUROPEAN:** An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

### FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. Over 1,300 other depositories also exists. A list of the regional GPO libraries appears on the inside back cover.

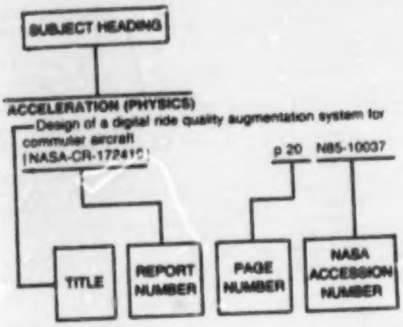
# SUBJECT INDEX

**AERONAUTICAL ENGINEERING** / *A Continuing Bibliography*
1985 Cumulative Index

JANUARY 1986

### Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

## A

**A-10 AIRCRAFT**
Peripheral vision horizon display on the single seat night attack A-10 p 23 N85-10053
Performance evaluation of A-10 aircraft maintenance units and aircraft using constrained facet analysis
[AD-A146955] p 201 N85-19660

**A-300 AIRCRAFT**
Principal tests for the automated production of the airbus fin assembly with fiber composite materials
p 137 A85-16066
New performance management system being tested on an A300 p 504 A85-32488
Stability limits of shear fields of the carbon-fiber-reinforced-plastics rudder unit - Airbus A300/A310
[DGLR PAPER 84-155] p 752 A85-40286

**A-310 AIRCRAFT**
Use of expended AIDS in engine health monitoring on the CF6-80 engine for the A310 Airbus
[SAE PAPER 841505] p 352 A85-25980
The cockpit of the Airbus A310 p 656 A85-37896
Stability limits of shear fields of the carbon-fiber-reinforced-plastics rudder unit - Airbus A300/A310
[DGLR PAPER 84-155] p 752 A85-40286
Flight control system technology in the civil transport aircraft (Airbus-Program) - Status and key points of new development requirements
[DGLR PAPER 84-089] p 775 A85-40308
'The test stand flies with the aircraft' - Engine condition monitoring in the case of the Airbus A 310 of the Lufthansa
[DGLR PAPER 84-114] p 784 A85-40330
The Airbus A 310-300 as an example of the construction of an FRP vertical tail fin
[MBB-UT-52-85-OE] p 758 A85-42677

**A-320 AIRCRAFT**
New technology in the A320
[AIAA PAPER 84-2444] p 342 A85-26324
Marriage of inertial-reference and air-data systems now assured p 488 A85-32486
Systems for the Airbus A320 - Innovation in all directions p 571 A85-33869
A 320 - Third generation Airbus p 646 A85-37946
Flight control system technology in the civil transport aircraft (Airbus-Program) - Status and key points of new development requirements
[DGLR PAPER 84-089] p 775 A85-40308
Use of CAD/CAM systems during the development/construction of the A320
[DGLR PAPER 84-118] p 801 A85-40332
The flight control revolution p 776 A85-41529
The first intelligent aircraft p 757 A85-41917
Description of MBB computerized design techniques for A320 p 303 N85-17194
Design of the nacelle for the A-320 aircraft
[SNIAS-851-111-111] p 761 N85-31046

**A-6 AIRCRAFT**
Real time data processing for avionics testing on the A-6E
[AIAA PAPER 84-2666] p 175 A85-17852
U.S. Navy experience with side-by-side unsequenced escape in A-6 series aircraft lessons to be learned (1 January 1969 through 31 December 1979)
p 331 A85-22766

**A-7 AIRCRAFT**
The development of a performance and mission planning program for the A-7E aircraft
[AD-A151717] p 576 N85-25256

**ABLATION**
Two-dimensional deforming finite element methods for surface ablation p 366 A85-25147
Angular motion influence on re-entry vehicle ablation or erosion asymmetry formation p 431 A85-26446
Experimental research on the effect of separation flow on ablation in supersonic turbulent flow
[AIAA PAPER 85-0975] p 684 A85-37625
Stability of a stationary solution to the ablation equation p 623 A85-38555

**ABRASION**
Blade tip geometry - A factor in abrading sintered seal material p 110 A85-13714
Impact dynamics research on composite transport structures
[NASA-TM-86391] p 797 N85-30367

**ABSORBENTS**
Flight-service program for advanced composite rudders on transport aircraft
[NASA-CR-174537] p 780 N85-29250

**ACCELERATED LIFE TESTS**
Fatigue substantiation of the SH-60B stabilator by test
[AIAA PAPER 84-2452] p 98 A85-13541
Corrosion-inhibiting gas-turbine engine lubricant. I Accelerated test development and validation
[ASLE PREPRINT 84-AM-5D-3] p 360 A85-25961
Accelerated testing of gas-turbine aircraft engines using the 'softening' method p 660 A85-39118
Cyclic endurance testing of the RB211-22B cast HP turbine blade --- high pressure (HP)
[PNR-90210] p 113 N85-12063
Forced corrosion tests of construction components of passenger aircraft fuselages p 436 N85-20062
Advanced life analysis methods. Volume 3: Experimental evaluation of crack growth analysis methods for attachment lugs
[AD-A151058] p 531 N85-24319

**ACCELERATION (PHYSICS)**
Flight simulation fidelity in a total g-force environment
[AIAA PAPER 85-1741] p 779 A85-40557
Design of a digital ride quality augmentation system for commuter aircraft
[NASA-CR-172419] p 20 N85-10037
Alternative shock characterizations for consistent shock test specifications p 372 N85-18396
Unsteady Navier-Stokes calculations in an accelerated reference frame
[AD-A151751] p 602 N85-25774

**ACCELERATION PROTECTION**
Improving inflight negative Gz restraint for aircrewmen
[AD-A151909] p 565 N85-26888

**ACCELEROMETERS**
The enigma of false bias detection in a strapdown system during transfer alignment p 406 A85-26428
Description and test methods for a frequency output accelerometer p 694 A85-38536
Keeping up with operational loads in the French Air Force: Defining new equipment p 292 N85-15681
Flight simulation for inertial navigation system
p 490 N85-24081
Low cost two gimbal inertial platform and its system integration p 569 N85-26861
R and D activities of the Systems Engineering Division
p 808 N85-32027

**ACCEPTABILITY**
The role of load-cell rotation in airplane-weight determination
[SAWE PAPER 1582] p 898 A85-49906

**ACCESS CONTROL**
Analytical modeling of a polling protocol --- airline information network
[ENST-84H001] p 333 N85-18029

**ACCIDENT INVESTIGATION**
Structural design guidelines for heliports
[FAA-PM-84-23] p 39 N85-11010

**ACCIDENT PREVENTION**
Wind shear - Taming the killer p 241 A85-20148
The use of falconry as mean to persuade the birds to stay out of the airport vicinity p 404 N85-19956
General Aviation Airworthiness Alerts, no. 85
[FAA-AC-43-16] p 830 N85-33117

**ACCIDENT PRONENESS**
Wind shear - Taming the killer p 241 A85-20148

**ACCURACY**
Influence of sampling rate on the calculated fidelity of an aircraft simulation p 57 A85-11083
Assessment of three-dimensional inviscid codes and loss calculations for turbine aerodynamic computations
[ASME PAPER 84-GT-187] p 475 A85-32961
From measurement uncertainty to measurement communications, credibility, and cost control in propulsion ground test facilities p 682 A85-39243
Evaluation of laser profile and deflection measuring system
[FAA-PM-84-24] p 55 N85-11341
Observations of lightweight Doppler system accuracy
[AD-A145966] p 96 N85-12049
Development of a Helicopter integrated navigation system p 245 N85-16802
Accuracy and error analysis --- airborne instruments
p 916 N85-35557

**ACEE PROGRAM**
Measurement and prediction of Energy Efficient Engine noise
[AIAA PAPER 84-2284] p 110 A85-13954
Fuel efficiency through new airframe technology
[NASA-TM-84548] p 2 N85-10909
Energy efficient engine combustor test hardware detailed design report
[NASA-CR-167945] p 28 N85-10950
Energy efficient engine component development and integration program
[NASA-CR-170034] p 33 N85-10990
Energy efficient engine. Volume 2. Appendix A: Component development and integration program
[NASA-CR-173085] p 34 N85-10991
Energy efficient engine. Volume 1: Component development and integration program
[NASA-CR-173084] p 34 N85-10992
Energy efficient engine. Low pressure turbine test hardware detailed design report
[NASA-CR-167956] p 34 N85-10994
Energy efficient engine high pressure turbine test hardware detailed design report
[NASA-CR-167955] p 34 N85-10995
Energy efficient engine ICLS engine bearings, drives and configuration: Detail design report
[NASA-CR-167871] p 34 N85-10997

Energy efficient engine. High pressure compressor detail design report
[NASA-CR-168558] p 35 N85-10986
Transonic steady- and unsteady-pressure measurements on a high-aspect-ratio supercritical-wing model with oscillating control surfaces
[NASA-TM-81888] p 327 N85-18003
Subsonic and transonic pressure measurements on a high-aspect-ratio supercritical-wing model with oscillating control surfaces
[NASA-TM-83201] p 327 N85-18004
Energy efficient engine high-pressure turbine component rig performance test report
[NASA-CR-168189] p 772 N85-29955
Energy efficient engine integrated core/low spool test hardware design report
[NASA-CR-168137] p 772 N85-29956
Energy Efficient Engine (E3) controls and accessories detail design report

Energy efficient engine component development and integration program
[NASA-CR-172646] p 772 N85-29958
Energy efficient engine. Fan and quarter-stage component performance report
[NASA-CR-168070] p 891 N85-34141
Energy efficient engine, high pressure turbine thermal barrier coating. Support technology report
[NASA-CR-168037] p 892 N85-35199

**ACOUSTIC ATTENUATION**
Engine noise measurement with acoustic shield wall
[AIAA PAPER 84-2283] p 26 A85-10841
The influence of mean flow on the acoustic properties of a tube bank
[AIAA PAPER 84-2312] p 61 A85-10863
Noise transmission through an acoustically treated and honeycomb stiffened aircraft sidewall
[AIAA PAPER 84-2329] p 62 A85-10873
Laboratory tests on an aircraft fuselage to determine the insertion loss of various acoustic add-on treatments
[AIAA PAPER 84-2330] p 16 A85-10874
Alternate approach to aircraft interior noise control. I Damped trim panels
[AIAA PAPER 84-2371] p 17 A85-10900
Adhesive bonded noise suppression structures for commercial and military aircraft p 134 A85-14172
An experimental study of sound attenuation characteristics in circular ducts with lined radial baffles
[AIAA PAPER 85-0079] p 304 A85-19505
Noise transmission through an acoustically treated and honeycomb-stiffened aircraft sidewall
p 537 A85-32592
Approach to interior noise control. I - Damped trim panels p 650 A85-39221
The battle against noise in industry
p 705 A85-39349

**ACOUSTIC DUCTS**
An experimental study of sound attenuation characteristics in circular ducts with lined radial baffles
[AIAA PAPER 85-0079] p 304 A85-19505
A mapped, factored-implicit scheme for the computation of duct and far-field acoustics p 460 A85-29097
A technique for the evaluation of the magnitude of acoustic power radiated from the duct of a turbojet using a point measurement p 861 A85-44045

**ACOUSTIC EMISSION**
Influence of viscosity on the vortex sound
[AIAA PAPER 84-2339] p 62 A85-10880
Effects of moisture on high performance laminates
p 435 A85-29929
Development of acoustic emission techniques for quantitative use on aerospace C.F.R.P. structures
p 445 A85-29938
Laboratory studies related to in-flight acoustic emission monitoring p 905 A85-47428
Acoustic emission monitoring of flaw growth in a graphite-epoxy experimental wing segment
p 907 A85-48084
Rotary-wing aircraft noise measurements: Analysis of variations and proposed measurement standard
[AD-A146207] p 135 N85-12562
Contribution of the study of light aircraft propeller noise
[ESA-TT-865] p 377 N85-18667

**ACOUSTIC EXCITATION**
Control of flow separation by sound
[AIAA PAPER 84-2298] p 60 A85-10851
The role of excitation on modifying the sound sources
[AIAA PAPER 84-2317] p 61 A85-10865
Mechanism of broadband jet noise amplification and suppression under controlled excitation
[AIAA PAPER 84-2319] p 61 A85-10866
Vibration response and sound radiation from beams, plates, and cylinders excited by nonhomogeneous random pressure fields
[AIAA PAPER 84-2327] p 61 A85-10871
The effect of acoustic disturbances on the vibrations of a multilayer plate p 64 A85-11823
Transformation of acoustic oscillations into the eddy ones in turbulent flows p 367 A85-24983
Active transition fixing and control of the boundary layer in air
[AIAA PAPER 85-0564] p 369 A85-25950
A review of complete weapon vibration testing techniques p 426 A85-26555
Far-field noise of a subsonic jet under controlled excitation p 537 A85-30669
The sound field in a finite cylindrical shell
p 537 A85-31195
Flow separation from the leading edge of an airfoil and the effect of acoustic perturbations on the separated flow p 694 A85-38510
An experimental investigation of the generation and consequences of acoustic waves in an axial flow compressor Large axial spacings between blade rows
p 805 A85-42044
Radiation, propagation, fluid-structure coupling; Colloquium on Aeronautical Acoustics, 9th, Compiegne, France, November 14-16, 1984, Reports. Parts 1 & 2
p 861 A85-44037
A surface finite element method for elasto-acoustic coupling p 861 A85-44038
The transmission of acoustic energy by a finite cylindrical shell excited by external plane waves
p 861 A85-44040
Preliminary analysis of tone-excited two-stream jet velocity decay
[NASA-TM-86951] p 397 N85-21114

**ACOUSTIC FATIGUE**
Acoustic fatigue life of adhesive bonded structures subjected to acoustic loads p 51 A85-12472
Dynamic response and acoustic fatigue of stiffened composite structure p 52 A85-12473
Sonic fatigue design method for the response of CFRP stiffened-skin panels p 52 A85-12474
The effect of acoustic/thermal environments on advanced composite fuselage panels
p 445 A85-29251

**ACOUSTIC IMPEDANCE**
Mechanisms of acoustical energy transfer by a cylindrical shell near the ring frequency p 861 A85-44039

**ACOUSTIC INSTABILITY**
Reheat buzz - An acoustically driven combustion instability
[AIAA PAPER 84-2321] p 41 A85-10868

**ACOUSTIC MEASUREMENT**
Phase averaged acoustic measurements for a Mach number 0.6 jet
[AIAA PAPER 84-2320] p 61 A85-10867
Laboratory tests on an aircraft fuselage to determine the insertion loss of various acoustic add-on treatments
[AIAA PAPER 84-2330] p 16 A85-10874
A technique for the evaluation of the magnitude of acoustic power radiated from the duct of a turbojet using a point measurement p 861 A85-44045
YO-3A acoustics research aircraft systems manual
[NASA-TM-85968] p 37 N85-10074
Analytical and physical modeling program for the NASA Lewis Research Center's Altitude Wind Tunnel (AWT)
[NASA-TM-86919] p 276 N85-15757
FAA/GAMA (Federal Aviation Administration/General Aviation Manufacturer's Association) propeller aircraft noise test program, Salina Municipal Airport, Salina, Kansas
[AD-A154818] p 882 N85-32983

**ACOUSTIC PROPAGATION**
Numerical solutions of acoustic wave propagation problems using Euler computations
[AIAA PAPER 84-2290] p 59 A85-10845
An acoustic mode measurement technique
[AIAA PAPER 84-2337] p 62 A85-10879
A mapped, factored-implicit scheme for the computation of duct and far-field acoustics p 460 A85-29097
Interaction between acoustics and subsonic ducted flow in a ramjet configuration p 704 A85-37209
The effectiveness of acoustic repellants in frightening birds away from airports p 639 A85-37543
Radiation, propagtion, fluid-structure coupling; Colloquium on Aeronautical Acoustics, 9th, Compiegne, France, November 14-16, 1984, Reports Parts 1 & 2
p 861 A85-44037
The propagation of acoustic modes in the annular circular duct of turbomachinery in the presence of swirling mean flow p 861 A85-44041
Transmission of gear noise to aircraft interiors prediction methods p 539 N85-23788

**ACOUSTIC PROPERTIES**
The influence of mean flow on the acoustic properties of a tube bank
[AIAA PAPER 84-2312] p 61 A85-10863
Alternate approach to aircraft interior noise control. II Self-supporting damped interior shell
[AIAA PAPER 84-2372] p 18 A85-10901
Interaction of a turbulent vortex with a lifting surface
[AIAA PAPER 85-0004] p 206 A85-19452
Approach to interior noise control. II - Self-supporting damped interior shell p 759 A85-42939
Sources, paths, and concepts for reduction of noise in the test section of the NASA Langley 4x7m wind tunnel
[NASA-CR-172446-VOL-1] p 197 N85-14866
Comparison of options for reduction of noise in the test section of the NASA Langley 4x7m wind tunnel, including reduction of nozzle area
[NASA-CR-172446-VOL-2] p 197 N85-14867
Noise measurement flight test: Data-analyses, Sikorsky S-76A helicopter
[AD-A148525] p 306 N85-17673
Interaction of a turbulent vortex with a lifting surface
p 557 N85-25214

**ACOUSTIC RETROFITTING**
Noise testing of an advanced design propeller in the Boeing transonic wind tunnel with and without test section acoustic treatment
[AIAA PAPER 84-2366] p 377 A85-26320
Evaluation of interior noise control treatments for advanced turboprop aircraft p 573 A85-35588
Meeting the 1985 FAA noise regulations with old engines and modern acoustic technology
[AIAA PAPER 85-1120] p 651 A85-39616
Noise testing of an advanced design propeller in a wind tunnel p 836 A85-45862
Aircraft cabin noise prediction and optimization
[NASA-CR-175982] p 806 N85-30766
Design of sidewall treatment of cabin noise control of a twin engine turboprop aircraft
[NASA-CR-172245] p 806 N85-30771

**ACOUSTIC SCATTERING**
The diffraction of sound waves by an elastic half-plane attached to a vertical rigid plane p 182 A85-16266
Ultrasonic microstructural noise parameters in a powder metal alloy p 905 A85-47381

**ACOUSTIC STREAMING**
Average force acting on a small sphere in a traveling-wave field in a viscous fluid
p 805 A85-41646

**ACOUSTICS**
Laminar-to-turbulent flow transition under influence of acoustic oscillations p 55 N85-11701
Analysis of the surface load and radiated sound of a vibrating airfoil with application to the experiment of Brooks
[NASA-CR-3864] p 305 N85-16590
Noise measurement flight test: Data/Analyses, hughes 500 D/E helicopter
[AD-A148110] p 501 N85-23758

**ACOUSTO-OPTICS**
Optical data processing for missile guidance
[AD-A149346] p 339 N85-16972

**ACRYLIC RESINS**
Redesign of airplane windows due to environmental crazing of acrylic p 341 A85-26306

**ACTIVE CONTROL**
Application of active noise control to model propeller noise
[AIAA PAPER 84-2344] p 62 A85-10883
Investigations for the use of an active control in aircraft — German thesis p 259 A85-19626
Active transition fixing and control of the boundary layer in air
[AIAA PAPER 85-0564] p 369 A85-25950
Active control of helicopter vibrations through multicyclic controls p 356 A85-26018
Effect of active control system nonlinearities on the L-1011-3(ACS) design gust loads
[AIAA PAPER 85-0755] p 511 A85-30374
Development and evaluation of a generic active helicopter vibration controller p 496 A85-32004
Active vibration suppression of a cantilever wing
p 497 A85-32344
Transonic time responses of the MBB A-3 supercritical airfoil including active controls p 512 A85-32586
Unstable Jaguar proves active controls for EFA
p 583 A85-33426
Development of an active laminar flow nacelle
[AIAA PAPER 85-1116] p 629 A85-39613
The status of flutter suppression technology using active controls p 775 A85-40995
Flight control systems and sensors for air transport
p 775 A85-41014
Flight control technology in transport
p 775 A85-41015
Transition control by periodic suction-blowing
[AIAA PAPER 85-1700] p 725 A85-41411
The use of active controls to augment rotor/fuselage stability p 776 A85-43220

Aeroservoelastic modeling methodology for active control simulation p 839 A85-45044
Design and microprocessor implementation of an integrated load alleviation-pitch manoeuvre flight controller for relaxed stability aircraft p 840 A85-45052
Active aeroelastic oscillation control on the F/A-18 aircraft
[AIAA PAPER 85-1858] p 843 A85-45887
Flight test evaluation of active ride control system for tactical aircraft
[AIAA PAPER 85-1860] p 843 A85-45889
Asymmetric aeroservoelastic modeling for Active Control Simulation
[AIAA PAPER 85-1861] p 843 A85-45890
Active control of helicopter blade flapping
[AIAA PAPER 85-1960] p 827 A85-45947
Active control of the buffeting responses on a large modern civil airplane configuration in wind tunnel
[ONERA, TP NO. 1985-28] p 893 A85-47253
Active control technology experience with the Space Shuttle in the landing regime
[NASA-TM-85910] p 36 N85-10071
Fuel efficiency through new airframe technology
[NASA-TM-84548] p 2 N85-10909
Energy efficient engine. Low pressure turbine test hardware detailed design report
[NASA-CR-167958] p 34 N85-10994
Integrated Application of Active Controls (IAAC) technology to an advanced subsonic transport project-longitudinal handling qualities study of a relaxed-stability airplane
[NASA-CR-3660] p 36 N85-11005
Development and flight evaluation of an augmented stability active controls concept: Executive summary
[NASA-CR-166009] p 37 N85-11006
Flying qualities and control system characteristics for superaugmented aircraft
[NASA-CR-170419] p 173 N85-13900
Integrated Application of Active Controls (IAAC) technology to an advanced subsonic transport project. ACT/Control/Guidance System study, volume 1
[NASA-CR-165963-VOL-1] p 162 N85-14837
Integrated Application of Active Controls (IAAC) technology to an advanced subsonic transport project. ACT/Control/Guidance System study. Volume 2: Appendices
[NASA-CR-165963-VOL-2] p 162 N85-14838
Study to eliminate ground resonance using active controls
[NASA-CR-166609] p 255 N85-15715
Helicopter active control with rotor blades relaxation p 270 N85-16819
Active control of forward swept wings with divergence and flutter aeroelastic instabilities p 356 N85-18063
Ground and flight testing for aircraft guidance and control
[AGARD-AG-262] p 467 N85-22350
Dynamic wind tunnel testing for active control research p 514 N85-22352
Dynamic wind-tunnel testing of active controls by the NASA Langley Research Center p 514 N85-22353
Active control of forward swept wings with divergence and flutter aeroelastic instabilities
[AD-A151637] p 565 N85-25270
The ONERA establishment at Cannes in the service of aeronautical research
[ESA-TT-875] p 593 N85-25276
Technical evaluation report on the Flight Mechanics Symposium on Active Control Systems: Review, Evaluation and Projections
[AGARD-AR-220] p 588 N85-26730
The state-of-the-art and future of flight control systems p 588 N85-26732
A perspective on superaugmented flight control advantages and problems p 588 N85-26733
Aspects of application of ACT systems for pilot workload alleviation p 588 N85-26734
Application of AFTI/F-16 task-tailored control modes in advanced multirole fighters p 589 N85-26735

Demonstration of relaxed static stability on a commercial transport p 679 N85-27898
Active control landing gear for ground load alleviation p 679 N85-27902
Wing buffeting active control testing on a transport aircraft configuration in a large sonic windtunnel p 679 N85-27903
How to handle failures in advanced flight control systems of future transport aircraft p 679 N85-27905
The evolution of active control technology systems for the 1990's helicopter p 680 N85-27911
R and D activities of the Systems Engineering Division p 806 N85-32027

**ACTUATION**
Systems study for an Integrated Digital-Electric Aircraft (IDEA)
[NASA-CR-3840] p 255 N85-15714
Magentically actuated compressor
[NASA-CASE-GSC-12799-1] p 448 N85-21404

**ACTUATOR DISKS**
Five years experience with minimum induced loss propellers. I - Theory
[SAE PAPER 840026] p 322 A85-26310
Some applications of actuator and semi-actuator disk theory to the problem of intake/engine compatibility p 727 A85-41810

**ACTUATORS**
Reliability and precision of the actuating mechanisms of aircraft control systems — Russian book p 355 A85-23723
Streamtube expansion effects on the Darrieus wind turbine p 451 A85-27096
Rationalizing the choice of an actuating mechanism for a jet drive p 661 A85-39124
Design of direct digital flight-mode control systems for high-performance aircraft with multiple actuator non-linearities p 840 A85-45051
A compact electromechanical actuator — for Boeing 727 upper rudder p 864 A85-45058
Flight test of a helicopter fly-by-wire/light actuation control system p 842 A85-45155
The application of the detection filter to aircraft control surface and actuator failure detection and isolation
[AIAA PAPER 85-1973] p 845 A85-45954
Performance evaluation of an electrofluidic flight control actuator p 894 A85-47789
Development and flight evaluation of an augmented stability active controls concept: Executive summary
[NASA-CR-166009] p 37 N85-11006
Design and test of a four channel motor for electromechanical flight control actuation
[NASA-CR-171838] p 297 N85-17294
Solar powered actuator with continuously variable auxiliary power control
[NASA-CASE-MFS-25637-1] p 454 N85-21769
Intelligent redundant actuation system requirements and preliminary system design
[NASA-CR-177366] p 886 N85-34138

**ADA (PROGRAMMING LANGUAGE)**
The use of Ada in distributed simulations p 457 A85-28612
Ada - Will DOD's new computer language cut software cost? p 459 A85-29669
Moving target, distributed, real-time simulation using Ada p 609 A85-34131
Reinventing the DAIS wheel in Ada --- distributed avionics executive p 858 A85-45073
The use of Ada in digital flight control systems
[AIAA PAPER 85-1953] p 834 A85-45939
Design for an Ada-based architecture for critical flight controls
[AIAA PAPER 85-1954] p 859 A85-45940

**ADAPTATION**
Assessment of lift- and blockage-induced wall interference in a three-dimensional adaptive-wall tunnel p 83 N85-12016
A data base for three-dimensional all-interference code evaluation p 83 N85-12017

**ADAPTIVE CONTROL**
Adaptive fuel control for helicopter applications p 110 A85-14049
Analysis and synthesis of radio-electronic complexes --- Russian book p 124 A85-14631
Generalized adaptive-wall wind tunnels
[AIAA PAPER 85-0225] p 274 A85-19601
Predicted performance benefits of an adaptive digital engine control system on an F-15 airplane
[AIAA PAPER 85-0255] p 263 A85-19801
Application of an adaptive blade control algorithm to a gust alleviation system p 269 A85-20143
Escape system operation through adaptive control p 331 A85-22769
Dual control guidance for simultaneous identification and interception
[AD-A154607] p 407 A85-27510
Digital simulation of adaptive guidance and control system of a homing missile p 409 A85-28604
Development of a velocity control algorithm for controlling a 6-DOF captive trajectory model support p 427 A85-29567
Radar signal processing p 599 A85-34443
Adaptive control of an elastic rotor with a magnetic bearing p 600 A85-36321
An approach to adaptive autopilot synthesis, with stabilization of a single-rotor helicopter used as an example p 584 A85-38573
Integrated flight/propulsion control - Adaptive engine control system mode
[AIAA PAPER 85-1425] p 669 A85-39772
An adaptive guidance algorithm for aerospace vehicles
[AIAA PAPER 85-1917] p 850 A85-45921
A second order adaptive controller for wing flutter control
[AIAA PAPER 85-1965] p 828 A85-45949
Stability of adaptive control algorithms - Theoretical examination and simulation for F-4 flight control
[AIAA PAPER 85-1966] p 845 A85-45965
An adaptive control of an electro-hydraulic position control system p 893 A85-47702
Adaptive operation of escape systems - A look at design requirements p 884 A85-49945
Research on optimal control, stabilization and computational algorithms for aerospace applications
[NASA-CR-174318] p 303 N85-17603
Automatic flight control modes for the AFTI/F-111 mission adaptive wing aircraft p 680 N85-27909
Research on optimal control, stabilization and computational algorithms for aerospace applications
[NASA-CR-172528] p 776 N85-29970
Fixed gain and adaptive techniques for rotorcraft vibration control
[NASA-CR-177344] p 819 N85-33111

**ADAPTIVE FILTERS**
A real time (on line) adaptive target detection technique for an airborne millimeter wave seeker design p 347 A85-24267
Nonlinear and adaptive filters for aircraft tracking --- German thesis p 485 A85-31848
Adaptive noise cancellation in a fighter cockpit environment
[AD-A153178] p 749 A85-41321

**ADDITIVES**
Jet fuel instability mechanisms
[NASA-CR-175856] p 690 N85-28127

**ADHESIVE BONDING**
Acoustic fatigue life of adhesive bonded structures subjected to acoustic loads p 51 A85-12472
Improved surface preparation of AM355 for adhesive bonding p 180 A85-15999
Bonded repairs to surface flaws — by adhesive BFRP patching p 137 A85-16245
Use of structural adhesives in aircraft turbine engine nacelles p 382 A85-27600

Surface characterization of anodic oxides on aluminum alloys by means of surface potential difference, surface impedance and surface morphology p 442 A85-27906

Design of an adhesive lap joint p 444 A85-29142

Aeronautical applications of adhesive bonding p 384 A85-29854

Reducing the effects of rivet holes on fatigue life by adhesive bonding p 693 A85-37472

The bonding of materials for propulsion systems p 687 A85-39175

Fracture toughness of adhesively bonded joints p 688 A85-39492

Ultrasonic weld bonding of primary structures p 853 A85-43546

Bonded repair of damage p 910 A85-50063

Adhesive joint formation under field conditions [AD-D011478] p 365 N85-19153

**ADHESIVES**

A thermoplastic polyimidesulfone — synthesis of processable and solvent resistant system p 282 A85-21483

Ageing of structural film adhesives - Changes in chemical and physical properties and the effect on joint strength p 434 A85-27913

An overview of structural repair adhesives p 686 A85-37407

The bonding of materials for propulsion systems p 687 A85-39175

Adhesive sealing for integral fuel tanks [SAWE PAPER 1573] p 901 A85-49901

Elastomer toughened polyimide adhesives — bonding metal and composite material structures for aircraft and spacecraft [NASA-CASE-LAR-12775-2] p 437 N85-21349

**ADSORPTION**

Kinetics of a gas adsorption compressor p 438 A85-26504

**AERIAL EXPLOSIONS**

The AH-64A nitrogen inerting system [AIAA PAPER 84-2480] p 106 A85-13557

**AERIAL PHOTOGRAPHY**

Depth of field for SAR with aircraft acceleration p 91 A85-12664

Detection of moving vehicles in thermal imagery obtained from a moving platform p 367 A85-24264

Evaluation of aircraft MSS analytical block adjustment p 439 A85-26641

[NASA-CR-166078] p 738 N85-29917

High Reynolds number tests of a NASA SC(3)-0712(B) airfoil in the Langley 0.3-meter transonic cryogenic tunnel
[NASA-TM-86371] p 740 N85-29926

Two approaches for the prediction of plume-induced separation
[AD-A154096] p 741 N85-29935

Low-speed tests of a high-aspect-ratio, supercritical-wing transport model equipped with a high-lift flap system in the Langley 4- by 7-meter and Ames 12-foot pressure tunnels
[NASA-TP-2097] p 742 N85-31010

Real scale test of the Petit Canard aircraft in the number 3 section, 47 sqm, of the SIMA wind tunnel, May 1984
[ONERA-PV-1/0772-GY] p 743 N85-31018

Aerodynamic measurement of the wind flow in the number two section of the SIMA wind tunnel
[ONERA-PV-1/8138-GY] p 743 N85-31019

Compendium of unsteady aerodynamic measurements, addendum 1
[AGARD-R-702-ADD-1] p 744 N85-31028

Heat transfer in aeropropulsion systems
[NASA-TM-87088] p 798 N85-31444

Quest for performance: The evolution of modern aircraft
[NASA-SP-468] p 811 N85-32089

Flight control system for a computer controlled aircraft with limited sensors
[AD-A156107] p 600 N85-32115
The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers
[GU-AERO-8410] p 674 N85-34121
AERODYNAMIC COEFFICIENTS
Drag and aeroacoustic noise characteristics generated by surfaces featuring coupled roughness and blowing
p 48 A85-11620
Determination of aircraft propulsive efficiency and drag using steady state measurements and Lock's propeller model
[AIAA PAPER 84-2500] p 109 A85-13571
Computation of unsteady aerodynamic pressure coefficients in a transonic straight cascade
p 79 A85-14893
Calculation of the aerodynamic characteristics of a wing p 142 A85-17066
Compressible lifting surface theory for propeller performance calculation p 143 A85-1[illegible]508
Aerodynamics of an aspect ratio 8 wing at low Reynolds numbers
[AIAA PAPER 85-0278] p 217 A85-19630
Correlation of airfoil icing relationships with two-dimensional model and full scale rotorcraft icing test data
[AIAA PAPER 85-0337] p 240 A85-19680
Determination of rarefied-flow aerodynamics of the Shuttle orbiter from flight measurements on STS-6 and STS-7
[AIAA PAPER 85-0347] p 219 A85-19686
Analytical determination of propeller performance degradation due to ice accretion
[AIAA PAPER 85-0339] p 264 A85-20867
Nonreflecting boundary conditions for the complete unsteady transonic small-disturbance equation
p 290 A85-21875
Extremum problem concerning a wing with a maximum gradient of lift force p 234 A85-22370
A method for flight-test determination of propulsive efficiency and drag p 411 A85-26757
The functional structure of the aerodynamic coefficients of a parachute due to symmetry p 471 A85-31451
Numerical computation of extended Kalman filter and its application to aerodynamic parameter identification of reentry satellite p 610 A85-35796
Aerodynamic hysteresis in stationary separated flow past elongated bodies p 552 A85-35881
The evaluation of aerodynamic coefficients for projectiles fired from a hovering helicopter
p 618 A85-37203
Hypersonic gas dynamics
[AIAA PAPER 85-0999] p 621 A85-37643
Engine inlet interaction with a prop-fan propulsion system
[SAE PAPER 841478] p 627 A85-39058
Investigation of transonic inlet drag characteristics
[SAE PAPER 841539] p 627 A85-39063
Aerodynamics of an aspect ratio 8 wing at low Reynolds numbers p 628 A85-39223
Propellant options for long duration, high altitude unmanned aircraft
[AIAA PAPER 85-1326] p 689 A85-39727
The development of the generalized escape system simulation program
[ASME PAPER 84-WA/DGC-20] p 651 A85-39869
Rotor dynamics simulation - A new approach
[AIAA PAPER 85-1739] p 754 A85-40585
Flow past blunt obstacles of circular section placed on a plane boundary p 723 A85-40962
Optimization of cascade blade mistuning. I - Equations of motion and basic inherent properties
p 771 A85-42365
Aerodynamic characteristics of a circulation control elliptical airfoil with two blown jets p 816 A85-45834
Fitting aerodynamic forces in the Laplace domain: An application of a nonlinear nongradient technique to multilevel constrained optimization
[NASA-TM-86317] p 12 N85-10917
An investigation of vortex-induced aerodynamic characteristics of supersonic cruise configurations
[NASA-CR-174299] p 234 N85-15690
Transport processes in the upper atmosphere
p 454 N85-20375
Unsteady aerodynamic characterization of a military aircraft in vertical gusts
[NASA-TM-77810] p 396 N85-21110
Flight-measured laminar boundary-layer transition phenomena including stability theory analysis
[NASA-TP-2417] p 396 N85-21118
Low-speed characteristics of a circulation control airfoil with AFT camber and a spiral trailing edge
[AD-A150851] p 481 N85-23725
Design of apparatus for the determination of aerodynamic drag coefficients of automobiles
[AD-A151842] p 558 N85-25219
A study of transonic flutter of a two-dimensional airfoil using the U-g and p-k methods
[AD-A151463] p 585 N85-25268
Wind tunnel wall interference
[AD-A151212] p 593 N85-25273
La Recherche Aerospatiale Bimonthly Bulletin Number 1984-3, 220/May-June
[ESA-TT-882] p 543 N85-26636
Measurements of the symmetric aerodynamic coefficients for flat faced cylinders in the angle of attack regime 0 to 90 deg for transonic and supersonic speeds
[FFA-TN-1984-04] p 561 N85-26675
Subsonic and transonic aerodynamics of a wraparound fin configuration
[AD-A153646] p 637 N85-28927
AERODYNAMIC CONFIGURATIONS
Propulsive efficiency of vibrating bodies in a subsonic gas flow p 2 A85-10111
An introduction to theoretical and computational aerodynamics — Book p 8 A85-12624
Mass flux boundary conditions in linear theory
p 73 A85-12726
Numerical solutions of the Euler equations for complex three-dimensional aerodynamic configurations
[AIAA PAPER 84-2399] p 74 A85-13509
Design parameters for flow energizers — highly swept strakes mounted above lifting surfaces
[AIAA PAPER 84-2499] p 74 A85-13570
The value of wind tunnel tests in student design projects
[AIAA PAPER 84-2529] p 101 A85-13588
Evaluation of missile aerodynamic characteristics using rapid prediction techniques p 80 A85-15505
Optimization of the aerodynamic characteristics of caret wings at supersonic flight speeds p 140 A85-16182
Aerodynamics of an airfoil in ground effect with a jet issuing from its undersurface
[AIAA PAPER 85-0019] p 207 A85-19461
Effects of covering configurations on ultralight wing aerodynamics
[AIAA PAPER 85-0277] p 217 A85-19629
Aerodynamic configured missiles - Promise and future
[AIAA PAPER 85-0345] p 248 A85-19684
Regarding parametric investigations of slender cone nose bluntness effects
[AIAA PAPER 85-0349] p 220 A85-19688
TRO-2D - A code for rational transonic aerodynamic optimization
[AIAA PAPER 85-0425] p 223 A85-19740
Design of aerodynamic bodies using artificial intelligence/expert system technique
[AIAA PAPER 85-0112] p 301 A85-20858
Optimal control of flow of a viscous incompressible fluid p 290 A85-22105
Shaped optimization of the subsonic profiles of axial-flow turbine cascades p 315 A85-24028
Numerical calculation of rotor performances in real flight configurations
[ONERA, TP NO. 1985-13] p 388 A85-27892
Optimal aerodynamic configurations in a twisted hypersonic gas flow p 389 A85-28390
Nonlinear conical flow — Book p 544 A85-34273
Design parameters for flow energizers — of general aviation aircraft p 547 A85-35562
Oblique wing ready for research aircraft
p 573 A85-36149
Software-engineering elements in the problem of the optimal design of lift systems for flight vehicles
p 646 A85-37323
The drag of simple shaped bodies in the rarefied hypersonic flow regime
[AIAA PAPER 85-0998] p 621 A85-37642
Transitional, hypervelocity aerodynamic si[illegible]ion and scaling in light of recent flight data
[AIAA PAPER 85-1028] p 621 A85-37661
Hovercraft skirt design and manufacture
p 694 A85-38233
Development in UK rotor blade technology
p 615 A85-38236
Configuration of shock waves closing a local supersonic zone p 623 A85-38481
An application of source-panel and vortex methods for aerodynamic solutions of airship configurations
[AIAA PAPER 85-0874] p 624 A85-38789
Investigation on configurations in longitudinal direction wind-tunnel testing of forward swept wings
p 625 A85-38969
Application of 3-D flow computations to gas turbine aerodynamic design
[AIAA PAPER 85-1216] p 630 A85-39659
Aerodynamic-design trends for commercial aircraft
[DGLR PAPER 84-082] p 709 A85-40302
Computation of unsteady transonic aerodynamics with steady state fixed by truncation error injection
[AIAA PAPER 85-1644] p 715 A85-40744
Flow simulations using Euler equations for nacelle-propeller configurations in a wind tunnel environment
[AIAA PAPER 85-1678] p 716 A85-40765
Unsteady transonic flow calculations for interfering lifting surface configurations
[AIAA PAPER 85-1711] p 719 A85-40783
A 3-D chimera grid embedding technique
[AIAA PAPER 85-1523] p 802 A85-40955
Overset grids in compressible flow
[AIAA PAPER 85-1524] p 803 A85-40956
Rotor system design - An adventure in compromise
p 756 A85-41069
Quick geometry generation and surface mesh partition for arbitrary 3-D bodies p 759 A85-43242
Supersonic aerodynamic characteristics of some reentry concepts for angles of attack up to 90 deg
[AIAA PAPER 85-1795] p 812 A85-43849
Aerodynamic models for propellers for fast aircraft
[ONERA, TP NO. 1985-55] p 868 A85-47301
How autopilot requirements constrain the aerodynamic design of homing missiles p 894 A85-47717
The subsonic near-wake of an axisymmetric semielliptical afterbody p 869 A85-48534
Inlet and airframe compatibility for a V/STOL fighter/attack aircraft with top-mounted inlets
[NASA-TM-84252] p 10 N85-10015
Experimental data base for computers program assessment. Report of the Fluid Dynamics Panel Working Group 04: Addendum
[AGARD-AR-138-ADD] p 11 N85-10020
DFVLR rotorcraft: Construction and engineering
[NASA-TM-77740] p 19 N85-10035
Stress-derivative control of keystoning deformation in finite element codes p 54 N85-10385
PAN AIR: A computer program for predicting subsonic or supersonic linear potential flows about arbitrary configurations using a higher order panel method. Volume 3: Case manual (version 1.0)
[NASA-CR-3253] p 13 N85-10922
Role of research aircraft in technology development
[NASA-TM-85913] p 21 N85-10932
Energy efficient engine ICLS Nacelle detail design report
[NASA-CR-167870] p 34 N85-10993
Simulator study of flight characteristics of several large, dissimilar, cargo transport airplanes during approach and landing
[NASA-TP-2357] p 36 N85-11002
Comparative flow calculation on transonic cone/cylinder standard models in connection with the wall interference problem
[FW-FO-1689] p 88 N85-12878
The preliminary checkout, evaluation and calibration of a 3-component force measurement system for calibrating propulsion simulators for wind tunnel models
[NASA-CR-174113] p 118 N85-12903
An overview of some monoplanar missile programs
[NASA-TM-86330] p 138 N85-14786
The aerodynamics of some guided projectiles
[NASA-TM-86334] p 138 N85-14788
F-7 supersonic day fighter viewed — Jian-7 aircraft
p 139 N85-14791
A-5 supersonic attack aircraft described — Qiang-5 aircraft p 139 N85-14792
Hypersonic flow of mixture around blunt body
p 148 N85-14979
A collection of flow visualization techniques used in the Aerodynamic Research Branch
[NASA-TM-85998] p 189 N85-15135
Systems study for an Integrated Digital-Electric Aircraft (IDEA)
[NASA-CR-3840] p 255 N85-15714
Aircraft drag reduction technology
p 257 N85-16782
Theoretical study of boundary-layer control
p 237 N85-16784
Aerodynamic-structural study of canard wing, dual wing, and conventional wing systems for general aviation applications
[NASA-CR-172529] p 238 N85-16829
Study of winglets applied to biplanes
[NASA-TM-86350] p 258 N85-16862
Generation of 3-dimensional body fitted coordinates using hyperbolic partial differential equations
[AD-A148059] p 327 N85-18006
The S2MA wind tunnel at the Modane-Avrieux aerodynamic test center
[ESA-TT-862] p 361 N85-18071
Effects of airfoil shape, thickness, camber, and angle of attack on calculated transonic unsteady airloads
[NASA-TM-86320] p 328 N85-18957

Parametric study of a canard-configured transport using conceptual design optimization
[NASA-TP-2400] p 415 N85-19979
Semianalytic modeling of aerodynamic shapes
[NASA-TP-2413] p 398 N85-21120
Calculation of vortex-flap aerodynamic characteristics
[NASA-CR-175624] p 476 N85-22367
The generation of three-dimensional body-fitted coordinate systems for viscous flow problems
[AD-A150861] p 536 N85-24848
Experience with transonic unsteady aerodynamic calculations p 554 N85-25176
Automatic Dynamic Aircraft Modeler (ADAM) for the computer program NASTRAN p 604 N85-25875
Computational aerodynamics in designing aircraft
p 576 N85-26622
Numerical example of three-dimensional flying object in shockless transonic flow p 558 N85-26623
Navier-Stokes solution of hypersonic blunt-nosed body flowfields p 558 N85-26624
Recent progress in computational aerodynamics
p 558 N85-26626
Computational aerodynamics for aircraft wing design
p 576 N85-26627
Comparison of computational results of a few representative three-dimensional transonic potential flow analysis programs p 559 N85-26628
A numerical design method for three-dimensional transonic wings p 577 N85-26631
ESP (External-Stores Program): A pilot computer program for determining flutter-critical external-store configurations. Volume 1: User's manual
[AD-A152268] p 587 N85-26725
ESP (External-Stores Program): A pilot computer program for determining flutter-critical external-store configurations. Volume 2: Final report on program enhancement and delivery
[AD-A152269] p 587 N85-26726
ESP (External-Stores Program): A pilot computer program for determining flutter-critical external-store configurations. Volume 3, part 1: Program compilation
[AD-A152270] p 588 N85-26727
The evaluation of ACS for helicopters: Conceptual simulation studies to preliminary design
p 589 N85-26737
Supersonic aerodynamic characteristics of canard, tailless, and aft-tail configurations for 2 wing planforms
[NASA-TP-2434] p 634 N85-27822
Static and dynamic pressure measurements on a NACA 0012 airfoil in the Ames High Reynolds Number Facility
[NASA-TP-2485] p 634 N85-27823
Methods for design aerodynamics of modern transport aircraft
[DFVLR-FB-85-05] p 636 N85-27838
Addition of flexible body option to the TOLA computer program, part 1
[NASA-CR-132732-1] p 652 N85-27855
The flight control system for the Experimental Aircraft Programme (EAP) demonstration aircraft
p 660 N85-27906
Propulsion efficiency of vibrating bodies in subsonic gas stream p 699 N85-28159
Nonlinear potential analysis techniques for supersonic-hypersonic configuration design
[NASA-CR-166078] p 738 N85-29917
Compendium of unsteady aerodynamic measurements, addendum 1
[AGARD-R-702-ADD-1] p 744 N85-31028
Data set 8: ZKP wing, oscillating aileron
p 744 N85-31029
Data set 9: LANN wing. Pitching oscillation
p 744 N85-31030
Recent developments in rotary-balance testing of fighter aircraft configurations at NASA Ames Research Center
[NASA-TM-86714] p 811 N85-32090
Wind tunnel drag evaluations of helicopter nose sections
[AD-A155489] p 818 N85-32100
Study of an efficient long-range Mach 2.7 supersonic transport configuration concept
[NASA-TM-86414] p 829 N85-32110
Aerodynamic characteristics of a distinct wing-body configuration at Mach 6: Experiment, theory, and the hypersonic isolation principle
[NASA-TP-2467] p 818 N85-33107
Energy efficient transport technology: Program summary and bibliography
[NASA-RP-1135] p 830 N85-33116
Proceedings of the 14th Army Science Conference. Volume 2: Principal authors I through O
[AD-A149201] p 919 N85-35690

AERODYNAMIC DRAG

Drag and aeroacoustic noise characteristics generated by surfaces featuring coupled roughness and blowing
p 48 A85-11620
NASA research on viscous drag reduction II
p 48 A85-11624
Induced drag and lift of wing by the piecewise continuous kernel function method p 6 A85-11976
Determination of aircraft propulsive efficiency and drag using steady state measurements and Lock's propeller model
[AIAA PAPER 84-2500] p 109 A85-13571
The aerodynamics of three-surface airplanes
[AIAA PAPER 84-2508] p 101 A85-13577
The aerodynamic drag characteristics of the Lochkegelleitwerk p 75 A85-13698
Steady base flows p 76 A85-14008
Wing tip sails which give lower drag at all normal flight speeds p 79 A85-14854
The measurements of drag resulting from small surface irregularities immersed in turbulent boundary layers
p 126 A85-15937
Turbulent roughness drag due to surface waviness at low roughness Reynolds numbers p 161 A85-16243
New tricks for cutting drag p 143 A85-18434
Crossflow drag of finite-length rectangular wing-bodies
[AIAA PAPER 85-0451] p 224 A85-19760
Drag prediction for projectiles and finned bodies in incompressible flow
[AIAA PAPER 85-0104] p 230 A85-20854
Drag of the fundamental shapes of parachutes
p 231 A85-20998
Aerodynamic effects of probe-induced flow separation of bluff bodies at transonic Mach numbers
[AIAA PAPER 85-0103] p 322 A85-25382
A method for flight-test determination of propulsive efficiency and drag p 411 A85-26757
Vector optimization of aircraft deceleration in air
p 423 A85-27795
Variational problems of gas dynamics - Formulations, methods of solution, and the relationship between exact and approximate approaches p 368 A85-28382
Investigation of drag and heat transfer for nonuniform supersonic flow past a body in the cases of laminar and turbulent regimes p 388 A85-28387
An analysis of the resistance of two disks in turbulent flow of an incompressible fluid p 390 A85-28466
A method for computing the drag rise Mach number for any aerofoil section p 472 A85-31781
Investigations into the effects of scale and compressibility on lift and drag in the RAE 5m pressurised low-speed wind tunnel p 592 A85-34999
A method for the estimation of jet interferences
p 549 A85-35751
Lift and drag of airfoils in nonuniform supersonic stream p 618 A85-37200
Transitional, hypervelocity aerodynamic simulation and scaling in light of recent flight data
[AIAA PAPER 85-1028] p 621 A85-37661
The effect of the bluntness shape on the drag coefficient of a body in hypersonic flow of a rarefied gas
p 624 A85-38564
Aerodynamic test results for a wing-mounted turboprop propulsion installation
[SAE PAPER 841480] p 627 A85-39060
Investigation of transonic inlet drag characteristics
[SAE PAPER 841539] p 627 A85-39063
Theoretical considerations in the aerodynamic effectiveness of winglets p 628 A85-39224
A simulation technique for jet temperature effects on nozzle-afterbody drag at transonic Mach numbers
[AIAA PAPER 85-1463] p 633 A85-39792
Base pressure control by passive methods
[AIAA PAPER 85-1620] p 714 A85-40727
Flow past blunt obstacles of circular section placed on a plane boundary p 723 A85-40982
Drag reduction by means of controlled separated flows
[AIAA PAPER 85-1800] p 813 A85-43853
The theoretical minimum induced drag of three-surface airplanes in trim p 894 A85-49126
Propulsive efficiency and aircraft drag determined from steady state flight test data
[SAE PAPER 850872] p 885 A85-50107
Optimum design of nonplanar wings: Minimum induced drag for a given lift and wing root bending moment
[NAL-TR-797] p 9 N85-10011
Airworthiness and Flight Characteristics (A and FC) test of the EH - 1X/EH - 1H helicopter configurations
[AD-A144881] p 20 N85-10039
A comparison of Wortmann airfoil computer-generated lift and drag polars with flight and wind tunnel results
[NASA-TM-86035] p 87 N85-12866
Investigations into the effects of scale and compressibility on lift and drag in the RAE 5m pressurized low-speed wind tunnel p 236 N85-16773
An optimization method for the preliminary design of interplanetary aerobraking missions p 238 N85-16822
Profile design for wings and propellers
[NASA-TM-77785] p 328 N85-18953
Hypothetical zero yaw drag trajectory of spinning projectiles between M = 5 and M = 10
[AD-A148899] p 329 N85-18963
Techniques to analyze vehicle coastdown data
[DE85-005159] p 399 N85-21127
Determination of the drag of free flying particles in supersonic flow with a pulsed laser p 400 N85-21129
Technical evaluation report on the FDP Symposium on Flight Test Techniques
[AGARD-AR-208] p 417 N85-21157
Investigations into the effects of scale and compressibility on lift and drag in the RAE 5m pressurised low-speed wind tunnel
[RAE-TM-AERO-2008] p 477 N85-22372
Investigation of the Vortex Tab
[NASA-CR-172586] p 557 N85-25209
Flow past a flat plat with a vortex/sink combination
[JIAA-TR-58] p 558 N85-25215
Design of apparatus for the determination of aerodynamic drag coefficients of automobiles
[AD-A151842] p 558 N85-25219
The development of a performance and mission planning program for the A-7E aircraft
[AD-A151717] p 576 N85-25258
A computer program for the drag prediction of subsonic, turbine powered aircraft in the en-route configuration
[VTH-LR-412] p 581 N85-2668
Aerodynamic performance of a wing in ground effect using the PANAIR program
[AD-A153303] p 635 N85-27832
Ice shapes and the resulting drag increase for a NACA 0012 airfoil
[NASA-TM-83556] p 641 N85-27839
SANDRAG: A computer code for predicting drag of bodies of revolution at zero angle of attack in incompressible flow
[DE85-011170] p 804 N85-30684
Wind tunnel drag evaluations of helicopter nose sections
[AD-A155489] p 818 N85-32100
The influence of helicopter tail shape on drag: An aerodynamic study using a low speed wind tunnel
[AD-A156304] p 876 N85-35174

AERODYNAMIC FORCES

Theoretical study of two dimensional stall in an incompressible flow
[ONERA, TP NO. 1984-63] p 7 A85-12612
Design of asymmetric nozzles of maximum moment under additional conditions on geometric and force characteristics p 140 A85-16184
Estimation of aerodynamic forces and moments on a steadily spinning airplane p 170 A85-16238
Body flow field simulation and force/moment prediction at transonic speeds
[AIAA PAPER 85-0423] p 222 A85-19738
Calculation of the hydrodynamic characteristics of polyplanes p 290 A85-22113
Aerodynamic force measurements in the IISc hypersonic shock tunnel p 320 A85-25481
The computation of second-order accurate unsteady aerodynamic generalized forces
[AIAA PAPER 85-0597] p 469 A85-30326
Lift and drag of airfoils in nonuniform supersonic stream p 618 A85-37200
Perturbed motion of airplane and safe store separation p 674 A85-38168
An experimental investigation of the aerodynamic effects on a body of revolution in turning flight
[AIAA PAPER 85-0866] p 624 A85-38782
A discussion on lift and moment characteristics of aerofoils in incompressible potential flows
p 730 A85-42441
Estimation of stochastic gust loads, taking into consideration unsteady air forces p 815 A85-44268
Unsteady aerodynamic forces induced by aeroelastic vibrations of a turbojet engine in a nacelle
[ONERA, TP NO. 1985-56] p 880 A85-47302
On rolling resonance and small asymmetrical aerodynamic force of re-entry body p 873 A85-49708
Integral equation of lifting surfaces in Laplace domain and analytic continuation of its pressure kernel
[NAL-TR-795T] p 9 N85-10009
Fitting aerodynamic forces in the Laplace domain: An application of a nonlinear nongradient technique to multilevel constrained optimization
[NASA-TM-86317] p 12 N85-10917
Force and moment measurements on a 74 deg delta wing with an apex flap
[NASA-CR-166081] p 12 N85-10918
Unsteady aerodynamic response of cascades and turborotors p 112 N85-12058
Effect of a variable camber and twist wing at transonic Mach numbers
[NASA-TM-86281] p 87 N85-12869

A preliminary study of using a strain-gauged balance and parameter estimation techniques for the determination of aerodynamic forces on a model in a very short duration wind tunnel
[AD-A146473] p 190 N85-15145

An exploratory study of finite difference grids for transonic unsteady aerodynamics
[NASA-TM-84583] p 235 N85-15686

Theoretical study of non-linear unsteady aerodynamics of a non-rigid lifting body
[AD-P004169] p 325 N85-17954

Experimental study of aerodynamic shielding of turbojet engine air intake against exhaust gases
p 355 N85-18210

Flight dynamics of axisymmetrical rotating bodies in air medium p 477 N85-22791

Estimating unsteady aerodynamic forces on a cascade in a three-dimensional turbulence field
[NASA-TM-86701] p 478 N85-23704

Investigation of the aerodynamic forces on bluff bodies at high Reynolds numbers
[DFVLR-MITT-84-19] p 481 N85-23727

Effect of drag behind nozzle array on its force and energy characteristics p 481 N85-24107

Calculation of harmonic aerodynamic forces of aerofoils and wings from the Euler equations p 554 N85-25177

Application of CFD techniques toward the validation of nonlinear aerodynamic models
[NASA-TM-86715] p 560 N85-26671

Preliminary wind tunnel study of the influence of a jet on the unsteady aerodynamics of a turbojet engine
[ONERA-RT-12/5115-RY-230-R-] p 561 N85-26679

Flow around rotating and nonmoving circular cylinder near flat screen. Report 1: Aerodynamic forces in cylinder p 582 N85-27059

Aerodynamic forces developing in channels between vanes in turbine drive wheels p 608 N85-27062

Turbine blade-tip clearance excitation forces
[NASA-CR-171534] p 773 N85-29963

AERODYNAMIC HEAT TRANSFER

Numerical analysis of heat transfer on the surface of a delta wing in hypersonic air flow at large angles of attack p 141 A85-16190

Investigations of the longitudinal flow in corner configurations in the hypersonic regime. II - Corners between swept wedges p 232 A85-22146

Pitot pressure and heat transfer measurements in hydrazine thruster plumes
[AIAA PAPER 85-0934] p 685 A85-37599

Stability of a stationary solution to the ablation equation p 623 A85-38555

Experimental investigation of heat transfer distribution inside the gap of a flat plate-flap combination in a shock tunnel p 695 A85-38973

Engineering flowfield method with angle-of-attack applications p 731 A85-42913

Unsteady transonic heat transfer in a transient facility
[NASA-CR-176145] p 910 N85-34354

Mach 14 flow restrictor thermal stress analysis
[AD-A156215] p 898 N85-35208

AERODYNAMIC HEATING

Two-dimensional deforming finite element methods for surface ablation p 365 A85-25147

Effect of variable surface catalysis on heating near the stagnation point of a blunt body
[AIAA PAPER 85-0248] p 323 A85-26336

Thermoluminescence studies on Jilin meteorite
p 463 A85-28043

A synthesizing procedure for transient temperatures in composed structures
[AIAA PAPER 85-0830] p 523 A85-30319

Analysis of aerothermal loads on spherical dome protuberances p 473 A85-32602

Refinement of an 'alternate' method for measuring heating rates in hypersonic wind tunnels
p 516 A85-32625

A review of some approximate methods used in aerodynamic heating analyses
[AIAA PAPER 85-0906] p 620 A85-37580

Measurement of wing-leading-edge heating rates on wind tunnel models using the thin-film technique
[AIAA PAPER 85-0972] p 681 A85-37622

Transitional, hypervelocity aerodynamic simulation and scaling in light of recent flight data
[AIAA PAPER 85-1028] p 621 A85-37661

Measured and predicted vortex-induced leeward heating on a biconic at Mach 6 and 10
[AIAA PAPER 85-1061] p 621 A85-37675

Dynamic behaviour of cold wires in heated airflows (T in the range from 300 to 600 K) p 694 A85-38069

Stability of a stationary solution to the ablation equation p 623 A85-38555

Experimental investigation of heat transfer distribution inside the gap of a flat plate-flap combination in a shock tunnel p 695 A85-38973

Finite element methods for high speed flows
[AIAA PAPER 85-1533] p 731 A85-40963

Aerodynamic heating rate distributions induced by trailing edge controls on hypersonic aircraft configurations at Mach 6
[NASA-TM-87453] p 476 N85-22370

Navier-Stokes solution of hypersonic blunt-nosed body flowfields p 558 N85-26624

Unsteady heat transfer due to time-dependent free stream velocity p 699 N85-27947

SRB thermal protection systems materials test results in an arc-heated nitrogen environment
[NASA-CR-170881] p 902 N85-35236

Results of tests of weathered K5NA closeout material in the MSFC Hot Gas Facility
[NASA-CR-170893] p 902 N85-35239

Study of NSI and related cable performance during tests performed in the NASA Hot Gas Facility
[NASA-CR-170886] p 912 N85-35423

AERODYNAMIC INTERFERENCE

Noise of counter-rotation propellers
[AIAA PAPER 84-2305] p 63 A85-10856

Economical influence function calibrations using the distributed loads code — for prediction of store loads in aircraft interference flowfield
[AD-A158490] p 158 A85-18518

Theoretical study of blockage effect of wind-tunnel wall on wake of two-dimensional flat plate normal to plane wall p 272 A85-19402

Experimental investigation of blockage effect of upper wall of wind-tunnel of wake of two-dimensional flat plate normal to plane boundary p 272 A85-19403

The use of panel methods for the development of low-subsonic wall interference and blockage corrections
[AIAA PAPER 85-0159] p 212 A85-19556

Ground interference effects on subsonic dynamic stall in pitch and plunge p 231 A85-21841

A slotted test section numerical model for interference assessment p 428 A85-26759

An asymptotic analysis of transonic wind-tunnel interference based on the full potential theory
p 394 A85-30171

Unsteady transonic flow calculations for two-dimensional canard-wing configurations with aeroelastic applications
[AIAA PAPER 85-0585] p 468 A85-30320

Exact solution for wind tunnel interference using the panel method p 591 A85-34734

Wall-interference calculation of wind tunnel with octagonal sections using conformal mapping method
p 592 A85-35750

Shading and interference effects during the rotation of a plate — in aerodynamics p 624 A85-38559

An integral method of wall interference correction for low speed wind tunnel p 682 A85-38962

Noise of counter-rotation propellers
p 705 A85-39220

Computer studies of hybrid slotted working sections with minimum steady interference at subsonic speeds
p 628 A85-39241

Comparison of advanced turboprop installation on swept and unswept supercritical wings at transonic speeds
[AIAA PAPER 85-1264] p 630 A85-39686

The interaction of a diffusing line vortex and an aligned shear flow p 788 A85-40254

The representation of aircraft-external store-interferences under supersonic conditions
[DGLR PAPER 84-112] p 709 A85-40328

Unsteady transonic flow calculations for interfering lifting surface configurations
[AIAA PAPER 85-1711] p 719 A85-40783

Assessment of wind tunnel corrections for multielement airfoils at transonic speeds p 734 A85-42968

Effects of a central fence on upwash flows
p 817 A85-45839

Experimental results on edge-tone oscillations in high-speed subsonic jets p 918 A85-48527

Wind Tunnel Wall Interference Assessment and Correction, 1983
[NASA-CP-2319] p 82 N85-12011

Wall interference measurements for three-dimensional models in transonic wind tunnels: Experimental difficulties p 82 N85-12012

Survey of ONERA activities on adaptive-wall applications and computation of residual corrections
p 82 N85-12013

Wind tunnel wall interference in closed, ventilated and adaptive test sections p 82 N85-12014

Two- and three-dimensional model and wall data from a flexible-walled transonic test section
p 82 N85-12015

Assessment of lift- and blockage-induced wall interference in a three-dimensional adaptive-wall tunnel
p 83 N85-12016

Interference from slotted walls p 84 N85-12026

An interference assessment approach for a three-dimensional slotted tunnel with sparse wall pressure data p 84 N85-12030

Determination of equivalent model geometry for tunnel wall interference assessment/correction
p 85 N85-12031

Adaptation of a four-wall interference assessment/correction procedure for airfoil tests in the 0.3-m TCT p 85 N85-12035

Modeling of propulsive jet plumes--extension of modeling capabilities by utilizing wall curvature effects
[AD-A146262] p 128 N85-12324

Detection, classification, and extraction of helicopter-radiated noise
[AD-A145993] p 134 N85-12661

Flow separation induced by periodic aerodynamic interference
[AD-P004174] p 325 N85-17959

Unsteady transonic flow calculations for two-dimensional canard-wing configurations with aeroelastic applications
[NASA-TM-86375] p 329 N85-18960

Experimental study of main rotor tip geometry and tail rotor interactions in hover. Volume 1. Text and figures
[NASA-CR-177336-VOL-1] p 466 N85-22344

Experimental study of main rotor tip geometry and tail rotor interactions in hover. Volume 2: Run log and tabulated data
[NASA-CR-177336-VOL-2] p 466 N85-22345

Study for prediction of rotor/wake/fuselage interference, part 1
[NASA-CR-177340-VOL-1] p 466 N85-22346

Study for prediction of rotor/wake/fuselage interference. Part 2: Program users guide
[NASA-CR-177340-VOL-2] p 467 N85-22347

F-14A aircraft high-speed flow simulations
[NASA-CR-172559] p 478 N85-23702

Approximate neutral point of a subsonic canard aircraft
[NASA-TM-86894] p 557 N85-25205

Unsteady gas dynamics problems related to flight vehicles
[AD-A151187] p 556 N85-25218

Wind tunnel wall interference
[AD-A151212] p 593 N85-25273

An experimental and analytical study of the aerodynamic interference effects between two Sears-Haack bodies at Mach 2.7
[NASA-TM-86729] p 560 N85-26673

Synthesis study: Validation of a gust generator in the presence of a model in a wind tunnel
[ONERA-RT-16/5108-RY-051] p 561 N85-26678

Adaptive wall wind tunnels and wall interference correction methods
[DFVLR-IB-222-84-A-37] p 683 N85-27912

Effect of ground and/or ceiling planes on thrust of rotors in hover
[NASA-TM-86754] p 743 N85-31014

AERODYNAMIC LOADS

Unsteady loading of leading-edges in unstable flows - An overview
[AIAA PAPER 84-2306] p 4 A85-10857

Measurement of transonic dips in the flutter boundaries of a supercritical wing in a wind tunnel
p 18 A85-11986

A kernel function method for computing unsteady load on three-dimensional wings in transonic flow
p 7 A85-12355

MAGNA analysis of the T-38 aircraft student canopy - Response to in-flight aerodynamic pressure loads
[AIAA PAPER 84-2390] p 97 A85-13503

Fatigue evaluation of helicopter dynamic components used in logging operations
[AIAA PAPER 84-2482] p 100 A85-13558

Effect of airfoil mean loading on convected gust interaction noise
[AIAA PAPER 84-2324] p 133 A85-13955

Theoretical and experimental research to determine load limits for highly loaded axial flow fans — German thesis
p 81 A85-15872

Application of the finite element technique to aerodynamic problems of aircraft p 104 A85-15882

Determination of stresses in elastic aircraft surfaces during motion in unsteady flow p 183 A85-17056

Quasistatic analysis of composite lifting surfaces in incompressible gas flow p 142 A85-17061

Steady and unsteady transonic airloads on a supercritical wing p 143 A85-18509

Economical influence function calibrations using the distributed loads code — for prediction of store loads in aircraft interference flowfield
[AD-A158490] p 158 A85-18518

An improved version of the LTRAN2 for high frequency domain p 205 A85-19401

Inexpensive calibrations for the influence function method using the interference distributed loads code — for prediction of store loads in aircraft flow fields
[AIAA PAPER 85-0270] p 247 A85-19623
Loading characteristics of VTOL aircraft and their effect on the remaining life of the aircraft p 250 A85-20469
A linearized unsteady aerodynamic analysis for transonic cascades p 229 A85-20744
On matching among wind turbines, loads and sites p 374 A85-24090
A simplified model for external loading on an engine nacelle enclosing an engine. I - For the nacelle at a steady incidence p 340 A85-24201
Streamtube expansion effects on the Darrieus wind turbine p 451 A85-27086
Measured and calculated airloads on a transport wing model p 382 A85-28263
Design and experimental investigation of a high-loaded transonic axial model turbine p 421 A85-28895
A new approach to apply the potential gradient method for supersonic unsteady airloads
[AIAA PAPER 85-0596] p 469 A85-30325
Dynamic loads analyses of flexible airplanes - New and existing techniques
[AIAA PAPER 85-0808] p 482 A85-30394
Generalized wake geometry for a helicopter in forward flight and effect of wake deformation on airloads p 472 A85-31996
A study for calculating rotor loads using free vortex concept p 600 A85-35746
Calculation of the flow around thick wings with separation vortices p 550 A85-35769
Natural frequencies and flight loads of composite main rotor blade for helicopter p 647 A85-36351
Unsteady blade row interactions in a multi-stage compressor
[AIAA PAPER 85-1134] p 630 A85-39618
A new finite element approach for prediction of aerothermal loads - Progress in inviscid flow computations
[AIAA PAPER 85-1533] p 722 A85-40984
The determination of load and slope transformation matrices for aeroelastic analyses p 794 A85-42940
Verification of calculation methods for unsteady airloads in the prediction of transonic flutter
[AIAA PAPER 84-0871] p 871 A85-49126
Handheld computer weight and balance computations for military aircraft
[SAWE PAPER 1582] p 877 A85-49907
An experimental study on the induced normal force on tail-fins due to wing-tail interference
[NAL-TR-814] p 104 N85-12051
Low power laminar aircraft structures p 73 N85-12857
Operational loads measurement: A philosophy and its implementation p 253 N85-15665
Navy operational loads data sources and systems p 253 N85-15668

Drag and aeroacoustic noise characteristics generated by surfaces featuring coupled roughness and blowing p 48 A85-11620
The inverse problem of azimuthal correlations of an acoustic far field and modeling of sources of jet noise p 132 A85-12775
Influence of viscosity on aerodynamic sound emission in free space p 132 A85-12880
On the generation of sound by turbulent boundary layer flow over a rough wall p 133 A85-13724
Effect of airfoil mean loading on convected gust interaction noise
[AIAA PAPER 84-2324] p 133 A85-13955
Turbulence characteristics of the noise producing region of an excited round jet. II - Large scale structure characteristics
[AIAA PAPER 84-2342] p 133 A85-13961
Noise generated by a subsonic jet p 134 A85-14895
Theoretical study of helicopter-rotor noise
[ONERA, TP NO. 1984-140] p 134 A85-15856
Investigation of nonlinear effects in the instabilities and noise radiation of supersonic jets
[AIAA PAPER 85-0081] p 304 A85-19507
Scaling of airfoil self-noise using measured flow parameters p 304 A85-21858
Turbulence suppression in free turbulent shear flows under controlled excitation. II - Jet-noise reduction p 366 A85-23844
The shock wave from a supersonic projectile p 319 A85-25467
Near-field frequency-domain theory for propeller noise p 460 A85-29079
Noise testing of an advanced design propeller in the Boeing anechoic test chamber with a relative velocity free jet
[AIAA PAPER 84-2282] p 421 A85-30193
A note on tower wake/blade interaction noise of a wind turbine p 470 A85-30773
Application of a turbulence distortion theory to predict helicopter rotor broadband noise due to inflow turbulence as a function of rotor thrust p 493 A85-31952
Contributions to the finite element solution of the fan noise radiation problem
[ASME PAPER 84-WA/NCA-1] p 537 A85-32954
Aerodynamic sound generation caused by viscous processes p 705 A85-38432
Investigation on reducing the flow noise of the 0.6 m x 0.6 m trisonic wind tunnel p 682 A85-38968
Instabilities and transition in the wall boundary layers of low-disturbance supersonic nozzles
[AIAA PAPER 85-1573] p 712 A85-40697
Mechanisms of acoustical energy transfer by a cylindrical shell near the ring frequency p 861 A85-44039
Noise bands associated with the turbulence-rotor interaction p 862 A85-44046
Calculation of flow in the main part of a supersonic jet with allowance for the influence of the nozzle exit section p 815 A85-44131
Pseudo-noise and noise — in aeronautics p 862 A85-45670
Advanced design propeller noise testing in an anechoic chamber p 836 A85-45889
Parametric analysis of the acoustic power emitted by coaxial jets p 916 A85-46179
Noise constraints effecting optimal propeller designs
[SAE PAPER 850871] p 874 A85-50106
Analysis of noise measured from a propeller in a wake
[NASA-TP-2358] p 65 N85-11786
Noise constraints effecting optimal propeller designs
[NASA-TM-86967] p 394 N85-19923
Noise transmission loss of a rectangular plate in an infinite baffle
[NASA-TP-2398] p 461 N85-22109
Large-scale Advanced Propfan (LAP) performance, acoustic and weight estimation, January, 1984
[NASA-CR-174782] p 476 N85-22368
An experimental study of the noise generated by vaporous cavitation in turbulent shear flows produced by confined orifice plates p 611 N85-26316
La Recherche Aerospatiale Bimonthly Bulletin Number 1984-3, 220/May-June
[ESA-TT-882] p 543 N85-28636
Rotorcraft noise p 705 N85-28916
Nozzle wall roughness effects on free-stream noise and transition in the pilot low-disturbance tunnel
[NASA-TM-86389] p 910 N85-34355
Optimally designed propellers constrained by noise p 892 N85-35196

**AERODYNAMIC STABILITY**
Zeroth-order feedback strategies for medium-range interception in a horizontal plane p 157 A85-18327
A vortex-lattice method for general, unsteady aerodynamics p 144 A85-18511
Flow over double-delta wing and wing body at high alpha p 144 A85-18516
Optimization of flutter characteristics p 288 A85-20828
Characteristic motions for simulation of post-stall manoeuvres and flight instabilities p 269 A85-21679
Effects of friction dampers on aerodynamically unstable rotor stages p 285 A85-21886
Effect of aerodynamic moment on the regime of the gravity gradient stabilization of the Salyut-6 - Soyuz orbital system p 432 A85-28486
Multimode instability prediction method
[AIAA PAPER 85-0737] p 523 A85-30370
Application of the finite-state arbitrary-motion aerodynamics to rotor blade aeroelastic response and stability in hover and forward flight
[AIAA PAPER 85-0763] p 491 A85-30380
Pitch-flap-lag instability of elastic modes of an articulated rotor blade p 496 A85-32003
A possible causative flow mechanism for body rock — nonlinear pitch-yaw-roll coupling in high-performance aircraft p 512 A85-32593
Unstable Jaguar proves active controls for EFA p 583 A85-33426
Aerodynamic characteristics of an airfoil oscillating in transonic flow between parallel walls p 729 A85-41837
A turbine engine aerodynamic model for in-stall transient simulation
[AIAA PAPER 85-1429] p 772 A85-42672
Transition effects of boundary layer on static and dynamic stability of slender cone p 731 A85-42783
A historic review of canard configurations
[AIAA PAPER 85-1803] p 825 A85-43854
A numerical investigation of the aerodynamics of biconic and non-circular flared configurations
[AIAA PAPER 85-1814] p 814 A85-43862
Flight control dynamics of the 1903 Wright Flyer
[AIAA PAPER 85-1804] p 809 A85-43877
Dynamic stall progress in analysis and prediction
[AIAA PAPER 85-1769] p 817 A85-47026
The theoretical minimum induced drag of three-surface airplanes in trim p 894 A85-49128
Some considerations on Aeroelastic instabilities caused by coupling between propeller-type rotor and its supporting structure

**AERODYNAMIC STALLING**

Theoretical study of two dimensional stall in an incompressible flow
[ONERA, TP NO. 1984-83] p 7 A85-12612

Analysis of airfoil leading-edge separation bubbles
[AIAA PAPER 83-0300] p 79 A85-15327

Estimation of aerodynamic forces and moments on a steadily spinning airplane p 170 A85-16238

Numerical study on the dynamic stall process of a NACA 0012 airfoil
[AIAA PAPER 85-0128] p 212 A85-19539

Interrelated effects of pitch rate and pivot point on airfoil dynamic stall
[AIAA PAPER 85-0130] p 212 A85-19541

Is the free flight/wind tunnel equivalence concept valid for unsteady viscous flow?
[AIAA PAPER 85-0378] p 222 A85-19708

Determination of surging line of two-spool axial flow compressor with cropped fan stages at low speed by use of parallel compressor theory p 264 A85-20242

Characteristic motions for simulation of post-stall manoeuvres and flight instabilities p 269 A85-21679

Ground interference effects on subsonic dynamic stall in pitch and plunge p 231 A85-21841

Evaluation of a stalled airfoil analysis program
p 231 A85-21848

Stall warning - Catching it early p 578 A85-36144

Taming the deadly spin p 584 A85-36148

Dynamic overshoot of the static stall angle
p 628 A85-39225

Stall transients of axial compression systems with inlet distortion
[AIAA PAPER 85-1348] p 632 A85-39740

Quantitative evaluation of transient heat transfer on axial flow compressor stability
[AIAA PAPER 85-1352] p 697 A85-39742

Application of system identification techniques to poststall combustor dynamics
[AIAA PAPER 85-1353] p 669 A85-39743

High speed compressor rig as a stall recovery research tool
[AIAA PAPER 85-1428] p 682 A85-39773

Dynamic engine behavior during post surge operation of a turbofan engine
[AIAA PAPER 85-1430] p 669 A85-39774

Unsteady characteristics of an airfoil interacting with a vortical wake
[AIAA PAPER 85-1707] p 718 A85-40780

Application of frequency domain and time domain analysis tools to the analysis of nonrecoverable stall
[AIAA PAPER 85-1350] p 765 A85-40836

Turbofan-engine nonrecoverable stall computer-simulation development and validation
[AIAA PAPER 85-1432] p 765 A85-40840

Stall recovery control strategy methodology and results
[AIAA PAPER 85-1433] p 765 A85-40841

Measurement of the radial flow along a low speed compressor blading during unstalled and stalled operation p 729 A85-41834

Massive separation and dynamic stall on a cusped trailing-edge airfoil p 735 A85-42974

Studies of the flow field near an NACA 4412 aerofoil at nearly maximum lift p 736 A85-42978

Effects of aspect ratio on stall hysteresis for the Wortmann airfoil
[AIAA PAPER 85-1770] p 812 A85-43832

Dynamic stall overshoot of static airfoil characteristics
[AIAA PAPER 85-1773] p 812 A85-43834

Modeling of turbulent flowfields through a cascade of airfoils at stall conditions p 816 A85-45716

Dynamic stall progress in analysis and prediction
[AIAA PAPER 85-1739] p 817 A85-47026

Computed static stall of a supercritical airfoil
p 867 A85-47103

Handling qualities related to stall/spin accidents of supersonic fighter aircraft p 894 A85-49132

Is any free flight/wind tunnel equivalence concept valid for unsteady viscous flow? p 871 A85-49138

Application of the ONERA model of dynamic stall
[NASA-TP-2399] p 87 N85-12862

Flight test results on stall characteristics of a large jet transport
[NAL-TR-817] p 162 N85-14835

Prediction of dynamic stall characteristics using advanced non-linear panel methods
[AD-A148453] p 239 N85-16836

Supermaneuverability
[AD-P004153] p 342 N85-17938

Wing rock flow phenomena
[AD-P004154] p 323 N85-17939

Unsteady stall penetration of an oscillating swept wing
[AD-P004156] p 323 N85-17941

A Navier-Stokes calculation of the airfoil dynamic stall process
[AD-P004163] p 324 N85-17948

Theoretical investigation of dynamic stall using a momentum integral method
[AD-P004170] p 325 N85-17955

Synthesized airfoil data method for prediction of dynamic stall and unsteady airloads
[NASA-CR-3672] p 327 N85-18005

The unsteady boundary layer on an elliptic cylinder following the impulsive onset of translational and rotational motion — dynamic stall p 477 N85-23699

Nonlinear problems in flight dynamics involving aerodynamic bifurcations
[NASA-TM-86706] p 557 N85-25206

Flight investigation of stall, spin and recovery characteristics of a low-wing, single-engine, T-tail light airplane
[NASA-TP-2427] p 574 N85-25248

Simulator study of the stall departure characteristics of a light general aviation airplane with and without a wing-leading-edge modification
[NASA-TM-86309] p 574 N85-25250

Investigation of potential and viscous flow effects contributing to dynamic stall
[AD-A151696] p 602 N85-25773

Unsteady Navier-Stokes calculations in an accelerated reference frame
[AD-A151751] p 602 N85-25774

Preliminary airworthiness evaluation of a National Aeronautics and Space Administration automated stall warning system for an OV-1 aircraft
[AD-A152010] p 579 N85-26708

Wing tunnel investigation of dynamic stall of an NACA 0018 airfoil oscillating in pitch
[NAE-AN-27] p 635 N85-27630

Turbulence structure in the boundary layers of an oscillating airfoil
[AD-A153631] p 637 N85-28926

Calculation of steady and unsteady airfoil flow fields via the Navier-Stokes equations
[NASA-CR-3899] p 818 N85-33105

Flutter clearance of the Schweizer 1-36 deep-stall sailplane
[NASA-TM-85917] p 830 N85-33118

A design procedure to modify the trailing edge upper surface pressure gradient of a given aerofoil
[GU-AERO-8408] p 874 N85-34120

An investigation into the three-dimensional stall development on a modified NACA 23012 aerofoil
[GU-AERO-8414] p 875 N85-34124

Comments on the prediction of dynamic stall
[GU-AERO-8501] p 875 N85-34125

**AERODYNAMICS**

Experimental research in Poland on turbulence and high-speed aerodynamics p 3 A85-10322

Aerodynamics of premixed flames in flat plate boundary layers p 41 A85-10374

A method for designing three-dimensional configurations with prescribed skin friction p 6 A85-11969

Aerodynamic visualization techniques
[ONERA, TP NO. 1984-80] p 52 A85-12603

An introduction to theoretical and computational aerodynamics — Book p 8 A85-12624

Wavelength selection and growth of Goertler vortices
p 73 A85-12703

Interactive Graphics for Geometry Generation - A program with a contemporary design
[AIAA PAPER 84-2389] p 131 A85-13502

Organized structures in wakes and jets - An aerodynamic resonance phenomenon p 77 A85-14344

Current status of numerical solutions of the Navier-Stokes equations
[AIAA PAPER 85-0032] p 207 A85-19469

A comparison between theoretical and experimental flow fields of an airfoil with deflected spoiler
[AIAA PAPER 85-0269] p 216 A85-19622

Ill-posed problems in perturbation theory (Asymptotic methods of mechanics) p 233 A85-22364

A perspective of theoretical and applied computational fluid dynamics p 368 A85-25128

The role of computers in aerodynamic and structural research and development at Avions Marcel Dassault-Breguet Aviation p 341 A85-26015

Efficient algorithm for unsteady transonic aerodynamics of low-aspect-ratio wings p 385 A85-26756

Applications of a photomultiplier to visualization of aerodynamic flows by laser tomography
[ONERA, TP NO. 1985-11] p 442 A85-27890

An experimental investigation of the aerodynamics of nozzle flow in a rectangular passage
p 547 A85-35500

Application of the single-cycle optimization approach to aerodynamic design p 548 A85-35586

The aerodynamical calculation of the wing section with separation p 551 A85-35784

Fundamentals of transonic flow — Book

Characteristics of controlled-oscillating annular cascade test facility with Freon gas
[NAL-TR-812] p 10 N85-10014

Aeroelastic stability analysis with interacting structural nonlinearities p 55 N85-11364

Extended aeroelastic analysis for helicopter rotors with prescribed hub motion and blade appended penduluum vibration absorbers
[NASA-CR-172455] p 85 N85-12038

Unsteady aerodynamic response of cascades and turborotors p 112 N85-12058

Propulsive efficiency of vibrating wing in supersonic flow p 148 N85-14656
Verification of a computer program for vibration analysis of composite wing cores [NAL-TR-825] p 190 N85-15187
Aeroelastic analysis and the identification of flight loads — Mirage 2000 aircraft p 254 N85-15679
Stereo Electro-optical Tracking System (SETS) [NASA-CR-172471] p 295 N85-16098
Active control of forward swept wings with divergence and flutter aeroelastic instabilities p 356 N85-18063
Unsteady transonic flow calculations for two-dimensional canard-wing configurations with aeroelastic applications [NASA-TM-86375] p 329 N85-18960
Viscous effects on transonic airfoil stability and response [NASA-TM-86374] p 329 N85-18961
Three-dimensional unsteady lifting surface theory in the subsonic range [NASA-TM-77812] p 397 N85-21111
A study of transonic flutter of a two-dimensional airfoil using the U-g and p-k methods [LR-615] p 398 N85-21121
Study for the optimization of a transport aircraft wing for maximum fuel efficiency. Volume 1: Methodology, criteria, aeroelastic model definition and results [NASA-CR-172551] p 499 N85-22378
Simple theoretical models for composite rotor blades [NASA-CR-175820] p 499 N85-22382
Structural response of a rotating bladed disk to rotor whirl [NASA-CR-175605] p 507 N85-22391
Oscillating airfoils and their wake [NASA-TM-77831] p 478 N85-23701
A research program in active control/aeroelasticity [NASA-CR-175674] p 501 N85-23752
Flutter taming: A new tool for the aeroelastic designer [AD-A150834] p 515 N85-23802
Some optimization problems in static aeroelasticity for wings made of composite materials p 503 N85-24104
Transonic Unsteady Aerodynamics and its Aeroelastic Applications [AGARD-CP-374] p 542 N85-25171
Experience with transonic unsteady aerodynamic calculations p 554 N85-25176
Computation of unsteady transonic flows about two-dimensional and three-dimensional AGARD standard configurations p 555 N85-25183
Calculation of unsteady transonic flow around a high swept wing p 555 N85-25184
The development of unsteady transonic 3-D full potential code and its aeroelastic applications p 555 N85-25187
Transonic aerodynamic and aeroelastic characteristics of a variable sweep wing [NASA-TM-86677] p 556 N85-25203
Unsteady gas dynamics problems related to flight vehicles [AD-A151187] p 558 N85-25218
Active control of forward swept wings with divergence and flutter aeroelastic instabilities [AD-A151837] p 585 N85-25270
Description of a computer program treating transonic steady state aeroelastic effects for a canard or tail airplane [FFA-TN-1983-23] p 561 N85-26674
Dynamic and aeroelastic action of guy cables [VTT-18] p 608 N85-27276
An assessment of the suitability of the BHGA structural test rig for aerodynamic testing of hang gliders [CA-8505] p 652 N85-27853
Flight trials of a modified gulfstream commander carrying external stores [AD-A153376] p 653 N85-27859
Helicopter Aeromechanics [AGARD-LS-139] p 617 N85-28913
Recent developments in the dynamics of advanced rotor systems p 653 N85-28917
The static aeroelasticity of a composite wing p 701 N85-29321
Selected topics in experimental aeroelasticity at the NASA Langley Research Center [NASA-TM-86436] p 798 N85-30364
Interactive aircraft flight control and aeroelastic stabilization [NASA-CR-176035] p 776 N85-31064
Aeroelastic constraints for a wing weight minimization procedure [FFA-TN-1985-4] p 875 N85-34126
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 1: Analysis methods [NASA-CR-177943-VOL-1] p 896 N85-35202
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 2: Data [NASA-CR-177943-VOL-2] p 896 N85-35203

Computation of the aerothermodynamic field of laminar diffusion flames p 41 A85-10557
Reliability improvement of aerothermal analysis of high speed rotating machinery p 50 A85-11874
A comparison of triple-moment temperature-velocity correlations in the asymmetric heated jet with alternative closure models p 124 A85-14378
Heat transfer effects of longitudinal vortices embedded in a turbulent boundary layer
[ASME PAPER 84-HT-21] p 186 A85-18627
Application of axisymmetric analogue for calculating heating in three-dimensional flows
[AIAA PAPER 85-0245] p 216 A85-19611
A procedure for the optimization of the aerothermodynamic design of multistage axial compressors — German thesis p 227 A85-19851
Newton iteration formulas for correcting temperature and pressure in thermodynamic calculation of rocket engines
p 279 A85-20226
A new approach to some hybrid aerodynamic problems of airfoil cascades on a general streamsheet of revolution. I
p 228 A85-20229
Calculation and analysis of the three-dimensional flow in centrifugal compressor impellers p 228 A85-20231
A linearly correcting method of deviation function for considering the influence of pressure on the thermodynamic properties of combustion gas
p 304 A85-20236
On the variety of type discrimination criteria of equations on S1 and S2 stream surfaces in turbomachine
p 229 A85-20238
Advances in heat transfer. Volume 16
p 298 A85-20501
Hypersonic chemically nonequilibrium viscous shock layer on wings with a catalytic surface
p 229 A85-20581
Introductory aerothermodynamics of advanced space transportation systems p 231 A85-21827
Calculation of friction and heat transfer in turbulent flow of a compressible gas in a plane duct
p 281 A85-22114
Heat transfer in the case of jet flow past an arbitrarily nonisothermal surface p 368 A85-25621
A comparison of scramjet integral analysis techniques
p 420 A85-27099
An investigation on turbulent heat transfer of an axisymmetric jet impinging on a flat plate
p 440 A85-27235
Algorithms for diagnosing thermal loads of flight vehicles — Russian book p 517 A85-31574
Analysis of aerothermal loads on spherical dome protuberances p 473 A85-32602
An improved procedure for calculating the aerothermodynamic properties of a vitiated air test medium
[AIAA PAPER 85-0913] p 704 A85-37583
Numerical simulation of hypersonic viscous fore- and afterbody flows over capsule-type vehicles at angles of attack
[AIAA PAPER 85-0924] p 620 A85-37593
Low density aerothermodynamics
[AIAA PAPER 85-0994] p 620 A85-37640
Developments in aerothermal test techniques at the AEDC supersonic-hypersonic wind tunnels
[AIAA PAPER 85-1003] p 681 A85-37644
Application of 3-D aerothermal model and flow visualization technique to the combustor exit gas temperature study
[AIAA PAPER 85-1313] p 668 A85-39718
A new finite element approach for prediction of aerothermal loads - Progress in inviscid flow computations
[AIAA PAPER 85-1533] p 722 A85-40964
Future fundamental combustion research for aeropropulsion systems
[AIAA PAPER 85-1398] p 771 A85-42671
Engineering flowfield method with angle-of-attack applications p 731 A85-42913
Temperature fluctuations and heat flux in grid-generated isotropic turbulence with streamwise and transverse mean-temperature gradients p 908 A85-49359
Aerothermal modeling program p 32 N85-10963
Optimum thermogasdynamic design of gas turbine engines by characteristics of element prototypes
p 170 N85-14965
Heat transfer results and operational characteristics of the NASA Lewis Research Center Hot Section Cascade Test Facility
[NASA-TM-86880] p 189 N85-15133
Analytical and physical modeling program for the NASA Lewis Research Center's Altitude Wind Tunnel (AWT)
[NASA-TM-86919] p 276 N85-15757
Combustion research for gas turbine engines
[NASA-TM-86963] p 422 N85-21164
NASA R and T aerospace plane vehicles: Progress and plans
[NASA-TM-86429] p 595 N85-25368
Future fundamental combustion research for aeropropulsion systems
[NASA-TM-87049] p 671 N85-27870
Heating parameter estimation using coaxial thermocouple gages in wind tunnel test articles
[AD-A153039] p 686 N85-28328
A new finite element approach: Progress in inviscid flow computations
[NASA-TM-86434] p 798 N85-31450

**AFTERBODIES**
Afterbody drag reduction by vortex generators
[AIAA PAPER 85-0354] p 220 A85-19692

Results of a wind tunnel/flight test program to compare afterbody/nozzle pressures on a 1/12 scale model and an F-15 aircraft
[SAE PAPER 841543.] p 649 A85-39066

A simulation technique for jet temperature effects on nozzle-afterbody drag at transonic Mach numbers
[AIAA PAPER 85-1463] p 633 A85-39792

Results of AGARD assessment of prediction capabilities for nozzle afterbody flows
[AIAA PAPER 85-1464] p 633 A85-39793

Transonic turbulent flow computations for axisymmetric afterbodies
[AIAA PAPER 85-1639] p 715 A85-40741

Simulation of Nacelle-afterbody/exhaust-jet flowfields using a three-dimensional Navier-Stokes algorithm
[AIAA PAPER 85-1283] p 720 A85-40829

A summary of an AGARD assessment of testing techniques for aircraft afterbody flows
[AIAA PAPER 85-1465] p 779 A85-40844

A numerical investigation of the aerodynamics of biconic and non-circular flared configurations
[AIAA PAPER 85-1614] p 814 A85-43662

The subsonic near-wake of an axisymmetric semielliptical afterbody p 869 A85-48534

On the evaluation of boundary layer measurements on boattailed bodies of revolution in axisymmetric compressible subsonic flow
[ESA-TT-883] p 796 N85-31471

Study of NBI and related cable performance during tests performed in the NASA Hot Gas Facility
[NASA-CR-170888] p 912 N85-35423

**AFTERBURNING**

Numerical calculation of flow field in afterburner diffuser of turbofan engine p 772 A85-43244

Flameholder with integrated air mixer
[AD-D011549] p 421 N85-21161

Some unique features in operation of two-stage turbojet engine with afterburner p 508 N85-22828

Effect of water injection into air for turbine cooling on economy of operation of gas turbine engine with afterburning p 509 N85-22830

**AGGREGATES**

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 1: Correlation analysis of Marshall properties of laboratory-compacted specimens
[FAA-PM-84-12-VOL-1] p 430 N85-21180

**AGING (MATERIALS)**

Ageing of structural film adhesives - Changes in chemical and physical properties and the effect on joint strength p 434 A85-27913

Age forming technology expanded in an autoclave
[SAE PAPER 850665] p 910 A85-50113

System engineering and integration contract for implementation of the National Airspace System plan, volume 1, sections 1.0-4.0, 6.0
[AD-A145763] p 96 N85-12046

Chemical and photographic evaluation of rigid explosive transfer lines
[AD-A149303] p 437 N85-20145

**AGRICULTURAL AIRCRAFT**

The efficiency of an agricultural airplane as a function of the coverage and transverse distribution of the chemicals p 383 A85-27718

Effectiveness of agricultural aviation p 106 N85-13460

Director on institute's civil aviation projects p 204 N85-16764

**AGRICULTURE**

Birds and airport agriculture in the conterminous United States: A review of literature
[AD-P004208] p 429 N85-19975

**AH-64 HELICOPTER**

Composite flexbeam tail rotor practical p 1 A85-12082

The AH-64A nitrogen inerting system
[AIAA PAPER 84-2460] p 108 A85-13557

Design and development of a dynamically scaled model AH-64 main rotor
[AIAA PAPER 84-2532] p 101 A85-13591

TADS/PNVS - The keen eyes of the hunter — Target Acquisition Designation Sight/Pilot Night Vision Sensor p 107 A85-15594

Aeroelastic characteristics of the AH-64 bearingless tail rotor p 250 A85-20142

Design, fabrication and verification of composite flexbeam tail rotor for AH-64 Apache helicopter p 251 A85-21379

Tooling problems in the manufacture of AH-64 Composites Flexbeam Tail Rotor p 200 A85-21382

AH-64A production line Automatic Test Equipment p 465 A85-31979

The AH-64 Back-Up Control System p 512 A85-32000

Software Quality Assurance Program for the AH-64 Advanced Attack Helicopter (AAH) p 466 A85-32010

**AILERONS**

Aileron effectiveness for a subsonic transport model with a high-aspect-ratio supercritical wing
[NASA-TM-85874] p 235 N85-15895

Flight service evaluation of advanced composite ailerons on the L-1011 transport aircraft
[NASA-CR-172483] p 294 N85-17049

Gust load alleviation of a cantilevered rectangular elastic wing. Wind tunnel experiment and analysis
[NAK-TR-88] p 681 N85-29950

Compendium of unsteady aerodynamic measurements, addendum 1
[AGARD-R-702-ADD-1] p 744 N85-31028

Data set 8: ZKP wing, oscillating aileron p 744 N85-31029

Reflection plane tests of a wind turbine blade tip section with ailerons
[NASA-TM-87018] p 912 N85-34444

**AIR**

An improved procedure for calculating the aerothermodynamic properties of a vitiated air test medium
[AIAA PAPER 85-0913] p 704 A85-37583

Density and velocity profiles in non-equilibrium laminar boundary layers in air
[AIAA PAPER 85-0576] p 820 A85-37626

Research test facility for evaporation and combustion of alternative jet fuels at high air temperatures
[AD-A153830] p 691 N85-29073

Air bag restraint system
[AD-D011671] p 747 N85-29936

**AIR BREATHING ENGINES**

Correlation and analysis of oil flow data for an air-breathing missile model
[AIAA PAPER 85-0452] p 224 A85-19781

Interactive design technique for arbitrary shaped, airbreathing missile configurations
[AIAA PAPER 85-0496] p 249 A85-19790

Air breathing space transport vehicles with wings p 260 A85-20909

Teaching undergraduate airbreathing propulsion at the US Air Force Academy
[AIAA PAPER 85-1145] p 863 A85-43776

Fiscal year 1986 technical objective document
[AD-A151039] p 539 N85-25000

**AIR CARGO**

Air cargo support technology - Economic realities
[AIAA PAPER 84-2514] p 136 A85-13580

Minimum and maximum cargo tables for aircraft with three cargo compartments
[SAWE PAPER 1568] p 160 A85-18020

New performance requirements for MIL-T-25959 tiedown adjusters p 330 A85-22762

Analysis of KC-10 loading alternatives
[SAE PAPER 840701] p 332 A85-26313

Helicopter cargo - New opportunities through technology transfer
[SAE PAPER 840703] p 342 A85-26314

Advanced baggage/cargo handling
[SAE PAPER 840711] p 332 A85-26315

Tomorrow's air cargo - Combis, convertibles, or all-freighters? p 411 A85-26480

Cargo claims - From the carrier's point of view p 461 A85-27396

A 73-ft cross parachute for cargo delivery p 402 A85-29264

**AIR CONDITIONING**

Environmental control systems (ECS) - Compromises and trade-off p 342 A85-26309

Air-cycle air conditioning of turbine-powered general aviation and commuter aircraft
[SAE PAPER 850901] p 885 A85-50118

**AIR CONDITIONING EQUIPMENT**

Modeling of a second-generation solar-driven Rankine air conditioner
[DE84-015132] p 52 N85-10223

**AIR COOLING**

Practical flight test method for determining reciprocating engine cooling requirements p 167 A85-16237

The effectiveness of the initial twist of the air in the blade cooling systems of gas turbines p 349 A85-23979

A study of heat transfer during the injection of water into the cooling air of a turbine blade p 349 A85-23984

Cooling of a turbine profile in the case of air injection through porous areas p 352 A85-25622

Calculation of the full cooling efficiency of the perforated wall of a gas turbine nozzle guide vane p 352 A85-25623

The closed-loop air-cycle option for equipment cooling on aircraft
[SAE PAPER 840940] p 570 A85-33752

Helicopter cooling, air cycle/vapor cycle trade-offs
[SAE PAPER A840942] p 570 A85-33753

Development and testing of forced-air cooled enclosures for high density electronic equipment
[SAE PAPER 840952] p 566 A85-33763

Unsteady temperature analysis of air-cooled turbine vanes p 767 A85-41783

Cooling characteristics of air cooled radial turbine blades p 792 A85-41784

Impingement cooling of gas turbine components p 767 A85-41785

Impingement cooling of turbine airfoils by multiple two-dimensional jets p 768 A85-41786

Experimental study of temperature effect on turbine vane cooling performance with multi-row ejection p 768 A85-41788

An experimental investigation of pressure losses in cooling air supply system for gas turbine rotor p 769 A85-41808

Single-engine propulsion improvement through intercooling
[SAE PAPER 850894] p 890 A85-50114

Improvement of gas turbine engine performance by water injection into turbine cooling air p 370 N85-18209

Effect of water injection into air for turbine cooling on economy of operation of gas turbine engine with afterburning p 509 N85-22830

effect of gas stream sweeping past the effluent of a perforated plate on heat transfer inside the perforations p 527 N85-22836

**AIR CURRENTS**

Aircraft and Doppler air motion comparisons in a JAWS microburst p 453 A85-28775

The physical and empirical basis for a specific clear-air turbulence risk index
[NASA-CR-178522] p 914 N85-35540

**AIR DEFENSE**

A legal analysis of the shooting of Korean Airlines Flight 007 by the Soviet Union p 66 A85-11937

The principles and practice of modern AEW radar — Airborne Early Warning p 336 A85-24916

A minimum-exposure, minimum-elevation military aircraft heuristic route selection model p 482 A85-31774

How much does it cost/how much does it weigh?
[SAWE PAPER 1593] p 919 A85-49913

A methodology for the determination of rotary wing aircraft vulnerabilities in air-to-air combat simulation
[AD-A148984] p 346 N85-18984

Visual simulation requirements for aircraft aspect recognition at real world distances
[AD-A151040] p 517 N85-23810

Program Manager: The journal of the defense systems management college, volume 14, number 2, March-April 1985
[AD-A154219] p 808 N85-32031

**AIR DROP OPERATIONS**

Investigation of the use of radar data for the measurement of parachute rate of descent and glide ratio p 331 A85-22764

60,000 pound capacity extraction system
[AD-A145841] p 105 N85-12052

**AIR FLOW**

Pressure distributions around an airfoil placed in a periodically fluctuating air flow. I - A flat plate approximation p 5 A85-10970

Air flow and particle trajectories around aircraft fuselages. I - Theory p 74 A85-13651

Air flow and particle trajectories around aircraft fuselages. II - Measurements p 106 A85-13652

Three-dimensional airflow and hydrometeor trajectory calculation with applications
[AIAA PAPER 85-0412] p 222 A85-19733

An experimental study of the hydraulic characteristics of air flow in the cooling slots of the nozzle guide vanes of gas turbine engines p 350 A85-24001

A study of the structure of the primary zone of cylindrical combustion chambers p 351 A85-24004

Laser-three-slice (L3S) velocimeter and applications in aerodynamics flow field measurements p 368 A85-25224

Non-equilibrium high enthalpy airflows in a free piston shock tunnel p 320 A85-25484

Modification of vortex interactions in a reattaching separated flow
[AIAA PAPER 85-0555] p 321 A85-25946

An assessment of the effect of the use of conventional weapons on the operation of a jet engine p 383 A85-27720

Contingency power concepts for helicopter turboshaft engine p 506 A85-32005

Heat transfer from rectangular plates inclined at different angles of attack and yaw to an air stream p 600 A85-35593

Interaction between acoustics and subsonic ducted flow in a ramjet configuration p 704 A85-37209

An analytical investigation of the ground and ambient head flow influence on the free inlet flow into a turbojet engine p 728 A85-41606

Internal combustion engine combustion chamber process studies at NASA Lewis Research Center p 855 A85-45856

The unsteady properties of a flow within a schematic air intake [AAAF PAPER NT 84-09] p 870 A85-48989

Turbulence in air inlets [AAAF PAPER NT 84-10] p 870 A85-48990

A finite difference model for flows around an air intake [AAAF PAPER NT 84-11] p 870 A85-48991

Numerical simulations of viscous fluid flows in air intakes at high angles of attack [AAAF PAPER NT 84-12] p 907 A85-48992

The characteristics of unsteady flow in air intakes [AAAF PAPER NT 84-13] p 870 A85-48993

Calculation of the flow in an air intake duct by numerical solution of the Euler equations [AAAF PAPER NT 84-24] p 870 A85-48998

Stall elimination and restart enhancement device [AD-D011217] p 27 N85-10062

Turbine heat transfer p 30 N85-10084

Energy efficient engine. High pressure compressor detail design report [NASA-CR-165558] p 35 N85-10998

Microburst wind structure and evaluation of Doppler radar for wind shear detection [DOT/FAA/PM-84/29] p 57 N85-11501

Problem of reduction to ideal wind tunnel in experimental aerodynamics p 13 N85-11702

Aircraft flow effects on cloud droplet images and concentrations [AD-A146178] p 131 N85-12529

New air supply-prime mover facility for engine tests detailed p 446 N85-20204

Flameholder with integrated air mixer [AD-D011549] p 421 N85-21161

Study for prediction of rotor/wake/fuselage interference, part 1 [NASA-CR-177340-VOL-1] p 486 N85-22346

Study for prediction of rotor/wake/fuselage interference. Part 2: Program users guide [NASA-CR-177340-VOL-2] p 487 N85-22347

Planning of air cushion transport vehicles p 530 N85-24160

Aerodynamic performance of a wing in ground effect using the PANAIR program [AD-A153303] p 635 N85-27832

The influence of helicopter tail shape on drag: An aerodynamic study using a low speed wind tunnel [AD-A156304] p 676 N85-35174

**AIR INTAKES**

A sensor for detection of unsteady distortion maxima in air intakes [ONERA, TP NO. 1984-148] p 205 A85-19262

Tests of air inlets on civil aircraft [ONERA, TP NO. 1984-157] p 272 A85-19271

Frequency response of a jet engine test facility air supply system [AIAA PAPER 85-0053] p 273 A85-19485

The discussion of the position of conical shock of axisymmetric air intake of supersonic aircraft relative to the leading edge of the cowl lip p 316 A85-24098

A experiment method to determine the air distribution of the holes along the flametube of gas turbine combustor p 351 A85-25223

Low-speed aerodynamic test of an axisymmetric supersonic inlet with variable cowl slot [AIAA PAPER 85-1210] p 719 A85-40819

Numerical study of a non-centered scheme with application to aerodynamics [AIAA PAPER 85-1497] p 720 A85-40935

The unsteady properties of a flow within a schematic air intake [AAAF PAPER NT 84-09] p 870 A85-48989

Turbulence in air inlets [AAAF PAPER NT 84-10] p 870 A85-48990

A finite difference model for flows around an air intake [AAAF PAPER NT 84-11] p 870 A85-48991

Numerical simulations of viscous fluid flows in air intakes at high angles of attack [AAAF PAPER NT 84-12] p 907 A85-48992

The characteristics of unsteady flow in air intakes [AAAF PAPER NT 84-13] p 870 A85-48993

Calculation of the flow in an air intake duct by numerical solution of the Euler equations [AAAF PAPER NT 84-24] p 870 A85-48998

Variable inlet vane assembly for a gas turbine combustion [AD-D011220] p 27 N85-10063

Interest of internal bleed for a two-dimensional air intake operating in a wide Mach number range (1.8-3 plus) p 237 N85-16793

Selection of air intake parameters for supersonic-flow operation p 527 N85-22637

West Europe report: Science and technology [JPRS-WST-84-012] p 601 N85-25552

MBB uses new CFC form tool for titanium alloy air intake p 601 N85-25553

Low-speed aerodynamic test of an axisymmetric supersonic inlet with variable cowl slot [NASA-TM-87009] p 582 N85-26710

**AIR JETS**

On a forced elliptic jet p 78 A85-14357

Experimental investigation of the partial impingement of a jet on a half-plate p 316 A85-24202

Calculation of the disturbance to combustion chamber film cooling due to air injection through a row of jets p 420 A85-29046

Interaction of twin turbulent circular jet p 617 A85-37049

Experimental study on air jet vortex generator p 736 A85-43234

Jet array impingement flow distributions and heat transfer characteristics: Effects of initial crossflow and nonuniform array geometry p 30 N85-10967

Study of stresses on surface of flat barrier immersed in under expanded jet of rarefied gas p 582 N85-27081

**AIR LAUNCHING**

Development of a velocity control algorithm for controlling a 6-DOF captive trajectory model support p 427 A85-28587

**AIR LAW**

Destruction of Korean Air Lines Boeing 747 over Sea of Japan, 31 August 1983 p 66 A85-10049

US jurisdiction and bilateral air agreements p 66 A85-10050

A legal analysis of the shooting of Korean Airlines Flight 007 by the Soviet Union p 66 A85-11937

FAA regulation of ultralight vehicles p 66 A85-11938

Atmospheric photochemical modeling of turbine engine fuels. Phase 1: Experimental studies. Volume 2: Environmental chamber data tabulations
[AD-A147786] p 300 N85-17470

Testing of materials and coatings for jet engine components under simulated operational conditions
[B8580073] p 672 N85-27673

Investigation of air pollution impact in Eastern Bavaria: Measurement results from August and September, 1984
[DFVLR-FB-85-03] p 702 N85-28471

**AIR QUALITY**

Outline of a new emissions model for military and civilian aircraft facilities
[DE84-016455] p 131 N85-13394

Visibility monitoring in the southern California desert for the Department of Defense: Research on operations-limiting visual extinction, RESOLVE protocol
[AD-A146617] p 191 N85-15315

Impact of aircraft emissions on air quality in the vicinity of airports. Volume 3: Air quality and emission modeling needs
[AD-A147951] p 299 N85-17435

Impact of aircraft emissions on air quality in the vicinity of airports. Volume 4. Nitrogen dioxide and hydrocarbons
[AD-A148253] p 299 N85-17436

Atmospheric photochemical modeling of turbine engine fuels. Phase 1: Experimental studies. Volume 2: Environmental chamber data tabulations
[AD-A147786] p 300 N85-17470

Legislation to improve airline safety
[GPO-38-222] p 405 N85-21132

**AIR START**

Air turbine starter sizing for a proper bleed source match
[SAE PAPER 841509] p 661 A85-39153

Pressurized Air Start System (PASS) for small gas turbine engines
[SAE PAPER 841571] p 662 A85-39161

**AIR TO AIR MISSILES**

Eccentric two-target model for qualitative air combat game analysis
[AIAA PAPER 83-2122] p 535 A85-32782

A realistic aerial combat duel as a differential game study p 535 A85-33287

A missile duel between two aircraft
p 703 A85-39563

**AIR TO AIR REFUELING**

Technical evaluation report on the FDP Symposium on Flight Test Techniques
[AGARD-AR-206] p 417 N85-21157

**AIR TO SURFACE MISSILES**

Next generation gunship
[AD-A156361] p 887 N85-35193

**AIR TRAFFIC**

The Cockpit Display of Traffic Information and the Threat Alert and Collision Avoidance System Integration - A review p 259 A85-21559

Random air traffic generation for computer models
p 567 A85-36509

Effects of measurement errors in estimating the probability of vertical overlap — in air traffic
p 567 A85-36510

Reconnoitering the electromagnetic spectrum
p 879 A85-49094

MERIT: A man/computer data management and enhancement system for upper air nowcasting/forecasting in the United States — Minimum Energy Routes using Interactive Techniques (MERIT) p 56 N85-10558

Activities report in air traffic control
p 96 N85-12047

TCAS 2 logic performance during phase one operational evaluation
[DOT/FAA/PM-84/20] p 154 N85-13793

Activities report of the aerospace industry in West Germany
[ISSN-0176-5086] p 198 N85-14718

FAA (Federal Aviation Administration) statistical handbook of aviation, calendar year 1983
[AD-A148171] p 203 N85-16760

Airport activity statistics of certificated route air carriers
[AD-A148472] p 243 N85-16846

Air traffic management concepts for the UK in the 1990's: A review of recent RSRE work
[AD-A147850] p 246 N85-16853

Ultralight aircraft technology and public safety
[GPO-38-948] p 406 N85-21131

Disturbance to the population due to flight operations at landing fields. Questionnaire on community reaction to non-commercial and sporting aviation
[NASA-TM-76531] p 534 N85-24537

National airspace review. Implementation plan. Revised
[AD-A151412] p 566 N85-25236

Air traffic: Instruments, airports, companies, post, cargo and passengers p 641 N85-28932

Traffic alert and collision avoidance system: Operational simulation
[FAA-PM-85-10] p 750 N85-29941

FAA air traffic activity, fiscal year 1984
[AD-A154318] p 750 N85-29942

Status of air traffic control system
[S-HPG-98-1197] p 750 N85-31036

System safety study of minimum TCAS 2 for instrument weather conditions
[FAA-PM-85-12] p 820 N85-33113

The contribution made by flight mechanics to civil aviation p 878 N85-35169

**AIR TRAFFIC CONTROL**

FAA's new terminal radar, the ASR-9 incorporates a separate weather channel p 15 A85-12060

Operational evaluation of an experimental TCAS — Traffic Alert and Collision Avoidance System
[AIAA PAPER 84-2407] p 89 A85-13514

Operational air traffic control requirements for the new Voice Switching and Control System
[AIAA PAPER 84-2435] p 92 A85-13530

Method for calculation of ATC-facility capacity utilization in preplanning air-traffic movements p 150 A85-17450

Enhanced TCAS II tracking accuracy — Traffic Alert and Collision Avoidance System
[AIAA PAPER 84-2738] p 152 A85-17889

Secondary surveillance radar mode S potential applications and future requirements in Europe
[AIAA PAPER 84-2735] p 153 A85-17892

Air traffic control and airport authorities - The U.K. viewpoint p 138 A85-18163

The Mission Oriented Terminal Area Simulation (MOTAS)
[AIAA PAPER 85-0308] p 274 A85-19655

An empirical study of the methodology for real-time air traffic control system simulation testing
p 375 A85-24085

Radio Technical Commission for Aeronautics, Annual Assembly Meeting and Technical Symposium, Washington, DC, November 15-17, 1983, Proceedings and Supplement p 382 A85-27527

The plan for an integrated FAA surveillance and weather system p 407 A85-27528

Weather information in the USSR ATC systems
p 441 A85-27530

Future communications/navigation/surveillance requirements for Department of Defense Air Transport Operations p 407 A85-27533

Fuel economies effected by the use of FMS in an advanced TMA p 412 A85-27604

Integration of advanced displays, FMS, speech recognition and data link p 407 A85-27606

Computer understanding of air traffic control displays
p 486 A85-32498

Mixing four-dimensional equipped and unequipped aircraft in the terminal area p 488 A85-32778

Time scheduling of a mix of 4D equipped and unequipped aircraft p 483 A85-33278

Radar signal processing p 599 A85-34443

Communication in automated air-traffic-control systems — Russian book p 644 A85-38647

The experience of an airport with flight safety - Its effect on airport infrastructure and traffic situation
p 777 A85-40291

Coordination of different types of air traffic
p 707 A85-40294

COMPAS - Computer support for approach control
[DGLR PAPER 84-091] p 748 A85-40310

Status and trends of microwave landing system
p 749 A85-41010

Landing path requirements for instrumental air traffic at regional airports and landing strips p 780 A85-41331

The role of air traffic control in the co-ordination of civil and military operations p 749 A85-41728

Flight management and other aircraft systems development p 810 A85-44305

Preventing collisions in air traffic - A system analysis with special emphasis on transponder-assisted on-board systems with selective addressing — German thesis
p 834 A85-45524

Ground based concept for time control of aircraft entering the terminal area
[AIAA PAPER 85-1888] p 824 A85-45910

Concepts and algorithms for terminal-area traffic management p 878 A85-47683

The flight planning - flight management connection
p 877 A85-47684

Simulation of time-control procedures for the advanced air traffic control system p 878 A85-47686

The imposition of flow control avoids ATC overloads
p 879 A85-48851

Initial European Central Data Bank of air traffic demand now in operational trials p 879 A85-48852

Automation in air traffic management
p 879 A85-49171

National airspace review p 15 N85-10926

Enhanced TCAS 2/CDTI traffic Sensor digital simulation model and program description
[NASA-CR-172445] p 15 N85-10927

System engineering and integration contract for implementation of the National Airspace System Plan. Volume 2: Section 5.0
[AD-A145710] p 16 N85-10929

A proof-of-principle getaway special free-flying satellite demonstration p 40 N85-11051

New airport ground traffic control system planned
p 96 N85-12006

Activities report in air traffic control
p 96 N85-12047

System engineering and integration contract for implementation of the National Airspace System plan. volume 1, sections 1.0-4.0, 6.0
[AD-A145783] p 96 N85-12048

Aircraft navigation and landing technology: Status of implementation
[GPO-38-615] p 97 N85-12883

Closely spaced independent parallel runway simulation
[DOT/FAA/CT-84/45] p 117 N85-12902

National airspace review: Airport radar service area operational confirmation report
[DOT/FAA/AT-84/2] p 245 N85-15707

A bird strike handbook for base-level managers
[AD-A147928] p 293 N85-16008

Designer on Aeroflot automated COMMO system development p 206 N85-16765

National airspace review enhancement plan, revision 3
[AD-A150743] p 246 N85-16852

Air traffic management concepts for the UK in the 1990's: A review of recent RSRE work
[AD-A147850] p 246 N85-16853

A cockpit-display concept for executing a multiple glide-slope approach for wake-vortex avoidance
[NASA-TP-2386] p 261 N85-16869

Test of dispersal of turbojet aircraft departure tracks at washington National Airport (1983-84). volume 1 report
[AD-A148111] p 306 N85-17669

Research at automated ATC Scientific-Experimental Center p 313 N85-18037

Improvements in Kazan airport equipment, facilities
p 360 N85-18039

Improvements under way at Gorkiy airport
p 360 N85-18040

Design and realization of a multiradar tracking system for air traffic control
[ENST-84E010] p 338 N85-18044

Denver ARTCC (Air Route Traffic Control Center) evaluation of PROFS (Program for Regional Observing and Forecasting Services) mesoscale weather products
[PB85-120301/GAR] p 338 N85-18045

Prototype concept design for US Army type 3A Air Traffic Control Tower (ATCT)
[AD-A148840] p 361 N85-18070

National airspace system: Operational requirements
[AD-A149349] p 339 N85-18973

Collision avoidance for Naval training aircraft
[FAA-PM-84-4] p 410 N85-21136

The evolution of methods of air traffic control
[AD-A149606] p 410 N85-21137

Operations concept for the advanced automation system man-machine interface
[AD-A149797] p 410 N85-21139

A radome for air traffic control SSR radar systems
[AD-P004373] p 449 N85-21467

Civil avionics flight testing with the RAE(B) BAC1-11
p 504 N85-22354

A flight management algorithm and guidance for fuel-conservative descents in a time-based metered air traffic environment: Development and flight test results
p 498 N85-22356

Planned office and facility consolidations: To improve system effectiveness and efficiency, FY 1985-87
[AD-A150441]
p 489 N85-22376

Analysis of estimation algorithms for CDTI and CAS applications
[NASA-CR-172444]
p 505 N85-22387

FAA aviation forecasts: Fiscal years 1985-1996
[AD-A151050]
p 484 N85-23747

Safety recommendation(s), A-84-82 through -84
[REPT-3957]
p 489 N85-23748

An analysis of the impacts of the Airport Radar Service Area (ARSA)
[AD-A150954]
p 489 N85-23749

Development concerns for satellite-based air traffic control surveillance systems
p 489 N85-23816

Multiple resources and display formatting: The implications of task integration in a simulated air traffic control task
[AD-A150713]
p 530 N85-24205

Administration chief on air traffic control improvements
p 567 N85-25193

Calculation and display of stack departure times for aircraft inbound to Heathrow Airport
[AD-A151991]
p 568 N85-25241

Wind modelling for increased aircraft operational efficiency
p 550 N85-26652

National Airspace System Plan: Facilities, equipment and associated development
p 569 N85-26692

Probabilistic computer model of optimal runway turnoffs
[NASA-CR-172549]
p 594 N85-26760

National airspace review, change 1
[AD-A152369]
p 644 N85-27844

Developments in the area of air traffic control systems and the relation with meteorology
[NLR-MP-84029-U]
p 645 N85-27848

A general area air traffic controller simulation using colour graphics
[AD-A153634]
p 645 N85-28933

FAA air traffic activity, fiscal year 1984
[AD-A154318]
p 750 N85-29942

Definition and layout of a traffic generator for an air traffic control simulation
[ESA-TT-888]
p 748 N85-31034

Status of air traffic control system
[S-HRG-98-1197]
p 750 N85-31036

A feasibility study for the use of electronic flight strips in ATC controller workstations
[DFVLR-FB-85-08]
p 751 N85-31039

System safety study of minimum TCAS 2 for instrument weather conditions
[FAA-PM-85-12]
p 820 N85-33113

Effect of interference on the performance of a minimum TCAS 2
[FAA-PM-84-33]
p 880 N85-34131

Introduction to European air traffic control
[AD-A156328]
p 878 N85-35178

FAA requirements for model to support capacity, delay, noise and energy programs
[AD-A155815]
p 880 N85-35179

**AIR TRAFFIC CONTROLLERS (PERSONNEL)**

CAUTRA ATC simulator strives for realism
p 897 A85-48857

Operations concept for the advanced automation system man-machine interface
[AD-A149797]
p 410 N85-21139

Administration chief on air traffic control improvements
p 567 N85-25193

Calculation and display of stack departure times for aircraft inbound to Heathrow Airport
[AD-A151991]
p 568 N85-25241

A feasibility study for the use of electronic flight strips in ATC controller workstations
[DFVLR-FB-85-08]
p 751 N85-31039

U.S. Civil airmen statistics for calendar year 1984
[AD-A156326]
p 866 N85-35153

**AIR TRANSPORTATION**

US jurisdiction and bilateral air agreements
p 66 A85-10050

The division of tasks in modern air transport and its effect on the liability of the air carrier - The concept 'agents' in the so-called Warsaw Convention — German thesis
p 307 A85-19826

Technology for profitable transportation — US airline industry
p 378 A85-24204

Technology and the market place - A changing air transport equation
[SAE PAPER 841545]
p 312 A85-25983

Principles of the design of ground support facilities for air transport
p 426 A85-27723

Attempt to regulate restrictive commercial practices in the field of air transportation within a transnational antitrust legal and institutional framework
p 539 A85-30999

International air transport - Economic aspects — Russian book
p 612 A85-35817

Costs and tariff levies in air transportation
p 705 A85-37950

Air transport deregulation - The US experience and its applicability to Europe
p 705 A85-39369

Airlines reach out for longer range - Twins cross the Atlantic; long-haul flights get longer
p 752 A85-40071

Air transport development ventures
[SAE PAPER 841626]
p 708 A85-40537

Flight control systems and sensors for air transport
p 775 A85-41014

Activities report in air traffic control
p 96 N85-12047

German domestic scheduled air transport in the year 2000
[ESA-TT-828]
p 149 N85-13792

FAA (Federal Aviation Administration) statistical handbook of aviation, calendar year 1983
[AD-A148171]
p 203 N85-16760

Utilization of Increased Airlift Capability (UIAC) study
[AD-A146669]
p 243 N85-16847

Issues in air transport
[PB85-121374/GAR]
p 333 N85-18030

Semiannual report to Congress on the effectiveness of the civil aviation security program
[AD-A149522]
p 334 N85-18937

Airport system development
[PB85-127793]
p 429 N85-19993

USSR report: Transportation
[JPRS-UTR-84-008]
p 468 N85-23694

Bugayev on civil aviation ministry's 1983 achievements
p 468 N85-23696

FAA aviation forecasts: Fiscal years 1985-1996
[AD-A151050]
p 484 N85-23747

USSR report: Transportation
[JPRS-UTR-85-008]
p 542 N85-25169

Civil air code international flights section explained
p 563 N85-25194

**AIR WATER INTERACTIONS**

Spatial variation of sea surface temperature and flux-related parameters measured from aircraft in the JASIN experiment
[AD-A149321]
p 130 A85-15425

**AIRBORNE EQUIPMENT**

An adaptive airborne VLF communications array concept
[AIAA PAPER 84-2696]
p 151 A85-17870

Enhanced TCAS II tracking accuracy — Traffic Alert and Collision Avoidance System
[AIAA PAPER 84-2738]
p 152 A85-17889

Improved TCAS I for pilot warning indication
[AIAA PAPER 84-2736]
p 153 A85-17891

Contemporary problems in airborne displays
p 346 A85-22593

A real time (on line) adaptive target detection technique for an airborne millimeter wave seeker design
p 347 A85-24267

Evaluating defeat mechanisms of electro-optical systems onboard remotely piloted vehicles
p 347 A85-24268

Airborne Doppler radar antennas p 335 A85-24832

Power traveling-wave tubes for modern airborne radars
p 335 A85-24845

Passive millimeter wave imaging for guidance applications
p 347 A85-24937

Signal processing consideration for a millimeter wave seeker
p 336 A85-24938

Phase III GPS integration options for aircraft platforms
p 337 A85-25196

Aeronautical technology in airborne systems
p 338 A85-26020

Importance of test and evaluation in Navy's LAMPS MK III program
p 382 A85-27471

Medium PRF for the AN/APG-66 radar — Pulse Repetition Frequency for Pulse Doppler Radar
p 408 A85-27834

The interceptor radar evolves as a sensor
p 409 A85-27847

767/757 instrumentation system p 418 A85-29653

Uses of a digital electronic theodolite system in a weapon separation program
p 418 A85-29655

The structure of a microburst - As observed by ground-based and airborne Doppler radar
p 452 A85-29772

An austere GPS receiver for airborne applications
p 485 A85-32194

Airborne Communications Restoral/Relay
p 487 A85-32232

Design of a radar guidance mechanism using MECSYN ANIMEC
[ASME PAPER 84-DET-139]
p 566 A85-33774

Aero-optical turbulent boundary layer/shear layer experiment on the KC-135 aircraft revisited
p 546 A85-35202

A technique for determining the effects of aircraft components on the pattern of radar antennas before they are built
p 633 A85-45018

Real time simulation of airborne radar systems
p 849 A85-4512

Satellite orbit determination from an airborne platform
p 850 A85-4512

Target super-resolution compensation for sprea spectrum radar waveforms
p 823 A85-4512

Theoretical study of airborne electromagnetic leakage
p 826 A85-4513

Preventing collisions in air traffic - A system analys with special emphasis on transponder-assisted on-boar systems with selective addressing — German thesis
p 834 A85-4552

Airborne optical information systems (Handbook) — in Russian
p 835 A85-4611

Effectiveness of agricultural aviation
p 1[illegible] [illegible]85-13460

USAF approach to airborne structural data recording: Airborne Data Acquisition Multifunction System (ADAMS)
p 292 N85-1568

Realization and testing of an experimental color display system for general aviation helicopters and aircraft
[BMFT-FB-W-84-042]
p 282 N85-18872

The principles of wind measurement with the help of aircraft
p 916 N85-3555

**AIRBORNE LASERS**

Precision pointing using a dual-wedge scanner — for airborne carbon dioxide Doppler lidar
p 526 A85-32711

Terrain/wire and wirelike obstacles warning system for helicopters
p 655 A85-38363

**AIRBORNE RADAR APPROACH**

Aviation radar — Russian book p 244 A85-19805

Development and flight test of a helicopter, X-band, portable precision landing system concept
[NASA-TM-86710]
p 586 N85-26721

Investigation of imaging and flight guidance concepts for rotorcraft zero visibility approach and landing
[NASA-CR-166571]
p 644 N85-27843

**AIRBORNE SURVEILLANCE RADAR**

A new digital X-band SLAR p 46 A85-10263

An algorithm for radiometric and geometric correction of digital SLAR data
p 56 A85-11216

The automatic SSR taxiway test facility
p 15 A85-12081

Depth of field for SAR with aircraft acceleration
p 91 A85-12664

The APG-66 radar and its derivative applications
[AIAA PAPER 84-2609]
p 150 A85-17813

Atmospheric propagation losses for long-range airborne radar systems analysis
[AIAA PAPER 85-0267]
p 244 A85-19620

A multipurpose synthetic aperture radar
p 335 A85-24887

The principles and practice of modern AEW radar — Airborne Early Warning
p 336 A85-24916

Airborne early warning radar p 408 A85-27835

Advanced SAR system maps Arctic regions
p 441 A85-27841

Design decisions guide airborne radar
p 409 A85-27848

Problems of radome design for modern airborne radar. II
p 599 A85-34661

Giant surveillance radar squeezed into wing
p 763 A85-41052

Construction of a special computer for image production using synthetic aperture radar — German thesis
p 834 A85-45550

Meeting the challenge of ESM/ECM integration
p 869 A85-49091

Reconnoitering the electromagnetic spectrum
p 879 A85-49094

**AIRBORNE/SPACEBORNE COMPUTERS**

Investigation of the semiautomatic control of an aircraft using timer redundancy in onboard digital computers of the flight-path control system
p 35 A85-10470

A reconfigurable redundancy management strategy for a triplex DFBW system
p 35 A85-12361

Computer optimized TACAN navigation for high performance aircraft
[AIAA PAPER 84-2436]
p 92 A85-13531

Flight critical system design guidelines and validation methods
[AIAA PAPER 84-2461]
p 113 A85-13548

Navigation processing of the Flight Management Computer System for the Boeing 737-300
p 93 A85-14827

Digital Avionics Systems Conference, 6th, Baltimore, MD, December 3-6, 1984, Proceedings
p 137 A85-17801

Developing safe software for critical airborne applications
[AIAA PAPER 84-2596]
p 192 A85-17802

Architectural solutions to safety problems of digital flight critical systems for commercial transports
[AIAA PAPER 84-2603]
p 193 A85-17806

Multivariable control system design techniques - An application to a short takeoff and landing aircraft
[AIAA PAPER 84-2625] p 171 A85-17822
A standard computer bus for MIL-STD-1750A avionics computers
[AIAA PAPER 84-2679] p 164 A85-17860
Maintenance Assist Functions embedded within the 737-300 Flight Management System
[AIAA PAPER 84-2706] p 165 A85-17874
VLSI chip set for high-performance avionic computers
[AIAA PAPER 84-2730] p 164 A85-17887
Designing a priority driven multi-frame rate flight executive
[AIAA PAPER 85-0309] p 266 A85-19656
Software design methods — for civil and military aircraft avionics systems p 301 A85-21457
A design methodology for integrated avionic systems p 301 A85-21458
Trends in digital flight control systems p 269 A85-21465
Trends in digital engine control - Integration of propulsion control with flight control and avionic systems in future military and commercial aircraft p 264 A85-21466
Sensor control and data annotation gets on the bus p 347 A85-24261
Maintenance computer for Tornado p 348 A85-25854
Living with EICAS - Operational experience to date on the 757 and 767 — Engine Indication and Crew Alerting System
[SAE PAPER 841506] p 352 A85-25981
PADDS - A Portable Airborne Digital Data System p 418 A85-28652
767/757 instrumentation system p 418 A85-28653
Development of an on-board computer for flight test data analysis p 504 A85-31965
Software Quality Assurance Program for the AH-64 Advanced Attack Helicopter (AAH) p 486 A85-32010
An Optimal, Proportional-plus-Integral/Tracking control law for aircraft applications p 513 A85-33282
DARPA stressing development of pilot's associate system p 602 A85-40917
Use of programmable calculators onboard commercial aircraft p 763 A85-41397
CMA-771 - A new OMEGA onboard system p 749 A85-41399
Microcomputer for aircraft gun-sight p 764 A85-42447
Onboard simulation - A newly emerging technology and the potential of the helmet mounted display as an embedded training device
[AIAA PAPER 85-1737] p 757 A85-42864
Design of airborne fiber-optic data bus system p 750 A85-43245
The Lockheed Cybernetics Console - An artificial intelligence tool p 858 A85-43690
Adaptable air data computer standardization p 833 A35-45025
A Standard Central Air Data Computer (SCADC) with worldwide applications p 833 A85-45026
Triplex bus-connected inter-unit selected FCS configuration — flight control system p 841 A85-45085
Airborne Electronic Terrain Map System - Conclusions p 834 A85-45152
Digital computer architecture as applied to an advanced flight control system
[AIAA PAPER 85-1949] p 846 A85-45967
Validation of fault-free behavior of a reliable multiprocessor system - FTMP: A case study — Fault-Tolerant Multi-Processor avionics p 888 A85-47757
Analytical redundancy management mechanization and flight data analysis for the F-8 digital fly-by-wire aircraft flight control sensors
[NASA-CR-170398] p 173 N85-14844
Investigation of semiautomatic aircraft control processes employing time redundancy in on-board digital trajectory control computers p 270 N85-16048
Documentation and separate test program development is most important for test/maintenance p 203 N85-16745
Experience in using on-aircraft software for testing integrated systems p 302 N85-16747
The design and development of an integrated core system for battlefield helicopters p 260 N85-16311
A cost-efficient control procedure for the benefit of all airspace users p 613 N85-26651
The interactive generation of specifications for an onboard software series (GISELE) p 679 N85-27906
Certifying complex digital systems on civil aviation aircraft p 680 N85-27907
Development and evaluation of a Fault-Tolerant Multiprocessor (FTMP) computer. Volume 2: FTMP software
[NASA-CR-166072] p 804 N85-30706
Informatics Division p 797 N85-31416
Development and operation of a measuring data acquisition system for use in light airplanes p 912 N85-35556

Safety recommendation(s), A-84-96
[REPT-3983A/217] p 563 N85-25223
Aircraft accident report: United Airlines Flight 663, Boeing 727-222, N7647U, Denver, Colorado, May 31, 1984
[PB85-910405] p 565 N85-26686
Frangibility of obstacles at airports
[NLR-MP-84002-U] p 700 N85-28431
DYNA3D, INGRID, and TAURUS: An integrated, interactive software system for crashworthiness engineering
[DE85-010928] p 860 N85-32846

**AIRCRAFT ANTENNAS**
The main characteristics of a synthetic-aperture radar in the case of arbitrary motion of the flight vehicle p 96 A85-15687
Antenna engineering handbook /2nd edition/ p 180 A85-16081
Effect of counterpoise on VOR antenna radiation patterns p 566 A85-33999
Giant surveillance radar squeezed into wing p 763 A85-41052
Main stages and problems in the design of low-gain active antennas p 794 A85-42106
Reconnoitering the electromagnetic spectrum p 879 A85-49094
Measurements of polarization characteristics of radiation field of on-board aircraft antennas p 127 N85-12230
On aircraft antennas and basic scattering studies
[AD-A146017] p 127 N85-12282
Microstrip antenna for multichannel radiometer p 188 N85-15056
Proceedings of the Symposium on Electromagnetic Windows (17th) held at Georgia Inst. of Technology, Engineering Experiment Station, Atlanta, Georgia on 25-27 July 1984. Part 2
[AD-A149125] p 449 N85-21444
Coordinate determination errors in measuring characteristics of radiation field of airborne antennas p 528 N85-22919
Simulation and analysis of airborne antenna radiation patterns p 797 N85-31342

**AIRCRAFT APPROACH SPACING**
Time scheduling of a mix of 4D equipped and unequipped aircraft p 483 A85-33278
COMPAS - Computer support for approach control
[DGLR PAPER 84-091] p 748 A85-40310
National airspace review enhancement plan, revision 3
[AD-A150743] p 246 N85-16852

**AIRCRAFT BRAKES**
The SEPCARB carbon-carbon materials, friction materials p 363 A85-24820

**AIRCRAFT CARRIERS**
Evaluation of a real-time predictive guidance law for landing VTOL aircraft at sea
[AIAA PAPER 84-2673] p 151 A85-17856
Aircraft noise annoyance at three joint air carrier and general aviation airports p 452 A85-27359

Glideslope descent-rate cuing to aid carrier landings p 409 A85-29124
Development of the F/A-18A automatic carrier landing system p 512 A85-32777
Getting hooked — ship deck aircraft capture and hangar packaging p 848 A85-44750
An update of the functional requirements of the Naval Aviation Logistics Command Management Information System (NALCOMIS) [AD-A148565] p 198 N85-15532
An interactive environment for the development of an expert system in ZOG [AD-A149954] p 459 N85-22025

**AIRCRAFT COMMUNICATION**
Data communications and teleprocessing systems on ground and on board of aircraft p 15 A85-12533
Applications of air-ground-air digital communication system ACARS/AIRCOM [AIAA PAPER 84-2604] p 150 A85-17807
An experimental aeronautical satellite data link [AIAA PAPER 84-2691] p 151 A85-17808
Implications of Joint Tactical Information Distribution System/Tactical Digital Information Link J on Navy aircraft weapons systems [AIAA PAPER 84-2719] p 152 A85-17883
New generation military tactical airborne communications systems - The interoperability challenge p 244 A85-19275
Integrated communications - A designers view — for civil and military aircraft avionics p 245 A85-21482
Future communications/navigation/surveillance requirements for Department of Defense Air Transport Operations p 407 A85-27533
Satellite communication performance evaluation model for aircraft systems p 586 A85-34490
NATCS - Navigation Aided Target Control System for multiple drone applications p 642 A85-37803
Communication in automated air-traffic-control systems — Russian book p 644 A85-38647
Adaptive noise cancellation in a fighter cockpit environment [AD-A153178] p 749 A85-41321
Applications of wavelength division multiplexing (WDM) and time division multiplexing (TDM) to aircraft data links p 853 A85-44365
A unified approach to data communications in aircraft p 822 A85-44995
Error corrective coding for MIL-STD-1553B aircraft stores management systems p 823 A85-45127
Technology considerations of Integrated Communication Navigation Identification Avionics (ICNIA) p 823 A85-45131
Worldwide airborne command post switching and intercommunication system - Present and future p 823 A85-45134
A fault and damage tolerant network for an advanced transport aircraft p 888 A85-47760
Ministry wants better commo facilities for agroaviation p 127 N85-12003
Designer on Aeroflot automated COMMO system development p 298 N85-16785
Tactical HF communication for military helicopters using the NVIS mode p 297 N85-16807
National airspace system: Operational requirements [AD-A149349] p 339 N85-18873
EHF air-to-air communications p 373 N85-19273
Spectrum resource assessment of the Aeronautical Mobile Service between 400 MHz and 17.7 GHz [PB85-125995] p 447 N85-20241
The effects of atmospheric turbulence on an air-to-air optical communication link [AD-A151840] p 602 N85-25700
Survey of narrow band vocoder technology [AD-A151919] p 606 N85-27114

**AIRCRAFT COMPARTMENTS**
Theoretical design of acoustic treatment for cabin noise control of a light aircraft [AIAA PAPER 84-2328] p 16 A85-10872
Effects of acoustic treatment on the interior noise levels of a twin-engine propeller aircraft - Experimental flight results and theoretical predictions [AIAA PAPER 84-2331] p 17 A85-10875
Review of recent research of interior noise of propeller aircraft [AIAA PAPER 84-2349] p 17 A85-10885
Alternate approach to aircraft interior noise control. I Damped trim panels [AIAA PAPER 84-2371] p 17 A85-10900
Modeling of turbulent buoyant flows in aircraft cabins p 90 A85-15867
1984 SAE aerospace handbook: Air transport cabin and flight deck safety provisions p 156 A85-17244
Minimum and maximum cargo tables for aircraft with three cargo compartments [SAWE PAPER 1568] p 160 A85-18820
757 payloads weight optimization [SAWE PAPER 1571] p 160 A85-18823
Numerical simulations of the effect of ventilation control on fire and smoke spread in aircraft cabins [ASME PAPER 84-HT-104] p 149 A85-18843
Environmental control systems (ECS) - Compromises and trade-off p 342 A85-26309
Theoretical design of acoustic treatment for noise control in a turboprop aircraft p 414 A85-29250
An improved source model for aircraft interior noise studies [AIAA PAPER 85-0787] p 537 A85-30389
Evaluation of interior noise control treatments for advanced turboprop aircraft p 573 A85-35586
Examination of fire safety of commercial aircraft cabins p 639 A85-37693
Approach to interior noise control. II - Damped trim panels p 680 A85-39221
Effects of acoustic treatment on the interior noise of a twin-engine propeller airplane p 827 A85-45841
Pool fire-ventilation crossflow experiments in a simulated aircraft cabin interior p 877 A85-48130
Acoustic intensity techniques for airplane cabin applications p 919 A85-49137
Flight investigation of cabin noise control treatments for a light turboprop aircraft [SAE PAPER 850876] p 885 A85-501[illegible]
Air-cycle air conditioning of turbine-powered general aviation and commuter aircraft [SAE PAPER 850901] p 886 A85-50118
Aircraft cabin pressurization control system tester [AD-D011225] p 38 N85-10081
The pyrolysis toxic gas analysis of aircraft interior materials [AD-A146286] p 119 N85-12115
Modeling of aircraft cabin fires [NBS-GCR-84-473] p 91 N85-12880
An improved source model for aircraft interior noise studies [NASA-CR-172517] p 305 N85-17668
Modeling of aircraft cabin fires [PB85-137885/GAR] p 333 N85-18031
Legislation to improve airline safety [GPO-38-222] p 405 N85-21132
Suppression and control of Class C cargo compartment fires [FAA-CT-84-21] p 405 N85-21133
Simultaneous cabin and ambient ozone measurements on two Boeing 747 airplanes. Volume 3: October 1978 - July 1979 [NASA-TM-86883] p 454 N85-21872
Thermal response of aircraft cabin ceiling materials during a post-crash, external fuel-spill, fire scenario [PB85-145647] p 502 N85-23784
Transmission of gear noise to aircraft interiors prediction methods p 539 N85-23788
A study of interior noise levels, noise sources and transmission paths in light aircraft [NASA-CR-172152] p 805 N85-30766
Effects of propeller rotation direction on airplane interior noise levels [NASA-TP-2444] p 805 N85-30767
Design of sidewall treatment of cabin noise control of a twin engine turboprop aircraft [NASA-CR-172245] p 806 N85-30771
The role of aircraft panel materials in cabin fires and their properties [FAA-CT-84-30] p 820 N85-32104
Aviation safety (aircraft passenger survivability and cabin safety) [GPO-38-647] p 878 N85-34130

**AIRCRAFT CONFIGURATIONS**
Rotor systems research aircraft airplane configuration flight-test results [AIAA PAPER 84-2465] p 99 A85-13551
Joined-wing research airplane feasibility study [AIAA PAPER 84-2471] p 99 A85-13553
The aerodynamics of three-surface airplanes [AIAA PAPER 84-2506] p 101 A85-13577
The X-29 flight-research program p 102 A85-13895
The joined wing - An overview — aircraft tandem wings in diamond configurations [AIAA PAPER 85-0274] p 247 A85-19626
Study of winglets applied to biplanes [AIAA PAPER 85-0279] p 217 A85-19631
Linearized potential flow analysis of complex aircraft configurations by HISSS, a higher order panel method [AIAA PAPER 85-0281] p 217 A85-19632
The influence of camber variation on the aerodynamics of civil transport aircraft [AIAA PAPER 85-0353] p 220 A85-19691
Afterbody drag reduction by vortex generators [AIAA PAPER 85-0354] p 220 A85-19692
Structural components, design of tilt-rotor JVX near completion p 249 A85-20059
A formalism for the design problem of aircraft system universalization p 250 A85-20473
Radar cross section lectures — Book p 289 A85-20915
Application of a two-dimensional grid solver for three-dimensional problems — of flows around aircraft configurations p 317 A85-25127
MiG-2000 p 412 A85-27838
In-flight flow visualization - A fluid approach p 414 A85-29644
Joined wing - Child of the computer p 393 A85-29672
Impact of main rotor tip geometry on main rotor/tail rotor interaction in hover p 495 A85-31985
Something old, something new p 648 A85-38440
Stability and control results for advanced turboprop aft-mount installations [SAE PAPER 841479] p 675 A85-39059
New configurations and their contribution to the reduction of commercial-aircraft operating costs [DGLR PAPER 84-081] p 707 A85-40301
The modern fighter aircraft - Comparative configurational considerations [DGLR PAPER 84-110] p 753 A85-40327
Simulation of wing, fuselage, and wing/fuselage flowfields using a three-dimensional Euler/Navier-Stokes algorithm [AIAA PAPER 85-1680] p 718 A85-40775
Navier-Stokes solution of the flow field around a complete aircraft [AIAA PAPER 85-1509] p 721 A85-40944
Peace Jack - An enigma exposed p 757 A85-41540
Performance and optimization analyses of flight vehicle from low to very high angles of attack [AIAA PAPER 85-1784] p 824 A85-43844
Flight control law synthesis for an elastic vehicle by eigenspace assignment [AIAA PAPER 85-1898] p 846 A85-45970
A three-dimensional, block-structured finite element grid generation scheme — for flow around aircraft modeling p 869 A85-48530
Grid generation and flow calculations for aircraft geometries p 871 A85-49129
An evaluation of improved analytically based weight estimation methodologies [SAWE PAPER 1616] p 883 A85-49920
Preliminary airworthiness evaluation of the Rutan Aircraft Factory (RAF), Inc. LONG-EZ airplane with external sight [AD-A145381] p 22 N85-10937
Second sailplane project: The RP-2 p 129 N85-12977
An in-flight investigation of a twin fuselage configuration in approach and landing [NASA-CR-172386] p 173 N85-13801
Design of an airfoil leading edge slat using an inverse aerodynamic calculation method p 256 N85-16777
Integrated digital/electric aircraft concepts study [NASA-CR-3841] p 257 N85-16861
A first-order Green's function approach to supersonic oscillatory flow: A mixed analytic and numeric treatment [NASA-CR-172207] p 327 N85-18002
Over the wing propeller [NASA-CASE-LAR-13134-1] p 415 N85-19980
Study for prediction of rotor/wake/fuselage interference, part 1 [NASA-CR-177340-VOL-1] p 466 N85-22346
Study for prediction of rotor/wake/fuselage interference. Part 2: Program users guide [NASA-CR-177340-VOL-2] p 467 N85-22347
Boundary layer transition control for takeoff and landing configurations p 480 N85-23714
Experiences with transition fixation in the high-speed regime at NLR p 480 N85-23715
Recent developments in the dynamics of advanced rotor systems [NASA-TM-86669] p 531 N85-24320
Computation of unsteady transonic flows about two-dimensional and three-dimensional AGARD standard configurations p 585 N85-25183
The application of transonic unsteady methods for calculation of flutter airloads p 585 N85-25186
Tensile and fracture toughness properties of Mirage III spars [AR-003-019] p 605 N85-25899
A first-order time-domain Green's function approach to supersonic unsteady flow [NASA-CR-172208] p 741 N85-29930
Calculation of transonic flows around an aircraft configuration with motorized nacelle [SNIAS-851-111-106] p 742 N85-31008
Quest for performance: The evolution of modern aircraft [NASA-SP-468] p 811 N85-32089

Flight testing the fixed-wing configuration of the Rotor Systems Research Aircraft (RSRA)
[NASA-TM-86762] p 886 N85-34135

**AIRCRAFT CONSTRUCTION MATERIALS**

Strengthening the study on the usability of aircraft materials p 42 A85-12354

The design evolution of an advanced composite translating cowl
[AIAA PAPER 84-2523] p 101 A85-13586

Non-destructive testing of aircraft composite structures p 123 A85-14107

Certification of Kevlar on primary structure SAAB/Fairchild SF-340 aircraft p 118 A85-14111

Metallized fabrics, their properties and technical applications p 118 A85-15166

Magnaweave shapes for aircraft - Integrally woven wing sections, stiffened shear panels, and others p 71 A85-15959

Evaluation of Kevlar 29 for filament-wound structural applications in helicopter p 178 A85-16033

Introduction of titanium powder metallurgy components to aircraft series production
[MBB-BB-569-84-OE] p 178 A85-16085

The thermal response of aircraft cabin ceiling materials during a post-crash, external fuel-spill, fire scenario
[AIAA PAPER 85-0396] p 241 A85-19721

Europeans using composites, ceramics for rotorcraft engine improvements p 253 A85-20081

Review of the origin of Japanese Industrial Standard p 280 A85-20545

Interpretation of fatigue crack growth in aluminium alloys under programmed block loading p 281 A85-20790

Kevlar aramid fibers vs other fibers for reinforcement of composite structures p 282 A85-21382

Energy absorbing qualities of fiber reinforced plastic tubes p 282 A85-21383

Current status of carbon fiber and composite development p 362 A85-24810

Combustion system for radiation investigations
p 33 N85-10986

Energy efficient engine component development and integration program
[NASA-CR-170034] p 33 N85-10990

Energy efficient engine. Low pressure turbine test hardware detailed design report
[NASA-CR-167956] p 34 N85-10994

Energy efficient engine high pressure turbine test hardware detailed design report
[NASA-CR-167955] p 34 N85-10995

Energy efficient engine. High pressure compressor detail design report
[NASA-CR-165558] p 35 N85-10998

Air force engine repair - Oklahoma City Air Logistics Center, Propulsion Division
[AD-P003999] p 71 N85-11980

Performance deterioration of cascades exposed to solid particles p 112 N85-12057

Basic study of bladed disk structural response
[AD-A146226] p 112 N85-12061

Propulsion — jet aircraft engines
[PNR-90208] p 113 N85-12062

Cyclic endurance testing of the RB211-22B cast HP turbine blade — high pressure (HP)
[PNR-90210] p 113 N85-12063

The applications of fibre optics in gas turbine engine instrumentation
[PNR-90209] p 135 N85-12687

Static jet noise test results of four 0.35 scale-model QCGAT mixer nozzles
[NASA-TM-86871] p 135 N85-13551

Random vibrations of aircraft engine blades
p 170 N85-14967

Predicted performance benefits of an adaptive digital engine control system of an F-15 airplane
[NASA-TM-85916] p 265 N85-15729

Monitoring engine thermal stresses
p 266 N85-15735

Accelerated Mission Endurance Testing (AMET)
p 266 N85-15736

Design and test requirements for development of today's engines p 266 N85-15737

Contamination and distortion of steady flow field induced by discrete frequency in aircraft gas turbines
[AD-A147092] p 294 N85-16073

The aircraft engine of the future
[PNR-90226] p 268 N85-16875

Rolls-Royce experience with thermal barrier coatings — in aircraft engines
[PNR-90222] p 285 N85-17152

Flow measurement device
[AD-D011432] p 298 N85-17369

An improved source model for aircraft interior noise studies
[NASA-CR-172517] p 305 N85-17668

Design description of a microprocessor based Engine Monitoring and Control unit (EMAC) for small turboshaft
[NASA-TM-86860] p 313 N85-17935

Research and development for semi-spherical inflow control device
[NAL-TR-833] p 353 N85-18056

Improvement of gas turbine engine performance by water injection into turbine cooling air
p 370 N85-18209

On limits of applicability of linear models to dynamics of gas channels in aircraft engines p 355 N85-18219

FRG firms jump into market for auto, aircraft ceramics
p 364 N85-18225

NASA Lewis Research Center/University Graduate Research Program on Engine Structures
[NASA-TM-86916] p 372 N85-18375

Preliminary performance of a vertical-attitude takeoff and landing, supersonic cruise aircraft concept having thrust vectoring integrated into the flight control system
[NASA-CR-172530] p 345 N85-18977

Analytical fuel property effects: Small combustors, phase 2
[NASA-CR-174848] p 365 N85-19175

Study of advanced fuel system concepts for commercial aircraft and engines
[NASA-CR-174752] p 365 N85-19176

Study of advanced fuel system concepts for commercial aircraft
[NASA-CR-174751] p 415 N85-19978

Over the wing propeller
[NASA-CASE-LAR-13134-1] p 415 N85-19980

Assuring structural integrity in Army systems
[NASA-CR-175492] p 448 N85-20398

A theory of post-stall transients in multistage axial compression systems
[NASA-CR-3878] p 398 N85-21117

Description of a technique to measure spray distribution in an air stream
[AD-A149780] p 398 N85-21122

Stratified charge rotary aircraft engine technology enablement program
[NASA-CR-174812] p 422 N85-21163

Tribological systems as applied to aircraft engines
[NASA-TM-86965] p 450 N85-21657

Effects of inlet distortion on a static pressure probe mounted on the engine hub in an F-15 airplane
[NASA-TP-2411] p 508 N85-22394

Hydrodynamic simulation of transient processes in injection system of aircraft engines during pump unswirling p 509 N85-22829

Effect of water injection into air for turbine cooling on economy of operation of gas turbine engine with afterburning p 509 N85-22830

T700 cutter life improvement program
[AD-A150450] p 528 N85-23089

Welcome to the Saclay Propeller Testing Center
[NASA-TM-77648] p 511 N85-23799

High frequency estimation of 2-dimensional cavity scattering
[AD-A151697] p 602 N85-25696

Advanced smoke meter development survey and analysis
[NASA-CR-168287] p 604 N85-25792

Nondestructive tests of ceramic components for aircraft turbines p 583 N85-26718

Test devices for aeronautical research and technology
[NASA-TM-77651] p 683 N85-27914

An investigation into the soot production processes in a gas turbine engine
[AD-A152710] p 690 N85-27992

Compressor and turbine models - numerical stability and other aspects
[AD-A153811] p 673 N85-28948

Hold-time effects in elevated temperature fatigue crack propagation
[AD-A154146] p 797 N85-30376

Component-specific modeling
[NASA-CR-174925] p 836 N85-32119

Elevated temperature crack growth
[NASA-CR-174957] p 856 N85-33540

Performance improvements from surfacing in aero engine components

[AD-A152801] p 690 N85-28129
Heat management system for aircraft
[AD-D011658] p 654 N85-28936
Detailed studies of aviation fuel flowability
[NASA-CR-174938] p 798 N85-31308
A comparison of two bench scale tests of fue temperature flow properties
[AD-A154477] p 786 N85-31
Observations of the use of the setapoint detector
[AD-A154633] p 853 N85-32
Comparative analysis of operational forecasts ve actual weather conditions in airline flight planning, vol 1
[NASA-CR-167862] p 913 N85-3
Comparative analysis of operational forecasts ve actual weather conditions in airline flight planning, vol 4
[NASA-CR-167865] p 913 N85-3
Comparative analysis of operational forecasts ve actual weather conditions in airline flight plann Summary report
[NASA-CR-167866] p 913 N85-3

**AIRCRAFT GUIDANCE**
Some concepts for improving non-precision appro guidance through use of on-board data bases p 95 A85-14
Evaluation of a real-time predictive guidance law landing VTOL aircraft at sea
[AIAA PAPER 84-2673] p 151 A85-17
Digital avionics and flight path director functions of HH-60 helicopter
[AIAA PAPER 84-2674] p 151 A85-17
Four-dimensional fuel-optimal guidance in the prese of winds p 158 A85-18
Mixing four-dimensional equipped and unequip aircraft in the terminal area p 488 A85-32
Onboard near-optimal climb-dash energy manageme p 497 A85-32
Air navigation systems — Russian book p 749 A85-4
Energy management of three-dimensi minimum-time intercept — for aircraft flight optimiza
[AIAA PAPER 85-1781] p 838 A85-4
Concepts and algorithms for terminal-area tr management p 876 A85-47
Simulation of time-control procedures for the advan air traffic control system p 878 A85-47
Time-controlled aircraft guidance in uncertain winds temperatures p 879 A85-47
Guidance and navigation programs and plans p 154 N85-14
Helicopter Guidance and Control Systems for Battlefi Support
[AGARD-CP-359] p 204 N85-16
Algorithms for automatic four-dimensional airc guidance, considering the momentary wind situation
[DFVLR-FB-84-40] p 410 N85-21
Optimal symmetric flight studies
[NASA-CR-172506] p 426 N85-21
A flight management algorithm and guidance fuel-conservative descents in a time-based metered traffic environment: Development and flight test resu p 496 N85-22
Reference systems for the evaluation of dead-reckon navigation equipment p 489 N85-22
Cost Effective and Affordable Guidance and Con Systems
[AGARD-CP-360] p 543 N85-26
Investigation of imaging and flight guidance conce for rotorcraft zero visibility approach and landing
[NASA-CR-166571] p 644 N85-27

**AIRCRAFT HAZARDS**
Recent data from the airlines lightning strike report project
[AIAA PAPER 84-2406] p 89 A85-13
Survey of lightning hazard and low altitude dir lightning strike program
[AIAA PAPER 84-2485] p 89 A85-13
Bird strike prevention at airports p 90 A85-1
Numerical simulations of the effect of ventilation con on fire and smoke spread in aircraft cabins
[ASME PAPER 84-HT-104] p 149 A85-1
Atmospheric electricity hazards to aircraft opera
[AIAA PAPER 85-0013] p 247 A85-19
The Federal Aviation Administration's Engineering Development Aircraft Icing Program
[AIAA PAPER 85-0015] p 247 A85-19
Lightning simulation facilities in the United States Europe
[AIAA PAPER 85-0093] p 273 A85-19
The lightning threat to aerospace vehicles
[AIAA PAPER 85-0094] p 240 A85-19
Evaluation of aircraft interior panels under full-sc cabin fire test conditions
[AIAA PAPER 85-0393] p 240 A85-19
Measurements of the response of transport aircr ceiling panels to fuel pool fires
[AIAA PAPER 85-0394] p 240 A85-19
Detailed measurements of the flowfield in the vici of an airfoil with glaze ice
[AIAA PAPER 85-0409] p 222 A85-19

Wind shear - Taming the killer p 241 A85-20148
A brief review of the performance of the Canadian rcrew life preservers over the last twenty years p 330 A85-22760
A look at 'chair-chutes' - Parachute industry's answer airline safety in the 1940s p 331 A85-22765
JAWS data collection, analyses highlights, and icroburst statistics p 452 A85-26771
Characteristics of gust front and downdrafts from single oppler radar data p 453 A85-26779
Recent data from the airline lightning strike reporting roject p 482 A85-32581
Droplet size distribution effects on aircraft ice ccretion p 563 A85-35585
Techniques for accommodating control effector failures n a mildly statically unstable airplane p 584 A85-35982
Protection of materials and technical equipment against irds p 638 A85-37540
Examination of fire safety of commercial aircraft abins p 639 A85-37693
Aircraft performance in a JAWS microburst p 701 A85-39213
Model of the wind field in a downburst p 701 A85-39218
Did safe jet fuel flunk its final exam? p 745 A85-41053
Icing on aircraft - Again a topic of interest p 745 A85-41065
Windshear escape p 776 A85-41530
Model tests of aircraft interior panel flammability p 852 A85-44125
Analysis of aircraft control strategies for microburst encounter — low altitude wind shear p 846 A85-46327
E and H fields measurements on the Transall C160 aircraft during lightning flashes
[ONERA, TP NO. 1985-48] p 876 A85-47259
Aircraft icing must never be underestimated p 877 A85-48862
Pool fire-ventilation crossflow experiments in a simulated aircraft cabin interior p 877 A85-49130
The microburst as a hazard to aviation: Structure, mechanisms, and nowcasting p 56 N85-10491
Automated aircraft icing forecast technique
[AD-A144653] p 57 N85-10571
A bird strike handbook for base-level managers
[AD-A147928] p 293 N85-16006
A study of the effects of triggered lightning
[AD-A148296] p 300 N85-17494
Don't fowl out
[AD-P004179] p 402 N85-19941
Accidents and serious incidents to civil aircraft due to birdstrikes
[AD-P004180] p 402 N85-19942
Analysis of bird strikes reported by European airlines, 1976 - 1980
[AD-P004181] p 402 N85-19943
1983 Air Force bird strikes

AIRCRAFT LANDING
The dynamics of takeoff and landing of aircraft — Russian book p 115 A85-14636
Visual simulation takes flight — Computer-generated imagery for improving realism of aircraft landing p 116 A85-15581
A simple and safe takeoff or landing procedure with wing surface contaminations p 155 A85-16239
Multivariable control system design techniques - An application to a short takeoff and landing aircraft
[AIAA PAPER 84-2625] p 171 A85-17822

Evaluation of a real-time predictive guidance law for landing VTOL aircraft at sea
[AIAA PAPER 84-2673] p 151 A85-17856

Dynamic analysis of large-scale mechanical systems and animated graphics
[AIAA PAPER 83-0949] p 184 A85-18340

Nonlinear simulation of flight along wind compensating curved glidepaths p 245 A85-21838

Development and qualification testing of S-76 helicopter takeoff and landing procedures for reduced field length p 414 A85-28643

Thrust vectored take-off, landing and ground handling of an airship
[AIAA PAPER 85-0877] p 641 A85-38792

Radio navigation and landing devices for IFR navigation with helicopters p 746 A85-40243

Status and trends of microwave landing system p 749 A85-41010

Landing path requirements for instrumental air traffic at regional airports and landing strips p 780 A85-41331

Snatching Harrier from the air with Skyhook p 781 A85-42890

A TACAN-based approach and landing aid p 821 A85-43584

Loop Separation Parameter for landing flying qualities
[AIAA PAPER 85-1786] p 838 A85-43846

Estimation of stochastic gust loads, taking into consideration unsteady air forces p 815 A85-44268

Getting hooked — ship deck aircraft capture and hangar packaging p 848 A85-44750

Flying qualities in the time domain
[AIAA PAPER 85-1849] p 842 A85-45878

Closed-loop, pilot/vehicle analyses of the approach and landing task
[AIAA PAPER 85-1851] p 842 A85-45880

In-flight evaluation of pure time delays in pitch and roll
[AIAA PAPER 85-1852] p 843 A85-45881

Fuel conservative guidance for shipboard landing of powered-lift STOL aircraft
[AIAA PAPER 85-1889] p 827 A85-45911

Multivariable control of VTOL aircraft for shipboard landing
[AIAA PAPER 85-1928] p 844 A85-45928

Flight evaluation of highly augmented controls and electronic displays for precision approach and landing of powered-lift aircraft
[AIAA PAPER 85-1944] p 827 A85-45934

An investigation of flying qualities requirements for a STOL fighter in approach and landing
[AIAA PAPER 85-1807] p 846 A85-47031

Time-controlled aircraft guidance in uncertain winds and temperatures p 879 A85-47867

Aircraft accident report: Flying Tigers, Inc., Flight 2468, McDonnell Douglas DC8-63, N797FT, Chambers Field, Naval Air Station, Norfolk, Virginia, October 25, 1983
[PB84-910408] p 14 N85-10925

Preliminary airworthiness evaluation of the Rutan Aircraft Factory (RAF), Inc. LONG-EZ airplane with external sight
[AD-A145381] p 22 N85-10937

Aircraft accident report, Scandinavian Airlines System, Flight 901, McDonnell Douglas DC-10-30, John F. Kennedy International Airport, Jamaica, New York, February 28, 1984
[PB84-910415] p 148 N85-13788

To take off and to land safely, Hoechst 1676 for ice and snow free runways p 149 N85-13791

An in-flight investigation of a twin fuselage configuration in approach and landing
[NASA-CR-172366] p 173 N85-13801

Alternatives for runway rubber removal from porous friction surfaces
[DOT/FAA/PM-84/28] p 176 N85-13803

Guidance and navigation programs and plans p 154 N85-14809

Critical conditions for the automatic control of landing from decision height in variable winds
[UTIAS-284] p 154 N85-14830

Simulation evaluation of two VTOL control/display systems in IMC approach and shipboard landing
[NASA-TM-85996] p 173 N85-14841

The effect of changes in the angle of incidence in the event of a richochet at a float step
[RAE-TRANS-2120] p 255 N85-15712

Development of a preliminary ALRS stabilized material pavement analysis system (SPAS)

Implications of artificial intelligence on the design of future onboard systems [SFENA-DPS/C/S3/84252A] p 918 N85-34596

**AIRCRAFT MANEUVERS**

Conversational time domain analysis for structural dynamics and control interaction problems [AIAA PAPER 84-1871] p 57 A85-10562

Supermaneuverability [AIAA PAPER 84-2386] p 69 A85-13501

Pursuit-evasion between two realistic aircraft p 131 A85-13632

Correlation of global and local aerodynamic properties in flight p 102 A85-13697

Integrated flight control/navigation sensors [AIAA PAPER 84-2623] p 171 A85-17820

Decoupling of high-gain multivariable tracking systems p 172 A85-18332

Maximum final energy chandelle [AIAA PAPER 85-0200] p 247 A85-19584

A generalized stability criterion for nonlinear dynamic systems — modeling aircraft roll maneuvers [AIAA PAPER 85-0202] p 300 A85-19586

Calculation of the exchange ratio for the Adaptive Maneuvering Logic program [AIAA PAPER 85-0311] p 199 A85-19658

Calculation of the minimum-time loop maneuver for jet aircraft p 269 A85-19676

Characteristic motions for simulation of post-stall manoeuvres and flight instabilities. p 269 A85-21679

The use of local functionals to construct a circumvention maneuver in game problems of evasion p 302 A85-22374

To pursue or to evade - That is the question — differential game theory application to air combat p 381 A85-26426

Supernormal flight may change battle flight concepts into the indefinite future p 424 A85-29195

A minimum-exposure, minimum-elevation military aircraft heuristic route selection model p 482 A85-31774

Insights into helicopter air combat maneuverability p 493 A85-31957

First-order feedback strategies for variable speed planar pursuit-evasion games p 703 A85-37198

Algorithms for improved, heading assisted, maneuver tracking p 644 A85-39456

A missile duel between two aircraft p 703 A85-39563

Axisymmetric thrust reversing thrust vectoring exhaust system for maneuver and balanced field length aircraft [AIAA PAPER 85-1466] p 670 A85-39794

Observability of relative navigation using range-only measurements p 750 A85-42399

Investigation of the dynamics of the limit maneuvers of a helicopter by means of a flight simulator p 781 A85-43051

A plane-tracking method p 750 A85-43236

Minimum time turning — of fighter aircraft [AIAA PAPER 85-1780] p 837 A85-43840

Aircraft intercept vectoring in a known wind field [AIAA PAPER 85-1782] p 824 A85-43842

Development of control laws for a flight test maneuver autopilot for an F-15 aircraft [AIAA PAPER 85-1859] p 843 A85-45888

Improved feedback algorithms for optimal maneuvers in vertical plane [AIAA PAPER 85-1976] p 845 A85-45956

A likelihood function method for multiple aircraft maneuver tracking p 888 A85-47699

A new approach to the maneuvering target tracking problem p 917 A85-47769

Directional solidification of flake and nodular cast iron during KC-135 low-g maneuvers p 44 N85-11040

Algorithm for tracking manuevering object with ambiguous measurements p 189 N85-15057

Evaluation of operational loads to verify structural design p 254 N85-15677

Modeling of aircraft performance from flight test results using quasi steady-state test techniques p 343 N85-18047

Coordinate determination errors in measuring characteristics of radiation field of airborne antennas p 528 N85-22919

Minimum time turns using vectored thrust [AD-A151693] p 575 N85-25256

High specific power aircraft turn maneuvers: Tradeoff of time-to-turn versus change in specific energy [AD-A151701] p 575 N85-25257

Application of CFD techniques toward the validation of nonlinear aerodynamic models [NASA-TM-86715] p 560 N85-26671

Autofocus motion compensation for synthetic aperture radar and its compatibility with strapdown inertial navigation sensors on highly maneuverable aircraft [AD-A151940] p 569 N85-26693

Piloted simulation of one-on-one helicopter air combat at NOE flight levels [NASA-TM-86686] p 586 N85-26720

Parameter identification results of tests in nonsteady symmetric flight with the Hawker Hunter Mk 7 [NLR-TR-83042-U] p 653 N85-27860

The STOL and maneuver technology program integrated control system development p 680 N85-27910

System safety study of minimum TCAS 2 for instrument weather conditions [FAA-PM-85-12] p 820 N85-33113

Development of control laws for a flight test maneuver autopilot for an F-15 aircraft [NASA-TM-86736] p 847 N85-33122

Control variables in vertical wind determination using simple flight-mechanical equations p 914 N85-35546

**AIRCRAFT MODELS**

Helicopter ground resonance - A spatial model analysis p 18 A85-11473

Modular programming structure applied to the simulation of non-linear aircraft models p 132 A85-15661

Model reduction of control systems [AFWAL-TM-83-183-FIGC] p 195 A85-18350

Experimental methods for wind-tunnel flight-mechanics investigations using dynamically similar aircraft models — German thesis p 249 A85-19836

Selection of rational models in the optimal planning of aeromechanical experiments p 288 A85-20460

Model tests of phase-locked propeller installations [AIAA PAPER 85-0001] p 353 A85-26316

Simulation validation of the XV-15 tilt-rotor research aircraft p 487 A85-32016

Investigations into the effects of scale and compressibility on lift and drag in the RAE 5m pressurised low-speed wind tunnel p 592 A85-34999

On the identification of a highly augmented airplane p 584 A85-35979

Stages in the development of the external wind-tunnel balance [DGLR PAPER 84-098] p 777 A85-40315

Unsteady aerodynamics on the ZKP large-scale model as a result of rapid control-surface motion [DGLR PAPER 84-130] p 710 A85-40342

The Dynamic Data Analyzer (DDA), an aircraft aero-propulsion digital analysis tool [AIAA PAPER 85-1212] p 779 A85-40821

Realism provided in a procedural trainer — for F-15 aircraft p 848 A85-45117

Development and validation of a general purpose linearization program for rigid aircraft models [AIAA PAPER 85-1891] p 846 A85-45976

Flow Cones for airplane flight test flow visualization p 903 A85-47085

Quantification of downwash and ground vortex of a lifting rotor model by flow visualization technique p 867 A85-47134

The theoretical minimum induced drag of three-surface airplanes in trim p 894 A85-49128

GIV - Gulfstream goes further p 882 A85-49638

Wind tunnel wall interference correction for aircraft models p 84 N85-12029

On aircraft antennas and basic scattering studies
[AD-A146017] p 127 N85-12282
Unsteady aerodynamic characterization of a military
aircraft in vertical gusts
[NASA-TM-77810] p 396 N85-21110
Hover test results of a small-scale twin-tilt nacelle
model
[NASA-TM-86665] p 478 N85-23706
Automatic Dynamic Aircraft Modeler (ADAM) for the
computer program NASTRAN p 604 N85-25875
Wing buffeting active control testing on a transport
aircraft configuration in a large sonic tunnel
p 590 N85-26750
Parameter identification results of tests in nonsteady
symmetric flight with the Hawker Hunter Mk 7
[NLR-TR-83042-U] p 653 N85-27860
Pressure distribution data from tests of 2.29 M (7.5 feet)
span EET high-lift transport aircraft model in the Ames
12-foot pressure tunnel
[NASA-TM-84517] p 709 N85-27912
Flight-mechanics test with a restricted flying aircraft
model in a wind tunnel
[ESA-TT-865] p 761 N85-31053
Design and implementation of input signals for
identification of pilot/aircraft models
[ESA-TT-880] p 762 N85-31055
Development and validation of a general purpose
linearization program for rigid aircraft models
[NASA-TM-86737] p 847 N85-32122

**AIRCRAFT NOISE**

Penetration of aircraft noise into an open configuration
airport terminal building p 37 A85-10406
The effects of installation on single- and counter-rotation
propeller noise
[AIAA PAPER 84-2263] p 58 A85-10830
Helicopter noise as predicted by three-dimensional
monopole and quasi-steady full-potential dipole sources
[AIAA PAPER 84-2267] p 58 A85-10832
Comparison of experimental and analytical predictions
of rotor blade-vortex interactions using model scale
acoustic data
[AIAA PAPER 84-2269] p 58 A85-10833
Numerical solutions of acoustic wave propagation
problems using Euler computations
[AIAA PAPER 84-2290] p 59 A85-10845
Assessment and prediction of aircraft community noise
annoyance
[AIAA PAPER 84-2291] p 55 A85-10846
Descriptors for rotary wing aircraft noise
[AIAA PAPER 84-2292] p 59 A85-10847
Quantification of advanced turboprop aircraft flyover
noise annoyance
[AIAA PAPER 84-2293] p 56 A85-10848
Proposed criteria for sound pressure levels in USAF
aircraft
[AIAA PAPER 84-2294] p 60 A85-10849
Theoretical design of acoustic treatment for cabin noise
control of a light aircraft
[AIAA PAPER 84-2328] p 16 A85-10872
Noise transmission through an acoustically treated and
honeycomb stiffened aircraft sidewall
[AIAA PAPER 84-2329] p 62 A85-10873
Effects of acoustic treatment on the interior noise levels
of a twin-engine propeller aircraft - Experimental flight
results and theoretical predictions
[AIAA PAPER 84-2331] p 17 A85-10875
Application of active noise control to model propeller
noise
[AIAA PAPER 84-2344] p 62 A85-10883
Predicted changes in advanced turboprop noise with
shaft angle of attack
[AIAA PAPER 84-2347] p 63 A85-10884
Ground plane microphone installation for measurement
of aircraft flyover noise
[AIAA PAPER 84-2353] p 63 A85-10889
Doppler frequency shift for aircraft noise in a refractive
atmosphere
[AIAA PAPER 84-2354] p 63 A85-10890
De-Dopplerization and acoustic imaging of aircraft
flyover measurements
[AIAA PAPER 84-2355] p 63 A85-10891
Propeller noise measurements in DNW on the fuselage
of a twin engine aircraft model — German-Dutch wind
tunnel
[AIAA PAPER 84-2367] p 17 A85-10897
Alternate approach to aircraft interior noise control. I
Damped trim panels
[AIAA PAPER 84-2371] p 17 A85-10900
Alternate approach to aircraft interior noise control. II
Self-supporting damped interior shell
[AIAA PAPER 84-2372] p 18 A85-10901
Advanced turboprop noise - A historical review
[AIAA PAPER 84-2261] p 133 A85-13958
Adhesive bonded noise suppression structures for
commercial and military aircraft p 134 A85-14172
Effect of angle of attack on rotor trailing-edge noise
p 134 A85-15346
Analysis of the effect on combustor noise measurements
of acoustic waves reflected by the turbine and combustor
inlet
[AIAA PAPER 84-2323] p 198 A85-16103
1984 SAE aerospace handbook: Noise
p 156 A85-17245
Environmental engineering at Saab-Scania Aircraft
Division p 157 A85-18149
Propagation of propeller tone noise through a fuselage
boundary layer p 197 A85-18514
The noise problem and the airport environment
p 191 A85-18874
Interaction of a turbulent vortex with a lifting surface
[AIAA PAPER 85-0004] p 206 A85-19452
The unambiguous in-flight determination of propeller
rotational noise in aircraft with four-cycle combustion
engines p 304 A85-20880
An overview of helicopter's environmental
considerations p 241 A85-21643
Acoustical guidelines for new heliports
p 276 A85-21644
Field-incidence noise transmission loss of general
aviation aircraft double-wall configurations
p 304 A85-21842
A path model of aircraft noise annoyance
p 304 A85-22071
Model tests of phase-locked propeller installations
[AIAA PAPER 85-0001] p 353 A85-26316
Aircraft noise annoyance at three joint air carrier and
general aviation airports p 452 A85-27359
The Flyover Noise Test Monitoring System (FONTMS)
p 414 A85-28646
Near-field frequency-domain theory for propeller noise
p 460 A85-29079
Noise transmission through aircraft panels
p 460 A85-29258
Theoretical design of acoustic treatment for noise control
in a turboprop aircraft p 414 A85-29260
Review of research on structureborne noise
[AIAA PAPER 85-0786] p 536 A85-30388
An improved source model for aircraft interior noise
studies
[AIAA PAPER 85-0787] p 537 A85-30389
The effect of source location on the structural-acoustic
interaction of an infinite elastic shell
[AIAA PAPER 85-0788] p 523 A85-30390
Acoustic vibration characteristics of high contact ratio
planetary gears p 524 A85-31954
The development of acoustical guidelines for new
heliports p 516 A85-32014
Development of piloting techniques to reduce helicopter
approach noise p 512 A85-32015
Noise transmission through an acoustically treated and
honeycomb-stiffened aircraft sidewall
p 537 A85-32592
A composite model of aircraft noise
p 537 A85-32594
Hygienic evaluation of noise in living quarters near an
airport p 608 A85-33579
Diffraction of a baffled dipole - Frequency dependence
p 611 A85-33915
Study on the comfortability of helicopter - Flight test of
acoustic noise level p 647 A85-38385
Approach to interior noise control. I - Damped trim
panels p 650 A85-39221
Extraction of helicopter-radiated noise by frequency
domain processing p 805 A85-40572
Benefits of blade sweep for advanced turboprops
[AIAA PAPER 85-1260] p 767 A85-41420
New ICAO procedures on instrument departures and
noise abatement p 746 A85-41733
Approach to interior noise control. II - Self-supporting
damped interior shell p 759 A85-42939
Mechanisms of acoustical energy transfer by a cylindrical
shell near the ring frequency p 861 A85-44039
Pseudo-noise and noise — in aeronautics
p 862 A85-45670
Noise radiation patterns of counter-rotation and
unsteadily loaded single-rotation propellers
p 862 A85-45840
Effects of acoustic treatment on the interior noise of a
twin-engine propeller airplane p 827 A85-45841
Predicted changes in advanced turboprop noise with
shaft angle of attack p 836 A85-45861
Acoustic intensity techniques for airplane cabin
applications p 919 A85-49137
Flight investigation of cabin noise control treatments for
a light turboprop aircraft

Glider Nimbus 3-24.5. Partial certification test results for importation in the U category
[REPT-CEV/IS/SE/AV/84] p 502 N85-23783
Structures and Dynamics Division research and technology plans for FY 1985 and accomplishments for FY 1984
[NASA-TM-86417] p 605 N85-25895
Parameter identification results of tests in nonsteady symmetric flight with the Hawker Hunter Mk 7
[NLR-TR-83042-U] p 653 N85-27980
Demonstration of relaxed static stability on a commercial transport p 679 N85-27898
Realisation of relaxed static stability on a commercial transport p 679 N85-27899
Mission analyses of solar powered aircraft
[NASA-CR-172583] p 782 N85-31072
Qualification needs for advanced integrated aircraft
[NASA-TM-86731] p 831 N85-33119
Comparative analyses of operational forecasts versus actual weather conditions in airline flight planning, volume 1
[NASA-CR-167862] p 913 N85-35834

**AIRCRAFT PILOTS**
Judgment and discipline - Recipe for survival p 241 A85-21582
Are two always better than one? — aircraft systems redundancy in number of engines, pilots, and crew protection p 496 A85-31997
Advanced avionics management system prevents pilots from being swamped by information overload p 655 A85-38401
Cross coupling in pilot/vehicle systems
[AIAA PAPER 85-1787] p 838 A85-43845
Loop Separation Parameter for landing flying qualities
[AIAA PAPER 85-1788] p 838 A85-43846
Identification of pilot dynamics from in-flight tracking data
[AIAA PAPER 85-1945] p 845 A85-45835
Traffic alert and collision avoidance system: Operational simulation
[FAA-PM-85-10] p 750 N85-29841

**AIRCRAFT POWER SUPPLIES**
Electric power systems in aircraft - Comments to the Standard GOST 19705-74 p 110 A85-14275
A minimum interruption ac electric power generating system for avionics
[AIAA PAPER 84-2742] p 168 A85-17895
Powerplants for long-duration unmanned aircraft p 420 A85-27094
A generalized algorithm for the topological optimization of the secondary electric power distribution systems of aircraft p 506 A85-31468
Secondary power generation system considerations for advanced aircraft
[SAE PAPER 841604] p 650 A85-39164
B-1B secondary power subsystem
[SAE PAPER 841607] p 652 A85-39166
Secondary power unit options for advanced fighter aircraft
[AIAA PAPER 85-1280] p 666 A85-39886
Meeting the electric power needs for aircraft digital electronics p 835 A85-45036
Improved secondary power system efficiency through expanded electrical power use p 836 A85-45037
Experimental cascaded doubly fed variable speed constant frequency generator system p 854 A85-45038
Advanced secondary power system for transport aircraft
[NASA-TP-2463] p 873 N85-28944

**AIRCRAFT PRODUCTION**
Principal tests for the automated production of the airbus fin assembly with fiber composite materials p 137 A85-18066
Essential design features of A310
[SAWE PAPER 1569] p 160 A85-18821
Design, fabrication and verification of composite flexbeam tail rotor for AH-64 Apache helicopter p 251 A85-21379
Tooling problems in the manufacture of AH-64 Composites Flexbeam Tail Rotor p 200 A85-21382
Fabrication and assembly of composite rear fuselage (CRF) tooling and manufacturing for the UH-60 helicopter p 200 A85-21394
RF-5e production development and flight test p 346 A85-24253
Japanese aerospace - Split personality on the mend p 382 A85-27365
Boeing's grown-up baby p 570 A85-33848
Integrated CADCAM - An approach for advanced composite primary aircraft structure p 703 A85-37211
Robotic drilling of acrylic windshields and canopies for fighter aircraft p 703 A85-37396
Methods for the assembly of aircraft structures — Russian book p 616 A85-38641
The Airbus A 310-300 as an example of the construction of an FRP vertical tail fin
[MBB-UT-52-85-OE] p 758 A85-42877
In-production aircraft weight control
[SAWE PAPER 1587] p 883 A85-48915
Weight control of composite parts in production
[SAWE PAPER 1629] p 886 A85-48927
Contour assessment of formed wing panels
[SAE PAPER 850884] p 886 A85-50131
Flexible manufacturing system for the production of aircraft parts
[PNR-90237] p 468 N85-23687

**AIRCRAFT PRODUCTION COSTS**
Low cost demonstrators for maturing technologies — in military aircraft development
[AIAA PAPER 84-2472] p 89 A85-13584
A survey of reported weight and cost savings for composite vs. metal airframes
[SAWE PAPER 1547] p 160 A85-18814
Impact of CAD/CAM on modification of flight test vehicles p 383 A85-25656
Manufacture and operating cost appraisals for modern airships p 571 A85-34290
Commission stacker - Incorporation in a total logistic concept — for Airbus production
[MBB-UT-36-84-OE] p 541 A85-35073
Requirements for future aircraft programs from the perspective of an airline company in international competition p 708 A85-40348
Low-cost demonstrators for maturing technologies — in military aircraft development p 827 A85-45842
FRG journal analyzes state, prospects of airbus programs: General analysis p 542 N85-25838

**AIRCRAFT RELIABILITY**
A system approach to flight control reliability and maintainability
[AIAA PAPER 84-2463] p 114 A85-13549
Extended range operations with two-engine airplanes - A regulatory view
[AIAA PAPER 84-2513] p 88 A85-13579
Atmospheric electricity hazards to aircraft operation
[AIAA PAPER 85-0013] p 247 A85-19457
Loading characteristics of VTOL aircraft and their effect on the remaining life of the aircraft p 280 A85-20469
Reliability and precision of the actuating mechanisms of aircraft control systems — Russian book p 353 A85-23723
Airworthiness technology — of helicopters p 412 A85-27501
Development and qualification testing of S-76 helicopter takeoff and landing procedures for reduced field length p 414 A85-28643
A balanced approach to the establishment of structural component lives p 524 A85-31959
Cost-effective airframe depot level repair through the airframe condition evaluation (ACE) program p 486 A85-31983
The development of maintenance and supply support of multi-mission helicopters operating from multiple locations p 486 A85-31984
Fault Detection/Location System (FD/LS) - How much, how little and how to implement p 486 A85-31982
The role of testing in qualification and certification of aircraft p 571 A85-34293
Development of the BK 117 helicopter p 674 A85-36369
Engine system field experience simulation program
[SAE PAPER 841601] p 658 A85-39071
United States Air Force engine damage tolerance requirements
[AIAA PAPER 85-1209] p 665 A85-39657
Requirements and demonstration for aeronautical structures made of carbon-fiber-reinforced epoxy resins
[DGLR PAPER 84-149] p 783 A85-40282
Stress measuring equipments for aircraft p 782 A85-40376
Environmental testing of avionics p 783 A85-40880
Structural analysis of aircraft gas turbine engines p 786 A85-41029
Routes to improved airworthiness of helicopters p 745 A85-41729
Structural integrity of helicopters in relation to their airworthiness p 757 A85-41730
Avionics unreliability turns fighters into shop queens p 764 A85-42896
Risk assessment of an aging military aircraft
[AIAA PAPER 84-0851] p 758 A85-42933
Validation of procedures for reliability evaluation and confirmation p 854 A85-44858
Guaranteed reliability estimates for various amounts of information on the primary factors p 854 A85-44860
Using the Rice distribution in evaluating the reliability of structures p 854 A85-44861
Pave Pillar avionics - An architecture for the future p 832 A85-45000
Self-Repairing Flight Control System Reliabi
Maintainability Program executive overview p 610 A85-4
Diagnosing and predicting the technical conditio
aviation equipment — Russian book p 611 A85-4
Laboratory studies related to in-flight acoustic emis
monitoring p 905 A85-47
Aspects of certification of civil aircraft structure
composite materials p 866 A85-4
A management guide to reliability predictions p 909 A85-4
The Eagle - A classic study in reliability growth p 862 A85-4
Airworthiness and flight characteristics test of
JOH-6A light combat helicopter configured with a w
strike protection system
[AD-A144880] p 20 N85-10
Airworthiness and Flight Characteristics (A and FC) t
of the EH - 1X/EH - 1H helicopter configurations
[AD-A144881] p 20 N85-10
Preliminary airworthiness evaluation of the Rutan Airc
Factory (RAF), Inc. LONG-EZ airplane with exten
sight
[AD-A148281] p 22 N85-10
The DG400 propulsed glider
[CEV/IS/SE/AV/84] p 161 N85-13
Nondestructive inspection: Improved capabilities
technicians
[AD-A147388] p 295 N85-161
Airworthiness and flight characteristics test of a
RC-12D Guardrail V
[AD-A148046] p 258 N85-18
Preliminary airworthiness evaluation AH-1S (
helicopter with external fuel tanks installed
[AD-A148091] p 258 N85-18
Standardization of helicopter certification requiremen
in the western world
[SNIAS-851-210-103] p 761 N85-310

[AD-A147786] p 521 N85-22970
US Army Aviation Engineering Flight Activity (USAAEFA) report bibliography update 1983 - 1984
[AD-A151381] p 541 N85-25188
NASA/aircraft industry standard specification for graphite fiber toughened thermoset resin composite material
[NASA-RP-1142] p 587 N85-26923
AIRCRAFT SPIN
Estimation of aerodynamic forces and moments on a steadily spinning airplane p 170 A85-16238
Discontinuous wing leading edge to enhance spin resistance p 424 A85-29255
Taming the deadly spin p 584 A85-36146
A simplified analysis of aircraft steady spin
p 584 A85-36483
Equilibrium conditions for aircraft steady spin
p 584 A85-36484
Handling qualities related to stall/spin accidents of supersonic fighter aircraft p 894 A85-49132
Determination of corrections to flow direction measurements obtained with a wing-tip mounted sensor
[NASA-CR-174412] p 329 N85-18962
Extended moment arm anti-spin device
[NASA-CASE-LAR-12979-1] p 416 N85-21147
Flight investigation of stall, spin and recovery characteristics of a low-wing, single-engine, T-tail light airplane
[NASA-TP-2427] p 574 N85-25248
Dual towline spin-recovery device
[NASA-CASE-LAR-13078-1] p 896 N85-35200
AIRCRAFT STABILITY
Conversational time domain analysis for structural dynamics and control interaction problems
[AIAA PAPER 84-1871] p 57 A85-10562
Development of a 3-D interactive graphics flight path analysis program for the T-38 aircraft
[AIAA PAPER 84-2439] p 113 A85-13533
Calculation of the probabilistic characteristics of nonlinear control systems using a trigonometric version of the factorial interpolation method p 192 A85-17065
A solution to the problem of the stability analysis of the three-dimensional motions of flight vehicles
p 170 A85-17067
Robust flight control for CCV aircraft
p 172 A85-18715
Theory of wing rock
[AIAA PAPER 85-0199] p 268 A85-19583
Transient motion of hypersonic vehicles including time history effects
[AIAA PAPER 85-0201] p 268 A85-19585
A generalized stability criterion for nonlinear dynamic systems — modeling aircraft roll maneuvers
[AIAA PAPER 85-0202] p 300 A85-19586
Characteristic motions for simulation of post-stall manoeuvres and flight instabilities p 269 A85-21679
A global technique for aircraft stability and control analysis p 270 A85-21681
The development of a finite element model of an aircraft vertical stabilizer for vibration analysis
p 290 A85-21683
Coupled helicopter rotor/body aeromechanical stability comparison of theoretical and experimental results
p 252 A85-21847
The importance of aircraft center-of-gravity position for flight control p 356 A85-25521
Canards - Design with care p 411 A85-27172
Criteria for low-speed longitudinal handling qualities of transport aircraft with closed-loop flight control systems — Thesis p 423 A85-28477
A possible causative flow mechanism for body rock — nonlinear pitch-yaw-roll coupling in high-performance aircraft p 512 A85-32593
BK 117 for dual pilot IFR operation
[MBB-UD-422-84-OE] p 572 A85-35253
Thrust reverser effects on fighter aircraft aerodynamics p 547 A85-35577
Aircraft flight stability testing: Dynamic loading — Russian book p 573 A85-35818
Techniques for accommodating control effector failures on a mildly statically unstable airplane
p 584 A85-35982
An approach to adaptive autopilot synthesis, with stabilization of a single-rotor helicopter used as an example p 584 A85-36573
A method for controlling the motion of a flight vehicle relative to its center of mass p 585 A85-36581
Perturbed motion of airplane and safe store separation p 674 A85-38168
Discussions on the regular behavior of the longitudinal dynamic response of aircraft during variable sweep flights p 674 A85-38974
Stability and control results for advanced turboprop aft-mount installations
[SAE PAPER 841479] p 675 A85-39059
The use of active controls to augment rotor/fuselage stability p 776 A85-43220
On-line estimation and identification of aircraft stability derivatives using the modified gain extended Kalman filter
[AIAA PAPER 85-1762] p 837 A85-43827
Identification of integro-differential systems for application to unsteady aerodynamics and aeroelasticity
[AIAA PAPER 85-1763] p 858 A85-43828
Low-speed experimental study of the vortex flow effects of a fighter forebody having unconventional cross-section
[AIAA PAPER 85-1798] p 813 A85-43851
Singular perturbation theory of longitudinal dynamic stability and response of aircraft p 839 A85-44683
An improved technique for testing helicopter rotor-pylon aeromechanical stability using measured rotor dynamic impedance characteristics p 826 A85-45794
Periodic control of the individual-blade-control helicopter rotor p 842 A85-45795
Development and validation of a general purpose linearization program for rigid aircraft models
[AIAA PAPER 85-1891] p 846 A85-45976
Theory of wing rock p 895 A85-49139
Analysis of asymmetric natural vibrations of an aeroplane with moving deformable control surfaces
p 863 A85-49672
Analysis of natural vibrations of a deformable aeroplane with fixed control systems p 863 A85-49673
A full-time yaw damper for the Starship flying scale prototype
[SAE PAPER 850912] p 895 A85-50123
Simulation study of an automatic trim system for reducing the control forces on a light twin after an engine failure
[SAE PAPER 850913] p 895 A85-50124
Preliminary airworthiness evaluation of the Rutan Aircraft Factory (RAF), Inc. LONG-EZ airplane with external sight
[AD-A145381] p 22 N85-10937
Preliminary performance of a vertical-attitude takeoff and landing, supersonic cruise aircraft concept having thrust vectoring integrated into the flight control system
[NASA-CR-172530] p 345 N85-18977
Acta Aeronautica et Astronautic Sinica (selected articles)
[AD-A148830] p 384 N85-19922
A Lagrange-D'Alembert formulation of the equations of motion of a helicopter carrying an externally suspended load
[NASA-TM-85884] p 416 N85-21149
Relative control effectiveness technique with application to airplane control coordination
[NASA-TP-2416] p 501 N85-23753
A perspective on superaugmented flight control advantages and problems p 677 N85-27886
Demonstration of relaxed static stability on a commercial transport p 679 N85-27898
Realisation of relaxed static stability on a commercial transport p 679 N85-27899
Experimental and theoretical determination of the wing-induced lateral wind on the tail surfaces in oscillating rolling motion. Part 1: Application of the Mobile Oscillating Derivatives (MOD) on an experimental part
[IFD-1/84-PT-1] p 654 N85-28939
Experimental and theoretical determination of the wing-induced lateral wind on the tail surfaces in oscillating rolling motion. Part 2: Theoretical investigations for calculation of the lateral wind
[IFD-1/84-PT-2] p 654 N85-28940
Contributions on the subject of longitudinal movements of aircraft in wind shears
[NASA-TM-77837] p 702 N85-29432
AIRCRAFT STRUCTURES
In situ aircraft inspection by pulsed laser holography
p 1 A85-10554
Structural crashworthiness; International Symposium, 1st, University of Liverpool, Liverpool, England, September 14-16, 1983, Invited Lectures p 47 A85-10624
Helicopter stability — Russian book
p 18 A85-11249
Fatigue life prediction - Metals and composites
p 42 A85-11752
Critical analysis of flaw acceptance methods
p 50 A85-11754
State-of-art and future of aicraft structure design and strength analysis p 19 A85-12351
New developments in aeroelastic research
p 51 A85-12352
Acoustic fatigue life of adhesive bonded structures subjected to acoustic loads p 51 A85-12472
Inspecting fastener holes electronically - The capacitance hole probe system p 52 A85-12592
Accumulation of fracture probability as damage accumulation for the prediction of service life and crack propagation in dynamically loaded aviation sheet metal
p 122 A85-12944
Maintenance impact of current loads recording methodology on crack-growth based individual aircraft tracking
[AIAA PAPER 84-2410] p 97 A85-13516
Methodology to better predict structural maintenance requirements for individual aircraft
[AIAA PAPER 84-2411] p 69 A85-13517
A methodology for analyzing laser induced structural damage
[AIAA PAPER 84-2521] p 122 A85-13584
Non-destructive testing of aircraft composite structures p 123 A85-14107
Certification of Kevlar on primary structure SAAB/Fairchild SF-340 aircraft p 118 A85-14111

Development of resins for damage tolerant composites - A systematic approach
p 118 A85-14167

Adhesive bonded noise suppression structures for commercial and military aircraft p 134 A85-14172

Damping of composite materials p 119 A85-15579

The application of endless-fiber reinforced polymers
p 119 A85-15580

Analysis of longitudinal natural vibrations of an aeroplane with moving deformable control surfaces
p 115 A85-15718

Crack growth life-time prediction under aeronautical type loading
[ONERA, TP NO. 1984-113] p 125 A85-15833

Damage tolerance of metallic structures: Analysis methods and applications p 125 A85-15859

Improved surface preparation of AM355 for adhesive bonding
p 180 A85-15899

Technical and economical aspects in manufacturing aviation and space components by using superplastic forming (SPF) and/or superplastic forming/diffusion bonding (SPF/DB)
[MBB-BB-572-84-OE] p 161 A85-16087

Two examples of failure-analyses in metal structures
p 182 A85-16253

Determination of stresses in elastic aircraft surfaces during motion in unsteady flow p 183 A85-17058

Optimal probabilistic design of the structures of flight vehicles
p 183 A85-17063

Strength analyses of aircraft structures using a mixed superelement method p 183 A85-17070

Strength analysis of aircraft structures by the step method under conditions of physical nonlinearity
p 183 A85-17071

A fault-tolerant approach to helicopter swashplate control
p 172 A85-18335

Measurements of the response of transport aircraft ceiling panels to fuel pool fires
[AIAA PAPER 85-0394] p 240 A85-19720

Current problems in aviation science and technology
p 199 A85-20451

Determination of the optimal parameters of aircraft structural elements in the form of sandwich plates and shallow shells with a honeycomb filler
p 287 A85-20452

Theory of vibration conduction as a method for calculating the vibration of complex structures
p 287 A85-20454

Current problems in the theory of plates and shells in aircraft
p 287 A85-20459

Design of load-bearing aircraft structures
p 288 A85-20463

Composite structures; Proceedings of the National Specialists' Meeting, Philadelphia, PA, March 23-25, 1983
p 281 A85-21376

Sikorsky composite rotor hub development
p 251 A85-21381

Tooling problems in the manufacture of AH-64 Composites Flexbeam Tail Rotor p 200 A85-21382

Advanced-composite joints and fittings for primary structural components p 290 A85-21385

Crashworthiness of helicopter composite structures
p 251 A85-21386

Advanced composites - Designed to survive — helicopter safety in modern battlefield p 251 A85-21387

Flexible matrix composites applied to bearingless rotor systems
p 281 A85-21389

Utilization of analytical equipment in design and process problems solution and failure analyses of composites
p 281 A85-21390

Optimization of airplane wing structures under landing loads
p 252 A85-22005

Universal matrices to obtain thermal load vectors for the family of anisotropic plane triangular finite elements
p 291 A85-22232

Innovation in aircraft structures - Fifty years ago and today
p 311 A85-23180

Statistical treatment of multiply censored samples in fatigue testing
p 387 A85-25119

M61A1 gunfire environmental effects on F-14 aircraft structure and equipment p 411 A85-26552

Coatings for erosion resistance p 434 A85-27538

Use of structural adhesives in aircraft turbine engine nacelles
p 382 A85-27600

Ageing of structural film adhesives - Changes in chemical and physical properties and the effect on joint strength
p 434 A85-27913

Permanent fasteners for light-weight structures — Book
p 443 A85-28479

The evolution of flutter excitation at McDonnell Aircraft
p 414 A85-28648

Aeronautical applications of adhesive bonding
p 384 A85-29854

Introduction to aerospace structural analysis — Book
p 446 A85-29974

Icing flight research - Aerodynamic effects of ice and ice shape documentation with stereo photography
[AIAA PAPER 85-0468] p 402 A85-30182

Finite element analysis of an ultralight aircraft
[AIAA PAPER 85-0616] p 490 A85-30234

Fabrication and testing of a brazed multipiece beryllium support structure for tactical sensors
[AIAA PAPER 85-0679] p 522 A85-30260

Design of a CFRP-wing for the alpha-jet major panel tests
[AIAA PAPER 85-0725] p 490 A85-30278

Tension analysis of stiffened aircraft structures
[AIAA PAPER 85-0795] p 523 A85-30298

A synthesizing procedure for transient temperatures in composed structures
[AIAA PAPER 85-0830] p 523 A85-30319

Dynamic loads analyses of flexible airplanes - New and existing techniques
[AIAA PAPER 85-0808] p 482 A85-30384

An implementation of the modular approach in solving elasticity problems p 524 A85-31455

Determination of loads on a thin-walled structure from parameters of its stress-strain state p 482 A85-31461

The use of functional splines for constructing aircraft surfaces
p 534 A85-31466

The use of minicomputers for automating design tasks during the static testing of aircraft structures
p 515 A85-31782

A balanced approach to the establishment of structural component lives p 524 A85-31959

The application of geodetic construction to helicopter airframes
p 494 A85-31961

Delamination control of composite rotor hubs
p 519 A85-31962

Structures for 21st century aircraft examined
p 496 A85-32947

Factory automation for composite structures manufacturing p 526 A85-33007

Elastomers used in aeronautics industry
[SNIAS-851-551-103] p 788 N85-31304
Influence of the molding joint plane on the fatigue resistance of the alloys 7010 and 7050. Test Report No. M1-631600
[PV-M1-631600] p 799 N85-31582
R and D programmes at the National Aeronautical Laboratory
[AR-22] p 807 N85-32022
R and D activities of the Materials Science Division
p 786 N85-32024
R and D activities of the Structural Sciences Division
p 799 N85-32026
Quest for performance: The evolution of modern aircraft
[NASA-SP-468] p 811 N85-32089
Preliminary sizing and performance of aircraft
[NASA-TM-86357] p 829 N85-32111
Flight service evaluation of composite helicopter components
[NASA-CR-172562] p 901 N85-34222
An automated technique for encasing specific payloads with low-drag fairings p 866 N85-35183
Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 867 N85-35187
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 1: Analysis methods
[NASA-CR-177943-VOL-1] p 896 N85-35202
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 2: Data
[NASA-CR-177943-VOL-2] p 896 N85-35203

**AIRCRAFT SURVIVABILITY**

Rotorcraft effectiveness and survival in the 1990's and beyond
[AIAA PAPER 84-2417] p 69 A85-13522
Flight control technology for improved aircraft performance and survivability
[AIAA PAPER 84-2489] p 170 A85-16107
Advanced composites - Designed to survive — helicopter safety in modern battlefield p 251 A85-21387
Real-time management of strategic penetrator missions p 810 A85-45153
Modeling aircraft combat damage repair
p 866 A85-49576
F-16 force management, yesterday, today and tomorrow p 254 N85-15674
An empirical self-protection chaff model
[AD-A151928] p 607 N85-27115
General Aviation Crashworthiness Project. Phase 2: Impact severity and potential injury prevention in general aviation accidents
[PB85-917002] p 747 N85-29938

**AIRCRAFT TIRES**

A dynamic tire/soil contact surface interacting model for aircraft ground operations
[AIAA PAPER 85-0708] p 482 A85-30358
Radial tires undergo operational tests on military, civil aircraft p 498 A85-32800
Heat generation in aircraft tires p 756 A85-41133
Monitoring tyre health p 825 A85-44748
Aircraft chocks
[AD-A145135] p 38 N85-10077
Alternatives for runway rubber removal from porous friction surfaces
[DOT/FAA/PM-84/28] p 176 N85-13803
Selection of effective arrangement of heavy undercarriage systems for use with concrete runways
p 503 N85-24158

**AIRCRAFT WAKES**

Flow stability in the wake of a three-dimensional body
p 2 A85-10116
Noise produced by the interaction of a rotor wake with a swept stator blade
[AIAA PAPER 84-2326] p 133 A85-13956
Vortex research facility improvements and preliminary density stratification effects on vortex wakes
[AIAA PAPER 85-0050] p 209 A85-19482
Measurements of generating boundary layer and wake of an airfoil using laser Doppler velocimetry
[AIAA PAPER 85-0181] p 214 A85-19572
Numerical solution of the full-potential equation for rotors and oblique wings using a new wake model
[AIAA PAPER 85-0268] p 216 A85-19621
Experimental results for Reynolds number effects on trailing vortices p 232 A85-21849
Spectral characteristics of radar echoes from aircraft-dispensed chaff p 406 A85-26606
Development of a terminal sensor for hazardous weather and wake turbulence detection p 441 A85-27532
The optics of aircraft shear flows — laser beam propagation through atmospheric turbulence
[AIAA PAPER 85-0557] p 460 A85-27880
The influence of blade wakes on the performance of outwardly curved combustor pre-diffusers
[AIAA PAPER 85-1291] p 667 A85-39704
On the wake of a pitching airfoil
[AIAA PAPER 85-1621] p 737 A85-43050
On the wake hazard alleviation associated with roll oscillations of wake-generating aircraft
[AIAA PAPER 85-1774] p 812 A85-43835
Wing span loads of complex high-lift systems from wake measurements p 817 A85-45850
The use of visualization as a guide in the numerical determination of the flow around an abruptly accelerated elliptic cylinder or airfoil p 904 A85-47127
A flow visualization study of the effect of wing-tip jets on wake vortex development p 867 A85-47129
Preliminary results using a rapid photographic wake traverse system — in a wind tunnel
[RAE-TM-AERO-1987] p 55 N85-11332
Analysis of noise measured from a propeller in a wake
[NASA-TP-2358] p 65 N85-11786
Recent advances in computational methods to solve the high-lift multi-component airfoil problem
p 236 N85-16774

**AIRDROPS**

A 73-ft cross parachute for cargo delivery
p 402 A85-29264

**AIRFIELD SURFACE MOVEMENTS**

The automatic SSR taxiway test facility
p 15 A85-12081
Ground navigation systems for aircraft - An urgent need p 90 A85-15168
Airport surface detection equipment
p 408 A85-27833
A dynamic tire/soil contact surface interacting model for aircraft ground operations
[AIAA PAPER 85-0708] p 482 A85-30358
New airport ground traffic control system planned
p 96 N85-12006
Simulation of aircraft behaviour on and close to the ground
[NASA-TM-87460] p 501 N85-23754

**AIRFOIL FENCES**

An exploratory study of apex fence flaps on a 74 deg delta wing
[NASA-CR-172463] p 557 N85-25208

**AIRFOIL PROFILES**

Airfoil trailing edge flow measurements and comparison with theory, incorporating open wind tunnel corrections
[AIAA PAPER 84-2266] p 4 A85-10831
Control of flow separation by sound
[AIAA PAPER 84-2298] p 60 A85-10851
Role of constraints in inverse design for transonic airfoils p 80 A85-15337
Aerodynamic methods used in France for the study of propellers for high-speed aircraft
[ONERA, TP NO. 1984-120] p 81 A85-15840
Modern propeller profiles
[ONERA, TP NO. 1984-121] p 81 A85-15841
Transonic solutions for a multielement airfoil using the full-potential equations p 144 A85-18512
Noise of an airfoil in a flow
[ONERA, TP NO. 1984-155] p 303 A85-19269
An improved version of the LTRAN2 for high frequency domain p 205 A85-19401
An analysis of the flow past an S-shaped rotor by discrete vortex model p 206 A85-19405
Calculation of compressible potential flow about multielement airfoils using a finite field-panel approach
[AIAA PAPER 85-0038] p 207 A85-19473
Computational study of circulation control with suction
[AIAA PAPER 85-0042] p 208 A85-19477
The design of airfoils at low Reynolds numbers
[AIAA PAPER 85-0074] p 209 A85-19500
Flows over low Reynolds number airfoils - Compressible Navier-Stokes numerical solutions
[AIAA PAPER 85-0107] p 210 A85-19523
Numerical computation of viscous flowfields about multiple component airfoils
[AIAA PAPER 85-0167] p 213 A85-19563
Analysis of circulation control airfoils using an implicit Navier-Stokes solver
[AIAA PAPER 85-0171] p 213 A85-19565

Unsteady aerodynamics of an airfoil encountering a passing vortex
[AIAA PAPER 85-0203] p 214 A85-19587

Prediction of subsonic/transonic separated flow about airfoils
[AIAA PAPER 85-0205] p 215 A85-19589

A class of airfoils having finite trailing edge pressure gradients
[AIAA PAPER 85-0206] p 215 A85-19590

Supercritical airfoil drag reduction by passive shock wave/boundary layer control in the Mach number range .75 to .90
[AIAA PAPER 85-0207] p 215 A85-19591

A Fourier Transform method for calculating velocity profiles on airfoils
[AIAA PAPER 85-0208] p 215 A85-19592

Multigrid solution of the Euler equations using implicit schemes
[AIAA PAPER 85-0293] p 218 A85-19643

Progress in development of a Navier-Stokes solver for evaluation of iced airfoil performance
[AIAA PAPER 85-0410] p 222 A85-19731

Trapping of free vortex by airfoils with surface suction
[AIAA PAPER 85-0446] p 224 A85-19755

A subdomain finite element method for solving the conservative full potential equation for transonic profile flows — German thesis p 227 A85-19854

A new approach to some hybrid aerodynamic problems of airfoil cascades on a general streamsheet of revolution. I
p 228 A85-20229

Euler computations of AGARD Working Group 07 airfoil test cases
[AIAA PAPER 85-0018] p 229 A85-20851

Navier-Stokes computations for exotic airfoils
[AIAA PAPER 85-0109] p 230 A85-20855

Finite element solutions of Euler equations for lifting airfoils
[AIAA PAPER 85-0294] p 230 A85-20864

Investigations on transonic double circular arc (DCA)profiles of axial flow compressor - Calculations of profile design p 318 A85-25214

Sidewall boundary-layer corrections in subsonic, two-dimensional airfoil/hydrofoil testing
p 439 A85-26781

A type-dependent splitting scheme with variable parameters for the longitudinal large-disturbance potential equation p 393 A85-29680

Optimization methods applied to the aerodynamic design of helicopter rotor blades
[AIAA PAPER 85-0644] p 480 A85-30245

Computation of hydraulic losses in a plane profile cascade p 525 A85-32503

Experimental investigation of a simulated compressor airfoil trailing-edge flowfield p 474 A85-32818

Numerical optimization method for airfoil design
p 475 A85-33014

The preliminary design of aerodynamic profiles
p 475 A85-33350

A method for predicting unsteady potential flow about an aerofoil p 545 A85-34707

Aspects of a see-saw tail rotor balancing
[MBB-UD-423-84-OE] p 572 A85-35251

An inverse boundary element method for single component airfoil design p 548 A85-35591

A fast algorithm of the finite difference method for computation of the transonic flow past an arbitrary airfoil with the conservative full-potential equation
p 548 A85-35742

Flow separation from the leading edge of an airfoil and the effect of acoustic perturbations on the separated flow p 684 A85-38510

Transonic airfoil design based on Navier-Stokes equation to attain arbitrarily specified pressure distribution - An iterative procedure
[AIAA PAPER 85-1592] p 712 A85-40706

Time-dependent Navier-Stokes computations of separated flows over airfoils
[AIAA PAPER 85-1684] p 717 A85-40769

Three-dimensional unsteady Euler equations solutions on dynamic grids
[AIAA PAPER 85-1704] p 790 A85-40778

Unsteady characteristics of an airfoil interacting with a vortical wake
[AIAA PAPER 85-1707] p 718 A85-40780

Unsteady transonic full potential solutions for airfoils encountering vortices and gusts
[AIAA PAPER 85-1710] p 719 A85-40782

A self-adaptive-grid method with application to airfoil flow
[AIAA PAPER 85-1525] p 722 A85-40957

A comment on controlled diffusion airfoil
p 723 A85-40996

Finite-volume scheme for transonic potential flow about airfoils and bodies in an arbitrarily-shaped channel
p 734 A85-42967

Unsteady airfoil boundary layers - Experiment and computation p 735 A85-42972

Analyses of two-dimensional incompressible flow past airfoils using unsteady Navier-Stokes equations
p 735 A85-42975

On the wake of a pitching airfoil
[AIAA PAPER 85-1621] p 737 A85-43050

Transonic panel method for the full potential equation applied to multicomponent airfoils
[AIAA PAPER 83-1855] p 816 A85-45704

Aerodynamic characteristics of a circulation control elliptical airfoil with two blown jets p 816 A85-45834

The influence of laminar separation and transition on low Reynolds number airfoil hysteresis
p 817 A85-45838

Use of titanium tetrachloride for visualization of accelerating flow around airfoils p 903 A85-47090

Comparison of a computed transonic flow and interferometric measurements around the leading edge of a two dimensional aerofoil asymmetrically mounted in a wind tunnel p 868 A85-47164

Prediction of the inception of cavitation on blade profiles of hydraulic turbomachines p 906 A85-47549

Contribution to theory of similitude of subsonic flow
p 868 A85-48189

Some contributions to the modelling of discontinuous flows p 907 A85-48224

A study of laminar separation bubble in the concave region of an airfoil using laser velocimetry
p 868 A85-48520

Numerical optimization of circulation control airfoil at high subsonic speed p 871 A85-49131

The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers p 873 A85-49874

Effects of aircraft and flight parameters on energy-efficient profile descents in time-based metered traffic
[NASA-CR-172308-ADD] p 245 N85-15706

Detailed study of the flow around a multi-element airfoil. Comparison with calculations p 236 N85-16775

Laminar separation bubble with transition: Prediction test with local interaction — airfoils
[PNR-90231] p 328 N85-18006

Profile design for wings and propellers
[NASA-TM-77785] p 328 N85-18983

Skin friction measurements for 2 relatively thick airfoil sections at high Reynolds number
[AD-A150021] p 399 N85-21125

Investigation of the aerodynamic forces on bluff bodies at high Reynolds numbers
[DFVLR-MITT-84-19] p 481 N85-23727

Airfoil wing with flap
[CH-634787-A5] p 574 N85-25243

Investigation of potential and viscous flow effects contributing to dynamic stall
[AD-A151696] p 602 N85-25773

Design of a basic profile for a low sweep airfoil. Part 2: Experimental investigation on the DFVLR-W1 airfoil profile in the Brunswick transonic wind tunnel
[DFVLR-FB-85-01-PT-2] p 635 N85-27833

Integral profile method for production of carbon fiber sheets
[MBB/LFA34/CFK/PUB/006] p 690 N85-27975

Experimental investigations on airfoils with different geometries in the domain of high angles of attack-flow separation
[NASA-TM-77882] p 818 N85-33110

An investigation into the three-dimensional stall development on a modified NACA 23012 aerofoil
[GU-AERO-8414] p 875 N85-34124

AIRFOILS

Aeroacoustic interaction of a distributed vortex with a lifting Joukowski airfoil
[AIAA PAPER 84-2287] p 59 A85-10843

Airfoil tip vortex formation noise
[AIAA PAPER 84-2308] p 60 A85-10858

Pressure distributions around an airfoil placed in a periodically fluctuating air flow. I - A flat plate approximation p 5 A85-10970

A multigrid method for computing the transonic flow over two closely-coupled airfoil components
p 76 A85-13952

Effect of airfoil mean loading on convected gust interaction noise
[AIAA PAPER 84-2324] p 133 A85-13955

High frequency properties in the unsteady linearized potential flow of a compressible fluid p 78 A85-14852

Analysis of airfoil leading-edge separation bubbles
[AIAA PAPER 83-0300] p 79 A85-15327

Design and development of a pultruded FRP laminate to replace aluminum shape in a high stress high fatigue application p 119 A85-15629

Aerodynamic characteristics of an airfoil in a nonuniform wind profile p 143 A85-18506

Aerodynamics of an airfoil in ground effect with
issuing from its undersurface
[AIAA PAPER 85-0019] p 207 A85-19

An experimental investigation of an airfoil underg
large amplitude pitching motions
[AIAA PAPER 85-0039] p 207 A85-19

The interaction and merging of two turbulent
vortices
[AIAA PAPER 85-0046] p 208 A85-19

Interrelated effects of pitch rate and pivot point on a
dynamic stall
[AIAA PAPER 85-0130] p 212 A85-19

Computation of unsteady shock-induced ve
separation
[AIAA PAPER 85-0183] p 214 A85-19

Studies of condensation effects on airfoil testing
transonic cryogenic tunnel
[AIAA PAPER 85-0229] p 274 A85-19

Scaling laws for testing of high lift airfoils under he
rainfall
[AIAA PAPER 85-0257] p 216 A85-19

The aerodynamic effect of surface we
characteristics on a laminar flow airfoil in simulated he
rain
[AIAA PAPER 85-0260] p 247 A85-19

A comparison between theoretical and experimental
fields of an airfoil with deflected spoiler
[AIAA PAPER 85-0269] p 216 A85-19

Application of continuous vorticity panels to gene
unsteady two-dimensional lifting flows
[AIAA PAPER 85-0282] p 217 A85-19

Euler calculations for multielement airfoils us
Cartesian grids
[AIAA PAPER 85-0291] p 218 A85-19

Detailed measurements of the flowfield in the vicin
of an airfoil with glaze ice
[AIAA PAPER 85-0409] p 222 A85-197

TRO-2D - A code for rational transonic aerodynam
optimization
[AIAA PAPER 85-0425] p 223 A85-197

Visualization of the spanwise vortex structure in t
starting flow behind an airfoil
[AIAA PAPER 85-0447] p 224 A85-197

A summary of NASA's research on the fluid ice protecti
system
[AIAA PAPER 85-0467] p 241 A85-197

A comparative study between an implicit and expl
algorithm for transonic airfoils
[AIAA PAPER 85-0480] p 225 A85-197

Artificial dissipation models for the Euler equatio
[AIAA PAPER 85-0438] p 231 A85-20

Evaluation of a stalled airfoil analysis program
p 231 A85-21

Scaling of airfoil self-noise using measured fl
parameters p 304 A85-21

Unsteady aerodynamics of oscillating airfoils with inpla
motions p 314 A85-231

Predicting rime ice accretion on airfoils
p 317 A85-251

Suppression of shocks on transonic airfoils
p 319 A85-254

Airfoil large-eddy breakup devices for turbulent dr
reduction
[AIAA PAPER 85-0520] p 320 A85-25

Control of unsteady separated flow structures
airfoils
[AIAA PAPER 85-0531] p 321 A85-25

The performance of smooth-wall drag reduci
outer-layer devices in rough-wall boundary layers
[AIAA PAPER 85-0558] p 369 A85-25

A comparison of separated flow airfoil analys
methods p 385 A85-27

Unsteady surface pressure measurements on a pitchi
airfoil
[AIAA PAPER 85-0532] p 387 A85-27

Overview of icing research at ONERA
[AIAA PAPER 85-0335] p 401 A85-28

Incompressible flow round an airfoil in a straight-li
cascade and between parallel walls, with som
phenomena in the boundary layer taken i
consideration p 388 A85-28

Feedback in separated flows over symmetric airfo
[AIAA PAPER 84-2297] p 390 A85-29

Transonic flow calculations using triangular fini
elements p 391 A85-29

Reynolds number dependence of vortex patterns
accelerated flow around airfoils p 470 A85-305

Further experimental evidence of vortex splitting
p 470 A85-306

The interaction of a wake with a turbulent bounda
layer p 471 A85-30

A method for computing the drag rise Mach numb
for any aerofoil section p 472 A85-317

Advanced technology impact on LHX helicop
preliminary design p 496 A85-31

Unsteady flow about a Joukowski airfoil in the presence of moving vortices p 473 A85-32903

Airloads on bluff bodies, with application to the rotor-induced downloads on tilt-rotor aircraft p 544 A85-33489

On relaxation of transonic flows around zero-lift airfoil and convergence of self-correcting wind tunnels p 549 A85-35757

Finite difference computation of the flow around airfoils in two-dimensional transonic slotted wall wind tunnel p 549 A85-35764

An experiment research of boundary layer control technique for multi-component airfoils p 550 A85-35775

A second-order approximate method for transonic small-disturbance potential flow and its application to the analysis of flows over airfoils p 625 A85-38922

Transient technique for measuring heat transfer coefficients on stator airfoils in a jet engine environment [AIAA PAPER 85-1471] p 697 A85-39796

Computational study of unsteady compressible flow around an airfoil by a block pentadiagnoal matrix scheme [AIAA PAPER 85-1692] p 716 A85-40774

Unsteady viscous flow round moving circular cylinders and airfoils [AIAA PAPER 85-1490] p 720 A85-40930

Numerical study of a non-centered scheme with application to aerodynamics [AIAA PAPER 85-1497] p 720 A85-40935

Implicit TVD schemes for hyperbolic conservation laws in curvilinear coordinates [AIAA PAPER 85-1513] p 721 A85-40948

Transonic flows about oscillating airfoils using the Euler equations [AIAA PAPER 85-1514] p 721 A85-40949

Measurement of unsteady pressure distribution on oscillating airfoils in a turbine annular cascade p 769 A85-41829

Aerodynamic characteristics of an airfoil oscillating in transonic flow between parallel walls p 729 A85-41837

An experimental investigation of an airfoil undergoing large-amplitude pitching motions p 730 A85-42351

A discussion on lift and moment characteristics of aerofoils in incompressible potential flows p 730 A85-42441

The computation of viscid/inviscid interaction on airfoils with separated flow p 732 A85-42954

Research into multi-element aerofoil aerodynamics p 733 A85-42960

Assessment of wind tunnel corrections for multielement airfoils at transonic speeds p 734 A85-42968

Boundary layers on oscillating airfoils p 735 A85-42973

Massive separation and dynamic stall on a cusped trailing-edge airfoil p 735 A85-42974

Studies of the flow field near an NACA 4412 aerofoil at nearly maximum lift p 736 A85-42976

Aerofoils at low Reynolds numbers - Prediction and experiment p 736 A85-42979

Effects of aspect ratio on stall hysteresis for the Wortmann airfoil [AIAA PAPER 85-1770] p 812 A85-43832

Dynamic stall overshoot of static airfoil characteristics [AIAA PAPER 85-1773] p 812 A85-43834

On the theory of oscillating airfoils in supersonic and sonic flow p 814 A85-43825

An inviscid model of unsteady aerofoil flow with fixed upper surface separation p 816 A85-45166

Performance prediction of the Wells self-rectifying air turbine p 857 A85-45352

Comparison of supercritical airfoil flow calculations with wind tunnel results p 816 A85-45701

Modeling of turbulent flowfields through a cascade of airfoils at stall conditions p 816 A85-45716

Subcritical damping ratios of a two-dimensional airfoil in transonic flow p 817 A85-45849

The use of visualization as a guide in the numerical determination of the flow around an abruptly accelerated elliptic cylinder or airfoil p 904 A85-47127

Flow instabilities in transonic small-disturbance theory p 869 A85-48531

Numerical analysis of transonic flow around a two-dimensional airfoil by solving full Navier-Stokes equations p 869 A85-48875

Modeling techniques for transonic airfoils p 871 A85-49014

Development and applications of algorithms for calculating the transonic flow about harmonically oscillating wings [NASA-CR-172376] p 9 N85-10007

Computational methods for complex flowfields [AD-A145219] p 11 N85-10019

Embedded-grid generation with complete continuity across interfaces for multi-element airfoils p 11 N85-10911

Design and wind tunnel evaluation of a symmetric airfoil series for large wind turbine applications [NASA-CR-174764] p 12 N85-10919

Turbine heat transfer p 30 N85-10964

Gas side heat transfer: 2-D flow p 30 N85-10965

Performance of two transonic airfoil wind tunnels utilizing limited ventilation p 63 N85-12020

Experiments suitable for wind tunnel wall interference assessment/correction p 63 N85-12021

Asymptotic methods for wind tunnel wall corrections at transonic speed p 64 N85-12022

Progress in wind tunnel wall interference assessment/correction procedures at the NAE p 64 N85-12025

Review of the advanced technology airfoil test program in the 0.3-meter transonic cryogenic tunnel p 65 N85-12033

Some experience with Barnwell-Sewall type correction to two-dimensional airfoil data p 65 N85-12034

Interaction between an airfoil and a streamwise vortex [AD-A145823] p 86 N85-12041

Design of a basic airfoil for a slightly swept wing. Part 1: Theoretical transonic airfoil design [DFVLR-FB-84-19-PT-1] p 86 N85-12043

An experimental study on the induced normal force on tail-fins due to wing-tail interference [NAL-TR-814] p 104 N85-12051

Unsteady aerodynamic response of cascades and turborotors p 112 N85-12056

Numerical studies of unsteady transonic flow over an oscillating airfoil [NASA-TM-86011] p 128 N85-12316

A study of flow past an airfoil with a jet issuing from its lower surface [NASA-CR-166610] p 86 N85-12860

Natural laminar flow airfoil design considerations for winglets on low-speed airplanes [NASA-CR-3853] p 87 N85-12863

A comparison of Wortmann airfoil computer-generated lift and drag polars with flight and wind tunnel results [NASA-TM-86035] p 87 N85-12868

Effect of a variable camber and twist wing at transonic Mach numbers [NASA-TM-86281] p 87 N85-12869

The role of freestream turbulence scale in subsonic flow separation [NASA-CR-174172] p 87 N85-12870

Simulation of separated transonic airfoil flow by finite-difference viscous-inviscid interaction p 146 N85-13768

Experimental studies of transonic airfoil trailing edge and wake flowfield properties p 146 N85-13773

An experimental study of airfoil-spoiler aerodynamics [NASA-CR-177328] p 147 N85-14796

Comparison of uniform perturbation solutions and numerical solutions for some potential flows past slender bodies [NASA-CR-172465] p 147 N85-14799

Development of the code NSFOIL for analyzing high Reynolds number transonic flow around an airfoil [NAL-TR-816] p 147 N85-14801

Laminar separation bubble with transition: Prediction test with local interaction [BLL-PNR-90231-(8019.3153)] p 189 N85-15132

Unsteady pressure measurements on a biconvex airfoil in a transonic oscillating cascade [NASA-TM-86914] p 234 N85-15689

Aircraft wing fuel tank environmental simulator tests for evaluation of antimisting fuels [FAA-CT-84-15] p 283 N85-15920

Some important problems in unsteady boundary layers including separation. 1: Nature of singularity on oscillating airfoils [AD-A147897] p 294 N85-16087

High temperature thermocouple and heat flux gauge using a unique thin film-hardware hot juncture [NASA-TM-86898] p 295 N85-16096

Analysis of the surface load and radiated sound of a vibrating airfoil with application to the experiment of Brooks [NASA-CR-3864] p 305 N85-16590

Recent advances in computational methods to solve the high-lift multi-component airfoil problem p 236 N85-16774

Inviscid compressible flow past a multi-element aerofoil p 236 N85-16776

Turbulent bubbles behind airfoils and wings at high angle of attack p 296 N85-16779

Design studies of thick laminar flow airfoils for low speed flight employing turbulent boundary layer suction over the rear part p 257 N85-16786

Pneumatic turbulators: A device for drag reduction at Reynolds numbers below 5 million p 257 N85-16791

Results of S5 CH tests with an ARL (Aerospace Research Laboratory) cascade [NASA-TM-77510] p 278 N85-16882

Unsteady aerodynamic loading of an airfoil due to vortices released intermittently from its upper surface [AD-P004162] p 324 N85-17947

A Navier-Stokes calculation of the airfoil dynamic stall process [AD-P004163] p 324 N85-17948

Unsteady separated flow: Forced and common vorticity about oscillating airfoils [AD-P004167] p 324 N85-17952

Leading edge separation criterion for an oscillating airfoil [AD-P004175] p 325 N85-17960

Corrections for attached sidewall boundary-layer effects in 2-dimensional airfoil testing [NASA-CR-3873] p 326 N85-17997

Flow instabilities in transonic small disturbance theory [NASA-TM-86251] p 326 N85-18000

Numerical approach for the aerodynamic analysis of airfoils with laminar separation [NASA-CR-172496] p 326 N85-18001

Synthesized airfoil data method for prediction of dynamic stall and unsteady airloads [NASA-CR-3872] p 327 N85-18005

Study of controlled diffusion stator blading [NASA-CR-167995] p 354 N85-18058

The boundary layer on compressor cascade blades [NASA-CR-174369] p 372 N85-18292

On the flow processes in sharply inclined and stalled airfoils in parallel movement and rotation [NASA-TM-77509] p 328 N85-18952

Analysis of inviscid transonic flow around an airfoil by diagonal form of IAF scheme [NAL-TR-831] p 328 N85-18955

Effects of airfoil shape, thickness, camber, and angle of attack on calculated transonic unsteady airloads [NASA-TM-86320] p 328 N85-18957

Viscous effects on transonic airfoil stability and response [NASA-TM-86374] p 329 N85-18961

Wall interference estimation of the NAL's two-dimensional wind tunnel [NAL-TR-829] p 361 N85-18992

A multistage time-stepping scheme for the Navier-Stokes equations [NASA-CR-172527] p 373 N85-19365

A fast algorithm of the finite difference method for computation of the transonic flow past an arbitrary airfoil with the conservative full-potential equation p 395 N85-20191

On relaxation of transonic flows around zero-lift airfoils and convergence of self-correcting wing tunnels p 396 N85-20214

Finite difference computation of the flow around airfoils in two-dimensional transonic slotted wall wind tunnel p 396 N85-20216

The Satellite sail p 433 N85-20376

Three-dimensional unsteady lifting surface theory in the subsonic range [NASA-TM-77812] p 397 N85-21111

A study of transonic flutter of a two-dimensional airfoil using the U-g and p-k methods [LR-615] p 398 N85-21121

Tailored airfoils for vertical axis wind turbines [DE85-004828] p 399 N85-21128

Numerical integration of the unsteady full-potential equation with applications to transonic flow about a two-dimensional airfoil [NLR-MP-84022-U] p 400 N85-21130

Hypersonic flow about triangular airfoil at large angles of attack p 477 N85-22792

T700 cutter life improvement program [AD-A150450] p 528 N85-23089

Oscillating airfoils and their wake [NASA-TM-77831] p 478 N85-23701

The structure of separated flow regions occurring near the leading edge of airfoils, including transition [NASA-CR-175670] p 478 N85-23703

Computations of two-dimensional airfoil-vortex interactions — helicopter rotor flowfields [NASA-CR-3885] p 479 N85-23709

Flutter taming: A new tool for the aeroelastic designer [AD-A150834] p 515 N85-23802

Transonic Unsteady Aerodynamics and its Aeroelastic Applications
[AGARD-CP-374] p 542 N85-25171

Numerical studies of unsteady transonic flow over oscillating airfoil p 554 N85-25174

Experience with transonic unsteady aerodynamic calculations p 554 N85-25176

Calculation of harmonic aerodynamic forces of aerofoils and wings from the Euler equations p 554 N85-25177

Unsteady transonic aerodynamic and aeroelastic calculations about airfoils and wings
p 555 N85-25185

A study of transonic flutter of a two-dimensional airfoil using the U-g and p-k methods
[AD-A151463] p 585 N85-25288

Transient technique for measuring heat transfer coefficients on stator airfoils in a jet engine environment
[NASA-TM-87005] p 604 N85-25794

Investigation to optimize the passive shock wave/boundary layer control for supercritical airfoil drag reduction
[NASA-CR-175788] p 559 N85-26665

Low Reynolds number vehicles
[AGARD-AG-288] p 560 N85-26666

Automatic flight control modes for the AFTI/F-111 mission adaptive wing aircraft p 591 N85-26756

Static and dynamic pressure measurements on a NACA 0012 airfoil in the Ames High Reynolds Number Facility
[NASA-TP-2485] p 634 N85-27823

Users manual for coordinate generation code CRDSRA
[NASA-CR-172584] p 634 N85-27824

User's manual for airfoil flow field computer code SRAIR
[NASA-CR-172585] p 634 N85-27825

Numerical study of porous airfoils in transonic flow
[NASA-TM-86713] p 635 N85-27828

Wing tunnel investigation of dynamic stall of an NACA 0018 airfoil oscillating in pitch
[NAE-AN-27] p 635 N85-27830

Ice shapes and the resulting drag increase for a NACA 0012 airfoil
[NASA-TM-83556] p 641 N85-27839

Proposals for the determination of necessary elevator handling characteristics of sailplanes in high speed range
[DFVLR-FB-84-52] p 676 N85-27882

A 5-year research plan, 1986-1990. Wind energy technology: Generating power from the wind
[DE85-008427] p 702 N85-28463

Turbulence structure in the boundary layers of an oscillating airfoil
[AD-A153631] p 637 N85-28928

A study of aerodynamic control in stalled flight leading-edge vortex formation analysis
[AD-A153758] p 638 N85-28926

A study of aerodynamic control in stalled flight long laminar separation bubble analysis
[AD-A153850] p 638 N85-28930

Inviscid analysis of two supercritical laminar-flow-control airfoils at design and off-design conditions
[NASA-TM-84657] p 739 N85-29920

Application of two-dimensional unsteady aerodynamic to a free-tip rotor response analysis
[NASA-CR-177348] p 741 N85-29933

Aircraft rotor blade with passive tuned tab
[NASA-CASE-ARC-11444-1] p 759 N85-29947

Computer programs for smoothing and scaling airfoil coordinates
[NASA-TM-84666] p 742 N85-31011

Interactive aircraft flight control and aeroelastic stabilization
[NASA-CR-178035] p 776 N85-31064

Sidewall boundary-layer effects in two-dimensional airfoil testing
[NASA-CR-178034] p 781 N85-31065

Heat transfer in aeropropulsion systems
[NASA-TM-87068] p 796 N85-31444

An evaluation of four methods of numerical analysis for two-dimensional airfoil flows
[AD-A155202] p 818 N85-32098

Calculation of steady and unsteady airfoil flow fields via the Navier-Stokes equations
[NASA-CR-3899] p 818 N85-33105

Experimental investigations on airfoils with different geometries in the domain of high angles of attack-flow separation
[NASA-TM-77892] p 818 N85-33110

Generation by conformal mappings of aerofoil sections and of certain other simple shapes suitable for both aerodynamic and stress-concentration problems
[AD-A154901] p 819 N85-33112

An evaluation of three helicopter rotor sections
[NASA-TM-86719] p 874 N85-34115

A design procedure to modify the trailing edge upper surface pressure gradient of a given aerofoil
[GU-AERO-8408] p 874 N85-34120

Modelling of unsteady, incompressible separation on an aerofoil using an inviscid flow algorithm
[GU-AERO-8412] p 874 N85-34122

The collected data for ramp function tests on a NACA 23012 aerofoil. Volume 1: Description and pressure data
[GU-AERO-8413-VOL-1] p 875 N85-34123

A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow
[ISL-CO-219/84] p 875 N85-34127

A stream function approach to solving the conservative Euler equations for transonic flows p 875 N85-35156

Heat transfer characteristics for two-dimensional arrays of impinging jets with initial crossflow
p 911 N85-35385

**AIRFRAME MATERIALS**

Weight-aspects of the advanced composite airframe program (ACAP)
[SAWE PAPER 1517] p 159 A85-18808

A survey of reported weight and cost savings for composite vs. metal airframes
[SAWE PAPER 1547] p 160 A85-18814

Impact of MIL-STD-1290 crashworthiness requirements on design of helicopter composite structures
[SAWE PAPER 1567] p 160 A85-18819

The all-composite airframes p 252 A85-21397

Development of lithium-containing aluminium alloys for the ingot metallurgy production route
p 434 A85-27120

The problems arising in testing of carbon-based materials for structural components of airframes
p 686 A85-37339

Aluminum-lithium based alloys for aerospace applications p 785 A85-41624

Fuel efficiency through new airframe technology
[NASA-TM-84548] p 2 N85-10909

Full-scale crash-test evaluation of two load-limiting subfloors for general aviation airframes
[NASA-TP-2380] p 129 N85-13267

A comparison of fatigue lives under a complex and a much simplified flight-by-flight testing sequence — Mirage 3 aircraft
[ARL/STRUC-TM-388] p 344 N85-18052

Fatigue Crack Topography
[AGARD-CP-376] p 531 N85-24321

New materials and techniques for aircraft structures
[B8580074] p 653 N85-27861

**AIRFRAMES**

Methodology to better predict structural maintenance requirements for individual aircraft
[AIAA PAPER 84-2411] p 69 A85-13517

Helicopter airframe variable tune vibration absorber
[AIAA PAPER 84-2531] p 101 A85-13590

Inspection and repair of advanced composite airframe structures for helicopters p 70 A85-14047

Air force damage tolerance design philosophy
p 126 A85-15868

Structural analysis and testing of ACAP subcomponents — Advanced Composite Airframe Program
p 251 A85-21384

Composite airframe production implementation
p 312 A85-28302

The application of geodetic construction to helicopter airframes p 484 A85-31961

Blade design parameters which affect helicopter vibrations p 484 A85-31969

Cost-effective airframe depot level repair through the airframe condition evaluation (ACE) program
p 465 A85-31983

Structural analysis of the CL-600 rear pressure bulkhead, using NASTRAN nonlinear analysis capabilities (Solution 64) p 754 A85-40459

Structures in service - An airline point of view
p 708 A85-40461

Aerodynamic interactions between a rotor and airframe in forward flight
[AIAA PAPER 85-1606] p 724 A85-41403

Static test techniques for composite airframe structures developed on the U.S. Army/Sikorsky ACAP
p 759 A85-43222

Interactive computer modeling of airframe structures
p 759 A85-43225

Manufacturing tolerances for natural laminar flow airframe surfaces
[SAE PAPER 850863] p 884 A85-50103

The Influence of Large Scale Computing on Aircraft Structural Design
[AGARD-R-706] p 20 N85-10040

Fuel efficiency through new airframe technology
[NASA-TM-84548] p 2 N85-10909

Iterative method of calculating strength of airfra members using finite element method
p 162 N85-14

Analysis of thin-walled airframe members geometrically nonlinear statement p 163 N85-14

High-strength composite materials for aircraft, bo armor p 435 N85-200

Aircraft skin penetrator and agent applicator. Volu 2: Test and evaluation
[AD-A151609] p 564 N85-252

Design, fabrication and test of composite curved fram for helicopter fuselage structure
[NASA-CR-172438] p 574 N85-252

Tensile and fracture toughness properties of Mirage spars
[AR-003-019] p 605 N85-258

Initial quality of advanced joining concepts
[AD-A152241] p 606 N85-270

USAF damage tolerant design handbook: Guidelin for the analysis and design of damage tolerant aircr structures, revision B
[AD-A153161] p 652 N85-278

**AIRLINE OPERATIONS**

US jurisdiction and bilateral air agreements
p 66 A85-100

Aircraft delay impact on a central terminal hall - simulation model p 174 A85-162

A range for all needs — Airbus A310/A3 development p 156 A85-173

Method for calculation of ATC-facility capacity utiliza in preplanning air-traffic movements p 150 A85-174

Aircraft repair (2nd revised and enlarged edition)
p 311 A85-236

Technology for profitable transportation — US air industry p 378 A85-242

Integration of MSG-3 into airline operation
[SAE PAPER 841483] p 312 A85-259

MSG-3 as viewed by the manufacturer (was it effective — Maintenance Steering Group
[SAE PAPER 841482] p 312 A85-259

Advanced baggage/cargo handling
[SAE PAPER 840711] p 332 A85-263

Cargo claims - From the carrier's point of view
p 461 A85-273

Registration and nationality of aircraft operated b international agencies in law and practice
p 462 A85-273

FMS airline experience to date p 408 A85-276

Birds on airports: The reason for their presence
p 404 N85-19955
The use of falconry as mean to persuade the birds to stay out of the airport vicinity p 404 N85-19956
Control of mammals at airports
[AD-P004192] p 404 N85-19957
Inexpensive multipurpose landscaping
p 428 N85-19961
Reducing gull use of some attractions near airports
[AD-P004195] p 428 N85-19962
FAA policy regarding solid waste disposal facilities
[AD-P004196] p 428 N85-19963
Airport bird hazards associated with solid waste disposal facilities
[AD-P004197] p 428 N85-19964
Successful control of gulls and other birds at a sanitary landfill
[AD-P004198] p 453 N85-19965
Development of bird hazard reduction for airport operational safety
[AD-P004202] p 428 N85-19969
The bird strike situation and its ecological background in the Copenhagen Airport, Kastrup
[AD-P004203] p 404 N85-19970
Bird control program Orlando International Airport
[AD-P004204] p 404 N85-19971
Birds and airport agriculture in the conterminous United States: A review of literature
[AD-P004206] p 429 N85-19975
The FAA grant-in-aid assurances: FAR part 139, and airport hazards
[AD-P004209] p 429 N85-19976
Light your runways and taxiways without electricity
[DE85-000269] p 429 N85-19991
International airport study: How to improve the effect of airports on trade and on export-related industries
[PB85-124923] p 429 N85-19992
Airport system development
[PB85-127793] p 429 N85-19993
Examination of the feasibility for demonstration and use of radioluminescent lights for Alaskan remote runway lighting
[DE85-002503] p 431 N85-21185
FTASUM: Aviation forecast summaries
[PB85-112977] p 455 N85-21906
An analysis of the impacts of the Airport Radar Service Area (ARSA)
[AD-A150954] p 489 N85-23749
Disturbance to the population due to flight operations at landing fields. Questionnaire on community reaction to non-commercial and sporting aviation
[NASA-TM-76531] p 534 N85-24537
A study of the methods for evaluating the noise impact of a proposed airport on a community
p 609 N85-25957
Probabilistic computer model of optimal runway turnoffs
[NASA-CR-172549] p 594 N85-26760
Study of acceptance criteria for joint densities in bituminous airport pavements
[FAA-PM-85-5] p 594 N85-26761
Radioluminescent lighting for rural Alaskan runway lighting and marking
[DE85-007022] p 594 N85-26764
Acceptability testing of radioluminescent lights for VFR-night air taxi operations
[DE85-007303] p 594 N85-26765
Rotterdam Airport and the Common Market
p 641 N85-27840
Airport and airway system cost allocation model. Volume 7: User's manual
[AD-A152877] p 683 N85-27917
Frangibility of obstacles at airports
[NLR-MP-84002-U] p 700 N85-28431
Air traffic: Instruments, airports, companies, post, cargo and passengers p 641 N85-28932
Data on noise environments at different times of day around airports
[NASA-CR-172612] p 806 N85-30769

AIRSHIPS
Mooring airships p 562 A85-34259
Manufacture and operating cost appraisals for modern airships p 571 A85-34260
The acquisition and operating cost of an advertising airship p 562 A85-34261
Lighter-Than-Air Systems Conference, 6th, Norfolk, VA, June 26-28, 1985, Technical Papers
p 616 A85-38776
North warning system airship feasibility study
[AIAA PAPER 85-0858] p 640 A85-38777
Tethered aerostat operations in the marine environment
[AIAA PAPER 85-0860] p 640 A85-38778
High Endurance Lighter Than Air (HELTA) Program
[AIAA PAPER 85-0861] p 640 A85-38779
Basic aerostatics - A tutorial
[AIAA PAPER 85-0864] p 624 A85-38780
Aerodynamics of a new aerostat design with inverted-Y fins
[AIAA PAPER 85-0867] p 624 A85-38783
The design and development of the Grace Aircraft GAC-20 airship
[AIAA PAPER 85-0869] p 648 A85-38784
What an airship manufacturer faces in a certification program today
[AIAA PAPER 85-0870] p 641 A85-38785
Design of a small airship
[AIAA PAPER 85-0872] p 648 A85-38787
The need to return to hydrogen in airships
[AIAA PAPER 85-0873] p 648 A85-38788
An application of source-panel and vortex methods for aerodynamic solutions of airship configurations
[AIAA PAPER 85-0874] p 624 A85-38789
Wind tunnel investigation of the interaction of an airship configuration with lifting rotors
[AIAA PAPER 85-0875] p 625 A85-38790
Progress report on the engineering development of the Magnus Aerospace LTA 20-1 airship
[AIAA PAPER 85-0876] p 649 A85-38791
Thrust vectored take-off, landing and ground handling of an airship
[AIAA PAPER 85-0877] p 641 A85-38792
Dynamic characteristics of the STARS aerostat
[AIAA PAPER 85-0880] p 674 A85-38795
Control response measurements of the Skyship-500 airship
[AIAA PAPER 85-0881] p 649 A85-38796
The Tethered Aerostat Antenna Program (TAAP) demonstration phase
[AIAA PAPER 85-0883] p 616 A85-38797
Missions and vehicle concepts for modern, propelled, lighter-than-air vehicles
[NASA-TM-86672] p 203 N85-16757
Current development, applications of airships in USSR
p 396 N85-21109
Missions and vehicle concepts for modern, propelled, lighter-than-air vehicles
[NASA-TM-87461] p 542 N85-25170

AIRSPACE
Destruction of Korean Air Lines Boeing 747 over Sea of Japan, 31 August 1983 p 66 A85-10049

A legal analysis of the shooting of Korean Airlines Flight 007 by the Soviet Union p 66 A85-11937

Radio Technical Commission for Aeronautics, Annual Assembly Meeting and Technical Symposium, Washington, DC, November 15-17, 1983, Proceedings and Supplement p 382 A85-27527

Preventing infringements of restricted airspace p 746 A85-41732

System engineering and integration contract for implementation of the National Airspace System Plan. Volume 2: Section 5.0
[AD-A145710] p 16 N85-10929

System engineering and integration contract for implementation of the National Airspace System plan, volume 1, sections 1.0-4.0, 6.0
[AD-A145783] p 96 N85-12046

National airspace review: Airport radar service area operational confirmation report
[DOT/FAA/AT-84/2] p 245 N85-15707

National airspace review enhancement plan, revision 3
[AD-A150743] p 248 N85-16852

National airspace review. Implementation plan. Revised
[AD-A151412] p 568 N85-25236

Airport and airway system cost allocation model. Volume 7: User's manual
[AD-A152877] p 683 N85-27917

Introduction to European air traffic control
[AD-A156328] p 878 N85-35176

AIRSPEED

Scaling laws for jet mixing noise in simulated flight and the prediction scheme associated
[AIAA PAPER 84-2360] p 63 A85-10894

Divergence speed degradation of forward-swept wings with damaged composite skin p 18 A85-11988

X-Wing Hamer speed and helicopter hovering p 572 A85-35352

Engine inlet interaction with a prop-fan propulsion system
[SAE PAPER 841478] p 627 A85-39058

Electra vertical air motions in summer MONEX - Using the aircraft as an air motion sensor and notification of a data labeling error p 800 A85-42173

The design of a fluidic low-airspeed sensor p 888 A85-47791

Critical conditions for the automatic control of landing from decision height in variable winds
[UTIAS-284] p 154 N85-14830

Recent methods for calibrating the anemometry of helicopters at low speeds p 280 N85-16809

Simulating speed and height cues in the C-130 weapon system trainer
[AD-P004313] p 358 N85-17987

Determination of corrections to flow direction measurements obtained with a wing-tip mounted sensor
[NASA-CR-174412] p 329 N85-18982

Airspeed sensing pressure valve system
[AD-D011472] p 346 N85-18987

Miniature electrooptical air flow sensor
[NASA-CASE-LAR-13065-1] p 447 N85-20295

Safety recommendation(s), A-84-123 and -124
[REPT-38848/93] p 563 N85-25222

High specific power aircraft turn maneuvers: Tradeoff of time-to-turn versus change in specific energy
[AD-A151701] p 575 N85-25257

Formulation and implementation of nonstationary adaptive estimation algorithm with applications to air-data reconstruction
[NASA-TM-86727] p 577 N85-26699

Using regression analyses for determining air data sensor errors by means of an inertial navigation system
[ESA-TT-886] p 751 N85-31041

ALADIN 2 AIRCRAFT

Presentation of the acoustic and aerodynamic results of the Aladin 2 concept qualification testing
[NASA-TM-77883] p 876 N85-35161

ALGEBRA

An algebraic solution of the GPS equations p 406 A85-29606

Alternatives for jet engine control
[NASA-CR-175831] p 580 N85-26713

ALGORITHMS

The impact of advanced computational techniques on digital avionics signal processor performance
[AIAA PAPER 84-2653] p 194 A85-17840

Efficient solution of the Euler and Navier-Stokes equations with a vectorized multiple-grid algorithm p 145 A85-18679

Algorithmic mass-factoring of finite element model analyses An update: Grid-density sensitivity
[SAWE PAPER 1524] p 186 A85-18810

Accelerated convergence for incompressible flow calculations
[AIAA PAPER 85-0058] p 209 A85-19489

A comparative study between an implicit and explicit algorithm for transonic airfoils
[AIAA PAPER 85-0480] p 225 A85-19777

Application of an adaptive blade control algorithm to a gust alleviation system p 289 A85-20143

Recent improvements in efficiency, accuracy, and convergence for implicit approximate factorization algorithms — computational fluid dynamics
[AIAA PAPER 85-0360] p 230 A85-20698

Development of asymptotic algorithms in the Polet package of applications programs — for sea surface effect vehicle design p 233 A85-22286

A FORTRAN subroutine for the solution of periodic block-tridiagonal systems p 457 A85-27506

Development of a velocity control algorithm for controlling a 6-DOF captive trajectory model support p 427 A85-29857

Algorithms for diagnosing thermal loads of flight vehicles — Russian book p 517 A85-31574

A time-accurate multiple-grid algorithm
[AIAA PAPER 85-1493] p 602 A85-40832

GMRES acceleration of computational fluid dynamics codes
[AIAA PAPER 85-1494] p 602 A85-40833

An advanced signal selection algorithm — for redundancy management of flight control sensors p 841 A85-45064

Eigenstructure assignment and its application in design of flight control system p 860 A85-46822

Inviscid and viscous flows in cascades with an explicit multiple-grid algorithm p 869 A85-46539

Computational methods for complex flowfields
[AD-A145219] p 11 N85-10019

Impact of new computing systems on computational mechanics and flight-vehicle structures technology p 20 N85-10042

Shock capturing finite difference algorithms for supersonic flow past fighter and missile type configurations
[NASA-CR-174051] p 11 N85-10913

TCAS 2 logic performance during phase one operational evaluation
[DOT/FAA/PM-84/20] p 154 N85-13793

Analytical redundancy management mechanization and flight data analysis for the F-8 digital fly-by-wire aircraft flight control sensors
[NASA-CR-170396] p 173 N85-14844

cost and benefits optimization model for fault-tolerant aircraft electronic systems
[NASA-CR-166043] p 293 N85-15293

Research on optimal control, stabilization and computational algorithms for aerospace applications
[NASA-CR-174318] p 300 N85-17603

On one design principle of surge protector for gas turbine engine compressor p 370 N85-18206

A multistage time-stepping scheme for the Navier-Stokes equations
[NASA-CR-172527] p 373 N85-19365

Robust Kalman filtering and its applications
[AD-A149044] p 378 N85-19775

A study of transonic flutter of a two-dimensional airfoil using the U-g and p-k methods
[LR-615] p 398 N85-21121

Algorithms for automatic four-dimensional aircraft guidance, considering the momentary wind situation
[DFVLR-FB-84-40] p 410 N85-21148

A flight management algorithm and guidance for fuel-conservative descents in a time-based metered air traffic environment: Development and flight test results p 466 N85-22356

On the solution of the three-dimensional flowfield about a flow-through nacelle
[NASA-TM-87448] p 477 N85-22371

Analysis of estimation algorithms for CDTI and CAS applications
[NASA-CR-172444] p 505 N85-22387

Efficiency of algorithms for gas-air channel diagnostics in gas turbine engines based on gas thermodynamic parameters p 508 N85-22823

Thermal response of aircraft cabin ceiling materials during a post-crash, external fuel-spill, fire scenario
[PB85-145647] p 502 N85-23764

Generation of flight paths using heuristic search
[AD-A151949] p 569 N85-26694

Formulation and implementation of nonstationary adaptive estimation algorithm with applications to air-data reconstruction
[NASA-TM-86727] p 577 N85-26699

Development and application of optimum sensitivity analysis of structures
[NASA-CR-175857] p 608 N85-27257

The AFTI/F16 terrain-aided navigation system
[DE85-008411] p 645 N85-28935

Piloted simulation of an algorithm for onboard control of time-optimal intercept
[NASA-TP-2445] p 681 N85-28949

Research on optimal control, stabilization a
computational algorithms for aerospace applications
[NASA-CR-172528] p 776 N85-28

Modelling of unsteady, incompressible separation o
aerofoil using an inviscid flow algorithm
[GU-AERO-8412] p 874 N85-34

Energy management of three-dimens
minimum-time intercept
[NASA-CR-176174] p 887 N85-35

Comparative analysis of operational forecasts ve
actual weather conditions in airline flight planning, vol
2
[NASA-CR-167863] p 913 N85-35

ALIGNMENT

The enigma of false bias detection in a strapdown sys
during transfer alignment p 406 A85-29

IUS-1 - Redundant inertial measurement unit test p
and results p 890 A85-47

An alignment fixture for a 2-Degree-of-Freedom (TD
gyroscope
[AD-A148885] p 339 N85-19

ALKANES

Liquid phase products and solid deposit formation fr
thermally stressed model jet fuels
[NASA-TM-86874] p 121 N85-13

The distribution of higher n-alkanes in partially fro
middle distillate fuels.
[AD-A153940] p 692 N85-29

ALL-WEATHER AIR NAVIGATION

The Command Flight Path Display - All weather, 
missions p 666 A85-38

All-weather low altitude penetration p 821 A85-44

Flying in spite of the weather
[NLR-MP-84021-U] p 644 N85-27

ALL-WEATHER LANDING SYSTEMS

Getting hooked — ship deck aircraft capture and han
packaging p 848 A85-447

Development and flight test of a helicopter compa
portable, precision landing system concept p 281 N85-16

ALLOCATIONS

Airport and airway system cost allocation model. Volu
7: User's manual
[AD-A152877] p 683 N85-27

ALLOYS

Metallurgical aspects of metallic materials and dama
tolerance in accessory gearboxes p 48 A85-10

Structural uses for ductile ordered alloys. Report 
the committee on application potential for ductile order
alloys
[AD-A146313] p 119 N85-121

Advanced thin film thermocouples
[NASA-CR-175541] p 450 N85-21

Effects of surface chemistry on hot corrosion life
[NASA-CR-174915] p 582 N85-267

ALPHA JET AIRCRAFT

The AFA computerized mission planning system p 347 A85-25

Design of a CFRP-wing for the alpha-jet major pa
tests
[AIAA PAPER 85-0725] p 490 A85-30

ALTERNATING CURRENT

A minimum interruption ac electric power generati
system for avionics
[AIAA PAPER 84-2742] p 188 A85-17

ALTIMETERS

Cosmic interpolation of terrestrial potential values p 451 A85-284

Radial variations of a satellite orbit due to gravitation
errors - Implications for satellite altimetry p 452 A85-281

Regional mean sea surfaces based on GEOS-3 a
SEASAT altimeter data p 453 A85-297

Altimetric-gravimetric functional boundary va
problem p 799 A85-411

A numerical experiment in the altimetry-gravimet
problem II p 800 A85-413

TCAS 2 logic performance during phase one operatio
evaluation
[DOT/FAA/PM-84/20] p 154 N85-137

Theoretical and experimental analyses of la
altimeters for barometric measurements over the ocea
p 298 N85-175

A method for determining mesoscale dyna
topography
[AD-D011412] p 300 N85-175

ALTITUDE

Critical conditions for the automatic control of landi
from decision height in variable winds
[UTIAS-284] p 154 N85-148

Analytical and physical modeling program for the NAS
Lewis Research Center's Altitude Wind Tunnel (AW
[NASA-TM-86919] p 276 N85-157

On the altitudinal distribution of birds and bird strikes in the Netherlands
[AD-P004169] p 404 N85-19952

**ALTITUDE CONTROL**

Altitude control using action-demanding interactive displays: Toward an active psychophysics
[AD-P004311] p 358 N85-17985

**ALTITUDE SIMULATION**

The Altitude Wind Tunnel (AWT) - A unique facility for propulsion system and adverse weather testing
[AIAA PAPER 85-0314] p 275 A85-19661

Analytical and physical modeling program for the NASA Lewis Research Center's Altitude Wind Tunnel (AWT)
[AIAA PAPER 85-0379] p 275 A85-19709

The NASA altitude wind tunnel - Its role in advanced icing research and development
[AIAA PAPER 85-0090] p 357 A85-26381

Analytical modeling of circuit aerodynamics in the new NASA Lewis Altitude Wind Tunnel
[AIAA PAPER 85-0380] p 323 A85-26389

Analytical modeling of circuit aerodynamics in the new NASA Lewis wind tunnel
[NASA-TM-86912] p 234 N85-15688

The NASA Altitude Wind Tunnel (AWT): Its role in advanced icing research and development
[NASA-TM-86920] p 276 N85-15758

**ALTITUDE TESTS**

Altitude testing of a flight weight, self-cooled, 2D thrust vectoring exhaust nozzle
[SAE PAPER 841557] p 352 A85-25964

Uncertainty of turbine engine performance measurements in altitude ground test facilities
p 421 A85-29566

Engine thrust measurement uncertainty
[AIAA PAPER 85-1404] p 669 A85-39785

**ALUMINUM**

Age forming technology expanded in an autoclave
[SAE PAPER 850885] p 910 A85-50113

Friction and wear behavior of aluminum and composite I-beam stiffened airplane skins
[NASA-TM-86416] p 652 N85-27852

Impact dynamics research on composite transport structures
[NASA-TM-86391] p 787 N85-30367

**ALUMINUM ALLOYS**

Strengthening the study on the usability of aircraft materials p 42 A85-12354

Review of the origin of Japanese Industrial Standard
p 280 A85-20545

Fatigue crack growth behavior of 7XXX aluminum alloys under simple variable amplitude loading
p 280 A85-20758

Interpretation of fatigue crack growth in aluminum alloys under programmed block loading p 281 A85-20790

Aluminum and titanium compared p 433 A85-26481

Aluminum-lithium alloys for aircraft structure - An overview p 434 A85-27119

Development of lithium-containing aluminum alloys for the ingot metallurgy production route
p 434 A85-27120

The use of countergravity casting for producing compressor body castings of AK-7 alloy
p 441 A85-27717

Surface characterization of anodic oxides on aluminum alloys by means of surface potential difference, surface impedance and surface morphology p 442 A85-27908

The effect of mercury on the load-bearing capacity of the structural elements of aircraft p 435 A85-28894

The influence of microstructure on the temperature-dependent flow properties of Ti-6Al-4V
p 687 A85-38749

Fatigue crack growth due to periodic underloads and overloads p 784 A85-41464

Aluminum-lithium based alloys for aerospace applications p 785 A85-41624

Preliminary investigation of the strength and durability of superplastic formed aluminum p 785 A85-42934

High strength and elevated temperature PM alloy forgings for aerospace applications p 786 A85-43141

Powder materials and ceramics in aerospace applications - A European perspective
p 787 A85-43153

Crack growth in aluminum alloy sheet material under flight-simulation loading p 853 A85-46489

Effect of temperature on the fatigue and fracture properties of 7475-T761 aluminum p 900 A85-47973

Low temperature and loading frequency effects on crack growth and fracture toughness of 2024 and 7475 aluminum p 900 A85-47974

Effect of penetrant on fatigue of aluminum alloy lap joints
[NLR-TR-82104-U] p 53 N85-10373

Flight simulation fatigue crack propagation in metal/carbon-epoxy laminates
[NLR-TR-83006-U] p 54 N85-10416

Development of powder metallurgy 2XXX series Al alloys for high temperature aircraft structural applications
[NASA-CR-172408] p 44 N85-11220

Crack resistance of pressed and rolled semifinished goods of aluminum alloys used in load-bearing aircraft wing structures p 120 N85-12245

Fractographic observation and estimation of crack growth curve of aluminum alloy under ramdom flight simulation loading
[NAL-TR-824] p 180 N85-14913

Engineering property comparisons of PM and IM aluminum alloy forgings
[AD-B088146L] p 298 N85-17398

Crack growth geometry in aluminum alloy sheet material under flight simulation loading. 1: A comparison between TWIST and miniTWIST FALSTAFF and short FALSTAFF. 2: Effect of truncating high loads
[VTH-LR-441] p 436 N85-20119

Mechanisms of corrosion fatigue in high strength I/M (Ingot Metallurgy) and P/M (Powder Metallurgy) aluminum alloys
[AD-A151177] p 597 N85-25478

Tensile and fracture toughness properties of Mirage III spars
[AR-003-019] p 605 N85-25899

Investigation of the influence of some paint systems and water displacing corrosion inhibitors on anodic undermining corrosion of aluminum 2024 clad alloy — aircraft structures
[VTH-LR-443] p 598 N85-27009

Influence of the molding joint plane on the fatigue resistance of the alloys 7010 and 7050. Test Report No. M1-631600
[PV-M1-631600] p 799 N85-31582

Modifications of flight-by-flight load sequences to provide for good fracture surface readability
[NLR-MP-84012-U] p 798 N85-31577

Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 887 N85-35187

Development of a mathematical model for predicting the percentage fatigue life increase resulting from shot peened components
[AD-A155774] p 912 N85-35425

**ALUMINUM COATINGS**

Fatigue strength of aluminized bolted joints
[MBB-VFW-53-84-OE] p 181 A85-16112

Microstructural development of protective Al2O3 scales p 283 A85-21650

**ALUMINUM COMPOUNDS**

The B2 aluminides as alternative materials
[NASA-TM-86937] p 364 N85-19076

**ALUMINUM OXIDES**

Microstructural development of protective Al2O3 scales p 283 A85-21650

**AMMUNITION**

Laboratory vibration schedules
[AD-A155856] p 887 N85-35186

**AMPHIBIOUS AIRCRAFT**

Renegade 250 - Flight evaluation or boat ride?
p 252 A85-22273

New possibilities for future amphibian aircraft
[DGLR PAPER 84-084] p 753 A85-40304

**AMPLIFICATION**

Fixed gain and adaptive techniques for rotorcraft vibration control
[NASA-CR-177344] p 819 N85-33111

**AMPLIFIER DESIGN**

Main stages and problems in the design of low-gain active antennas p 794 A85-42106

**AMPLITUDES**

The use of an optical data acquisition system for bladed disk vibration analysis
[NASA-TM-86891] p 190 N85-15184

**ANALOG CIRCUITS**

An analog CMOS autopilot p 583 A85-34096

**ANALOG COMPUTERS**

The selection of the desired transfer coefficients for analog computers p 610 A85-35853

**ANALOG TO DIGITAL CONVERTERS**

A graphical approach to understanding and preventing the phenomenon of aliasing p 658 A85-45041

**ANCHORS (FASTENERS)**

Expedient runway surfacing with post tensioning system for expeditionary airfields
[AD-D011677] p 781 N85-29976

**ANECHOIC CHAMBERS**

A study of the flow recirculation problems within an anechoic hover chamber
[AIAA PAPER 85-0071] p 273 A85-19497

Noise testing of an advanced design propeller in the Boeing anechoic test chamber with a relative velocity free jet
[AIAA PAPER 84-2262] p 421 A85-30193

Capabilities of the high speed anechoic wind tunnel at Lyon University p 846 A85-44049

Advanced design propeller noise testing in an anechoic chamber p 838 A85-45869

**ANEMOMETERS**

Hot section laser anemometry p 30 N85-10962

Laser anemometer optimization p 30 N85-10963

**ANGLE OF ATTACK**

Predicted changes in advanced turboprop noise with shaft angle of attack
[AIAA PAPER 84-2347] p 63 A85-10884

Comparison of model and full scale inlet distortions for subsonic commercial transport inlets
[AIAA PAPER 84-2487] p 74 A85-13562

Hypersonic flow past a wing at large angles of attack
p 78 A85-14591

Effect of angle of attack on rotor trailing-edge noise
p 134 A85-15346

The aerodynamic behavior of infinite swept wings - Another point of view p 144 A85-18517

Flow visualization of high angle of attack vortex wake structures
[AIAA PAPER 85-0102] p 286 A85-19520

Laminar boundary layer stability experiments on a cone at Mach 8. III - Sharp cone at angle of attack
[AIAA PAPER 85-0492] p 226 A85-19787

Reynolds number and fan/inlet coupling effects on subsonic transport inlet distortion p 544 A85-34011

Heat transfer from rectangular plates inclined at different angles of attack and yaw to an air stream
p 600 A85-35593

The effect of winglet on the spatial vortex of slender body at high angle of attack p 551 A85-35788

The alleviation and control of the asymmetry load at high angle-of-attack p 583 A85-35797

A numerical investigation of a viscous hypersonic air flow around elongated blunted bodies at large angles of attack p 619 A85-37333

Numerical simulation of hypersonic viscous fore- and afterbody flows over capsule-type vehicles at angles of attack
[AIAA PAPER 85-0924] p 620 A85-37593

High angle-of-attack calculations of the subsonic vortex flow on slender bodies p 730 A85-42353

Engineering flowfield method with angle-of-attack applications p 731 A85-42913

Performance and optimization analyses of flight vehicle from low to very high angles of attack
[AIAA PAPER 85-1784] p 824 A85-43844

Rotary-balance experiments on a modern fighter aircraft configuration at high Reynolds numbers
[AIAA PAPER 85-1829] p 848 A85-43870

Hypersonic flow past a wing at large angles of attack with a detached shock wave p 815 A85-44788

Predicted changes in advanced turboprop noise with shaft angle of attack p 836 A85-45861

Flying qualities in the time domain
[AIAA PAPER 85-1849] p 842 A85-45878

Wind tunnel calibration of a hemispherical head angle of attack and angle of sideslip indicator
[FFA-TN-1984-11] p 13 N85-10923

Heat transfer and pressure drop in blade cooling channels with turbulence promoters
[NASA-CR-3837] p 128 N85-12315

Review of requirements and status of simulation and scaling of transonic, viscous flows
[AD-A146357] p 189 N85-15137

Experiences with the use of a side-strut model support system for high angles of attack in the Trisonic wind tunnel TMK
[DFVLR-MITT-84-09] p 277 N85-15763

Effect of aerodynamic and angle-of-attack uncertainties on the May 1979 entry flight control system of the Space Shuttle from Mach 8 to 1.5
[NASA-TP-2365] p 280 N85-15778

Unsteady stall penetration of an oscillating swept wing
[AD-P004156] p 323 N85-17941

Theoretical investigation of dynamic stall using a momentum integral method
[AD-P004170] p 325 N85-17955

Determination of corrections to flow direction measurements obtained with a wing-tip mounted sensor
[NASA-CR-174412] p 329 N85-18962

Effect of inclination, transverse intertip spacing, and logitudinal pitch on crossflow heat transfer from an array of finned tubes p 373 N85-19359

Hypersonic flow about triangular airfoil at large angles of attack p 477 N85-22792

The structure of separated flow regions occurring near the leading edge of airfoils, including transition
[NASA-CR-175670] p 478 N85-23703

Low-speed stability and control wind-tunnel investigations of effects of spanwise blowing on fighter flight characteristics at high angles of attack — Langely 12-ft low-speed tunnel and 30- by 60-ft tunnel
[NASA-TP-2431] p 479 N85-23708

Performance and surge limits of a TF30-P-3 turbofan engine/axisymmetric mixed-compression inlet propulsion system at Mach 2.5
[NASA-TP-2461] p 561 N85-25261

Investigation of potential and viscous flow effects contributing to dynamic stall
[AD-A151696] p 602 N85-25773

Measurements of the symmetric aerodynamic coefficients for flat faced cylinders in the angle of attack regime 0 to 90 deg for transonic and supersonic speeds
[FFA-TN-1984-04] p 567 N85-29875

Experiences with the use of a side-sting model support system for high angles for attack in the TMK Trisonic Wind Tunnel
[ESA-TT-895] p 781 N85-31089

Recent developments in rotary-balance testing of fighter aircraft configurations at NASA Ames Research Center
[NASA-TM-86714] p 811 N85-32090

Aerodynamic characteristics of the standard dynamics model in coning motion at Mach 0.6
[NASA-TM-86717] p 817 N85-32094

Experimental investigations on airfoils with different geometries in the domain of high angles of attack-flow separation
[NASA-TM-77892] p 818 N85-33110

**ANGLES (GEOMETRY)**

The effect of changes in the angle of incidence in the event of a ricochet at a float step
[RAE-TRANS-2120] p 255 N85-15712

Influence of setting angle of jet cooling nozzles on temperature and stress state of a turbine wheel
p 355 N85-16206

Aerodynamic measurement of the wind flow in the number two section of the SIMA wind tunnel
[ONERA-PV-1/8133-GY] p 743 N85-31019

**ANGULAR MOMENTUM**

Flight investigation of stall, spin and recovery characteristics of a low-wing, single-engine, T-tail light airplane
[NASA-TP-2427] p 574 N85-25248

**ANGULAR RESOLUTION**

Time reference errors of angle-measuring signals at the output of an envelope detector under multipath conditions p 488 A85-33046

**ANGULAR VELOCITY**

Angular motion influence on re-entry vehicle ablation or erosion asymmetry formation p 431 A85-29446

**ANISOTROPIC MEDIA**

Life prediction and constitutive models for engine hot section anisotropic materials
[AIAA PAPER 85-1421] p 852 A85-43960

**ANISOTROPIC PLATES**

Explicit formulation for a high precision triangular laminated anisotropic thin plate finite element
p 696 A85-39170

**ANNEALING**

Investigation of device and electronic interactions in GaAs device processing
[AD-A149747] p 461 N85-22162

**ANNOTATIONS**

Sensor control and data annotation gets on the bus
p 347 A85-24261

Data annotation techniques for film and electro-optic sensors p 367 A85-24262

**ANNUAL VARIATIONS**

Protection of materials and technical equipment against birds p 638 A85-37540

**ANNULAR DUCTS**

The propagation of acoustic modes in the annular circular duct of turbomachinery in the presence of swirling mean flow p 861 A85-44041

Stall elimination and restart enhancement device
[AD-D011217] p 27 N85-10062

**ANNULAR FLOW**

Supersonic jet shock noise reduction
[AIAA PAPER 84-2278] p 19[illegible] [illegible]-16099

The effect of phase-difference on the spreading rate of a laminar circular jet under b[illegible] excitation
[AIAA PAPER 85-0045] p 208 A85-19479

An experimental investigation of the mixing of co-annular swirling flows
[AIAA PAPER 85-0186] p 230 A85-20862

An analytical and experimental investigation of annular propulsive nozzles p 382 A85-29253

Investigations of the influence of taper on the characteristic values of rotating annular turbine cascades in the transonic flow regime p 394 A85-30170

Interaction of twin turbulent circular jet
p 617 A85-37049

Investigation of the effect of two endwall contours on the performance of an annular nozzle cascade
[AIAA PAPER 85-1218] p 630 A85-38661

A further assessment of numerical annular dump diffuser flow calculations
[AIAA PAPER 85-1440] p 633 A85-39779

Characteristics of controlled-oscillating annular cascade test facility with Freon gas
[NAL-TR-812] p 10 N85-10014

Analysis and testing for rotordynamic coefficients of turbulent annular seals with different, directionally homogeneous surface-roughness treatment for rotor and stator elements p 188 N85-14134

Analysis for leakage and rotordynamic coefficients of surface roughened tapered annular gas seals
p 188 N85-14135

An improved computer model for prediction of axial gas turbine performance losses
[NASA-CR-174246] p 265 N85-15724

An experimental study of aerodynamic damping characteristics of a compressor annular cascade in high speed flow and the visualization of annular cascade flow
[NAL-TR-836] p 602 N85-25759

**ANNULAR NOZZLES**

Experimental investigation of shock-cell noise reduction for single stream nozzles in simulated flight
[NASA-CR-3846] p 135 N85-13550

**ANODIC COATINGS**

Surface characterization of anodic oxides on aluminum alloys by means of surface potential difference, surface impedance and surface morphology p 442 A85-27906

**ANTARCTIC REGIONS**

Feasibility studies of 'Polar Patrol Balloon'
p 647 A85-38321

The visibility climatology of McMurdo Sound-Williams Field, Antarctica
[AD-A148106] p 300 N85-17492

Designer O. K. Antonov on new AN-74 arctic transport
p 584 N85-25230

**ANTENNA ARRAYS**

Studies in fin-line antenna design for imaging array applications p 526 A85-33245

Scattering from a periodic array of conducting bars of finite surface resistance p 794 A85-42015

Theoretical investigation of single-frequency 8-element localizer signal scattering for critical area determination
[FAA-PM-85-4] p 751 N85-31037

**ANTENNA COMPONENTS**

Main stages and problems in the design of low-gain active antennas p 794 A85-42106

**ANTENNA DESIGN**

Antenna engineering handbook /2nd edition/
p 180 A85-18081

Airborne Doppler radar antennas p 335 A85-24832

Studies in fin-line antenna design for imaging array applications p 526 A85-33245

Effect of counterpoise on VOR antenna radiation patterns p 588 A85-33999

Satellite communication performance evaluation model for aircraft systems p 588 A85-34490

Problems of radome design for modern airborne radar. II p 589 A85-34681

Main stages and problems in the design of low-gain active antennas p 794 A85-42106

Large antenna control methods: Current status and future trends p 518 N85-23845

**ANTENNA RADIATION PATTERNS**

An analysis of the pattern of longitudinal slot antenna on the metal cylinder covered with a high collision plasma layer p 183 A85-17173

Reflector antennas with directional effect in the near-field Characteristics and applications — German thesis p 287 A85-19837

Effect of counterpoise on VOR antenna radiation patterns p 588 A85-33999

A technique for determining the effects of aircraft components on the pattern of radar antennas before they are built p 833 A85-45016

A proof-of-principle getaway special free-flying satellite demonstration p 40 N85-11051

Tactical HF communication for military helicopters using the NVIS mode p 297 N85-16807

Technical evaluation report on the FDP Symposium on Flight Test Techniques
[AGARD-AR-208] p 417 N85-21157

Coordinate determination errors in measuring characteristics of radiation field of airborne antennas
p 528 N85-22919

Theoretical investigation of single-frequency 8-element localizer signal scattering for critical area determination
[FAA-PM-85-4] p 751 N85-31037

**ANTENNAS**

Antenna engineering handbook /2nd edition/
p 180 A85-18081

A radome for air traffic control SSR radar systems
[AD-P004373] p 446 N85-21467

Avionics data base
[AD-A152415] p 657 N85-27863

**ANTHROPOMETRY**

Preliminary design of a limb restraint evaluator
[AD-A151749] p 584 N85-25226

**ANTIAIRCRAFT MISSILES**

Status and concerns for bank-to-turn control of tac
missiles p 423 A85-284

**ANTIMISTING FUELS**

Did safe jet fuel flunk its final exam?
p 745 A85-410

Aircraft wing fuel tank environmental simulator tests
evaluation of antimisting fuels
[FAA-CT-84-15] p 283 N85-15

**ANTIOXIDANTS**

Stabilizing T-6 fuel with antioxidant mixtures
p 384 A85-282

**ANTIREFLECTION COATINGS**

Removable cleanable antireflection shield
[AD-D011735] p 863 N85-33

**ANTISUBMARINE WARFARE**

Communication control group technology insertion
the S-3A p 93 A85-144

Importance of test and evaluation in Navy's LAMPS
III program p 382 A85-274

Development of a Helicopter integrated naviga
system p 245 N85-16

The NAVTAG (Naval Tactical Game) system and
modification to include the SH-60B helicopter
[AD-A152004] p 611 N85-27

**ANTISUBMARINE WARFARE AIRCRAFT**

Satellite communication performance evaluation mo
for aircraft systems p 588 A85-344

The NAVTAG (Naval Tactical Game) system and
modification to include the SH-60B helicopter
[AD-A152004] p 611 N85-27

**ANTONOV AIRCRAFT**

Soviets tailor cargo transport for remote-a
operations p 646 A85-382

An-124 - The world's largest aircraft
p 828 A85-465

Designer O. K. Antonov on new AN-74 arctic transp
p 584 N85-252

**APPLICATIONS PROGRAMS (COMPUTERS)**

The structure of the application software pac' RAFIP
for the analysis of physical processes in combusti
chambers p 661 A85-391

**APPROACH**

A TACAN-based approach and landing aid
p 821 A85-435

An investigation of flying qualities requirements for
STOL fighter in approach and landing
[AIAA PAPER 85-1807] p 846 A85-470

Aircraft accident report. Central Airlines flight 2
Hughes Charter Air, Gates Learjet model 25 (N51CA
Newark International Airport, Newark, New Jersey, Mar
30, 1983
[PB84-910411] p 14 N85-10

An in-flight investigation of a twin fuselage configurat
in approach and landing
[NASA-CR-172366] p 173 N85-139

A cockpit-display concept for executing a multi
glide-slope approach for wake-vortex avoidance
[NASA-TP-2386] p 261 N85-16

Safety recommendation(s), A-84-82 through -84
[REPT-3957] p 489 N85-2374

Ground-based and in-flight simulator studies of fligh
characteristics of a twin-fuselage passenger transp
airplane during approach and landing
[NASA-TP-2451] p 895 N85-3414

**APPROACH AND LANDING TESTS (STS)**

Some real-time simulation applications to Space Shutt
approach and landing design and test
p 899 A85-4901

**APPROACH CONTROL**

Some concepts for improving non-precision approac
guidance through use of on-board data bases
p 95 A85-148

The design of an on-board look-ahead-simulation fo
approach p 96 A85-156

Nonlinear simulation of flight along wind compensatin
curved glidepaths p 245 A85-218

Approach and landing technologies for STOL fighter
configurations p 414 A85-2925

Development of piloting techniques to reduce helicopte
approach noise p 512 A85-3201

Thrust reverser effects on fighter aircra
aerodynamics p 547 A85-3557

COMPAS - Computer support for approach contr
[DGLR PAPER 84-091] p 748 A85-4031

Ames develops remote site landing aids
p 748 A85-4081

Flying qualities in the time domain
[AIAA PAPER 85-1849] p 842 A85-4587

Reducing landing dispersions through flight contr
improvements on a turboprop-powered transport aircra
(The Lockheed High Technology Test Bed)
[AIAA PAPER 85-1850] p 842 A85-4587

Closed-loop, pilot/vehicle analyses of the approach an
landing task
[AIAA PAPER 85-1851] p 842 A85-458

Flight evaluation of highly augmented controls and electronic displays for precision approach and landing of powered-lift aircraft
[AIAA PAPER 85-1944] p 827 A85-45934
Concepts and algorithms for terminal-area traffic management p 878 A85-47683
Time-controlled aircraft guidance in uncertain winds and temperatures p 879 A85-47687
Aspects of application of ACT systems for pilot workload alleviation p 586 N85-26734
A preliminary investigation of handling qualities requirements for helicopter instrument flight during decelerating approach manouvers and overshoot
[AD-A154650] p 847 N85-32125
Guidelines for the evaluation of visual approach slope indicators
[ARL/SYS-R-32] p 690 N85-34132
The integrated manual and automatic control of complex flight systems
[NASA-CR-176166] p 896 N85-35201
**APPROACH INDICATORS**
Evaluation of arctic test of improved tritium radioluminescent lighting
[AD-A148215] p 276 N85-16884
Safety recommendation(s), A-84-123 and -124
[REPT-38948/93] p 563 N85-25222
**APPROXIMATION**
Explicit constraint approximation forms in structural optimization. II - Numerical experiences
p 125 A85-15808
A fast algorithm for solving the conservative transonic S1 full potential equation employing non-orthogonal curvilinear coordinates and non-orthogonal velocity components p 226 A85-20239
The full-approximation method in the theory of transonic flows p 233 A85-22367
Approximate solution of a nonlinear problem of flow past a thin airfoil profile near a support surface
p 233 A85-22368
Entropy condition satisfying approximations for the full potential equation of transonic flow p 385 A85-26916
Variational problems of gas dynamics - Formulations, methods of solution, and the relationship between exact and approximate approaches p 388 A85-28382
Newton-like minimal residual methods applied to transonic flow calculations p 458 A85-29081
A review of some approximate methods used in aerodynamic heating analyses
[AIAA PAPER 85-0908] p 620 A85-37580
Approximate calculation of flow field in an inlet with arbitrary cross sections and curved axis
p 872 A85-49652
Research on implicit approximate-factorization finite-difference method for the Euler equation
p 873 A85-49706
Fitting aerodynamic forces in the Laplace domain: An application of a nonlinear nongradient technique to multilevel constrained optimization
[NASA-TM-86317] p 12 N85-10917
Multivariable flight control with time-scale separation
[NASA-CR-174320] p 268 N85-16873
Preliminary development of an approximation procedure for supercritical wing design optimization applications
[AD-A150177] p 500 N85-22383
Characteristics of steady-state hypersonic flow about blunted bodies with discontinuities in generators
p 636 N85-28155
**ARC LAMPS**
Investigation of light source and scattering medium related to vapor-screen flow visualization in a supersonic wind tunnel
[NASA-TM-86290] p 190 N85-15144
**ARCHITECTURE**
Prototype concept design for US Army type 3A Air Traffic Control Tower (ATCT)
[AD-A148840] p 361 N85-18070
Evaluating wind flow around buildings on heliport placement
[FAA-PM-84-25] p 455 N85-21881
**ARCHITECTURE (COMPUTERS)**
Architectural solutions to safety problems of digital flight Critical systems for commercial transports
[AIAA PAPER 84-2603] p 193 A85-17806
A standard computer bus for MIL-STD-1750A avionics computers
[AIAA PAPER 84-2679] p 194 A85-17860
Some problems in the development of CAD systems — for design of minicomputer digital components
p 200 A85-20486
Trends in digital flight control systems
p 289 A85-21465
A functional language approach in high-speed digital simulation p 458 A85-28815
Development of a generic architecture — in computers p 535 A85-31991
Pave Pillar avionics - An architecture for the future
p 832 A85-45000
A signal processor with distributed control and multidimensional scalability p 858 A85-45005
Triplex bus-connected inter-unit selected FCS configuration — flight control system
p 841 A85-45065
Reliability analysis of the A129 Integrated Multiplex System — in flight control in helicopters
p 834 A85-45142
Design for an Ada-based architecture for critical flight controls
[AIAA PAPER 85-1954] p 859 A85-45940
Digital computer architecture as applied to an advanced flight control system
[AIAA PAPER 85-1949] p 848 A85-45967
CAUTRA ATC simulator strives for realism
p 887 A85-48857
Recent advances in computer image generation
p 918 A85-49005
Impact of new computing systems on computational mechanics and flight-vehicle structures technology
p 20 N85-10042
Avionics/crew station integration p 166 N85-14818
Evolution toward a multi-bus architecture for Army helicopter avionic systems p 280 N85-16812
Rotorcraft digital advanced avionics system (RODAAS) functional description
[NASA-CR-166611] p 568 N85-25237
Navigation: Accounting for copy p 568 N85-26641
Design and specification of a local area network architecture for use in real-time flight simulation
[AD-A152242] p 594 N85-26762
**ARCTIC REGIONS**
A feasibility study of a VLF radio compass for Arctic navigation p 94 A85-14833
Advanced SAR system maps Arctic regions
p 441 A85-27841
Parachute expedition to Arctic p 236 N85-16240
MI-8 helicopter cargo loading experiment for Arctic shipping p 504 N85-24425
Designer O. K. Antonov on new AN-74 arctic transport
p 564 N85-25230
**AREA NAVIGATION**
Evaluation of radio navigation systems and their configuration with respect to minimum cost
[ESA-TT-847] p 751 N85-31043
**ARIANE LAUNCH VEHICLE**
Ariane 4 has already 'flown' in wind-tunnels and off a simulated launch pad p 782 A85-40913
**ARITHMETIC**
The use of residue arithmetic for fault detection in a digital flight control system p 841 A85-45063
**ARM (ANATOMY)**
Simple nonrestrictive arm restraint system

Air Force Academy Aeronautics Digest
[AD-A149614] p 384 N85-21104
Fiscal year 1986 technical objective document
[AD-A151039] p 539 N85-25000
Computer assisted flight schedule optimization
[AD-A151669] p 611 N85-27623
Air Force Federal Photovoltaic Utilization Program
[DE85-010812] p 801 N85-31648
U.S. Civil airmen statistics for calendar year 1984
[AD-A156326] p 866 N85-35153
Laboratory vibration schedules
[AD-A155856] p 867 N85-35188
**AROMATIC COMPOUNDS**
A chromatographic method for determining the content of aromatic hydrocarbons in aviation gasolines
p 434 A85-28035
Liquid phase products and solid deposit formation from thermally stressed model jet fuels
[NASA-TM-86874] p 121 N85-13068
Quantitative determination of compound classes in jet turbine fuels by high performance liquid Chromatography/Differential refractive index detection: Part 2
[AD-A149298] p 436 N85-20144
**ARRAYS**
Arrays for minimum wave drag of bodies of revolution
[AIAA PAPER 85-0449] p 249 A85-19758
Arrays of bodies of revolution for minimum wave drag
p 881 A85-49136
Stability of vortex structures during separation flow past array of wings p 481 N85-24110
Heat transfer characteristics for two-dimensional arrays of impinging jets with initial crossflow
p 911 N85-35365
**ARRESTING GEAR**
Aircraft barricade
[AD-D011316] p 277 N85-15761
**ARROW WINGS**
Subsonic pressure distributions near a wing-fin juncture on a supersonic arrow-wing configuration with wing-mounted vertical fins
[AIAA PAPER 85-0276] p 217 A85-19628
**ARTIFICIAL INTELLIGENCE**
Artificial intelligence applied to the inertial navigation system performance and maintenance improvement
p 94 A85-14830
Aircraft turbojet engine modeling using artificial intelligence techniques
[AIAA PAPER 85-0253] p 263 A85-19616
Design of aerodynamic bodies using artificial intelligence/expert system technique
[AIAA PAPER 85-0112] p 301 A85-20856
Intelligent test generator — for Naval aircraft maintenance p 456 A85-26821
Computer understanding of air traffic control displays
p 488 A85-32498
The metamorphosis of the military aircraft cockpit
p 764 A85-42893
The Lockheed Cybernetics Console - An artificial intelligence tool p 858 A85-43690
Avionics as an expert systems domain
p 833 A85-45001
Status and prospects of computational fluid dynamics for unsteady transonic viscous flows
[NASA-TM-86016] p 85 N85-12037
Avionics fault tree analysis and artifical intelligence for future aircraft maintenance p 203 N85-16755
Aviation maintenance computerized management information systems: Perspective for the future
[AD-A150637] p 467 N85-22349
Status and prospects of computational fluid dynamics for unsteady transonic flow p 555 N85-25180
Generation of flight paths using heuristic search
[AD-A151949] p 569 N85-26694
Diagnosis: Using automatic test equipment and an artificial intelligence expert system
[AD-A151918] p 610 N85-27576
Implications of artificial intelligence on the design of future onboard systems
[SFENA-DPS/C/S3/84252A] p 918 N85-34596
**ARTIFICIAL SATELLITES**
Aerodynamic and thermal characteristics of stellate bodies in hypersonic flow of rarefied gas at angle of attack p 148 N85-14974
Transdigitizer for relaying signals from Global Positioning System (GPS) satellites
[AD-D011442] p 339 N85-18970
**ASCENT TRAJECTORIES**
Onboard near-optimal climb-dash energy management
p 497 A85-32781
Energy-modelled climb and climb-dash - The Kaiser technique — reviewed for Me 262 jet fighter aircraft trajectories p 572 A85-35350
**ASPECT RATIO**
Aerodynamics of an aspect ratio 8 wing at low Reynolds numbers
[AIAA PAPER 85-0278] p 217 A85-19630
Aerodynamics of an aspect ratio 8 wing at low Reynolds numbers p 628 A85-39223
Computer studies of hybrid slotted working sections with minimum steady interference at subsonic speeds
p 628 A85-39241
Summary of nonaxisymmetric nozzle internal performance from the NASA Langley Static Test Facility
[AIAA PAPER 85-1347] p 668 A85-39739
Effects of aspect ratio on stall hysteresis for the Wortmann airfoil
[AIAA PAPER 85-1770] p 812 A85-43832
Detailed pressure distribution measurements obtained on several configurations of an aspect-ratio-7 variable twist wing
[NASA-TM-86306] p 314 N85-18950
Visual simulation requirements for aircraft aspect recognition at real world distances
[AD-A151040] p 517 N85-23810
Some optimization problems in static aeroelasticity for wings made of composite materials p 503 N85-24104
Wind tunnel wall interference
[AD-A151212] p 593 N85-25273
Hypersonic nonequilibrium gas flow past zero-aspect wing p 562 N85-27063

Aerodynamic performance of a wing in ground effect using the PANAIR program [AD-A153303] p 635 N85-27832
**ASPHALT**
Alternatives for runway rubber removal from porous friction surfaces [DOT/FAA/PM-84/28] p 176 N85-13803
Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 1: Correlation analysis of Marshall properties of laboratory-compacted specimens [FAA-PM-84-12-VOL-1] p 430 N85-21180
Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 2: Statistical analyses of Marshall properties of plant-produced bituminous materials [FAA-PM-84-12-VOL-2] p 430 N85-21181
Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 3: Statistical analysis of 3 methods for determining maximum specific gravity of bituminous concrete mixtures [FAA-PM-84-12-VOL-3] p 430 N85-21182
Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 5: Summary of validation studies [FAA-PM-84-12-VOL-5] p 431 N85-21184
**ASSEMBLIES**
Two-plane balance and slip-ring design p 856 N85-33536
**ASSEMBLING**
Methods for the assembly of aircraft structures — Russian book p 616 A85-38641
**ASSESSMENTS**
DC-10 winglet flight evaluation [NASA-CR-3704] p 760 N85-29949
**ASSURANCE**
Towards the year 2000: Developments in inspection and product assurance to be anticipated during the next 15 years — aircraft engines [PNR-90258] p 911 N85-34421
**ASTRODYNAMICS**
Periodic motions of generalized conservative mechanical systems whose equations of motion contain a large parameter — Russian book p 460 A85-30017
**ASTRONAUTICS**
Israel Annual Conference on Aviation and Astronautics, 25th, Technion - Israel Institute of Technology, Haifa and Tel Aviv, Israel, February 23-25, 1983, Collection of Papers p 70 A85-13676
Israel Annual Conference on Aviation and Astronautics, 26th, Haifa, Israel, February 8, 9, 1984, Collection of Papers p 615 A85-37176
The ideas of K.E. Tsiolkovskii and present-day scientific problems — Russian book p 685 A85-38775
**ASYMMETRY**
An explanation for the asymmetry of the modulation sidebands about the tooth meshing frequency in epicyclic gear vibration p 441 A85-27480
**ASYMPTOTIC METHODS**
Exact solutions of singular equations for viscous transonic flows p 142 A85-16939
Ill-posed problems in perturbation theory (Asymptotic methods of mechanics) p 233 A85-22354
Development of asymptotic algorithms in the Polet package of applications programs — for sea surface effect vehicle design p 233 A85-22366
An asymptotic analysis of transonic wind-tunnel interference based on the full potential theory p 394 A85-30171
Acoustic shocks in a variable area duct containing near sonic flows p 474 A85-32632
Asymptotic calculations of gasdynamic quantities near the separation of a limiting shock layer p 724 A85-41275
Singular asymptotic expansions in nonlinear rotordynamics [NASA-CR-174012] p 39 N85-10100
Asymptotic methods for wind tunnel wall corrections at transonic speed p 84 N85-12022
Analysis and testing for rotordynamic coefficients of turbulent annular seals with different, directionally homogeneous surface-roughness treatment for rotor and stator elements p 188 N85-14134
Singular asymptotic expansions in nonlinear rotordynamics p 451 N85-22218
**ASYMPTOTIC PROPERTIES**
An integral aproach to the determination of the asymptotic behavior of supersonic flow p 141 A85-16918
**ASYNCHRONOUS MOTORS**
Full load testing in the platform module prior to tow-out: A case history of subsynchronous instability p 186 N85-14117
**ATMOSPHERIC ATTENUATION**
Atmospheric propagation losses for long-range airborne radar systems analysis [AIAA PAPER 85-0267] p 244 A85-19620
**ATMOSPHERIC BOUNDARY LAYER**
Spatial variation of sea surface temperature and flux-related parameters measured from aircraft in the JASIN experiment [AD-A149321] p 130 A85-15425
Three powered sailplanes as meteorological instrumentation for atmospheric boundary layer studies at DFVLR [DFVLR-FB-84-50] p 663 N85-27862
Measurements for the determination of the vertical structure of the convective boundary layer — atmospheric boundary layer p 915 N85-35550
Partitioning of the vertical turbulent energy transport into positive and negative contributions — meteorology p 915 N85-35551
Aircraft measurements during the Bonn Experiment (BONEX 1) — meteorology p 915 N85-35552
**ATMOSPHERIC CHEMISTRY**
Atmospheric photochemical modeling of turbine engine fuels. Phase 1: Experimental studies. Volume 2: Environmental chamber data tabulations [AD-A147786] p 300 N85-17470
**ATMOSPHERIC CIRCULATION**
Case studies for flux measurements along a low-flying route to the south of Munich p 915 N85-35548
The determination of lee circulation during the foehn wind p 915 N85-35554
**ATMOSPHERIC COMPOSITION**
The University of Wyoming's small scientific balloon program p 639 A85-38309
Size distributions of elemental carbon in atmospheric aerosols [PB85-153534] p 609 N85-25963
**ATMOSPHERIC DENSITY**
Optical tomography for flow visualization of the density field around a revolving helicopter rotor blade p 48 A85-11264
**ATMOSPHERIC EFFECTS**
The functional structure of the aerodynamic coefficients of a parachute due to symmetry p 471 A85-31451
Droplet size distribution effects on aircraft ice accretion p 583 A85-35585
**ATMOSPHERIC ELECTRICITY**
Charge separation in a Florida thunderstorm p 130 A85-15072
Atmospheric electricity hazards to aircraft operation [AIAA PAPER 85-0013] p 247 A85-19457
Nighttime observations of thunderstorm electrical activity from a high altitude airplane p 702 A85-39526
In-flight electrical conductivity measurements [ONERA, TP NO. 1985-61] p 912 A85-47264
NASA thunderstorm overflight program: Atmospheric electricity research. An overview report on the optical lightning detection experiment for spring and summer 1983 [NASA-TM-86486] p 128 N85-12330
A study of the effects of triggered lightning [AD-A148296] p 300 N85-17494
Effects of lightning on aircraft studied at Sheremetyevo p 583 N85-25199
**ATMOSPHERIC ENTRY**
A three-dimensional Navier-Stokes/Euler code for blunt-body flow computations [AIAA PAPER 85-0361] p 220 A85-19696
Angular motion influence on re-entry vehicle ablation or erosion asymmetry formation p 431 A85-26446
Waveriders p 595 A85-34193
Descent vehicles — Russian book p 896 A85-49435
Results of tests of the SRB aft skirt heat shield curtain in the MSFC Hot Gas Facility [NASA-CR-170888] p 899 N85-35223
**ATMOSPHERIC ENTRY SIMULATION**
Experimental research on the effect of separation flow on ablation in supersonic turbulent flow [AIAA PAPER 85-0975] p 694 A85-37625
**ATMOSPHERIC HEAT BUDGET**
Partitioning of the vertical turbulent energy transport into positive and negative contributions — meteorology p 915 N85-35551
Aircraft measurements during the Bonn Experiment (BONEX 1) — meteorology p 915 N85-35552
**ATMOSPHERIC HEATING**
Application of axisymmetric analogue for calculating heating in three-dimensional flows [AIAA PAPER 85-0245] p 216 A85-19611
**ATMOSPHERIC MODELS**
A spatial model of wind shear and turbulence [AIAA PAPER 84-0277] p 190 A85-16236
Model of the wind field in a downburst p 701 A85-39218
Time-invariant structure of nonstationary atmospher turbulence [AIAA PAPER 85-1834] p 857 A85-458
Atmospheric photochemical modeling of turbine engi fuels. Phase 1: Experimental studies. Volume 2 Environmental chamber data tabulations [AD-A147786] p 300 N85-1747
Research Reports: 1984 NASA/ASEE Summer Facu Fellowship Program [NASA-CR-171317] p 462 N85-2221
Wind modelling for increased aircraft operationa efficiency p 559 N85-2665
**ATMOSPHERIC MOISTURE**
Air flow and particle trajectories around aircra fuselages. II - Measurements p 106 A85-1365
Three-dimensional airflow and hydrometeor trajector calculation with applications [AIAA PAPER 85-0412] p 222 A85-1973
Icing conditions encountered by a research aircraft p 299 A85-2114
**ATMOSPHERIC OPTICS**
The optics of aircraft shear flows — laser bea propagation through atmospheric turbulence [AIAA PAPER 85-0557] p 460 A85-2788
Aero-optical turbulent boundary layer/shear lay experiment on the KC-135 aircraft revealed p 546 A85-3520
La Recherche Aerospatiale Bimonthly Bulletin Numbe 1984-3, 220/May-June [ESA-TT-882] p 543 N85-2563
**ATMOSPHERIC PHYSICS**
The parameters of shock waves from bodies o revolution in a homogeneous atmosphere p 142 A85-1691
Proceedings of Meteorological Motor Glider (MEMO) Workshop '84 [DFVLR-MITT-85-04] p 914 N85-3554
**ATMOSPHERIC PRESSURE**
Theoretical and experimental analyses of lase altimeters for barometric measurements over the ocean p 298 N85-1735
**ATMOSPHERIC REFRACTION**
Doppler frequency shift for aircraft noise in a refractive atmosphere [AIAA PAPER 84-2354] p 63 A85-1068
**ATMOSPHERIC SOUNDING**
Long-duration flights using MIR (infrared balloon system — for stratospheric study p 639 A85-38307
The University of Wyoming's small scientific balloon program p 639 A85-38309
**ATMOSPHERIC TURBULENCE**
A spatial model of wind shear and turbulence [AIAA PAPER 84-0277] p 190 A85-16236
Comment on 'Effects of atmospheric turbulence on a quadrotor heavy-lift airship' p 144 A85-18522
Pulsed Doppler radars for weather observation and flight safety enhancement p 374 A85-24903
Development of a terminal sensor for hazardous weather and wake turbulence detection p 441 A85-27532
An investigation into the hovering behaviour of the LTA 20-1 airship in calm and turbulent air [AIAA PAPER 85-0876] p 641 A85-38793
Time-invariant structure of nonstationary atmospheric turbulence [AIAA PAPER 85-1834] p 857 A85-45848
Stochastic rotor blade dynamics [AD-A146312] p 105 N85-12054
Aircraft accident report Air Canada, Lockheed L-1011, C-FTNJ, near Charleston, South Carolina, November 24, 1983 [PB84-910413] p 149 N85-13790
The effects of atmospheric turbulence on an air-to-air optical communication link [AD-A151640] p 602 N85-25700
Environmental-physical measurements and determination of atmospheric turbulence with the ASK-16 motor glider p 915 N85-35549
**ATMOSPHERIC WINDOWS**
Subsonic multiple-jet aerodynamic window p 693 A85-37216
**ATOMIC CLOCKS**
The technical evolution of on-board clocks p 853 A85-44053
**ATOMIZERS**
Gas turbine airblast atomizers - A review. I p 420 A85-29343
Influence of downstream distance on simplex atomizer spray characteristics [ASME PAPER 84-WA/HT-25] p 698 A85-39688
**ATTACHMENT**
Advanced life analysis methods. Volume 1: Cracking data survey and NDI (nondestructive inspection) assessment for attachment lugs [AD-A150419] p 528 N85-23108
**ATTACK AIRCRAFT**
Hughes' new attackers p 18 A85-12175

FAH-2 - The German/French connection p 104 A85-15593
Friendly ejection seat trajectory computer program p 330 A85-22754
From Hind to Havoc p 412 A85-27840
A mission oriented approach to cockpit design as applied to observation and attack helicopters p 497 A85-32011
Versatile F/A-18 Hornet performs fighter and attack missions p 571 A85-34199
AV-8B-mean Marine V/STOL machine p 646 A85-38437
LHX - A giant leap p 648 A85-38438
Propulsion influences on air combat [AIAA PAPER 85-1457] p 651 A85-39789
Enhanced terrain masked penetration program p 632 A85-44991
Future electronic map systems p 632 A85-44993
A-5 supersonic attack aircraft described — Qiang-5 aircraft p 139 N85-14792
Details of export A-5 close-support aircraft given — Qiang-5 aircraft p 139 N85-14793
The development of a dynamic model of a generalised combat aircraft with forward wings for the identification of stability and control characteristics [CAR-84-33] p 343 N85-18050
Details of export A-5 close-support aircraft given p 346 N85-18983
Cost-estimating relationships for tactical combat aircraft [AD-A151575] p 575 N85-25255
ESP (External-Stores Program): A pilot computer program for determining flutter-critical external-store configurations. Volume 2: Final report on program enhancement and delivery [AD-A152289] p 587 N85-26726

ATTACKING (ASSAULTING)
A legal analysis of the shooting of Korean Airlines Flight 007 by the Soviet Union p 66 A85-11937
NyKINM, a further development of KINM 22 — simulation of a robot attack on an aircraft [FOA-C-20559-D8(E3)] p 256 N85-15720
Next generation gunship [AD-A156361] p 667 N85-35193

ATTITUDE (INCLINATION)
Flight trial results of a hybrid strapdown attitude and heading reference system p 91 A85-13446
The development and applications of GPS determined attitude p 486 A85-32196
A method of estimating aircraft attitude from fly by wire flight control system data p 588 N85-26853

ATTITUDE CONTROL
The development of digital attitude controllers - Its past, present and future p 302 A85-22449
Digital homing guidance - Stability vs performance tradeoffs p 406 A85-26440
A method for controlling the motion of a flight vehicle relative to its center of mass p 585 A85-36581
In-flight evaluation of pure time delays in pitch and roll [AIAA PAPER 85-1852] p 843 A85-45881
Peripheral vision horizon display on the single seat night attack A-10 p 23 N85-10053
Large antenna control methods: Current status and future trends p 518 N85-23845
Controller requirements for uncoupled aircraft motion, volume 2 [AD-A153300] p 676 N85-27879

ATTITUDE GYROS
Helicopter flight test of a ring laser gyro Attitude and Heading Reference System p 643 A85-38529
Design aspects, performance analysis and test results of a strapdown single gyro attitude and heading reference p 822 A85-45021
Extracts from the test plan for in-flight evaluation of the NT-33A peripheral vision display p 23 N85-10055

ATTITUDE INDICATORS
GPS aided low cost strapdown INS for attitude determination p 92 A85-13684
Attitude determination in a limb-scanning balloon radiometer p 665 A85-38319
Peripheral Vision Horizon Display (PVHD) [NASA-CP-2306] p 23 N85-10044
Peripheral vision horizon display testing in RF-4C aircraft p 23 N85-10054
Extracts from the test plan for in-flight evaluation of the NT-33A peripheral vision display p 23 N85-10055
Peripheral vision displays: The future p 24 N85-10058
A production peripheral vision display system p 24 N85-10059
A preliminary flight evaluation of the peripheral vision display using the NT-33A aircraft [AD-A145123] p 24 N85-10060
Wind tunnel calibration of a hemispherical head angle of attack and angle of sideslip indicator [FFA-TN-1984-11] p 13 N85-10923

ATTITUDE STABILITY
Application of frequency domain handling qualities criteria to the longitudinal landing task [AIAA PAPER 85-1848] p 842 A85-45877

AUDITORY SIGNALS
Auditory information systems in military aircraft: Current configurations versus the state of the art [AD-A145469] p 65 N85-11794

AUGMENTATION
Design of a digital ride quality augmentation system for commuter aircraft [NASA-CR-172419] p 20 N85-10037
Development and flight evaluation of an augmented stability active controls concept: Executive summary [NASA-CR-166009] p 37 N85-11006
An update of the Canada/USA augmentor-wing project p 257 N85-16781
A modern control design methodology with application to the CH-47 helicopter [AD-A151946] p 587 N85-26723

AUTOCLAVES
Age forming technology expanded in an autoclave [SAE PAPER 850885] p 910 A85-50113

AUTOMATED EN ROUTE ATC
Improvements in computing flight paths and flight times for air traffic control p 95 A85-15169
Cockpit requirements for weather information and data link messages p 401 A85-27529
Automation in air traffic management p 879 A85-49171
Start-2 ATC system installation progresses at Leningrad p 96 N85-12007

AUTOMATED PILOT ADVISORY SYSTEM
Flight management systems - Their role is steadily increasing p 512 A85-32487
Preventing collisions in air traffic - A system analyses with special emphasis on transponder-assisted on-board systems with selective addressing — German thesis p 834 A85-45534

AUTOMATIC CONTROL
Investigation of the semiautomatic control of an aircraft using timer redundancy in onboard digital computers of the flight-path control system p 35 A85-10470
Simulation in engineering sciences: Applications to the automatic control of mechanical and energy systems; Proceedings of the International Symposium, Nantes, France, May 9-11, 1983 p 131 A85-15651
U.S. Navy aircrew automated escape systems (AAES) and aircrew life support systems (ALSS) in-service usage data analysis program - A progress report and report of longer term plans p 331 A85-22787
Impacts of automation - Automation and flight test engineering p 413 A85-28633
The automated KC-135R test program p 413 A85-28638
Communication in automated air-traffic-control systems — Russian book p 644 A85-38647
Qualification needs for advanced integrated aircraft [AIAA PAPER 85-1865] p 827 A85-45894
Multi-input multi-output automatic design synthesis for performance and robustness [AIAA PAPER 85-1929] p 859 A85-45929
Automation in air traffic management p 879 A85-49171
Critical conditions for the automatic control of landing from decision height in variable winds [UTIAS-284] p 154 N85-14830
Investigation of semiautomatic aircraft control processes employing time redundancy in on-board digital trajectory control computers p 270 N85-16046
The effects of manufacturing automation on the surge and mobilization capabilities of the gas turbine engine industry [AD-A147295] p 297 N85-17162
Operations concept for the advanced automation system man-machine interface [AD-A149797] p 410 N85-21139
Guidance and control research flight testing with HFB 320 test aircraft p 514 N85-22355

AUTOMATIC CONTROL VALVES
An adaptive control of an electro-hydraulic position control system p 893 A85-47702

AUTOMATIC FLIGHT CONTROL
Multi-rate digital flight control systems p 35 A85-12360
A reconfigurable redundancy management strategy for a triplex DFBW system p 35 A85-12361
Integrated modular flight control - Costs and benefits [AIAA PAPER 84-2490] p 114 A85-13584
Fundamentals of the general structural-physical theory of flight instruments — Russian book p 131 A85-13750
The automated cockpit improves hands-off performance p 106 A85-14017
Flight control technology for improved aircraft performance and survivability [AIAA PAPER 84-2489] p 170 A85-16107
Optimum parametric control of objects with a lagging argument p 192 A85-17058
Time flies - An in-service evaluation of a 4-D flight management system [AIAA PAPER 84-2607] p 171 A85-17810
Multivariable control system design techniques - An application to a short takeoff and landing aircraft [AIAA PAPER 84-2625] p 171 A85-17822
Aircraft automatic digital flight control system with inversion of the model in the feed-forward path [AIAA PAPER 84-2627] p 171 A85-17823
Ultrareliable fault-tolerant control systems [AIAA PAPER 84-2650] p 194 A85-17837
A method for testing a digital flight control system without the use of ground support equipment [AIAA PAPER 84-2684] p 172 A85-17851
Pilot command interfaces for discrete control of automated nap-of-earth flight [AIAA PAPER 84-2621] p 172 A85-17859
Quantifying AFTI/F-16 gust alleviation characteristics using frequency response analysis p 424 A85-28641
Problems in the simulation of the automatic flight control systems of aircraft p 424 A85-29864
Fault tolerant computer system for the A129 helicopter p 504 A85-31271
Advanced AFCS developments on the XV-15 tilt rotor research aircraft — Automatic Flight Control System p 512 A85-32013
Mixing four-dimensional equipped and unequipped aircraft in the terminal area p 488 A85-32778
Shortcomings of modern control as applied to fighter flight control design p 513 A85-33300
Techniques for accommodating control effector failures on a mildly statically unstable airplane p 584 A85-35982
Invincible aircraft may be a step closer to reality p 585 A85-36723
Automatic flight control system (AFCS) of helicopter using an optical control algorithm p 674 A85-38384
New concepts in control theory, 1959-1984 (Dryden Lectureship in Research) — for aerospace flight control p 703 A85-39551
Flight control systems and sensors for air transport p 775 A85-41014
Flight control technology in transport p 775 A85-41015
Multiplexed data bus for aircraft and its role p 763 A85-41018
Optical technology for flight control systems p 776 A85-41019
Integrated flight/propulsion control - HIDEC modes p 839 A85-45042
The use of residue arithmetic for fault detection in a digital flight control system p 841 A85-45063
Reliability analysis of the A129 Integrated Multiplex System — in flight control in helicopters p 834 A85-45142
Development of control laws for a flight test maneuver autopilot for an F-15 aircraft [AIAA PAPER 85-1859] p 843 A85-45888
Sensitivity analysis of automatic flight control systems using singular value concepts [AIAA PAPER 85-1899] p 844 A85-45914

Ka-32 multimission helicopter designed to operate in harsh climate p 828 A85-46597
Eigenstructure assignment and its application in design of flight control system p 860 A85-46822
Concepts and algorithms for terminal-area traffic management p 878 A85-47683
Accounting for error stochasticity in terminal homing of aircraft p 97 N85-13115
Flight test of the Open Loop Gust Alleviation (OLGA) system [BMFT-FB-W-84-036] p 271 N85-16881
Algorithms for automatic four-dimensional aircraft guidance, considering the momentary wind situation [DFVLR-FB-84-40] p 410 N85-21146
Analytically redundant output feedback scheme for reduction of structural loads of a flexible transport aircraft [TT-8303] p 417 N85-21154
A 320 to have combined automatic pilot, flight control system p 515 N85-24186
Automatic flight control modes for the AFTI/F-111 mission adaptive wing aircraft p 680 N85-27909

Human factors in cockpit automation: A field study of flight crew transition
[NASA-CR-177333] p 747 N85-29937
The integrated manual and automatic control of complex flight systems
[NASA-CR-176166] p 898 N85-35201
AUTOMATIC LANDING CONTROL
Development of the F/A-18A automatic carrier landing system p 512 A85-32777
Techniques for accommodating control effector failures on a mildly statically unstable airplane
p 584 A85-35962
Concepts and algorithms for terminal-area traffic management p 878 A85-47683
Simulation of time-control procedures for the advanced air traffic control system p 878 A85-47686
Flight tests of the Digital Integrated Automatic Landing System (DIALS)
[NASA-CR-3869] p 116 N85-12900
Research at automated ATC Scientific-Experimental Center p 313 N85-18037
AUTOMATIC PILOTS
A modelling approach for autopilot design of a rolling missile p 115 A85-13691
The automated cockpit improves hands-off performance p 106 A85-14017
A simulator application of a 'hands-on throttle and stick' concept to a transport pilot/autopilot interface
[AIAA PAPER 84-2687] p 165 A85-17866
Status and concerns for bank-to-turn control of tactical missiles p 423 A85-26442
An analog CMOS autopilot p 583 A85-34096
An approach to adaptive autopilot synthesis, with stabilization of a single-rotor helicopter used as an example p 584 A85-36573
Development of control laws for a flight test maneuver autopilot for an F-15 aircraft
[AIAA PAPER 85-1889] p 843 A85-45858
The Collins AFDS Maintenance System for the Boeing 757/767 — Autopilot Flight Director System
[AIAA PAPER 85-1911] p 849 A85-45871
How autopilot requirements constrain the aerodynamic design of homing missiles p 894 A85-47717
Improved capabilities of the new general aviation digital autopilots
[SAE PAPER 850914] p 896 A85-50125
A digital piloting system for the combat helicopter
p 260 N85-16806
A 320 to have combined automatic pilot, flight control system p 515 N85-24186
Development and evaluation of a Fault-Tolerant Multiprocessor (FTMP) computer. Volume 2: FTMP software
[NASA-CR-166072] p 804 N85-30706
Development of control laws for a flight test maneuver autopilot for an F-15 aircraft
[NASA-TM-86736] p 847 N85-33122
AUTOMATIC TEST EQUIPMENT
The automatic SSR taxiway test facility
p 15 A85-12081
TI 4100 NAVSTAR navigator test results
p 95 A85-14840
Low cost GPS receiver signal processing
p 95 A85-14841
Evolution of an automated eddy current inspection system p 125 A85-15606
An approach to automatic FLIR video assessment
p 182 A85-16650
A method for testing a digital flight control system without the use of ground support equipment
[AIAA PAPER 84-2684] p 172 A85-17861
Integrated on-board monitoring and test concepts
[AIAA PAPER 84-2709] p 164 A85-17875
Data acquisition and processing for steady-state inlet pressure distortion at a turbojet engine face
p 143 A85-18298
AUTOTESTCON '83; Proceedings of the Conference, Fort Worth, TX, November 1-3, 1983
p 455 A85-26776
ATE in the field supporting airborne ASW avionics P-3 style p 361 A85-26778
Integration Status Accounting Program (ISAP) - A data collection and analysis program for ATE and TPS development p 455 A85-26783
Support program planning - Managing to get it supported — ATE for avionics p 461 A85-26785
System concepts/real-time parameters for a MIL-STD-1553B intermediate level tester
p 456 A85-26790
The Expeditionary Test Set - A fresh approach to automatic testing p 439 A85-26800
Data base management for ATE reliability enhancement p 456 A85-26807
Electronic warfare automatic test equipment calibration p 440 A85-26809
Portable automatic eye-safe laser and FLIR test set
p 440 A85-26810
Automatic ATLAS program generator (AAPG) for the advanced electronic warfare test set
p 456 A85-26817
Intelligent test generator — for Naval aircraft maintenance p 456 A85-26821
The Air Force modular automatic test equipment (mate) maintenance concepts p 440 A85-26825
Using flowcharts to map ATLAS route
p 456 A85-26831
Enhancing the F-111 avionics intermediate shop with dynamic test stations p 361 A85-26834
Automating the decision support for ATE operations management p 456 A85-26836
A model for the optimal synthesis and analysis of maintenance facilities p 456 A85-26838
The F-16 A/C-ATE centralized data system
p 416 A85-26839
Automated testing speeds EW receiver evaluation
p 406 A85-27645
Evaluation of automated eddy current system reliability

AH-64A production line Automatic Test Equipment
p 465 A85-31978
Iterative queueing network techniques for the analysis of large maintenance facilities p 536 A85-33299
Developing an off-line environment for testing real time aerodynamics simulation
[AIAA PAPER 85-1751] p 800 A85-42986
An airline view on built-in test equipment
[AIAA PAPER 85-1912] p 811 A85-45883
Diagnosing and predicting the technical condition of aviation equipment — Russian book
p 811 A85-46583
Improving engine testing thru automation using a minicomputer p 829 A85-46523
NDT-33 - A computerized eddy current instrument
p 906 A85-47470
Radar targets reveal all to automated tester
p 906 A85-49346
DYNA-SIM: A nonstationary queuing simulation with application to the automated test equipment problem
[AD-A148384] p 196 N85-15450
Design for Tactical Avionics Maintainability
[AGARD-CP-361] p 201 N85-16731
Study and realisation of a 3rd level maintenance center based on ATE systems utilization p 202 N85-16735
ATE user's view on design for maintainability
p 202 N85-16737
Built-in-test for first line testing p 202 N85-16739
Functional built-in-test in a pipelined image processor
p 202 [illegible]35-16740
F-111 automatic test equipment replacement program
p 782 N85-31322
Air Force bid sample testing p 807 N85-31323
AUTOMATIC TRAFFIC ADVISORY AND RESOLUTION
Improved TCAS I for pilot warning indication
[AIAA PAPER 84-2736] p 153 A85-17891
AUTOMATIC WEATHER STATIONS
Automatic monitoring of aviation terminal forecasts
p 532 A85-30600
New AWOS provides synthesized-voice weather information p 907 A85-48853
AUTOMATION
Advanced concepts in combat automation
[AIAA PAPER 84-2458] p 99 A85-13546
The fundamentals of the automated design of engines for flight vehicles — Russian book p 111 A85-15820
Significance and limitations of family ties among ejection seat type aircrew automated escape systems (AAES)
p 331 A85-22777
Fully-automatic flexible manufacturing cell for turbine blades p 367 A85-24647
Depot modernization at the Defense Logistics Agency
[AD-P004006] p 125 N85-11988
Future robotics program at San Antonio ALC (Air Logistics Center)
[AD-P004011] p 127 N85-11991
West Europe report: Science and technology
[JPRS-WST-84-012] p 601 N85-25552
Automated maintenance system test program increment VI production scheduling
[AD-A153894] p 706 N85-29636
AUTOMOBILE ENGINES
Porsche's new light-aircraft engine
p 581 A85-35254
DOE automotive gas turbine modern technology engine program p 794 A85-41636
Porsche aircraft engine P F M 3200
[SAE PAPER 850895] p 890 A85-50115
Ceramic technology for advanced heat engines program plan
[DE84-013567] p 121 N85-13055
FRG ceramic engine components (PET)
p 257 N85-17193
Development of high temperature ceramic parts
vehicular gas turbines
[PNR-90245] p 354 N85-1
Advanced Gas Turbine (AGT) powertrain
development for automotive applications
[NASA-CR-174809] p 379 N85-1
Introducing engine innovations: An examination of
markets for Brayton and Stirling automotive engines
[DE84-016319] p 448 N85-20
Advanced Gas Turbine (AGT) technology project
[NASA-CR-174798] p 773 N85-2
AUTOMOBILE FUELS
Some characteristics of automotive gasolines and
performance in a light aircraft engine
[FAA-CT-84-12] p 280 N85-1
AUTOMOBILES
Stages in the development of the external wind-
balance
[DGLR PAPER 84-096] p 777 A85-40
FRG firms jump into market for auto, aircraft cerami
p 384 N85-18
Structural ceramics in transportation: Fuel implicat
and economic impacts
[DE85-003024] p 436 N85-201
Uses of composite materials p 520 N85-22
AUTONOMOUS NAVIGATION
Combinatorial performance/cost analysis of a
autonomous navigation system for aircraft
p 588 N85-26
AUTONOMY
Development of a temperature-compensated hot-
anemometer system for boundary-layer transi
detection on high-performance aircraft
[NASA-TM-86732] p 835 N85-231
AUTOREGRESSIVE PROCESSES
A new approach to the maneuvering target tracki
problem p 917 A85-477
Time series analysis of closed-loop pilot vehi
dynamics p 271 N85-168
AUTOROTATION
Five years experience with miniature induced lo
propellers. II - Applications
[SAE PAPER 840027] p 322 A85-263
An investigation of the autorotation of gas-turbi
engines under startup conditions p 659 A85-391
AUXILIARY POWER SOURCES
Auxiliary and emergency power system
[SAE PAPER 841572] p 662 A85-391
Secondary power generation system considerations fo
advanced aircraft
[SAE PAPER 841604] p 650 A85-391
B-1B secondary power subsystem
[SAE PAPER 841607] p 662 A85-391
AUXILIARY PROPULSION
Pioneering commercial rocketry in the United States o
America - Reaction Motors, Inc. 1941-1958. II - Projects
p 463 A85-2937
AVAILABILITY
Maintainability aspects in maintenance management
p 909 A85-4953
A practical example of reducing life cycle costs an
increased availability p 296 N85-1673
AVIONICS
The approach to optical system designs for aircraft hea
up displays p 22 A85-1083
Volume phase holograms and their application to avioni
displays p 47 A85-1080
Scene matching and its application to aerospac
electronic systems p 15 A85-1225
Israel Annual Conference on Aviation and Astronautic
25th, Technion - Israel Institute of Technology, Haifa an
Tel Aviv, Israel, February 23-25, 1983, Collection o
Papers p 70 A85-1387
Thin plasma panels squeeze into crammed aircraft
p 106 A85-1460
Communication control group technology insertion fo
the S-3A p 93 A85-1448
Modern aviation electronics — Book
p 95 A85-1552
An approach to automatic FLIR video assessment
p 182 A85-1665
Digital Avionics Systems Conference, 6th, Baltimore
MD, December 3-6, 1984, Proceedings
p 137 A85-1780
The use of structured methods in the development o
large software-based avionics systems
[AIAA PAPER 84-2585] p 192 A85-1782
Digital fuel quantity indicating system for aircraft
[AIAA PAPER 84-2602] p 163 A85-1780
An overview of the digital avionics assessment activit
being conducted by the Federal Aviation Administratio
at NASA-Ames Research Center
[AIAA PAPER 84-2605] p 163 A85-1780
Recent advances in aircraft on-board weight and balanc
systems
[AIAA PAPER 84-2606] p 164 A85-1780

The APG-66 radar and its derivative applications
[AIAA PAPER 84-2609] p 150 A85-17813

Integrated flight control/navigation sensors
[AIAA PAPER 84-2623] p 171 A85-17820

Development tools - Case study for large systems — of digital avionics
[AIAA PAPER 84-2625] p 183 A85-17826

Multi-sensor surveillance performance evaluation tool — using computerized simulation
[AIAA PAPER 84-2631] p 183 A85-17827

General aviation data bus update
[AIAA PAPER 84-2637] p 184 A85-17828

Effect of precipitation static on general aviation digital avionics
[AIAA PAPER 84-2641] p 157 A85-17830

Current and future general aviation EFIS developments — electronic flight instrumentation systems
[AIAA PAPER 84-2642] p 184 A85-17831

The impact of advanced computational techniques on digital avionics signal processor performance
[AIAA PAPER 84-2653] p 184 A85-17840

Software controlled display/prohibition — for avionics
[AIAA PAPER 84-2657] p 184 A85-17844

Recent advances in electroluminescent displays applicable to future crew-station interfaces
[AIAA PAPER 84-2663] p 184 A85-17845

Real time data processing for avionics testing on the A-6E
[AIAA PAPER 84-2608] p 175 A85-17852

Safety-of-flight and qualification testing for avionic systems
[AIAA PAPER 84-2670] p 175 A85-17853

Integrated avionics for advanced Army rotorcraft
[AIAA PAPER 84-2672] p 151 A85-17855

Digital avionics and flight path director functions of the HH-60 helicopter
[AIAA PAPER 84-2674] p 151 A85-17857

A standard computer bus for MIL-STD-1750A avionics computers
[AIAA PAPER 84-2679] p 184 A85-17860

Data bus interface MIL-STD-1553B/ARINC 581 — avionics for KC-135 tanker aircraft
[AIAA PAPER 84-2682] p 184 A85-17862

Maintenance Assist Functions embedded within the 737-300 Flight Management System
[AIAA PAPER 84-2706] p 185 A85-17874

Integrated on-board monitoring and test concepts
[AIAA PAPER 84-2709] p 186 A85-17875

Avionics hardware design for testability
[AIAA PAPER 84-2703] p 152 A85-17876

Gate array, standard cell, and fully custom - Building blocks for the digital avionics designer
[AIAA PAPER 84-2711] p 184 A85-17880

A terrain data/digital map system for LHX — Light Helicopter
[AIAA PAPER 84-2723] p 152 A85-17885

VLSI chip set for high-performance avionic computers
[AIAA PAPER 84-2730] p 184 A85-17887

An assessment of the 1990 digital/electric airplane
[AIAA PAPER 84-2740] p 157 A85-17894

A minimum interruption ac electric power generating system for avionics
[AIAA PAPER 84-2742] p 168 A85-17895

Common modular avionics - Partitioning and design philosophy
[AIAA PAPER 84-2745] p 184 A85-17896

Modular standards for emerging avionics technologies
[AIAA PAPER 84-2747] p 184 A85-17897

High density modular avionics packaging
[AIAA PAPER 84-2749] p 184 A85-17898

Modular avionics packaging standardization
[AIAA PAPER 84-2746] p 184 A85-17899

General Dynamics Convair Division locally reconfigurable embedded computer
[AIAA PAPER 84-2748] p 195 A85-17900

The avionics flight test system p 154 A85-18716

Lightning simulation facilities in the United States and Europe

Adaptive noise cancellation in a fighter cockpit environment [AD-A153176] p 749 A85-41321

Sources, paths, and concepts for reduction of noise in the test section of the NASA Langley 4x7m wind tunnel [NASA-CR-172446-VOL-1] p 197 N85-14666

Comparison of options for reduction of noise in the test section of the NASA Langley 4x7m wind tunnel, including reduction of nozzle area [NASA-CR-172446-VOL-2] p 197 N85-14667

Background noise measurements from jet exit vanes designed to reduced flow pulsations in an open-jet wind tunnel [NASA-TM-86383] p 583 N85-27916

**BACKUPS**

Operational evaluation of an experimental TCAS -- Traffic Alert and Collision Avoidance System [AIAA PAPER 84-2407] p 89 A85-13514

**BACKWARD FACING STEPS**

Effect of initial conditions on turbulent reattachment downstream of a backward-facing step p 80 A85-15331

A study of compressible turbulent free shear layers using laser Doppler velocimetry [AIAA PAPER 85-0177] p 213 A85-19569

A study of the effects of numerical dissipation on the calculation of supersonic separated flows [AIAA PAPER 85-0301] p 219 A85-19650

Transformation of acoustic oscillations into the eddy ones in turbulent flows p 367 A85-24983

Modelling turbulent recirculating flows in complex geometries p 445 A85-29967

Flow over surface-mounted semi-bluff bodies p 73[illegible] A85-42977

**BAFFLES**

Control of jet shock associated noise by a reflector [AIAA PAPER 84-2279] p 59 A85-10839

An experimental study of sound attenuation characteristics in circular ducts with lined radial baffles [AIAA PAPER 85-0079] p 304 A85-19505

Optimization of combined convective and film cooling of perforated baffle blades in gas turbines p 529 N85-24067

Strutless diffuser for gas turbine engine [AD-D011662] p 672 N85-28943

**BAGGAGE**

Advanced baggage/cargo handling [SAE PAPER 840711] p 332 A85-26315

**BAGS**

Air bag restraint system [AD-D011671] p 747 N85-29936

**BALANCE**

Stages in the development of the external wind-tunnel balance [DGLR PAPER 84-098] p 777 A85-40315

Force and moment measurements on a 74 deg delta wing with an apex flap [NASA-CR-166081] p 12 N85-10918

Two-plane balance and slip-ring design p 856 N85-33536

**BALANCING**

Development of a microprocessor-controlled laser system for automated precision balancing p 443 A85-28828

Development of a multiplane multispeed balancing system for turbine systems [NASA-CR-174750] p 516 N85-22400

Stressed-strained state of tightening buckles in sectional runners of gas turbines p 672 N85-28149

**BALL BEARINGS**

The dynamics of ball separators in ball bearings. II - Results of optimization study [ASLE PREPRINT 84-AM-6C-3] p 369 A85-25957

Effect of two inner-ring oil-flow distribution schemes on the operating characteristics of a 35 millimeter bore ball bearing to 2.5 million DN [NASA-TP-2404] p 129 N85-13233

**BALLISTIC MISSILES**

Aerodynamic studies linked to the development of deployable nozzles — for upper stage ballistic missiles [ONERA, TP NO. 1984-149] p 205 A85-19263

**BALLISTIC TRAJECTORIES**

Angular motion influence on re-entry vehicle ablation or erosion asymmetry formation p 431 A85-26446

**BALLISTICS**

A relation between liquid roll moment and liquid side moment p 423 A85-26449

Structural and algorithmic aspects of the design of a mathematical-modeling system for problems of ballistics, control, and navigation p 432 A85-28391

**BALLOON FLIGHT**

Scientific ballooning - IX; Proceedings of the Seventh Symposium, Graz, Austria, June 25-July 7, 1984 p 615 A85-38301

Stratospheric flights with large polyethylene balloons from equatorial latitudes p 639 A85-38304

Long-duration flights using MIR (infrared balloon system) — for stratospheric study p 639 A85-38307

First results of a stratospheric experiment using a Montgolfiere Infra-Rouge (MIR) — balloon p 639 A85-38308

Balloon system and balloon-borne experiments in China p 640 A85-38310

A balloon tracking system that uses the VHF omnidirectional range (VOR) network p 643 A85-38313

An automatic navigation and aspect sensing system for X-ray astronomy p 643 A85-38314

Assuring payload security in flight and recovery - Design approaches and flight experience p 640 A85-38315

An alternate approach to very long duration ballooning in the northern hemisphere p 640 A85-38316

Attitude determination in a limb-scanning balloon radiometer p 655 A85-38319

**BALLOON SOUNDING**

Long-duration flights using MIR (infrared balloon system) — for stratospheric study p 639 A85-38307

First results of a stratospheric experiment using a Montgolfiere Infra-Rouge (MIR) — balloon p 639 A85-38308

The University of Wyoming's small scientific balloon program p 639 A85-38309

Balloon system and balloon-borne experiments in China p 640 A85-38310

Environmental-physical measurements and determination of atmospheric turbulence with the ASK-16 motor glider p 915 N85-35549

Partitioning of the vertical turbulent energy transport into positive and negative contributions — meteorology p 915 N85-35551

Aircraft measurements during the Bonn Experiment (BONEX 1) — meteorology p 915 N85-35552

Scientific ballooning - IX; Proceedings of the Seventh Symposium, Graz, Austria, June 25-July 7, 1984
p 615 A85-38301
The limits of stratoflim p 646 A85-38302
Recent materials problems relating to catastrophic balloon failures p 647 A85-38303
External caps - An approach to stress reduction in balloons p 647 A85-38306
Development of balloon-borne reel-down and-up winch system p 640 A85-38311
A new reeling technique for very long extension scanning in the stratosphere p 640 A85-38312
Feasibility studies of 'Polar Patrol Balloon'
p 647 A85-38321
**BANDWIDTH**
Multivariable flight control with time-scale separation
[NASA-CR-174320] p 256 N85-18873
**BARRELS**
An assessment of the effect of the use of conventional weapons on the operation of a jet engine
p 383 A85-27720
**BARRIER LAYERS**
Rolls-Royce experience with thermal barrier coatings — in aircraft engines
[PNR-90222] p 285 N85-17152
**BARRIERS**
Classical free-streamline flow over a polygonal obstacle
[NASA-CR-172448] p 53 N85-10301
**BARS**
Static strength of carbon-fiber-composite flat bars with unstressed holes p 789 A85-40289
**BASE FLOW**
Steady base flows p 78 A85-14008
Overlaid approach for base flow analyses at supersonic velocities. I - Basic model description. II - Applications including base combustion and multi-phase exhaust effects
[AIAA PAPER 85-1673] p 716 A85-40762
**BASE PRESSURE**
Base pressure of a projectile within the transonic flight regime p 317 A85-25136
Base pressure control by passive methods
[AIAA PAPER 85-1620] p 714 A85-40727
The effect of boattailing of a projectile in transonic flow
[AD-A157758] p 736 A85-42983
**BATHYTHERMOGRAPHS**
ADAPS (Airborne Data Acquisition and Processing System) operation and maintenance manual
[AD-A148297] p 419 N85-19983
**BAYES THEOREM**
Inspection intervals for fail-safe structure
p 124 A85-14899
Estimation of the threshold in fatigue crack initiation models: A Bayesian approach
[AD-A144847] p 54 N85-10410
**BAYS (STRUCTURAL UNITS)**
Investigation of experimental lightweight firewall materials for A/C engine bay applications
[AD-A155765] p 878 N85-35175
**BEACON COLLISION AVOIDANCE SYSTEM**
Ames develops remote site landing aids
p 748 A85-40918
**BEAM INTERACTIONS**
Some schemes for introducing an electron beam into a dense gas — for laser pumping p 366 A85-24055
**BEAMS (SUPPORTS)**
Vibration response and sound radiation from beams, plates, and cylinders excited by nonhomogeneous random pressure fields
[AIAA PAPER 84-2327] p 61 A85-10871
Snap-through of initially buckled beams under uniform random pressure p 51 A85-12450
The influence of an inclusion or a hole on the bending of a cracked beam p 123 A85-13703
Nonstationary deformation of structural elements and their optimization p 696 A85-39450
**BEARING (DIRECTION)**
Algorithms for improved, heading assisted, maneuver tracking p 644 A85-39458
Three position estimation procedures
[AD-A148746] p 338 N85-18042
**BEARINGLESS ROTORS**
Aeroelastic characteristics of the AH-64 bearingless tail rotor p 250 A85-20142
Flexible matrix composites applied to bearingless rotor systems p 281 A85-21389
A design methodology for a compliant matrix composite bearingless main rotor p 496 A85-31906
Will rotors lose their bearings? p 756 A85-41528
Integrated technology rotor/flight research rotor hub concept definition
[NASA-CR-166447] p 344 N85-18051
Integrated Technology Rotor/Flight Research Rotor (ITR/FRR) concept definition
[NASA-CR-166443] p 345 N85-18878
Integrated Technology Rotor/Flight Research Rotor (ITR/FRR) concept definition
[NASA-CR-166445] p 346 N85-18879
Integrated technology rotor/flight research rotor concept definition study
[NASA-CR-166446] p 345 N85-18880
Integrated Technology Rotor/Flight Research Rotor (ITR/FRR) concept definition study
[NASA-CR-166444] p 346 N85-18881
**BEARINGS**
Stability of squeeze film damped multi-mass flexible rotor bearing systems
[ASME PAPER 84-TRIB-45] p 299 A85-21296
An energy approach to linearizing squeeze-film damper forces p 440 A85-27479
Selecting the correct bearing can improve avionic instrument performance p 694 A85-39403
Dynamic analysis of rotor-bearing systems by finite element method p 796 A85-43239
Experimental on-stream elimination of resonant whirl in a large centrifugal compressor p 187 N85-14121
Improvement of the corrosion resistance of turbine engine bearings
[AD-A147430] p 286 N85-15731
Experimental study of heat transfer from shaft in cooled radial bearing of GNT-25 gas turbine
p 529 N85-24068
Design of piping for oil drain from turbine bearings
p 529 N85-24073
Fatigue life analysis of a turboprop reduction gearbox
[NASA-TM-87014] p 808 N85-27225
**BEECHCRAFT AIRCRAFT**
Natural icing flight tests of the Beech Model F90-1 prototype p 401 A85-28842
Rolls' Tay engine meets schedule for Gulfstream 4 first flight p 890 A85-49090
**BEHAVIOR**
Blackbirds and starlings: Population ecology and habits related to airport environments
[AD-P004190] p 404 N85-19953
**BELL AIRCRAFT**
New model introduction - The operators' perspective — in helicopter industry p 482 A85-31981
**BENDING**
Bending effects on structural dynamic instabilities of transonic wings p 51 A85-11987
Experimental investigation on advanced composite stiffened structures under uniaxial compression and bending
[AIAA PAPER 85-0674] p 518 A85-30259
Initial sailplane project: The RP-1
p 129 N85-12976
Second sailplane project: The RP-2
p 129 N85-12977
Simple theoretical models for composite rotor blades
[NASA-CR-175820] p 499 N85-22382
**BENDING MOMENTS**
The influence of an inclusion or a hole on the bending of a cracked beam p 123 A85-13703
Calculation of aerodynamic characteristics of winglets and experimental verification p 392 A85-29692
Optimal structural design of shells - A survey
p 786 A85-40240
Impact bending of a rotating, rigid-plastic fan blade
p 836 A85-45860
Optimum design of nonplanar wings: Minimum induced drag for a given lift and wing root bending moment
[NAL-TR-797] p 9 N85-10011
Helicopter active control with rotor blades relaxation
p 270 N85-16819
**BENDING VIBRATION**
An engineering method for evaluating unsteady aerodynamic effects on cascade blades during flexural vibrations p 182 A85-16915
**BENZENE**
A chromatographic method for determining the content of aromatic hydrocarbons in aviation gasolines
p 434 A85-29035
**BERYLLIUM**
Fabrication and testing of a brazed multipiece beryllium support structure for tactical sensors
[AIAA PAPER 85-0679] p 522 A85-30280
**BIAS**
The enigma of false bias detection in a strapdown system during transfer alignment p 406 A85-25426
A robust and efficient technique for dealing w
time-varying instrumental bias in linear filtering
p 458 A85-26
**BIBLIOGRAPHIES**

**BINOCULAR VISION**
Binocular overlap in a fiber optic helmet mount
display
[AD-P004331] p 348 N85-17
**BIOACOUSTICS**
The effectiveness of acoustic repellants in frighteni
birds away from airports p 639 A85-375
**BIOASSAY**
Molecular interactions of high energy fuels and jet fue
with oncogenic viruses and endogenous viruses
[AD-A145484] p 45 N85-112
**BIODEGRADATION**
The determination of biological impurities in fuels
p 179 A85-169
**BIODYNAMICS**
Biodynamic resistant control stick
[AD-D011380] p 259 N85-157
Unsteady separated flows: Generation and use b
insects
[AD-P004166] p 324 N85-179
Biomechanics finds practical applications in aerospa
research p 446 N85-202
**BIOGRAPHY**
For the sacred air space of our motherland: an intervi
with our country's famous aircraft designer. L
H[illegible]-Peng
[AD-A146291] p 72 N85-119
**BIONICS**
Turbulent vortices and bionics in turbojet
p 393 A85-297
**BIOTECHNOLOGY**
West Europe report: Science and technology
[JPRS-WST-85-020] p 797 N85-313
**BIPLANES**
Study of winglets applied to biplanes
[AIAA PAPER 85-0279] p 217 A85-190
Study of winglets applied to biplanes
[NASA-TM-86350] p 258 N85-168
**BIRD-AIRCRAFT COLLISIONS**
Bird strike prevention at airports p 90 A85-1516
Three dimensional nonlinear dynamic finite eleme
analysis for the response of a thick laminated shell t
impact loads
[AIAA PAPER 85-0713] p 491 A85-300
Protection of materials and technical equipment again
birds p 638 A85-375
Chemical preparations for protecting aircraft agains
birds p 638 A85-3754
The study of bird migration over a water area in th
northwestern portion of the Black Sea and adjacent are
in order to prevent bird-aircraft collisions
p 638 A85-3754
The effectiveness of acoustic repellants in frighteni
birds away from airports p 639 A85-375
Observation of birds in the flight path of aircraft - A
important stage in the prevention of bird strikes
p 639 A85-3754

A study of bird ingestions into large high bypass ratio turbine aircraft engines
[DOE/FAA-CT-84/13] p 14 N85-10028

A bird strike handbook for base-level managers
[AD-A147828] p 293 N85-18008

Evaluation of the birdstrike threat to the F-15 present fleet, rapid deployment force, and dual role fighter transparencies
[AD-A148854] p 334 N85-18966

Wildlife Hazards to Aircraft Conference and Training Workshop: Proceedings
[AD-A148330] p 402 N85-19938

Birds and aviation
[AD-P004177] p 402 N85-19939

Avoiding serious bird strike incidents
[AD-P004178] p 402 N85-19940

Don't fowl out
[AD-P004179] p 402 N85-19941

Accidents and serious incidents to civil aircraft due to birdstrikes
[AD-P004180] p 402 N85-19942

Analysis of bird strikes reported by European airlines, 1976 - 1980
[AD-P004181] p 402 N85-19943

1983 Air Force bird strikes
[AD-P004182] p 403 N85-19944

Worldwide birdstrike statistics of Lufthansa German Airlines
[AD-P004183] p 403 N85-19945

Birds and aircraft engine strike rates
[AD-P004184] p 403 N85-19946

Review of engine ingestions to wide body transport aircraft
[AD-P004185] p 403 N85-19947

Bird impact evaluation of the F/RF-4 transparency system p 403 N85-19949

Microscopic identification of feathers in order to improve birdstrike statistics
[AD-P004187] p 403 N85-19950

The use of small mobile radars to detect, monitor, and quantify bird movements
[AD-P004188] p 403 N85-19951

On the altitudinal distribution of birds and bird strikes in the Netherlands
[AD-P004189] p 404 N85-19952

Blackbirds and starlings: Population ecology and habits related to airport environments
[AD-P004190] p 404 N85-19953

Birds on airports: The reason for their presence
p 404 N85-19955

The use of falconry as mean to persuade the birds to stay out of the airport vicinity p 404 N85-19956

Landscape management on airports for reduction of bird populations
[AD-P004194] p 428 N85-19960

FAA policy regarding solid waste disposal facilities
[AD-P004196] p 428 N85-19963

Airport bird hazards associated with solid waste disposal facilities
[AD-P004197] p 428 N85-19964

Successful control of gulls and other birds at a sanitary landfill
[AD-P004198] p 453 N85-19965

Bird Strike Committee Europe
[AD-P004207] p 405 N85-19974

Birds and airport agriculture in the conterminous United States: A review of literature
[AD-P004208] p 429 N85-19975

**BIRDS**

A study of bird ingestions into large high bypass ratio turbine aircraft engines
[DOE/FAA-CT-84/13] p 14 N85-10028

Bird impact evaluation of the F/RF-4 transparency system p 403 N85-19949

Microscopic identification of feathers in order to improve birdstrike statistics
[AD-P004187] p 403 N85-19950

The use of small mobile radars to detect, monitor, and quantify bird movements
[AD-P004188] p 403 N85-19951

On the altitudinal distribution of birds and bird strikes in the Netherlands
[AD-P004189] p 404 N85-19952

Blackbirds and starlings: Population ecology and habits related to airport environments
[AD-P004190] p 404 N85-19953

Birds on airports: The reason for their presence
p 404 N85-19955

The use of falconry as mean to persuade the birds to stay out of the airport vicinity p 404 N85-19956

Airport site selection and design
[AD-P004193] p 428 N85-19959

Reducing gull use of some attractions near airports
[AD-P004195] p 428 N85-19962

Effectiveness of an overhead wire barrier in deterring gulls from feeding at a sanitary landfill
[AD-P004199] p 453 N85-19966

Effectiveness of an overhead wire barrier system in reducing gull use at the BFI Jedburg sanitary landfill, Berkeley and Dorchester counties, South Carolina
[AD-P004200] p 454 N85-19967

Evaluation of effectiveness of bird scaring operations at a sanitary landfill site near CFB Trenton, Ontario, Canada
[AD-P004201] p 454 N85-19968

Development of bird hazard reduction for airport operational safety
[AD-P004202] p 428 N85-19969

The bird strike situation and its ecological background in the Copenhagen Airport, Kastrup
[AD-P004203] p 404 N85-19970

Bird control program Orlando International Airport
[AD-P004204] p 404 N85-19971

Staff assistance to bases for bird hazards
[AD-P004205] p 405 N85-19972

Bird strike avoidance system for Dover AFB, Delaware
[AD-P004206] p 405 N85-19973

Birds and airport agriculture in the conterminous United States: A review of literature
[AD-P004208] p 429 N85-19975

The potential of the NEXRAD radar system for warning of bird hazards
[AD-P004210] p 405 N85-19977

**BITUMENS**

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 1: Correlation analysis of Marshall properties of laboratory-compacted specimens
[FAA-PM-84-12-VOL-1] p 430 N85-21180

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 2: Statistical analysis of Marshall properties of plant-produced bituminous materials
[FAA-PM-84-12-VOL-2] p 430 N85-21181

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 3: Statistical analysis of 3 methods for determining maximum specific gravity of bituminous concrete mixtures
[FAA-PM-84-12-VOL-3] p 430 N85-21182

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 5: Summary of validation studies
[FAA-PM-84-12-VOL-5] p 431 N85-21184

Study of acceptance criteria for joint densities in bituminous airport pavements
[FAA-PM-85-5] p 594 N85-26761

**BLACK SEA**

The study of bird migration over a water area in the northwestern portion of the Black Sea and adjacent areas in order to prevent bird-aircraft collisions
p 638 A85-37542

**BLADE SLAP NOISE**

Comparison of experimental and analytical predictions of rotor blade-vortex interactions using model scale acoustic data
[AIAA PAPER 84-2269] p 58 A85-10833

Weakly nonlinear theory of supersonic turbopropeller noise
[AIAA PAPER 84-2302] p 60 A85-10853

Noise of counter-rotation propellers
[AIAA PAPER 84-2305] p 60 A85-10856

Review of recent research of interior noise of propeller aircraft
[AIAA PAPER 84-2349] p 17 A85-10885

Propeller noise measurements in DNW on the fuselage of a twin engine aircraft model — German-Dutch wind tunnel
[AIAA PAPER 84-2367] p 17 A85-10897

Noise control characteristics of synchrophasing - An analytical investigation — of turboprop aircraft noise
[AIAA PAPER 84-2369] p 17 A85-10898

Noise control characteristics of synchrophasing - An experimental investigation — on aircraft fuselage model
[AIAA PAPER 84-2370] p 17 A85-10899

An experimental investigation of blade-vortex interaction at normal incidence
[AIAA PAPER 85-0003] p 206 A85-19451

Interaction of a turbulent vortex with a lifting surface
[AIAA PAPER 85-0004] p 206 A85-19452

Noise of counter-rotation propellers
p 705 A85-39220

Benefits of blade sweep for advanced turboprops
[AIAA PAPER 85-1260] p 767 A85-41420

Interaction of a turbulent vortex with a lifting surface
p 557 N85-25214

**BLADE TIPS**

Two dimensional blade-vortex interaction flow visualization study
[AIAA PAPER 84-2307] p 4 A85-10858

Experimental investigation of the sweep effects on a helicopter blade tip
[ONERA, TP NO. 1984-81] p 7 A85-12610

Study of the unsteady transonic flow on rotor blade with different tip shapes
[ONERA, TP NO. 1984-82] p 7 A85-12611

Flight tests of a sweptback parabolic tip on a Dauphin 365N
[ONERA, TP NO. 1984-84] p 7 A85-12613

Blade tip geometry - A factor in abrading sintered seal material p 110 A85-13714

Interaction of a turbulent vortex with a lifting surface
[AIAA PAPER 85-0004] p 206 A85-19452

Metallurgical and mechanical phenomena due to rubbing of titanium against sintered powder Nichrome
p 291 A85-22281

An experimental investigation and numerical prediction of thermomechanical phenomena in high speed rotor tip rubbing p 351 A85-25442

Pressure distributions on a helicopter swept tip from flight tests and from calculations p 470 A85-30942

Impact of main rotor tip geometry on main rotor/tail rotor interaction in hover p 495 A85-31985

Computerized aerodynamic design of a transonically 'quiet' blade p 473 A85-31989

Observations of tip vortex cavitation inception from a model marine propeller p 526 A85-33220

Numerical solution of two- and three-dimensional rotor tip leakage models p 626 A85-38989

Cantilevered stator vane tip leakage studies
[AIAA PAPER 85-1136] p 664 A85-39620

Time resolved measurements of a turbine rotor stationary tip casing pressure and heat transfer field
[AIAA PAPER 85-1220] p 686 A85-39663

Development of a noninterference technique for measuring turbine engine rotor blade stresses
[AIAA PAPER 85-1472] p 697 A85-39797

Measurements of flow field within an axial flow fan rotor using a Laser Two Focus velocimeter
p 727 A85-41809

Observations from varying the lift and drag inputs to a noise prediction method for supersonic helical tip speed propellers
[NASA-TM-83797] p 64 N85-10788

A feasibility study of free-tip rotor application as a passive cyclic control device p 343 N85-18046

Inviscid analysis of unsteady blade tip flow correlation studies
[NASA-CR-172506] p 329 N85-18958

One-piece HPTR blade squealer tip
[AD-D011452] p 355 N85-18969

An experimental investigation of the chopping of helicopter main rotor tip vortices by the tail rotor
[NASA-CR-177338] p 538 N85-23376

Unsteady analysis of rotor blade tip flow
[NASA-CR-3868] p 556 N85-25202

Interaction of a turbulent vortex with a lifting surface
p 557 N85-25214

Turbine blade-tip clearance excitation forces
[NASA-CR-171534] p 773 N85-29963

Oxidizing seal for a turbine tip gas path
[NASA-CASE-LEW-14053-1] p 911 N85-34402

Optimally designed propellers constrained by noise
p 892 N85-35196

**BLANKS**

Correction of engraving stamp for forming blanks of gas turbine engine blades p 371 N85-18213

**BLAST DEFLECTORS**

Wind tunnel tests on a tube-launched missile configuration with a deflectable nose control and a novel wrap-around fin stabiliser
[AR-003-696] p 8 N85-10003

Results of tests of MTA-2 TPS on the SRB hold-down bolt blast container
[NASA-CR-170891] p 899 N85-35224

**BLINDNESS**

Baffled eye and confounded brain or using visual illusions to train blind pilots
[AD-P004332] p 359 N85-17986

**BLOCKING**

Choking phenomena in multiflow nozzles with and without viscosity effects p 3 A85-10540

**BLOOD CIRCULATION**

China report: Science and technology
[JPRS-CST-84-008] p 500 N85-22384

**BLOWDOWN WIND TUNNELS**

An experiment research of boundary layer control technique for multi-component airfoils
p 550 A85-35775

Surface pressure fluctuations in a three-dimensional shock wave/turbulent boundary layer interaction at various shock strengths
[AIAA PAPER 85-1562] p 711 A85-40687

Experiences with the use of a side-strut model support system for high angles of attack in the Transonik wind tunnel TMK
[DFVLR-MITT-84-09] p 277 N85-15763
Transonic Mach number determination in a blow-down wind tunnel with solid walls and a downstream throat
[VTH-LR-402] p 636 N85-27835
Experiences with the use of a side-strut model support system for high angles for attack in the TMK Transonik Wind Tunnel
[ESA-TT-895] p 781 N85-31069
**BLOWING**
Analytical study of blowing boundary layer control for subsonic V/STOL inlets p 5 A85-11646
Influence of blowing rate and injection angle on the performance of a film-cooled blade p 265 A85-22231
Tests of wall suction and blowing in highly offset diffusers p 385 A85-26751
Measurements of a zero-pressure-gradient boundary layer blown by an asymmetric jet p 390 A85-29077
Transition control by periodic suction-blowing
[AIAA PAPER 85-1700] p 725 A85-41411
Drag reduction due to boundary-layer control by combined blowing and suction p 237 N85-16785
**BLUFF BODIES**
Aerodynamic effects of probe-induced flow separation of bluff bodies at transonic Mach numbers
[AIAA PAPER 85-0103] p 322 A85-26382
Aerodynamic characteristics and flow patterns for a number of bluff bodies in subsonic gas flow
p 389 A85-28389
Numerical simulation of cold flow in an axisymmetric centerbody combustor p 507 A85-32801
Airloads on bluff bodies, with application to the rotor-induced downloads on tilt-rotor aircraft
p 544 A85-33469
Axisymmetric bluff-body drag reduction through geometrical modification p 546 A85-35587
Flow over surface-mounted semi-bluff bodies
p 735 A85-42977
Determination of the local heat transfer coefficients of three simulated smooth ice formation characteristics on a cylinder
[AIAA PAPER 85-1836] p 819 A85-43873
Experimental investigation of heat transfer to bluff cylinders and cones in hypersonic rarefied gas flow
p 396 N85-20195
Investigation of the aerodynamic forces on bluff bodies at high Reynolds numbers
[DFVLR-MITT-84-19] p 481 N85-23727
**BLUNT BODIES**
Supersonic flow past a blunt wedge p 2 A85-10113
A numerical study of gas-particle supersonic flow past blunt bodies - The case of axisymmetric flow
p 74 A85-12771
Organized structures in wakes and jets - An aerodynamic resonance phenomenon p 77 A85-14344
Supersonic motion of bodies in a gas with shock waves p 140 A85-16183
Regarding parametric investigations of slender cone nose bluntness effects
[AIAA PAPER 85-0349] p 220 A85-19688
Passive control effects on flow separation around a protuberance at high subsonic speed — for optical propagation quality enhancement to and from airborne platforms
[AIAA PAPER 85-0351] p 220 A85-19690
A three-dimensional Navier-Stokes/Euler code for blunt-body flow computations
[AIAA PAPER 85-0361] p 220 A85-19696
Base pressure of a projectile within the transonic flight regime p 317 A85-25136
Effect of variable surface catalysis on heating near the stagnation point of a blunt body
[AIAA PAPER 85-0248] p 323 A85-26386
General features characterizing separated flows arising in supersonic and hypersonic flows past blunt bodies
p 386 A85-28380
Investigation of drag and heat transfer for nonuniform supersonic flow past a body in the cases of laminar and turbulent regimes p 388 A85-28387
Supersonic flow past blunt porous screens
p 389 A85-28442
Knudsen layer characteristics for a highly cooled blunt body in hypersonic rarefied flow p 545 A85-35127
On detached shock wave of sphere moving with transonic velocities p 549 A85-35763
Numerical calculation of separation flow over severely indented blunt body p 551 A85-35777
Viscous influence in axisymmetric laminar supersonic flow over blunt bodies p 552 A85-36329
A numerical investigation of a viscous hypersonic air flow around elongated blunted bodies at large angles of attack p 619 A85-37333
A supersonic inhomogeneous flow of an ideal gas around blunted bodies p 619 A85-37335
A nonstationary transition process caused by injection of a gas into the near wake of a body in a supersonic flow p 619 A85-37336
Transition measurements via heat-transfer instrumentation on a 0.5 bluntness 9.75-deg cone at Mach 7 with and without mass addition
[AIAA PAPER 85-1004] p 621 A85-37645
Measured and predicted vortex-induced leeward heating on a biconic at Mach 6 and 10
[AIAA PAPER 85-1061] p 621 A85-37675
The effect of the bluntness shape on the drag coefficient of a body in hypersonic flow of a rarefied gas
p 624 A85-38584
Similarity properties in the problem of flow from a supersonic source past a spherical bluntness
p 629 A85-39445
Flow past blunt obstacles of circular section placed on a plane boundary p 723 A85-40982
The ideal-liquid concept in calculations on the detached flow around blunt objects with a turbulent shear layer at the boundary of the detachment region
p 730 A85-42287
The effect of boattailing of a projectile in transonic flow
[AD-A157758] p 736 A85-42983
Hypersonic flow of mixture around blunt body
p 148 N85-14879
Navier-Stokes solution of hypersonic blunt-nosed body flowfields p 558 N85-26624
**BLUNT LEADING EDGES**
A second-order approximate method for transonic small-disturbance potential flow and its application to the analysis of flows over airfoils p 625 A85-38822
**BO-105 HELICOPTER**
Flight tests with a new helicopter Force Feel System (FFS) p 257 N85-16818
Flight research on visual aids and navigation equipment for helicopter low-level flight at night
p 281 N85-16820
**BOATTAILS**
Projectile aerodynamics prediction with CSCM-S upwind implicit relaxation algorithm
[AIAA PAPER 85-1839] p 814 A85-43874
On the evaluation of boundary layer measurements on boattailed bodies of revolution in axisymmetric compressible subsonic flow
[ESA-TT-883] p 798 N85-31471
**BODIES OF REVOLUTION**
The parameters of shock waves from bodies of revolution in a homogeneous atmosphere
p 142 A85-16819
Exact solution of compressible potential flow past a body of revolution at zero incidence - Especially for high subsonic flow p 144 A85-16528
Euler solution of axisymmetric flows about bodies of revolution using a multigrid method
[AIAA PAPER 85-0017] p 206 A85-19460
Arrays for minimum wave drag of bodies of revolution
[AIAA PAPER 85-0449] p 249 A85-19758
A new approach to some hybrid aerodynamic problems of airfoil cascades on a general streamsheet of revolution. I p 228 A85-20229
Drag prediction for projectiles and finned bodies in incompressible flow
[AIAA PAPER 85-0104] p 230 A85-20854
An extremum problem concerning the shape of a body of revolution in supersonic gas flow p 234 A85-22371
Investigation of the induction of subsonic wind tunnels with an axisymmetric working part p 389 A85-28443
An experimental investigation of the aerodynamic effects on a body of revolution in turning flight
[AIAA PAPER 85-0866] p 624 A85-38782
A numerical study of spin effects on axisymmetric flow past a body of revolution
[AIAA PAPER 85-1605] p 724 A85-41402
Flow characteristics of a body of revolution at incidence p 737 A85-42986
Aerodynamic effects of asymmetric vortex shedding from slender bodies
[AIAA PAPER 85-1797] p 813 A85-43850
The use of flow visualization for vortex trajectory mapping p 867 A85-47132
Arrays of bodies of revolution for minimum wave drag
p 881 A85-49136
Proceedings of the 9th US Air Force and the Federal Republic of Germany Data Exchange Agreement Meeting. Viscous and Interacting Flow Field Effects
[AD-A153020] p 699 N85-28266
**BODY CENTERED CUBIC LATTICES**
Beta titanium alloys in the 80's; Proceedings of the Symposium, Atlanta, GA, March 8, 1983
p 861 A85-43651
**BODY-WING AND TAIL CONFIGURATIONS**
Canard/tail comparison for an advanced variable-sweep-wing fighter
[AIAA PAPER 84-2401] p 97 A85-13510
Three-dimensional Euler solutions with grid embedd
[AIAA PAPER 85-0121] p 211 A85-196
Grid generation for wing-tail-fuselage configurations
p 547 A85-355
A calculation method of ground effects for the aircra
p 540 A85-357
Multigrid calculation of transonic flow pa wing-tail-fuselage combinations p 628 A85-3921
Application of the SWINT code to wing/body/ta geometries
[AIAA PAPER 85-1811] p 813 A85-438
The aerodynamics of some guided projectiles
[NASA-TM-86334] p 138 N85-147
Theoretical study of boundary-layer control
p 237 N85-167
Tail behaviour for suprema of empirical processes
[AD-A147629] p 303 N85-1781
Supersonic aerodynamic characteristics of canar tailless, and aft-tail configurations for 2 wing planform
[NASA-TP-2434] p 634 N85-27
Experimental and theoretical determination of th wing-induced lateral wind on the tail surfaces in oscillati rolling motion. Part 1: Application of the Mobile Oscillati Derivatives (MOD) on an experimental part
[IFD-1/84-PT-1] p 654 N85-28
Experimental and theoretical determination of th wing-induced lateral wind on the tail surfaces in oscillati rolling motion. Part 2: Theoretical investigations to calculation of the lateral wind
[IFD-1/84-PT-2] p 654 N85-2894
Transonic and supersonic wind tunnel tests on contr effectiveness on schematic missile configurations
[FFA-TN-1983-20] p 743 N85-3102
Transonic and supersonic wind tunnel tests on contr effectiveness on schematic missile configuration Supplement
[FFA-TN-1983-20-SUPPL] p 743 N85-3102
**BODY-WING CONFIGURATIONS**
Jet and wing/flap interaction noise
[AIAA PAPER 84-2362] p 64 A85-109
Modular potential flow computation including fuselag and wing tip effects p 75 A85-1367
Flow over double-delta wing and wing body at hig alpha p 144 A85-1851
Turbulent flow around a wing-fuselage type junctu
[AIAA PAPER 85-0040] p 208 A85-1947
Numerical solution of the Euler equations for high-spee blended wing-body configurations
[AIAA PAPER 85-0123] p 211 A85-1953
Aerodynamic prediction of elliptically-shaped missi configurations using component build-up methodolog
[AIAA PAPER 85-0271] p 216 A85-1962
Crossflow drag of finite-length rectangular wing-bodie
[AIAA PAPER 85-0451] p 224 A85-1976
Effect of wing nose shape on the flow in a wing/bod junction p 316 A85-2420
An experimental study of the behavior of 3D-turbulen boundary layer in and out of the separation region a wing-plate junction p 551 A85-3578
A supersonic panel method based on the tripl singularity p 617 A85-3719
Wing optimization and fuselage integration for futur generation of supersonic aircraft p 618 A85-3721
Juncture flow measurements using laser velocimetr
[AIAA PAPER 85-1612] p 719 A85-4060
Inviscid hypersonic flow around a conical flat-to wing-body combination p 723 A85-4101
Vortex trajectories and breakdown on wing-canar configurations p 731 A85-4238
3-D separation on bodies with elliptic cross-section an near root-section of wing-body combination
p 737 A85-4298
Convergence characteristics of a vortex-lattice metho for nonlinear configuration aerodynamics
p 816 A85-4583
A three-dimensional, block-structured finite element gri generation scheme — for flow around aircraft modeling
p 868 A85-4853
An experimental study of the transonic equivalence rul with lift, part 2
[AR-LR-614-PT-2] p 8 N85-1000
A study of aerodynamic characteristics of wing-body combinations. Part 2: Low-wing airplane
[NAL-TR-796] p 9 N85-10010
Drag reduction due to boundary-layer control by combined blowing and suction p 237 N85-16785
Wing rock flow phenomena
[AD-P004154] p 323 N85-1793
Flight mechanics analysis of dynamic derivatives of the Dornier variable wind tunnel model
[ESA-TT-854] p 395 N85-1993
Comparison of computational results of a few representative three-dimensional transonic potential flow analysis programs p 559 N85-2962
The role of computational fluid dynamics in aeronautical engineering p 605 N85-2862

Experimental and theoretical determination of the wing-induced lateral wind on the tail surfaces in oscillating rolling motion. Part 1: Application of the Mobile Oscillating Derivatives (MOD) on an experimental part
[IFD-1/84-PT-1] p 654 N85-28939
Calculation of transonic flows around an aircraft configuration with motorized nacelle
[SNIAS-851-111-106] p 742 N85-31006
Calculation of flow around the SF 310 airplane using a full potential equation method
[FFA-TN-1984-63] p 744 N85-31022

**BOEING AIRCRAFT**
MSG-3 as viewed by the manufacturer (was it effective?) — Maintenance Steering Group
[SAE PAPER 841482] p 312 A85-25969
767/757 instrumentation system p 416 A85-28653
Boeing's airliner launch criteria p 383 A85-28824
Boeing Flight Simulator Approval Process
[AIAA PAPER 85-1736] p 780 A85-42663

**BOEING 707 AIRCRAFT**
The silencers — JT3D engine noise reduction options
p 167 A85-16272
Meeting the 1985 FAA noise regulations with old engines and modern acoustic technology
[AIAA PAPER 85-1120] p 651 A85-39616

**BOEING 720 AIRCRAFT**
Turbulent roughness drag due to surface waviness at low roughness Reynolds numbers p 161 A85-16243
Development of an energy absorbing passenger seat for the B-720 test aircraft p 332 A85-26306

**BOEING 727 AIRCRAFT**
Application of scaling laws for the flyover jet noise to three departure procedures for the Boeing 727-200 advanced
[AIAA PAPER 84-2359] p 377 A85-26319
Aircraft performance in a JAWS microburst
p 453 A85-28776
Safety recommendation(s), A-84-65

**BORESIGHT ERROR**
Line-of-sight reconstruction for faster homing guidance
p 153 A85-18326

**BORON**
Boron slurry fuel atomization evaluation
[AIAA PAPER 85-1184] p 689 A85-39645

**BORON FIBERS**
Bonded repairs to surface flaws — by adhesive BFRP patching p 137 A85-16245
Fibers for structurally reliable metal and ceramic composites p 687 A85-37484

**BORON REINFORCED MATERIALS**
Repair of Mirage III aircraft using the BFRP crack-patching technique p 137 A85-16244

**BOUNDARY ELEMENT METHOD**
A special boundary element technique in transonic flow p 385 A85-26690
Stress intensity factors for an arc crack in a rotating disc p 599 A85-34974
An inverse boundary element method for single component airfoil design p 548 A85-35591
Application of boundary element method to heat transfer coefficient measurements around a gas turbine blade
[ASME PAPER 84-WA/HT-39] p 686 A85-39897

**BOUNDARY INTEGRAL METHOD**
Diffraction of a single plane wave by a conical wing
p 623 A85-38483
An integral method of wall interference correction for low speed wind tunnel p 682 A85-38962

**BOUNDARY LAYER CONTROL**
Control of flow separation by sound
[AIAA PAPER 84-2298] p 60 A85-10851
Analytical study of blowing boundary layer control for subsonic V/STOL inlets p 5 A85-11646
Effects of suction on shock/boundary-layer interaction and shock-induced separation p 143 A85-18510
Supercritical airfoil drag reduction by passive shock wave/boundary layer control in the Mach number range .75 to .90
[AIAA PAPER 85-0207] p 215 A85-19591
Optimal control of flow of a viscous incompressible fluid p 290 A85-22105
Flight testing of a wing section with laminar flow control p 233 A85-22227
Control of unsteady separated flow structures on airfoils
[AIAA PAPER 85-0531] p 321 A85-25931
The effect of opposing unsteady vorticity on turbulent wall flow
[AIAA PAPER 85-0550] p 321 A85-25943
Active transition fixing and control of the boundary layer in air
[AIAA PAPER 85-0564] p 369 A85-25950
Tests of wall suction and blowing in highly offset diffusers p 385 A85-26751
Control plate for shock-boundary layer interaction
[AIAA PAPER 85-0523] p 387 A85-27677
An experiment research of boundary layer control technique for multi-component airfoils
p 550 A85-35775
Development of an active laminar flow nacelle
[AIAA PAPER 85-1116] p 629 A85-39613
An investigation of high performance, short thrust augmenting ejectors
[ASME PAPER 84-WA/FE-10] p 697 A85-39873
Transition control by periodic suction-blowing
[AIAA PAPER 85-1700] p 725 A85-41411
The effect of boundary layer control on the performance of radial fan impellers p 728 A85-41820
Experimental study on air jet vortex generator
p 738 A85-43234
Joukowsky airfoil with circulation control
[AIAA PAPER 85-1772] p 812 A85-43833
Hybrid laminar flow control study
[NASA-CR-165930] p 21 N85-10933
Effect of upstream sidewall boundary layer removal on an airfoil test — conducted in Langley 0.3-m transonic cryogenic tunnel p 83 N85-12019
Circulation control: A bibliography of DTNSRDC research and selected outside references: Update
[AD-A146986] p 201 N85-15661
Improvement of Aerodynamic Performance Through Boundary Layer Control and High Lift Systems
[AGARD-CP-365] p 204 N85-16771

Drag reduction due to boundary-layer control by combined blowing and suction p 237 N85-16785
Technology developments for laminar boundary layer control on subsonic transport aircraft
p 237 N85-16787
Active and passive shock/boundary layer interaction control on supercritical airfoils p 238 N85-16795
Boundary layer control by transition fixing — conference
[DFVLR-MITT-84-17] p 479 N85-23712
Boundary layer transition control for takeoff and landing configurations p 480 N85-23714
Experiences with transition fixation in the high-speed regime at NLR p 480 N85-23715
Transition fixing in the high speed range for the development of civil aircraft wings p 480 N85-23716
Transition fixing on wings in industrial wind tunnels and associated problems p 480 N85-23717
Transition fixing and simulation of high Reynolds number flow at transonic velocities p 480 N85-23721
Three-Dimensional Boundary Layers
[AGARD-R-719] p 603 N85-25784
Investigation to optimize the passive shock wave/boundary layer control for supercritical airfoil drag reduction
[NASA-CR-175788] p 559 N85-26685
Numerical study of porous airfoils in transonic flow
[NASA-TM-86713] p 635 N85-27828

**BOUNDARY LAYER EQUATIONS**
A method for designing three-dimensional configurations with prescribed skin friction p 6 A85-11980
Drag prediction for projectiles and finned bodies in incompressible flow
[AIAA PAPER 85-0104] p 230 A85-20654
The high Reynolds number finite flat-plate cascade
p 474 A85-32616
Predictions of transonic separated flow with an eddy-viscosity/Reynolds-shear-stress closure model
[AIAA PAPER 85-1683] p 717 A85-40768

Implicit/explicit analyses of interactive phenomena in supersonic, chemically-reacting, mixing and boundary layer problems
[AIAA PAPER 85-1717] p 780 A85-40785

Analysis of three-dimensional separated flow with the boundary-layer equations
[AIAA PAPER 85-1499] p 791 A85-40836

Newton solution of coupled Euler and boundary layer equations p 733 A85-42958

Boundary layers on oscillating airfoils
p 735 A85-42973

3-D separation on bodies with elliptic cross-section and near root-section of wing-body combination
p 737 A85-42987

A three-dimensional boundary-layer analysis including heat-transfer and blade-rotation effects
p 737 A85-42988

An interactive scheme for three-dimensional transonic flows p 737 A85-42992

Three-Dimensional Boundary Layers
[AGARD-R-719] p 603 N85-25784

Three-dimensional boundary layer research at NLR
p 603 N85-25787

Computational aerodynamics in designing aircraft
p 576 N85-28622

BOUNDARY LAYER FLOW

Aerodynamics of premixed flames in flat plate boundary layers p 41 A85-10374

A characteristics approach to swept shock-wave/boundary-layer interactions
p 73 A85-12717

Numerical analysis of the combined flow of a reaction jet and an external stream with allowance for the effect of boundary layers and a turbulent mixing zone
p 141 A85-16185

T2 wind tunnel adaptive walls - Design, construction and some typical results p 175 A85-18501

Effects of suction on shock/boundary-layer interaction and shock-induced separation p 143 A85-18510

Propagation of propeller tone noise through a fuselage boundary layer p 197 A85-18514

An experimental investigation of stator/rotor interaction influence on multistage compressor rotor flow
[AIAA PAPER 85-0009] p 206 A85-19455

Application of axisymmetric analogue for calculating heating in three-dimensional flows
[AIAA PAPER 85-0245] p 216 A85-19611

A relaxation approach to patched-grid calculations with the Euler equations
[AIAA PAPER 85-0295] p 218 A85-19644

Nonreflecting boundary conditions for the complete unsteady transonic small-disturbance equation
p 290 A85-21675

Study of a bounded jet flow considering the initial turbulence - Experiments with a nozzle having aspect ratio of 3 p 387 A85-24585

Transonic shock wave - Boundary layer interaction at a convex wall p 317 A85-24800

The performance of smooth-wall drag reducing outer-layer devices in rough-wall boundary layers
[AIAA PAPER 85-0558] p 369 A85-25947

Sidewall boundary-layer corrections in subsonic, two-dimensional airfoil/hydrofoil testing
p 439 A85-26761

Incompressible flow round an airfoil in a straight-line cascade and between parallel walls, with some phenomena in the boundary layer taken into consideration p 368 A85-28373

Measurements of a zero-pressure-gradient boundary layer blown by an asymmetric jet p 390 A85-29077

Stability experiments in the flow over a rotating disk
p 444 A85-29081

Boundary layer flow over long cylinders with suction
p 444 A85-29140

A note on blade wake interaction influence on compressor stator row aerodynamic performance
p 475 A85-32966

Effect of ambient pressure on nozzle centerline flow properties p 546 A85-35146

Numerical analysis of a 3-D separated flow
p 552 A85-35792

Numerical methods for the time dependent compressible Navier-Stokes equations p 553 A85-36415

The free interaction in a supersonic flow over a porous wall p 626 A85-38021

Loss in turbofan thrust caused by boundary layer growth in a nacelle's inlet and exhaust ducts
[AIAA PAPER 85-1281] p 631 A85-39697

Boundary layer effects on the flowfield about flow-through nacelles
[AIAA PAPER 85-1623] p 714 A85-40729

Overset grids in compressible flow
[AIAA PAPER 85-1524] p 803 A85-43856

A parabolized Navier-Stokes algorithm for separated supersonic internal flows
[AIAA PAPER 85-1411] p 726 A85-41423

Aerodynamic performance of a turbine scroll with a diagonal flow nozzle p 729 A85-41825

A quasi-simultaneous finite difference approach for strongly interacting flow p 732 A85-42956

Development of a Navier-Stokes analysis to investigate the mechanism of shock/wave boundary layer interactions p 734 A85-42966

Boundary layers on oscillating airfoils
p 735 A85-42973

Massive separation and dynamic stall on a cusped trailing-edge airfoil p 735 A85-42974

Computation of velocity and pressure variation across thick turbulent stern flows p 736 A85-42985

On the accuracy of boundary layer measurements in cascades at high subsonic speeds p 867 A85-47163

Theoretical and experimental study of nonadiabatic transonic shock/boundary-layer interaction
p 889 A85-48529

Measurement of the development of the boundary layer in the annulus walls of a fourstage compressor
[CUED/A-TURBO-TR-121] p 52 N85-10239

Design and wind tunnel evaluation of a symmetric airfoil series for large wind turbine applications
[NASA-CR-174784] p 12 N85-10919

A local slot boundary condition for transonic flow calculations in slotted-wall test sections of wind tunnels
[FFA-TN-1984-34] p 86 N85-12879

Detailed study of the flow around a multi-element airfoil. Comparison with calculations p 236 N85-16775

Application of two and three-dimensional criteria for calculating transitions and boundary layers over swept wings p 237 N85-16783

Simultaneous flow visualization and unsteady lift measurement on an oscillating lifting surface
[AD-P004157] p 323 N85-17942

Can the singularity be removed in time-dependent flows?
[AD-P004165] p 324 N85-17950

Preliminary results from the unsteady airfoil model USTAR2
[AD-P004171] p 325 N85-17956

Leading edge separation criterion for an oscillating airfoil
[AD-P004175] p 325 N85-17960

Aerodynamic heating rate distributions induced by trailing edge controls on hypersonic aircraft configurations at Mach 6
[NASA-TM-87483] p 476 N85-22370

Wind tunnel wall interference
[AD-A151212] p 580 N85-25273

Comparison of computational results of a few representative three-dimensional transonic potential flow analysis programs p 559 N85-26629

A curved test section for research on transonic shock wave-boundary layer interaction
[VTH-LR-414] p 561 N85-26682

Numerical solution of transonic normal shock wave-boundary layer interaction using the Bohning-Zierep model — wind tunnel flow
[VTH-LR-416] p 562 N85-26683

An evaluation of four methods of numerical analysis for two-dimensional airfoil flows
[AD-A155202] p 616 N85-32098

A comparison of laser Doppler anemometry and probe measurements within the boundary layer of an airfoil at subsonic flow
[ISL-CO-219/84] p 676 N85-34127

BOUNDARY LAYER SEPARATION

Control of flow separation by sound
[AIAA PAPER 84-2298] p 60 A85-10651

Effect of a buried-wire gage on the separation bubble Numerical study p 73 A85-12704

Unsteady boundary layers close to the stagnation region of slender bodies p 77 A85-14242

Analysis of airfoil leading-edge separation bubbles
[AIAA PAPER 83-0300] p 79 A85-15327

Boundary layers and separation on a spheroid at incidence p 145 A85-16863

Some features of two-dimensional turbulent separated flows
[AIAA PAPER 85-0178] p 214 A85-19570

Measurements of separating boundary layer and wake of an airfoil using laser Doppler velocimetry
[AIAA PAPER 85-0181] p 214 A85-19572

Evaluation of vortex wake predictions in the SWINT code
[AIAA PAPER 85-0450] p 224 A85-19759

Experimental and theoretical analyses of laminar separation bubbles
[AIAA PAPER 84-2201] p 298 A85-20874

A lower bound for three-dimensional turbulent separation in supersonic flow p 316 A85-25149

Effect of a longitudinal vortex on a separated turbulent boundary layer
[AIAA PAPER 85-0530] p 321 A85-25930

Unsteady laminar boundary-layer separation
oscillating configurations p 391 A85-29

The position of laminar separation lines on smo
inclined bodies p 546 A85-351

An experimental study of the behavior of 3D-turbu
boundary layer in and out of the separation region
wing-plate junction p 551 A85-357

The separation of a turbulent boundary layer with
two-face angle before an obstruction
p 619 A85-373

Flow separation from the leading edge of an airfoil a
the effect of acoustic perturbations on the separa
flow p 694 A85-383

Numerical and experimental determination of seconda
separation on delta wings in subsonic flow
p 628 A85-38

Low-speed aerodynamic test of an axisymmetr
supersonic inlet with variable cowl slot
[AIAA PAPER 85-1210] p 719 A85-40

Categories and calculations of three-dimension
boundary-layer-separation p 791 A85-40

A numerical method for duct flow with boundary la
separation
[AIAA PAPER 85-1410] p 726 A85-41

Laminar separation studied as an airfoil problem
p 732 A85-42

Comparison of interactive and Navier Stoke
calculations of separating boundary layer flows
p 734 A85-42

Flow over surface-mounted semi-bluff bodies
p 735 A85-42

Studies of the flow field near an NACA 4412 aerofo
at nearly maximum lift p 736 A85-42

Some developments in vortex motion research

turbulent shear flows
[AD-P004164] p 370 N85-179

Genesis of unsteady separation
[AD-P004173] p 370 N85-179

Flow separation induced by periodic aerodynam
interference
[AD-P004174] p 325 N85-179

Numerical approach for the aerodynamic analysis
airfoils with laminar separation
[NASA-CR-172486] p 326 N85-180

Laminar separation bubble with transition: Predictio
test with local interaction — airfoils
[PNR-90231] p 326 N85-180

Experimental studies of Quasi-Two-Dimensional an
three-dimensional viscous interaction regions induced b
skewed-shock and swept-shock boundary lay
interactions
[AD-A150080] p 449 N85-215

The structure of separated flow regions occurring nea
the leading edge of airfoils, including transition
[NASA-CR-175670] p 478 N85-237

Low-speed aerodynamic test of an axisymmetric
supersonic inlet with variable cowl slot
[NASA-TM-87039] p 582 N85-2871

Proceedings of the 6th US Air Force and the Federal Republic of Germany Data Exchange Agreement Meeting. Viscous and Interacting Flow Field Effects
[AD-A153690] p 609 N85-26266

Turbulence structure in the boundary layers of an oscillating airfoil
[AD-A153631] p 637 N85-28626

A study of aerodynamic control in stalled flight long laminar separation bubble analysis
[AD-A153668] p 636 N85-28620

Effect of leading-edge load constraints on the design and performance of supersonic wings
[NASA-TP-2446] p 739 N85-29623

Two approaches for the prediction of plume-induced separation
[AD-A154098] p 741 N85-29635

SANDRAG: A computer code for predicting drag of bodies of revolution at zero angle of attack in incompressible flow
[DE85-011170] p 804 N85-30684

An evaluation of four methods of numerical analysis for two-dimensional airfoil flows
[AD-A155202] p 818 N85-32098

Experimental investigations on airfoils with different geometries in the domain of high angles of attack-flow separation
[NASA-TM-77882] p 818 N85-33110

Modelling of unsteady, incompressible separation on an aerofoil using an inviscid flow algorithm
[GU-AERO-8412] p 874 N85-34122

Study of boundary layer separation on a supercritical profile with a spoiler by means of a laser Doppler velocimeter
[IBL-CO-225/84] p 875 N85-34129

Computation of three-dimensional shock wave and boundary-layer interactions
[NASA-TM-86780] p 911 N85-35372

BOUNDARY LAYER STABILITY

Instability and transition in supersonic boundary layers
p 5 A85-11625

On the stability of an infinite swept attachment line boundary layer p 75 A85-13723

The effect of cooling on supersonic boundary-layer stability p 77 A85-14229

Development of artificially induced perturbations in a supersonic boundary layer p 140 A85-16177

Critical layer concept relative to hypersonic boundary layer stability
[AIAA PAPER 85-0303] p 219 A85-19652

Laminar boundary layer stability experiments on a cone at Mach 8. III - Sharp cone at angle of attack
[AIAA PAPER 85-0492] p 228 A85-19787

Transition calculations in three-dimensional flows
[ONERA, TP NO. 1985-7] p 387 A85-27687

Newton-like minimal residual methods applied to transonic flow calculations p 438 A85-29061

Flutter and divergence boundary prediction from nonstationary random responses at increasing flow speeds
[AIAA PAPER 85-0691] p 523 A85-30357

Instabilities and transition in the wall boundary layers of low-disturbance supersonic nozzles
[AIAA PAPER 85-1573] p 712 A85-40697

Natural laminar flow hits smoother air
p 724 A85-41055

Stability characteristics of a supersonic boundary layer and their relation to the position of the laminar-turbulent transition point p 730 A85-42123

The unsteady boundary layer on an elliptic cylinder following the impulsive onset of translational and rotational motion — dynamic stall p 477 N85-23689

BOUNDARY LAYER TRANSITION

Instability and transition in supersonic boundary layers
p 5 A85-11625

Wavelength selection and growth of Goertler vortices
p 73 A85-12703

The effect of cooling on supersonic boundary-layer stability p 77 A85-14229

A comparison of flight test and analytical techniques for boundary layer transition on a sailplane
[AIAA PAPER 85-0075] p 210 A85-19501

On boundary layer transition in high-subsonic and transonic flow under the influence of acoustic disturbances and free-stream turbulence
[AIAA PAPER 85-0082] p 210 A85-19508

Some thoughts on the range/tunnel transition controversy
[AIAA PAPER 85-0127] p 211 A85-19538

Potential flow calculations and preliminary wing design in support of an NLF variable sweep transition flight experiment
[AIAA PAPER 85-0426] p 248 A85-19741

Relative effects of Reynolds number and freestream turbulence in transonic flow p 391 A85-29085

Dynamics of forebody flow separation and associated vortices p 392 A85-29262

On the effect of wing taper and sweep direction on leading edge transition p 545 A85-35000

Transition measurements via heat-transfer instrumentation on a 0.5 bluntness 9.75-deg cone at Mach 7 with and without mass addition
[AIAA PAPER 85-1004] p 621 A85-37645

Instabilities and transition in the wall boundary layers of low-disturbance supersonic nozzles
[AIAA PAPER 85-1573] p 712 A85-40697

Analysis of transitional separation bubbles on infinite swept wings
[AIAA PAPER 85-1686] p 717 A85-40770

Transition control by periodic suction-blowing
[AIAA PAPER 85-1700] p 725 A85-41411

Transition effects of boundary layer on static and dynamic stability of slender cone p 731 A85-42783

An experimental investigation on location of boundary layer transition on the NACA 0012 using surface hot film gages p 736 A85-43231

The influence of laminar separation and transition on low Reynolds number airfoil hysteresis
p 817 A85-45838

A new single filament smoke tube injection device
p 903 A85-47082

The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers p 873 A85-49874

Manufacturing tolerances for natural laminar flow airframe surfaces
[SAE PAPER 850863] p 884 A85-50103

A review and analysis of boundary layer transition data for turbine application
[NASA-TM-86860] p 53 N85-10306

Natural laminar flow airfoil design considerations for winglets on low-speed airplanes
[NASA-CR-3853] p 87 N85-12863

Application of two and three-dimensional criteria for calculating transitions and boundary layers over swept wings p 237 N85-16783

Laminar separation bubble with transition: Prediction test with local interaction — airfoils
[PNR-90231] p 328 N85-18008

Flight-measured laminar boundary-layer transition phenomena including stability theory analysis
[NASA-TP-2417] p 398 N85-21118

Skin friction measurements for 2 relatively thick airfoil sections at high Reynolds number
[AD-A150021] p 399 N85-21125

Boundary layer control by transition fixing — conference
[DFVLR-MITT-84-17] p 479 N85-23712

Boundary layer transition control for takeoff and landing configurations p 480 N85-23714

Experiences with transition fixation in the high-speed regime at NLR p 480 N85-23715

Transition fixing in the high speed range for the development of civil aircraft wings p 480 N85-23716

Transition fixing on wings in industrial wind tunnels and associated problems p 480 N85-23717

The influence of transition strips on the pressure distribution on transonic profiles p 480 N85-23718

Investigation of the conditions for tripping transition with roughness elements and their influence on boundary layer development p 480 N85-23720

Transition fixing and simulation of high Reynolds number flow at transonic velocities p 480 N85-23721

Three-dimensional boundary layers and shear flows activities at ONERA/CERT p 587 N85-25785

Brief review of current work in the UK on three dimensional boundary layers p 603 N85-25788

On the effect of wing taper and sweep direction on leading edge transition
[CA-8435] p 634 N85-27827

Flat-plate transition p 798 N85-31438

A review and analysis of boundary layer transition data for turbine application p 798 N85-31440

Development of a temperature-compensated hot-film anemometer system for boundary-layer transition detection on high-performance aircraft
[NASA-TM-86732] p 835 N85-33121

Nozzle wall roughness effects on free-stream noise and transition in the pilot low-disturbance tunnel
[NASA-TM-86389] p 910 N85-34355

BOUNDARY LAYERS

Design and experimental evaluation of propfan inlets
[SAE PAPER 841477] p 352 A85-25976

*Prediction of aerodynamic characteristics of fighter wings at high angles of attack*
[AD-A145107] p 10 N85-10017

Effect of upstream sidewall boundary layer removal on an airfoil test — conducted in Langley 0.3-m transonic cryogenic tunnel p 83 N85-12019

Effect of boundary layers on solid walls in three-dimensional subsonic wind tunnels
p 84 N85-12023

Investigations of boundary layers in the Emmen Federal Aircraft works transonic tunnel, Switzerland
[FW-FO-1641] p 88 N85-12877

Aero-optics experimental techniques
[AD-A146755] p 294 N85-16067

Some important problems in unsteady boundary layers including separation. 2: Unsteady boundary layers close to the stagnation region of slender bodies
[AD-A146964] p 294 N85-16069

Active and passive shock/boundary layer interaction control on supercritical airfoils p 238 N85-16795

Corrections for attached sidewall boundary-layer effects in 2-dimensional airfoil testing
[NASA-CR-3873] p 326 N85-17997

Efficient self-consistent viscous-inviscid solutions for unsteady transonic flow
[NASA-TM-86335] p 329 N85-18959

Instrumentation for Application Number 1: Mass spectrometric analysis of the boundary layer associated with the tethered satellite p 433 N85-20372

Low Reynolds number vehicles
[AGARD-AG-288] p 560 N85-26666

On the effect of wing taper and sweep direction on leading edge transition
[CA-8435] p 634 N85-27827

Sidewall boundary-layer effects in two-dimensional airfoil testing
[NASA-CR-176034] p 781 N85-31065

BOUNDARY LUBRICATION

Theory and practice of lubrication for engineers (2nd revised and enlarged edition) — Book
p 124 A85-15521

A method for the evaluation of the boundary lubricating properties of aviation turbine fuels p 687 A85-37495

BOUNDARY VALUE PROBLEMS

Mass flux boundary conditions in linear theory
p 73 A85-12726

The full-approximation method in the theory of transonic flows p 233 A85-22367

A FORTRAN subroutine for the solution of periodic block-tridiagonal systems p 457 A85-27506

Investigation of the induction of subsonic wind tunnels with an axisymmetric working part p 389 A85-28443

Contributions to the finite element solution of the fan noise radiation problem
[ASME PAPER 84-WA/NCA-1] p 537 A85-32954

Comparison of various numerical techniques in gas dynamics p 475 A85-33354

Determination of the discrepancy vector components using nonlinear functions in solving certain boundary value elasticity problems p 600 A85-35900

Theoretical determination of pressure coefficient Cp on double wedged delta wing and its agreement with experimental results p 552 A85-36340

Validity of solution of three-dimensional linearised boundary value problem for axial disturbance velocity u. in transonic-supersonic flow p 553 A85-36341

Multigrid acceleration of an iterative method with application to transonic potential flow
p 553 A85-36404

The finite element formulation of airflow around a deformable wing by using the incremental finite element method p 621 A85-37879

Characteristics of a two-dimensional turbulent jet in a bounded slipstream p 695 A85-39131

Altimetric-gravimetric functional boundary value problem p 799 A85-41177

A numerical experiment in the altimetry-gravimetry problem II p 800 A85-41395

Cooling characteristics of air cooled radial turbine blades p 792 A85-41784

Characteristic boundary conditions for three-dimensional transonic unsteady aerodynamics
[NASA-TM-86292] p 12 N85-10915

A comparative study of the finite element and boundary element methods as applied to a boundary value problem of a harmonic function
[AD-A146018] p 132 N85-12627

A finite difference method for inverse mode calculations of a three-dimensional boundary layer
[ESA-TT-863] p 327 N85-18007

Propagation of three-dimensional turbulent jet from lobar nozzle through surrounding stream p 527 N85-22785

High specific power aircraft turn maneuvers: Tradeoff of time-to-turn versus change in specific energy
[AD-A151701] p 575 N85-25257

A numerical design method for three-dimensional transonic wings p 577 N85-26631

Three-dimensional wing boundary layer analysis program BLAY and its application p 559 N85-26632

BRAKES (FOR ARRESTING MOTION)

Use of braking stages for control of turbine speed
p 371 N85-18215

BRAKING

Testing solution for IL-76 braking system problem
p 256 N85-16766

Use of braking stages for control of turbine speed p 371 N85-16215
Expedient runway surfacing with post tensioning system for expeditionary airfields [AD-D011677] p 781 N85-29876

**BRANCHING (MATHEMATICS)**
Bifurcation theory applied to aircraft motions [NASA-TM-86704] p 478 N85-23705
Nonlinear problems in flight dynamics involving aerodynamic bifurcations [NASA-TM-86706] p 557 N85-25206
Nonlinear global stability analysis of compressor stall phenomena [NASA-CR-174906] p 773 N85-29980

**BRAYTON CYCLE**
Introducing engine innovations: An examination of future markets for Brayton and Stirling automotive engines [DE84-016319] p 448 N85-20382

**BRAZING**
Fabrication and testing of a brazed multipiece beryllium support structure for tactical sensors [AIAA PAPER 85-0879] p 522 A85-30280

**BRITTLENESS**
Frangibility of obstacles at airports [NLR-MP-84002-U] p 700 N85-28431

**BROADCASTING**
Measurement of signal separation between radio service and air navigation service [IRT-TB-B-40/82] p 246 N85-16880

**BUBBLE CHAMBERS**
Ultra high energy events in ECHOS series and primary energy spectrum [HE-3.7-9] p 920 N85-35966

**BUBBLES**
Effect of a buried-wire gage on the separation bubble Numerical study p 73 A85-12704
Analysis of airfoil leading-edge separation bubbles [AIAA PAPER 83-0300] p 79 A85-15327
Experimental and theoretical analysis of laminar separation bubbles [AIAA PAPER 84-2201] p 288 A85-20874
The spanwise variation of laminar separation bubbles on finite wings at low Reynolds numbers [AIAA PAPER 85-1580] p 712 A85-40706
Analysis of transitional separation bubbles on infinite swept wings [AIAA PAPER 85-1685] p 717 A85-40770
Flow visualization in water channels by means of a procedure for the generation of very small air bubbles p 853 A85-44270
A study of laminar separation bubble in the concave region of an airfoil using laser velocimetry p 868 A85-46020
Laminar separation bubble with transition: Prediction test with local interaction [BLL-PNR-90231-(9019.3153)] p 169 N85-15132
Turbulent bubbles behind airfoils and wings at high angle of attack p 296 N85-16779
Pneumatic turbulators: A device for drag reduction at Reynolds numbers below 5 million p 257 N85-16791
Laminar separation bubble with transition: Prediction test with local interaction — airfoils [PNR-90231] p 325 N85-18006
A study of aerodynamic control in stalled flight long laminar separation bubble analysis [AD-A153850] p 636 N85-26830

**BUCKLING**
The buckling of a stiffened cylindrical shell heated by an internal gas flow with varying thermodynamic parameters p 166 A85-16916
Experimental investigation on advanced composite stiffened structures under uniaxial compression and bending [AIAA PAPER 85-0674] p 518 A85-30259

**BUDGETING**
The congressional authorization process as it applies to aeronautical research and technology p 462 A85-29585
Managing recoverable aircraft components in the PPB and related processes: Executive summary [AD-A146806] p 308 N85-16867

**BUDGETS**
AGARD bulletin technical programme, 1985 [AGARD-BUL-84-2] p 67 N85-11971
FRG's DFVLR ready for participation in space station p 433 N85-20176

**BUFFETING**
Active control of buffeting on a modern transport-aircraft wing configuration in a wind tunnel [ONERA, TP NO. 1984-131] p 116 A85-15847
Experimental study of the unsteady flow around a buffeting wing p 317 A85-24805
The buffeting pressure field of a high-aspect-ratio swept wing [AIAA PAPER 85-1609] p 714 A85-40720
Active control of the buffeting response on a large modern civil airplane configuration in wind tunnel [ONERA, TP NO. 1985-26] p 863 A85-47253
Some results of experimental and analytical buffeting investigations on a delta wing [ONERA, TP NO. 1985-39] p 869 A85-47262
La Recherche Aerospatiale Bimonthly Bulletin, Number 1984-4, 221/July-August [ESA-TT-884] p 543 N85-26637
Wing buffeting active control testing on a transport aircraft configuration in a large sonic tunnel p 580 N85-26750
Wing buffeting active control testing on a transport aircraft configuration in a large sonic windtunnel p 679 N85-27803

**BULKHEADS**
Structural analysis of the CL-600 rear pressure bulkhead, using NASTRAN nonlinear analysis capabilities (Solution 64) p 754 A85-40499

**BUOYANCY**
Modeling of turbulent buoyant flows in aircraft cabins p 90 A85-15667
On the flow processes in sharply inclined and stalled airfoils in parallel movement and rotation [NASA-TM-77506] p 328 N85-18952

**BURGER EQUATION**
On limits of applicability of linear models to dynamics of gas channels in aircraft engines p 355 N85-18219

**BURNERS**
Burner liner thermal/structural load modelling p 30 N85-10970

**BURNING RATE**
Study of HTPB-based SOFRAM fuels [FOA-C-20563-D3] p 437 N85-20150
The role of aircraft panel materials in cabin fires and their properties [FAA-CT-84-30] p 820 N85-32104

**BURST TESTS**
Air turbine starter turbine wheel containment [SAE PAPER 841546] p 691 A85-39156

**BURSTS**
Forecasting dry microburst activity over the high plains p 857 A85-44169

**BUS CONDUCTORS**
Fiber optic data bus using Frequency Division Multiplexing (FDM) and an asymmetric coupler [NASA-TM-86015] p 129 N85-13139
EMI (electromagnetic interference) filter capacitor unit [AD-D011382] p 293 N85-15941

**BUSHINGS**
Further investigations to improve the fatigue life of the Mirage 1110 wing main spar [ARL/STRUC-TM-397] p 654 N85-26938

**BYPASS RATIO**
Far-field measurement and mode analysis of the effects of vane/blade ratio on fan noise [AIAA PAPER 84-2280] p 25 A85-10840
Evaluation and correction of the adverse effects of (i) inlet turbulence and (ii) rain ingestion on high bypass engines [AIAA PAPER 84-2486] p 109 A85-13561
A study of bird ingestions into large high bypass ratio turbine aircraft engines [DOE/FAA-CT-84/13] p 14 N85-10226
Effect of combined pressure and temperature distortion orientation on high-bypass-ratio turbofan engine stability [NASA-TM-83771] p 27 N85-10067
Effect of steady-state temperature distortion on inlet flow to a high-bypass-ration turbofan engine [NASA-TM-86886] p 285 N85-15725
Planning of air cushion transport vehicles p 530 N85-24160
Energy efficient engine. Fan and quarter-stage component performance report [NASA-CR-168070] p 891 N85-34141
Energy Efficient Engine Program technology benefit/cost study, volume 1 [NASA-CR-174766-VOL-1] p 892 N85-35197
Energy Efficient Engine Program technology benefit/cost study, volume 2 [NASA-CR-174766-VOL-2] p 892 N85-35198

**BYPASSES**
An approximate method for calculating flow in the mixing chambers of bypass engines under conditions of incomplete mixing of gas flows p 350 A85-23989

**C**

**C-130 AIRCRAFT**
Future technologies using the Lockheed HTB aircraft — High Technology Test Bed [AIAA PAPER 84-2486] p 70 A85-13552
Lockheed pushes Stol technology p 137 A85-17773
Afterbody drag reduction by vortex generators [AIAA PAPER 85-0354] p 220 A85-19
Lockheed's High Tech Test Bed p 825 A85-447
Reducing landing dispersions through flight con improvements on a turboprop-powered transport airc (The Lockheed High Technology Test Bed) [AIAA PAPER 85-1850] p 842 A85-450

**C-135 AIRCRAFT**
Data bus interface MIL-STD-1553B/ARINC 561 - avionics for KC-135 tanker aircraft [AIAA PAPER 84-2682] p 194 A85-178
The automated KC-135R test program p 413 A85-280
Aero-optical turbulent boundary layer/shear lay experiment on the KC-135 aircraft revisited p 546 A85-350
A robust flight control design for the C-135 airc Horowitz's method p 840 A85-450
Investigation of surface tension phenomena using th KC-135 aircraft [NASA-TM-82606] p 362 N85-18
Design of robust controllers for a multiple input-multi output control system with uncertain parame application to the lateral and longitudinal modes of th KC-135 transport aircraft [AD-A153100] p 675 N85-27

**C-160 AIRCRAFT**
E and H fields measurements on the Transall C16 aircraft during lightning flashes [ONERA, TP NO. 1985-46] p 876 A85-472

**C-5 AIRCRAFT**
C-5B - A giant reborn p 755 A85-410
Performance capabilities of the C-5 and C-17 carg aircraft [AD-A145518] p 22 N85-10
The structural finite element model of the C-5A p 804 N85-29

**CABIN ATMOSPHERES**
Simultaneous cabin and ambient ozone measureme on two Boeing 747 airplanes. Volume 3: October 197 - July 1979 [NASA-TM-86683] p 454 N85-218

**CABINS**
Evaluation of aircraft interior panels under full-sca cabin fire test conditions [AIAA PAPER 85-0393] p 240 A85-1971
The thermal response of aircraft cabin ceiling materia during a post-crash, external fuel-spill, fire scenario [AIAA PAPER 85-0395] p 241 A85-1972
Examination of fire safety of commercial aircra cabins p 639 A85-378

**CABLES**
Karman vortex shedding - Friend or foe of the structur dynamicist? — application to Space Shuttle cable tr flutter [AIAA PAPER 85-0681] p 470 A85-303

**CABLES (ROPES)**
Study of NSI and related cable performance during tes performed in the NASA Hot Gas Facility [NASA-CR-170886] p 912 N85-354

**CALCULATORS**
Use of programmable calculators onboard commercia aircraft p 763 A85-413
Development of NATOPS performance software for th SH-3D and SH-3H helicopters [AD-A156140] p 887 N85-351

**CALCULUS OF VARIATIONS**
Numerical solution of the minimum-time flight of a glid through a thermal by use of multiple shooting methods p 638 A85-374

**CALIBRATING**
Economical influence function calibrations using th distributed loads code — for prediction of store loads i aircraft interference flowfield [AD-A156490] p 156 A85-185
Inexpensive calibrations for the influence functio method using the interference distributed loads code — for prediction of store loads in aircraft flow fields [AIAA PAPER 85-0270] p 247 A85-196
Electronic warfare automatic test equipme calibration p 440 A85-26
New airborne systems developed for navaids test an calibration p 488 A85-324
Autocalibration of a laser gyro strapdown inertia reference/navigation system p 642 A85-378
The transonic wind tunnel of the Munich Institute fo Air Transport Technology and Light Construction o HSBw [DGLR PAPER 84-107] p 777 A85-403
IUS-1 - Redundant inertial measurement unit test pla and results p 899 A85-4705
A proof-of-principle getaway special free-flying satell demonstration p 40 N85-1105
Evaluation of laser profile and deflection measuri system [FAA-PM-84-24] p 55 N85-113

Wall interference measurements for three-dimensional models in transonic wind tunnels: Experimental difficulties p 82 N85-12012
Survey of ONERA activities on adaptive-wall applications and computation of residual corrections p 82 N85-12013
Wind tunnel wall interference in closed, ventilated and adaptive test sections p 82 N85-12014
Tornado: Structural Usage Monitoring System (SUMS) p 282 N85-15680
A standard aircraft diffusion flame: Spectral characteristics and a feasibility study for developing an alternate calibration source for aircraft optical fire detection systems
[AD-A150231] p 520 N85-22768
Calibration loading of a strain-gauged diverless helicopter weapon recovery system
[AD-A151486] p 575 N85-25253
Transonic Mach number determination in a blow-down wind tunnel with solid walls and a downstream throat
[VTH-LR-402] p 636 N85-27835
Construction 1976-1980: Design, manufacturing, calibration of the German-Dutch wind tunnel (DNW) p 683 N85-27913
Using regression analysis for determining air data sensor errors by means of an inertial navigation system
[ESA-TT-886] p 751 N85-31041

**CALORIMETERS**
Applications of high pressure differential scanning calorimetry to aviation fuel thermal stability research
[NASA-TM-87002] p 521 N85-23941

**CAMBER**
Mission adaptive wing p 828 A85-46499
Effect of a variable camber and twist wing at transonic Mach numbers
[NASA-TM-86281] p 67 N85-12969
Low-speed characteristics of a circulation control airfoil with AFT camber and a spiral trailing edge
[AD-A150851] p 481 N85-23725

**CAMBERED WINGS**
Simplified transonic integral equations for lifting profiles and wings p 6 A85-12034
Subsonic pressure distributions near a wing-fin juncture on a supersonic arrow-wing configuration with wing-mounted vertical fins
[AIAA PAPER 85-0276] p 217 A85-19628
The influence of camber variation on the aerodynamics of civil transport aircraft
[AIAA PAPER 85-0353] p 220 A85-19691
Extension of the small perturbations method in three-dimensional transonic, unsteady flow to the case of real wings
[ONERA-NT-17/3064-RY-070-R] p 743 N85-31017

**CAMERA SHUTTERS**
Initial feasibility ground test of a proposed photogrammetric system for measuring the shapes of ice accretions on helicopter rotor blades during forward flight
[NASA-TM-87391] p 106 N85-12867

**CAMERAS**
NASA thunderstorm overflight program: Atmospheric electricity research. An overview report on the optical lightning detection experiment for spring and summer 1983
[NASA-TM-86488] p 128 N85-12330

**CANADA**
Birds and aviation
[AD-P004177] p 402 N85-19939
Birds and aircraft engine strike rates
[AD-P004184] p 403 N85-19946
Search and rescue in Canada p 807 N85-31098

**CANADAIR AIRCRAFT**
Canadair 601 - Challenger in name and in performance p 157 A85-16117

**CANARD CONFIGURATIONS**
Computation of vortex flow around a canard/delta combination p 6 A85-11980
The aerodynamic characteristics of a propulsive wing/canard concept in STOL
[AIAA PAPER 84-2336] p 74 A85-13507
Canard/tail comparison for an advanced variable-sweep-wing fighter
[AIAA PAPER 84-2401] p 97 A85-13510
The aerodynamics of three-surface airplanes
[AIAA PAPER 84-2508] p 101 A85-13577
Applicability of a panel method, which includes nonlinear effects, to a forward-swept-wing aircraft
[AIAA PAPER 84-2402] p 139 A85-16105
Modifying and testing a canard on a Swiss Mirage III - Flight test status report p 158 A85-16610
Canards - Design with care p 411 A85-27172
Unsteady transonic flow calculations for two-dimensional canard-wing configurations with aeroelastic applications
[AIAA PAPER 85-0585] p 468 A85-30320
Aerodynamic canard/wing parametric analysis for general-aviation applications p 473 A85-32587
Vortex trajectories and breakdown on wing-canard configurations p 731 A85-42926
Transonic aerodynamic computations for a canard configuration p 731 A85-42931
A historic review of canard configurations
[AIAA PAPER 85-1803] p 825 A85-43854
Measurements of canard-induced roll oscillations
[AIAA PAPER 85-1830] p 839 A85-43871
Determination of leading-edge vortex trajectories by schlieren photography p 904 A85-47150
Aerodynamic-structural study of canard wing, dual wing, and conventional wing systems for general aviation applications
[NASA-CR-172529] p 238 N85-16829
Unsteady transonic flow calculations for two-dimensional canard-wing configurations with aeroelastic applications
[NASA-TM-86375] p 329 N85-18960
Wind-tunnel investigation of a full-scale canard-configured general aviation airplane
[NASA-TP-2382] p 396 N85-19925
Parametric study of a canard-configured transport using conceptual design optimization
[NASA-TP-2400] p 415 N85-19979
Approximate neutral point of a subsonic canard aircraft
[NASA-TM-86694] p 557 N85-25205
Description of a computer program treating transonic steady state aeroelastic effects for a canard or tail airplane
[FFA-TN-1983-23] p 581 N85-26874
Supersonic aerodynamic characteristics of canard, tailless, and aft-tail configurations for 2 wing planforms
[NASA-TP-2434] p 634 N85-27622
Real scale test of the Petit Canard aircraft in the number 3 section, 47 sqm, of the SIMA wind tunnel, May 1984
[ONERA-PV-1/0772-GY] p 743 N85-31018
Study of an efficient long-range Mach 2.7 supersonic transport configuration concept
[NASA-TM-86414] p 829 N85-32110
The aerodynamic characteristics of a GU25-5(11)8 aerofoil for low Reynolds numbers
[GU-AERO-8410] p 874 N85-34121
Vortex boundary-layer interactions
[NASA-CR-176192] p 911 N85-35373

**CANOPIES**
A parachute theory allowing for the structure of the canopy fabric p 13 A85-11822
Determination of the limits of the stability region of a parachute system with a low-permeability canopy p 142 A85-17075
Stress analysis and shaping of the canopy of a square parachute p 242 A85-21668
A theoretical view on the stress analysis of fully inflated parachute canopies
[AD-A148387] p 239 N85-16835

**CANS**
Flame radiation and linear heat transfer in a tubular-can combustor p 663 A85-39580

**CANTILEVER BEAMS**
Vibration analysis of a rotating blade using dynamic discretization p 446 A85-29968

**CANTILEVER MEMBERS**
The dynamic stressed state of the cantilever turbocompressor blades of gas-turbine engines p 421 A85-29886
Flutter parametric studies of cantilevered twin-engine transport type wing with and without winglet. Volume 2: Transonic and density effect investigations
[NASA-CR-172410-VOL-2] p 130 N85-13270

**CANTILEVER PLATES**
Flutter analysis of cantilevered quadrilateral plates p 600 A85-35296

**CAPACITANCE SWITCHES**
An analog CMOS autopilot p 583 A85-34098

**CAPACITORS**
EMI (electromagnetic interference) filter capacitor unit
[AD-D011392] p 293 N85-15941
Control of cascaded induction generator systems
[AD-A150429] p 527 N85-22897

**CAPS**
External caps - An approach to stress reduction in balloons p 647 A85-38306

**CARBON**
Aviation turbine fuels from tar sands bitumen and heavy oils. Part 1: Process analysis
[AD-A151319] p 597 N85-25539
West Europe report: Science and technology
[JPRS-WST-84-012] p 601 N85-25552
Size distributions of elemental carbon in atmospheric aerosols
[PB85-153534] p 609 N85-25863

**CARBON DIOXIDE LASERS**
Applications of FM-CW CO2 waveguide laser radar p 334 A85-22650
Field tests and signature analysis of an imaging CO2 laser radar — for cruise missile guidance and targeting sensor p 334 A85-22651
Field measurements with a coherent transversely excited atmospheric CO2 laser radar p 357 A85-22652
Precision pointing using a dual-wedge scanner — for airborne carbon dioxide Doppler lidar p 526 A85-32711

**CARBON FIBER REINFORCED PLASTICS**
Sonic fatigue design method for the response of CFRP stiffened-skin panels p 52 A85-12474
Control of the properties of carbon fiber-reinforced plastics p 118 A85-12722
The application of endless-fiber reinforced polymers p 119 A85-15580
Essential design features of A310
[SAWE PAPER 1569] p 160 A85-18821
Energy absorbing qualities of fiber reinforced plastic tubes p 282 A85-21393
Current status of carbon fiber and composite development p 362 A85-24810
Carbon and kevlar in the Dornier 228 utility-commuter aircraft p 341 A85-24819
Electromagnetic shielding by a CFC aircraft fuselage — Carbon Fiber Composite p 412 A85-27625
Development of acoustic emission techniques for quantitative use on aerospace C.F.R.P. structures p 445 A85-29938
Design of a CFRP-wing for the alpha-jet major panel tests
[AIAA PAPER 85-0725] p 490 A85-30278
Properties of glass and carbon fiber fabrics used in helicopter rotors
[MBB-UD-424-84-OE] p 541 A85-35254
Comparison of predictions and experimental results on notches and bolt-loaded drilled holes in CFRP laminates
[DGLR PAPER 84-141] p 788 A85-40277
Requirements and demonstration for aeronautical structures made of carbon-fiber-reinforced epoxy resins
[DGLR PAPER 84-149] p 783 A85-40282
Protection of carbon-fiber reinforced artificial materials against damage by lightning
[DGLR PAPER 84-151] p 752 A85-40283
Stability limits of shear fields of the carbon-fiber-reinforced-plastics rudder unit - Airbus A300/A310
[DGLR PAPER 84-155] p 752 A85-40286
Static strength of carbon-fiber-composite flat bars with unstressed holes p 789 A85-40289
New nonmetallic structural composites for military-aircraft construction
[DGLR PAPER 84-102] p 783 A85-40320
The Airbus A 310-300 as an example of the construction of an FRP vertical tail fin
[MBB-UT-52-85-OE] p 758 A85-42677
New carbon fibers and the aircraft of the future p 852 A85-45738
Application of carbon fibre reinforced thermoplastic (PEEK) composite to aero engine component manufacture p 900 A85-48568
Flight simulation fatigue crack propagation in metal/carbon-epoxy laminates
[NLR-TR-83006-U] p 54 N85-10416
Modern structural materials. Present situation and evolution prospects — aircraft materials
[SNIAS-842-551-101] p 105 N85-12886
Development of a fuselage forward section in Carbon Fiber Reinforced Plastic (CFRP) type of construction
[MBB/LFA34/CFK/PUB/008] p 651 N85-27851
Integral profile method for production of carbon fiber sheets
[MBB/LFA34/CFK/PUB/006] p 690 N85-27975
Heat resistant Carbon Fiber Reinforced Plastics (CFRP) hardening equipment
[MBB/LFA33/CFK/PUB/007] p 690 N85-27976

**CARBON FIBERS**
The use of carbon weaves and tapes - Technical and economic surveys p 520 A85-33242
Distributions of fatigue life and fatigue strength in notched specimens of a carbon 8-harness-satin laminate
[NAL-TR-809T] p 54 N85-10407
Composite structural materials
[NASA-CR-174077] p 121 N85-12966
All-composite Airbus empennage p 284 N85-15931
Composite structural materials
[NASA-CR-175515] p 437 N85-21268
MBB uses new CFC form tool for titanium alloy air intake p 601 N85-25553
Lightning-safe carbon fiber composite for Airbus tail unit p 692 N85-29100

**CARBON-CARBON COMPOSITES**
The SEPCARB carbon-carbon materials, friction materials p 363 A85-24820
The problems arising in testing of carbon-based materials for structural components of airframes p 686 A85-37339
**CARCINOGENS**
Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses [AD-A145464] p 45 N85-11255
**CARET WINGS**
Optimization of the aerodynamic characteristics of caret wings at supersonic flight speeds p 140 A85-16182
**CARGO**
Mi-8 helicopter cargo loading experiment for Arctic shipping p 504 N85-24425
Air traffic: Instruments, airports, companies, post, cargo and passengers p 641 N85-28632
Laboratory vibration schedules [AD-A155856]. p 857 N85-35188
**CARGO AIRCRAFT**
Minimum and maximum cargo tables for aircraft with three cargo compartments [SAWE PAPER 1568] p 160 A85-18620
Analyses of KC-10 loading alternatives [SAE PAPER 840701] p 332 A85-26313
Helicopter cargo - New opportunities through technology transfer [SAE PAPER 840703] p 342 A85-26314
Tomorrow's air cargo - Combis, convertibles, or all-freighters? p 411 A85-26480
C-17 will fill long-haul airlift gap p 570 A85-33850
C-17 cleared for take-off — new heavy lifter for US Air Force p 572 A85-35353
Soviets tailor cargo transport for remote-site operations p 646 A85-38244
An-124 - The world's largest aircraft p 828 A85-46525
Performance capabilities of the C-5 and C-17 cargo aircraft [AD-A145516] p 22 N85-10939
USSR report: Transportation [JPRS-UTR-84-025] p 641 N85-27641
Test flight of IL-76TD long-range transport variant p 641 N85-27642
OWEMA report: A project study concerning the possibilities and the desirability of a east-west runway for Maastricht Airport (Netherlands) as a Euro-regional air freight carrier [B8476490] p 685 N85-28955
**CARTRIDGES**
Flares and photoflash items [AD-A145442] p 45 N85-11253
**CASCADE CONTROL**
A multiloop robust controller design study using singular value gradients p 703 A85-39564
Real-time analysis of a digital multiloop flight control system p 840 A85-45050
**CASCADE FLOW**
Computation of internal flows: Methods and applications; Proceedings of the Energy Sources Technology Conference, New Orleans, LA, February 12-16, 1984 p 49 A85-11630
The rule of forbidden signals and apparent Mach number in transonic compressor cascades p 5 A85-11632
Internal flows of relevance to gas-turbines p 49 A85-11635
Periodic internal flows — in gas turbines p 5 A85-11643
Design method for highly-loaded blades with blockage in cascade p 5 A85-11644
Application of the Godunov method and its second-order extension to cascade flow modeling [AIAA PAPER 83-1941] p 73 A85-12714
Flutter of turbofan rotors with mistuned blades p 122 A85-12716
Computation of unsteady aerodynamic pressure coefficients in a transonic straight cascade p 79 A85-14893
Computation of unsteady aerodynamic pressure coefficients in a transonic straight cascade. II [ONERA, TP NO. 1984-116] p 80 A85-15838
On the use of inverse modes of calculation in 2D cascades and ducts [ONERA, TP NO. 1984-132] p 81 A85-15846
An engineering method for evaluating unsteady aerodynamic effects on cascade blades during flexural vibrations p 182 A85-16915
Numerical solutions of viscous transonic flow in turbomachinery cascades [AIAA PAPER 85-0007] p 206 A85-19454
Three dimensional aerodynamics of an annular cascade in a non-uniform inlet flow [AIAA PAPER 85-0174] p 213 A85-19567
Matrix solution of compressible flow on S(1) surface through a turbomachine blade row with splitter vanes or tandem blades p 227 A85-20228
A new approach to some hybrid aerodynamic problems of airfoil cascades on a general streamsheet of revolution. I p 228 A85-20229
Complete three-dimensional flow solution of a cascade incorporating splitter vanes of arbitrary geometry p 228 A85-20230
A linearized unsteady aerodynamic analysis for transonic cascades p 229 A85-20744
Computation of choked and supersonic turbomachinery flows by a modified potential method p 232 A85-21869
Determination of the angles of flow incident on the rotating cascade of a reversing device p 366 A85-24002
Shaped optimization of the subsonic profiles of axial-flow turbine cascades p 315 A85-24028
A multigrid method for calculating transonic flows in cascades p 315 A85-24092
Transonic cascade flow with given shock shapes solved by separate supersonic and subsonic computations p 315 A85-24095
A prediction research of rotating stall in axial compressors p 316 A85-24097
An improved model of shock waves in front of two-dimensional cascades p 318 A85-25213
Investigations on transonic double circular arc (DCA)profiles of axial flow compressor - Calculations of profile design p 318 A85-25214
Compressor cascades research using a helium-driven shock tube p 318 A85-25457
Numerical simulation of unsteady flow in a compressor rotor cascade [AIAA PAPER 85-0133] p 323 A85-26383
A full Navier-Stokes solution of viscous gas flow through profile cascade on S1 stream surface of revolution employing nonorthogonal curvilinear coordinate system p 385 A85-26899
The addition of quasi-three-dimensional terms into a finite element method for transonic turbomachinery blade-to-blade flows p 386 A85-26920
A finite element method for the solution of two-dimensional transonic flows in cascades p 386 A85-26921
Numerical calculation of a laminar two dimensional straight cascade flow p 386 A85-27346
Incompressible flow round an airfoil in a straight-line cascade and between parallel walls, with some phenomena in the boundary layer taken into consideration p 388 A85-28373
Investigations of the influence of taper on the characteristic values of rotating annular turbine cascades in the transonic flow regime p 394 A85-30170
The nonlinear model for predicting rotating stall in multistage axial-flow compressors p 471 A85-31339
Computation of hydraulic losses in a plane profile cascade p 525 A85-32503
The high Reynolds number finite flat-plate cascade p 474 A85-32616
Design and performance of a fixed, nonaccelerating guide vane cascade that operates over an inlet flow angle range of 60 deg [ASME PAPER 84-GT-75] p 475 A85-32904
Simulation of rotating stall by the vortex method p 544 A85-34012
Finite element solution of non-viscous flows in cascades of blades p 552 A85-36335
A study of the critical flow rate through cascades of thin slightly bent airfoils using the large-particle method p 624 A85-38582
The characteristics compatibility conditions on the boundary points are applied to time-marching methods for transonic flow past plane cascades p 625 A85-38967
Simulation of wake passing in a stationary turbine rotor cascade p 629 A85-39589
Investigation of the effect of two endwall contours on the performance of an annular nozzle cascade [AIAA PAPER 85-1218] p 630 A85-39661
Application of Runge Kutta time marching scheme for the computation of transonic flows in turbomachines [AIAA PAPER 85-1332] p 631 A85-39728
An investigation of lift augmentation of tandem cascades [ASME PAPER 84-WA/FM-3] p 633 A85-39875
New iterative algorithm between stream function and density for transonic cascade flow [AIAA PAPER 85-1594] p 713 A85-40710
Computation of internal incompressible separated flows using a space-marching technique [AIAA PAPER 85-1624] p 790 A85-40730
Inviscid modeling of turbomachinery wake transport [AIAA PAPER 85-1132] p 719 A85-40812
An implicit algorithm for solving 2D rotational flow i an aircraft engine fan frame [AIAA PAPER 85-1534] p 722 A85-40
A comment on controlled diffusion airfoil p 723 A85-40
Fan and compressor technology p 724 A85-4102
Unsteady temperature analysis of air-cooled turbi vanes p 767 A85-4178
Experimental study of temperature effect on turbine van cooling performance with multi-row ejection p 768 A85-4178
Development of computational flow analyses for blad rows p 727 A85-41813
Time dependent computation of the Euler equations fo designing 2-D cascades, including the case of transonic shock free design p 727 A85-41814
A numerical method to weaken shock in transonic cascades p 727 A85-41815
Measurement of 3-D unsteady flow downstream of roto and stator blades in axial-flow compressors p 729 A85-418
Measurement of unsteady pressure distribution o oscillating airfoils in a turbine annular cascade p 769 A85-418
Modeling of turbulent flowfields through a cascade o airfoils at stall conditions p 816 A85-4571
On the accuracy of boundary layer measurements i cascades at high subsonic speeds p 867 A85-4710
Prediction of the inception of cavitation on blade profile of hydraulic turbomachines p 906 A85-478
Inviscid and viscous flows in cascades with an expli multiple-grid algorithm p 860 A85-4853
Supplements to 'Theory of secondary flow i cascades' p 869 A85-4867
Characteristics of controlled-oscillating annular cascad test facility with Freon gas [NAL-TR-812] p 10 N85-1001
Further development of a transonic cascade analys [AD-A145410] p 54 N85-1131
Inverse design technique for cascades [NASA-CR-3836] p 81 N85-1200
Incompressible lifting-surface aerodynamics for rotor-stator combination [NASA-TM-83767] p 86 N85-1203
A finite element method for the solution o two-dimensional transonic flows in cascades [PNR-90216] p 86 N85-1204
Performance deterioration of cascades exposed to soli particles p 112 N85-1205
Unsteady aerodynamic response of cascades an turborotors p 112 N85-1205
Unsteady pressure measurements on a biconvex airfo in a transonic oscillating cascade [NASA-TM-86914] p 234 N85-156
Results of S5 CH tests with an ARL (Aerospac Research Laboratory) cascade [NASA-TM-77510] p 278 N85-168
Estimating unsteady aerodynamic forces on a cascad in a three-dimensional turbulence field [NASA-TM-86701] p 478 N85-2370
An experimental study of aerodynamic damping characteristics of a compressor annular cascade in hig speed flow and the visualization of annular cascade flow [NAL-TR-838] p 602 N85-2575
Gasdynamic evaluation of choking cascade turns [AD-A151854] p 603 N85-2577
Influence of surface roughness on compressor blade at high reynolds number in a two-dimensional cascade [AD-A151855] p 603 N85-2577
Proceedings of the NAL Symposium on Aircraft Computational Aerodynamics [NAL-SP-1] p 543 N85-2[illegible]11
Notes on unsteady transonic cascade flows [AD-A154829] p 817 N85-3209
Analysis of incompressible cascade flows using state-of-the-art computer programs [AD-A155850] p 876 N85-3517
**CASCADE WIND TUNNELS**
A straight cascade wind-tunnel study of fan blade flutter in started supersonic flow [ONERA, TP NO. 1984-117] p 125 A85-1583
An aeroelastic testing technique in a straight cascade wind-tunnel p 896 A85-47161
Inverse design technique for cascades [NASA-CR-3836] p 81 N85-1200
Results of S5 CH tests with an ARL (Aerospace Research Laboratory) cascade [NASA-TM-77510] p 278 N85-168
Methods for design aerodynamics of modern transport aircraft [DFVLR-FB-85-05] p 636 N85-278
**CASING**
A study on configurations of casing treatment for axi flow compressors p 26 A85-10974

A parametric study of the unbalance vibration of the rotor supported in a light, flexible casing
p 771 A85-41855

Some observations on circumferentially grooved casing treatment — in compressors p 771 A85-42442

**CASTING**

Polycrystalline grain controlled castings for rotating compressor and turbine components
p 519 A85-32380

Low-gravity solidification of cast iron and space technology applications p 44 N85-11022

Directional solidification of flake and nodular cast iron during KC-135 low-g maneuvers p 44 N85-11040

Precision die forging of blades or gas turbines
p 672 N85-28148

**CASTINGS**

The use of countergravity casting for producing compressor body castings of AK-7 alloy
p 441 A85-27717

**CASUALTIES**

Don't fowl out
[AD-P004179] p 402 N85-19941

**CATALYSIS**

Effect of variable surface catalysis on heating near the stagnation point of a blunt body
[AIAA PAPER 85-0248] p 323 A85-26386

**CATALYTIC ACTIVITY**

Radiation/catalytic augmented combustion
[AD-A148756] p 384 N85-18101

The role of surface generated radicals in catalytic combustion p 671 N85-27869

**CATAPULTS**

Tensile ski-jump ramp for aircraft takeoff
[AIAA PAPER 85-0802] p 491 A85-30302

**CATASTROPHE THEORY**

A global technique for aircraft stability and control analysis p 270 A85-21681

Nonlinear global stability analysis of compressor stall phenomena
[NASA-CR-174805] p 773 N85-29960

**CATHODE RAY TUBES**

Thin plasma panels squeeze into crammed aircraft
p 106 A85-14009

Color CRT in the F-15 p 686 A85-38954

Effects of specification on airborne display hardware
p 833 A85-45102

A quantitative measure of monochrome CRT displays — for aircraft cockpits p 833 A85-45103

Manufacturing Methods and Technology (MM/T) specifications for miniature cathode ray tube
[AD-A145587] p 54 N85-11298

**CAUCHY INTEGRAL FORMULA**

A numerical method for second order thin airfoil theory p 815 A85-44626

**CAVITATION FLOW**

Cavitation models of separated flow of a low-viscosity fluid past wing profiles p 390 A85-29004

Analysis of transitional separation bubbles on infinite swept wings
[AIAA PAPER 85-1685] p 717 A85-40770

Flow visualization in water channels by means of a procedure for the generation of very small air bubbles
p 853 A85-44270

Prediction of the inception of cavitation on blade profiles of hydraulic turbomachines p 906 A85-47849

**CAVITIES**

Aerodynamic sound generation induced by flow over small, cylindrical cavities
[AIAA PAPER 84-2258] p 58 A85-10827

Structure and characteristics of turbulent separated flow in a cavity p 445 A85-29919

High frequency estimation of 2-dimensional cavity scattering
[AD-A151697] p 602 N85-25696

**CEILING (AIRCRAFT CAPABILITY)**

A study of ramjet engine. II - Altitude specific range at the ceiling p 766 A85-41013

Effect of ground and/or ceiling planes on thrust of rotors in hover
[NASA-TM-86754] p 743 N85-31014

**CEILINGS (ARCHITECTURE)**

The thermal response of aircraft cabin ceiling materials during a post-crash, external fuel-spill, fire scenario
[AIAA PAPER 85-0395] p 241 A85-19721

**CELESTIAL GEODESY**

Cosmic interpolation of terrestrial potential values
p 451 A85-26476

Radial variations of a satellite orbit due to gravitational errors - implications for satellite altimetry
p 452 A85-28140

Regional mean sea surfaces based on GEOS-3 and SEASAT altimeter data p 453 A85-29716

**CELESTIAL MECHANICS**

Problems of contemporary mechanics. Parts 1 & 2
p 442 A85-28376

**CELESTIAL NAVIGATION**

Denab, Dubhe, & Dallas — ground stations to enhance GPS accuracy in civil aviation p 91 A85-13445

An automatic navigation and aspect sensing system for X-ray astronomy p 643 A85-38314

**CELLS**

Opacity control technique for jet engine test cells
[AD-D011668] p 774 N85-29968

**CEMENTS**

Materials for emergency repair of runways
[AD-A146139] p 117 N85-12068

Development of a preliminary ALRS stabilized material pavement analysis system (SPAS)
[AD-A147116] p 277 N85-15760

**CENSORED DATA (MATHEMATICS)**

Statistical treatment of multiply censored samples in fatigue testing p 367 A85-25119

**CENTAUR LAUNCH VEHICLE**

A high energy stage for the National Space Transportation System
[IAF PAPER 84-15] p 361 A85-23200

**CENTER OF GRAVITY**

Computer geometric simulation of cruise missile center of gravity versus fuel consumption
[SAWE PAPER 1511] p 159 A85-18804

Orbiter spacecraft weight and center of gravity determination
[SAWE PAPER 1509] p 178 A85-18817

The importance of aircraft center-of-gravity position for flight control p 358 A85-25521

Handheld computer weight and balance computations for military aircraft
[SAWE PAPER 1582] p 877 A85-49807

The role of load-cell rotation in airplane-weight determination
[SAWE PAPER 1583] p 898 A85-49808

**CENTER OF MASS**

A method for controlling the motion of a flight vehicle relative to its center of mass p 585 A85-36581

**CENTERBODIES**

Numerical simulation of cold flow in an axisymmetric centerbody combustor p 507 A85-32601

**CENTRIFUGAL COMPRESSORS**

A method for calculating turbulent 3-D flows in diffusers p 79 A85-14889

An analysis of unsteady torque on a quasi-three-dimensional centrifugal impeller
p 185 A85-19531

Calculation and analysis of the three-dimensional flow in centrifugal compressor impellers p 228 A85-20231

Experimental investigation of backswept centrifugal compressor impeller. I p 264 A85-20243

Inlet flow distortions in centrifugal fans
[ASME PAPER 84-JPGC-GT-4] p 314 A85-23193

Unsteady flow at the outlet of the high specific speed centrifugal compressor impeller
[ASME PAPER 84-JPGC-GT-10] p 365 A85-23194

Flowfield and performance measurements in a vaned radial diffuser
[ASME PAPER 84-WA/FM-7] p 634 A85-39876

The history and future of the centrifugal compressor in aviation gas turbines
[SAE PAPER 841635] p 764 A85-40538

Mathematical modelling of performance characteristics and optimization of turbomachine stages
p 769 A85-41812

A consideration concerning stall and surge limitations within centrifugal compressors. II p 793 A85-41821

Slip Factor dependence on flow coefficient in centrifugal compressors p 793 A85-41823

Research on supersonic diffusers of centrifugal compressor by means of swirl flow. I - Flow in a diffuser at various Mach numbers p 729 A85-41824

Development of high specific speed centrifugal compressors for turbochargers p 793 A85-41831

Subsynchronous vibrations in a high pressure centrifugal compressor: A case history p 186 N85-14118

Experiences with nonsynchronous forced vibration in centrifugal compressors p 187 N85-14119

Experimental on-stream elimination of resonant whirl in a large centrifugal compressor p 187 N85-14121

Internal hysteresis experienced on a high pressure syn gas compressor p 187 N85-14122

Lateral fluid forces acting on a whirling centrifugal impeller in vaneless and vaned diffuser
p 187 N85-14123

Hydraulic forces on a centrifugal impeller undergoing synchronous whirl p 187 N85-14124

Open-cycle centrifugal vapor-compression heat pump
[PB85-113405/GAR] p 372 N85-18348

R and D activities of the Propulsion Division
p 799 N85-32025

**CENTRIFUGAL FORCE**

Aerodynamic forces developing in channels between vanes in turbine drive wheels p 606 N85-27062

**CENTRIFUGAL PUMPS**

Analyses and testing for rotordynamic coefficients of turbulent annular seals with different, directionally-homogeneous surface-roughness treatment for rotor and stator elements
[ASME PAPER 84-TRIB-31] p 289 A85-21293

Analyses and testing for rotordynamic coefficients of turbulent annular seals with different, directionally homogeneous surface-roughness treatment for rotor and stator elements p 188 N85-14134

**CENTRIFUGING STRESS**

Naval Center seeks new uses for centrifuge-based simulator p 591 A85-33800

Hydrodynamic impeller stiffness, damping, and inertia in the rotordynamics of centrifugal flow pumps
p 187 N85-14125

**CENTRIPETAL FORCE**

Hydraulic forces on a centrifugal impeller undergoing synchronous whirl p 187 N85-14124

**CERAMIC COATINGS**

Oxidation-based model for thermal barrier coating life
p 41 A85-10310

Plastic flow of plasma sprayed ceramics
p 362 A85-24161

Life modeling of atmospheric and low pressure plasma-sprayed thermal-barrier coating
p 435 A85-29728

Performance of thermal barrier coating for gas turbine airfoil in engine test p 785 A85-41841

Thermal stability of plasma-sprayed zirconia coatings as related to substrate selection p 900 A85-48758

FRG ceramic engine components (PET)
p 297 N85-17193

**CERAMIC MATRIX COMPOSITES**

The use of high-temperature ceramics in diesel and gas-turbine engines (Review) p 518 A85-31487

Fibers for structurally reliable metal and ceramic composites p 687 A85-37484

**CERAMICS**

Crack arrest in structural ceramics p 41 A85-11671

An overview of potential for the substitution of ceramic materials for vulnerable materials and the implications of national materials policy p 179 A85-19099

Europeans using composites, ceramics for rotorcraft engine improvements p 263 A85-20061

The challenge from ceramics to metals in the gas turbine and related areas p 280 A85-20150

Engineering ceramics p 362 A85-24229

International perspective on ceramic heat engines
[ACS PAPER 1-J111-84] p 383 A85-25268

Evolution in the U.S. of ceramic technology for turbine engines
[ACS PAPER 3-JIII-84] p 383 A85-25269

Ionic radii and electronegativities of effective sintering aids for Si3N4 ceramics p 519 A85-32850

Feasibility study of the welding of SiC
p 688 A85-39339

Thermal characteristics of gas turbine combustor in high temperature operation p 792 A85-41793

DOE automotive gas turbine modern technology engine program p 794 A85-41838

PM aerospace materials; Proceedings of the International Conference, Bern, Switzerland, November 12-14, 1984. Volumes 1 & 2 p 786 A85-43126

Powder materials and ceramics in aerospace applications - A European perspective
p 787 A85-43153

Mating of Si3N4 with Si3N4 hardware
[NASA-TM-86864] p 43 N85-10191

Selecting the proper ceramic material for a regenerator experiencing large temperature gradients
[AD-A144796] p 43 N85-10199

Surface protection overview p 32 N85-10978

High performance fibers for structurally reliable metal and ceramic composites — advanced gas turbine engine materials
[NASA-TM-86878] p 119 N85-12085

Ceramic technology for advanced heat engines program plan
[DE84-013567] p 121 N85-13055

Experimental and analytical study of ceramic-coated turbine-tip shroud seals for small turbine engines
[NASA-TM-86881] p 353 N85-18057

Development of high temperature ceramic parts for vehicular gas turbines
[PNR-90245] p 354 N85-18062

Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-174809] p 379 N85-18831

Experimental study of ceramic coated tip seals for turbojet engines
[NASA-TM-86939] p 373 N85-19363

Structural ceramics in transportation: Fuel implications and economic impacts
[DE85-003024] p 438 N85-20130

Fabrication of ceramic substrate-reinforced and free forms
[NASA-TM-86994] p 516 N85-23626
Solid state compressor
[AD-A150790] p 531 N85-24302
Nondestructive tests of ceramic components for aircraft turbines p 583 N85-26718
Ceramic applications in turbine engines
[NASA-CR-174715] p 690 N85-28109
Ceramic turbochargers: A case study of a near-term application of high-strength ceramics
[DE85-006495] p 700 N85-28373
Future of ceramic turbochargers: Promises and pitfalls
[DE85-006209] p 700 N85-28380
Ceramic Technology for Advanced Heat Engines Project
[DE85-008755] p 691 N85-29052
Ceramic coatings for heat engine materials: Status and future needs
[DE85-008759] p 691 N85-29053
Ceramic coatings for heat engine materials
[DE85-005238] p 691 N85-29054
West Europe report: Science and technology
[JPRS-WST-85-020] p 797 N85-31333

**CERMETS**
Hot forming of mechanically alloyed gas turbine components p 787 A85-43157

**CERTIFICATION**
Certification of Kevlar on primary structure SAAB/Fairchild SF-340 aircraft p 118 A85-14111
Certification of a holographic head-up display system for low visibility landings
[AIAA PAPER 84-2689] p 165 A85-17298
The liability of aircraft manufacturers and certification authorities in the United Kingdom p 452 A85-27397
Civil certification of a U.S. government procured helicopter p 482 A85-31968
The role of testing in qualification and certification of aircraft p 571 A85-34253
BK 117 for dual pilot IFR operation
[MBB-UD-422-84-OE] p 572 A85-35253
GPS-based certification for the microwave landing system p 642 A85-37825
What an airship manufacturer faces in a certification program today
[AIAA PAPER 85-0870] p 641 A85-38785
Simple aircraft p 707 A85-40293
ATR 42 - The definitive configuration certification program begun p 755 A85-40611
Improving engine testing thru automation using a minicomputer p 829 A85-46623
Aspects of certification of civil aircraft structures in composite materials p 846 A85-48570
Certification of advanced systems
p 167 N85-14629
Glider Nimbus 3-24.5. Partial certification test results for importation in the U category
[REPT-CEV/IS/SE/AV/84] p 502 N85-23763
Interactive design of specifications for airborne software set (GISELE) p 610 N85-26753
Certifying complex digital systems on civil aviation aircraft p 660 N85-27907
Standardization of helicopter certification requirements in the western world
[SNIAS-851-210-103] p 761 N85-31045

**CESSNA AIRCRAFT**
Wing tip sails which give lower drag at all normal flight speeds p 79 A85-14854
Rolls' Tay engine meets schedule for Gulfstream 4 first flight p 890 A85-49090

**CESSNA 402B AIRCRAFT**
Design of a digital ride quality augmentation system for commuter aircraft
[AD-A148233] p 271 N85-16879

**CH-47 HELICOPTER**
Composites for aluminum extrusions — for CH-47D Chinook helicopter p 311 A85-25100
Development of an on-board computer for flight test data analyses p 504 A85-31985
Performance degradation of helicopter rotor in forward flight due to ice p 746 A85-42937
A mathematical simulation model of the CH-47B helicopter, volume 1
[NASA-TM-84351-VOL-1] p 19 N85-10033
Noise measurement flight test for Boeing Vertol 234/CH 47-d helicopter: Data/analyses
[AD-A148172] p 306 N85-17670
A modern control design methodology with application to the CH-47 helicopter
[AD-A151946] p 587 N85-26723

**CHAFF**
Spectral characteristics of radar echoes from aircraft-dispensed chaff p 406 A85-26606
An empirical self-protection chaff model
[AD-A151926] p 607 N85-27115

**CHANNEL FLOW**
Computation of internal flows: Methods and applications; Proceedings of the Energy Sources Technology Conference, New Orleans, LA, February 12-16, 1984
p 46 A85-11600
Forced oscillations of transonic channel and inlet flows with shock waves p 73 A85-12711
On the use of inverse modes of calculation in 2D cascades and ducts
[ONERA, TP NO. 1984-132] p 81 A85-15846
Shock waves in transonic channel flows at moderate Reynolds number
[AIAA PAPER 85-0088] p 221 A85-19702
A full Navier-Stokes solution of viscous gas flow through profile cascade on S1 stream surface of revolution employing nonorthogonal curvilinear coordinate system
p 365 A85-26669
Numerical determination of detached internal flow with the example of a radial compression tunnel — German thesis p 449 A85-28796
Near-sonic subsonic flow around a profile - in particular the foot-point structure of a shock and the flow-reverse theorem p 583 A85-36342
Simplified implicit block-bidiagonal finite difference method for solving the Navier-Stokes equations
p 695 A85-39003
Computation of internal incompressible separated flows using a space-marching technique
[AIAA PAPER 85-1624] p 790 A85-40730
Two- and three-dimensional grid generation for internal flow applications of computational fluid dynamics
[AIAA PAPER 85-1528] p 800 A85-40869
Aero/hydrodynamic stability of elastically supported plates in narrow channels with upstream barriers preventing flow redistribution p 794 A85-42584
Finite-volume scheme for transonic potential flow about airfoils and bodies in an arbitrarily-shaped channel
p 734 A85-42987
The effect of channel convergence on heat transfer in a passage with short pin fins
[NASA-TM-83601] p 53 N85-10303
Shock waves in transonic flows at moderate Reynolds Number p 236 N85-16823
On limits of applicability of linear models to dynamics of gas channels in aircraft engines p 355 N85-18210

**CHANNELS (DATA TRANSMISSION)**
A standard computer bus for MIL-STD-1750A avionics computers
[AIAA PAPER 84-2679] p 194 A85-17590
Data bus interface MIL-STD-1553B/ARINC 561 — avionics for KC-135 tanker aircraft
[AIAA PAPER 84-2682] p 184 A85-17862
Sensor control and data simulation gets on the bus
p 347 A85-24261
Multibus-based parallel processor for simulation
p 457 A85-28613
Multiplexed data bus for aircraft and its role
p 763 A85-41018
Design of airborne fiber-optic data bus system
p 750 A85-43245
A unified approach to data communications in aircraft
p 822 A85-44995
Evolution of a 100 Mbps fiber optic serial data bus for aerospace applications p 863 A85-44996
System engineering takes the byte out of MIL-STD-1553 — avionics data bus p 822 A85-44999
Advanced air data system concepts
p 833 A85-45027
Triplex bus-connected intra-unit selected FCS configuration — flight control system
p 841 A85-46065
Error correcting coding for MIL-STD-1553B aircraft stores management systems p 823 A85-46127
Systems study for an Integrated Digital-Electric Aircraft (IDEA)
[NASA-CR-3840] p 256 N85-15714
Evolution toward a multi-bus architecture for Army helicopter avionic systems p 280 N85-16812
Integration of sensor fusion in advanced helicopter cockpit design p 280 N85-16813
Propagation Influences on Digital Transmission Systems: Problems and Solutions
[AGARD-CP-363] p 373 N85-19269
Data compression for noiseless channels
p 527 N85-22851

**CHAPLYGIN EQUATION**
Higher approximations in the transonic expansion of the solution to the Chaplygin equation p 3 A85-10117

**CHARACTERIZATION**
The TA6ZrSD (IMI 685) characterization in strain controlled tests. (Specimens obtained from a forged spinning wheel) no. M4-45870
[M4-45870] p 126 N85-12384

**CHARGE COUPLED DEVICES**
Passive navigation by triangulation and tracking o undistinguished features in successive high-resolutio images p 642 A85-378

**CHEBYSHEV APPROXIMATION**
Minimax optimal control in the reentry of a sea glider p 40 N85-11

**CHECKOUT**
Check of an electronic model of controlled systems
p 429 A85-261
Joint service design for testability program
p 296 N85-167
International flight planning handbook
[AD-A156220] p 878 N85-361

**CHEMICAL ANALYSIS**
Chemical nature of wear debris — in lubricating oils use in gas turbine engines
[ASLE PREPRINT 84-LC-3A-1] p 363 A85-259
Compound class quantitation of JP-5 jet fuels by hi performance liquid chromatography-differential refractiv index detection
[AD-A145754] p 120 N85-121
Chemical and photographic evaluation of rigid explosiv transfer lines
[AD-A146203] p 437 N85-2014
Aspects of high-resolution gas chromatography a applied to the analysis of hydrocarbon fuels and othe complex organic mixtures. Volume 1
[AD-A156154] p 902 N85-362

**CHEMICAL BONDS**
Ionic radii and electronegativities of effective anion ide for Si3N4 ceramics p 519 A85-32

**CHEMICAL COMPOSITION**
Milling of Si3N4 with Si3N4 hardware
[NASA-TM-86864] p 43 N85-101
Variability of major organic components in aircraft fue Volume 3: Sample data package for the reference JP- fuel
[AD-A145482] p 45 N85-112
Variability of major organic components in aircraft fue Volume 1: Technical discussion
[AD-A145574] p 46 N85-112
Variability of major organic components in aircraft fue Volume 2: Illustrations
[AD-A146831] p 121 N85-138
The influence of fuel quality upon flame-tu temperature and flame radiation in a model gas-turbi primary zone
[K230] p 506 N85-222
Composition and photochemical reactivity of turbi engine exhaust
[AD-A150559] p 533 N85-222
The distribution of higher n-alkanes in partially froze middle distillate fuels
[AD-A153940] p 692 N85-290

**CHEMICAL COMPOUNDS**
Chemical preparations for protecting aircraft again birds p 626 A85-375

**CHEMICAL EQUILIBRIUM**
The 'solution-large molecules' method for calculatin the equilibrium composition of heterogeneous systems
p 667 A85-391

**CHEMICAL REACTIONS**
Reactions of NaCl with gaseous SO3, SO2, and O2
p 42 A85-116
Effects of slip and chemical reaction models o three-dimensional nonequilibrium viscous shock-lay flows p 90 A85-156
Spectral methods for modeling supersonic chemica reacting flow fields
[AIAA PAPER 85-0302] p 219 A85-196
Chemical reactions involved in the initiation of ho corrosion of IN-738 p 519 A85-316
Fire-resistant phosphorus containing polyimides an copolyimides
[NASA-CASE-ARC-11522-2] p 301 N85-342

**CHEMICALS**
The efficiency of an agricultural airplane as a functio of the coverage and transverse distribution of th chemicals p 383 A85-2771

**CHEMILUMINESCENCE**
Nitrogen analysis by chemiluminescence
[AD-A156197] p 902 N85-353

**CHINA**
China report: Science and technology
[JPRS-CST-84-042] p 139 N85-147
New fighter aircraft reported — Jian-8 aircraft
p 139 N85-147
F-7 supersonic day fighter viewed — Jian-7 aircraft
p 139 N85-147
A-5 supersonic attack aircraft described — Qiang-5 aircraft p 139 N85-147
Details of export A-5 close-support aircraft given — Qiang-5 aircraft p 139 N85-147
China report: Science and technology
[JPRS-CST-84-027] p 346 N85-169

Details of export A-5 close-support aircraft given
p 346 N85-18880
China report: Science and technology
[JPRS-CST-84-028] p 446 N85-20189
China report: Science and technology
[JPRS-CST-84-030] p 446 N85-20206
China has developed a new version of fighter aircraft
[AD-A155290] p 630 N85-32118
CHINESE AIRCRAFT
Chinese design supersonic bomber, plan joint efforts to build momentum p 706 A85-40802
CHIPS (ELECTRONICS)
VLSI chip set for high-performance avionic computers
[AIAA PAPER 84-2730] p 184 A85-17887
Military electronics - Why so unreliable?
p 186 A85-18440
Life cycle cost model for very high speed integrated circuits
[AD-A147798] p 297 N85-17298
CHUTES
A look at 'chair-chutes' - Parachute industry's answer to airline safety in the 1940s p 331 A85-22785
Air carrier overwater emergency equipment and procedures
[PB85-917006] p 620 N85-32105
CINEMATOGRAPHY
A study of separated flow behind two- and three-dimensional bodies exposed to a spherical shock wave p 78 A85-14590
CINETHEODOLITES
Uses of a digital electronic theodolite system in a weapon separation program p 418 A85-29655
CIRCUIT BOARDS
Packaging and interconnection for avionics
p 290 A85-21480
CIRCUIT PROTECTION
Atmospheric electricity hazards to aircraft operation
[AIAA PAPER 85-0013] p 247 A85-19457
CIRCUIT RELIABILITY
Electronic Equipment Thermal Management
p 909 A85-49530
ITAD - A CAD system for environmental reliability design — Integrated Thermal Avionic Design
p 916 A85-49531
A management guide to reliability predictions
p 909 A85-49541
CIRCULAR CONES
Equation associated with the theory of local interaction in a rarefied gas p 394 A85-30110
CIRCULAR CYLINDERS
Vibration responses and sound radiation from beams, plates, and cylinders excited by nonhomogeneous random pressure fields
[AIAA PAPER 84-2327] p 61 A85-10871
Turbulent boundary layer-wake interaction
p 77 A85-14345
The circular cylinder in subsonic and transonic flow
p 78 A85-15329
An analysis of the pattern of longitudinal slot antenna on the metal cylinder covered with a high collision plasma layer p 183 A85-17173
Euler and Navier-Stokes solutions for supersonic shear flow past a circular cylinder p 391 A85-29090
Boundary layer flow over long cylinders with suction
p 444 A85-29140
Some problems in discrete vortex numerical modelling on vortex motion behind a circular cylinder
p 550 A85-35788
A numerical study of the separation flow by Navier-Stokes equation past a circular cylinder and sphere p 551 A85-35792
The flow past two cylinders having different diameters
p 696 A85-39240
Damage tolerance of composite cylinders
p 666 A85-39600
Heat transfer investigation in the junction region of circular cylinder normal to a flat plate at 90 deg location
[ASME PAPER 84-WA/HT-70] p 666 A85-39696
Computation of flow around a circular cylinder in a supercritical regime
[AIAA PAPER 85-1660] p 715 A85-40756
Unsteady viscous flow round moving circular cylinders and airfoils
[AIAA PAPER 85-1490] p 720 A85-40800
Flow around a circular cylinder in the first subregion of the critical range
[AIAA PAPER 85-1718] p 725 A85-41413
The effect of Reynolds number on normal and side forces on ogive-cylinders at high incidence
[AIAA PAPER 85-1798] p 813 A85-43852
Determination of the local heat transfer coefficients of three simulated smooth ice formation characteristics on a cylinder
[AIAA PAPER 85-1836] p 819 A85-43873
A note on the steady high-Reynolds-number flow about a circular cylinder p 872 .A85-49368
Turbulent bouyant flow and pressure variations around a circular cylinder in a cross uniform flow near the ground p 371 N85-18287
Measurements in the flow field of a cylinder with a laser transit anemometer and a drag rake in the Langley 0.3 m transonic cryogenic tunnel
[NASA-TM-86289] p 531 N85-24270
Flow around rotating and nonmoving circular cylinder near flat screen. Report 1: Aerodynamic forces in cylinder p 562 N85-27059
CIRCULAR ORBITS
The effect of aerodynamic lift on near circular satellite orbits p 595 A85-34859
CIRCULAR PLATES
Vibration and flutter of mistuned bladed-disk assemblies
[AIAA PAPER 84-0991] p 181 A85-16095
Vibration and flutter of mistuned bladed-disk assemblies p 836 A85-45854
CIRCULAR TUBES
An experimental study of sound attenuation characteristics in circular ducts with lined radial baffles
[AIAA PAPER 85-0079] p 304 A85-19505
CIRCULATION
Circulation control: A bibliography of DTNSRDC research and selected outside references: Update
[AD-A148966] p 201 N85-15661
Heat management system for aircraft
[AD-D011666] p 654 N85-28936
CIRCULATION CONTROL AIRFOILS
Viscous/inviscid analysis of curved sub- or supersonic wall jets p 145 A85-18677
Computational study of circulation control with suction
[AIAA PAPER 85-0042] p 208 A85-19477
Analysis of circulation control airfoils using an implicit Navier-Stokes solver
[AIAA PAPER 85-0171] p 213 A85-19565
Circulation control airfoils - Past, present, future
[AIAA PAPER 85-0204] p 215 A85-19588
A Navier-Stokes investigation of a circulation control airfoil
[AIAA PAPER 85-0300] p 219 A85-19649
Analytic and experimental verification of the NOTAR circulation control tail boom p 495 A85-31980
Circulation control technology applied to propulsive high lift systems
[SAE PAPER 841497] p 627 A85-39205
Joukowsky airfoil with circulation control
[AIAA PAPER 85-1772] p 812 A85-43833
Aerodynamic characteristics of a circulation control elliptical airfoil with two blown jets p 816 A85-45834
Numerical optimization of circulation control airfoil at high subsonic speed p 871 A85-49131
Low-speed characteristics of a circulation control airfoil with AFT camber and a spiral trailing edge
[AD-A150861] p 481 N85-23725
Basic consideration of the lifting capability of stoppable rotors
[AD-A150850] p 502 N85-23759
Circulation control propellers for general aviation, including a BASIC computer program
[NASA-CR-169966] p 773 N85-29959
Circulation control lift generation experiment: Hardware development p 858 N85-33535
CIRCULATION CONTROL ROTORS
Evaluation of a ten-foot diameter X-wing rotor
p 495 A85-31967
CIVIL AVIATION
Destruction of Korean Air Lines Boeing 747 over Sea of Japan, 31 August 1983 p 66 A85-10049
A legal analysis of the shooting of Korean Airlines Flight 007 by the Soviet Union p 66 A85-11937
Denali, Dubhe, & Dallas — ground stations to enhance GPS accuracy in civil aviation p 91 A85-13445
Using satellites to improve civilian aircraft surveillance coverage
[AIAA PAPER 84-2405] p 91 A85-13512
The determination of optimum flight profiles for short haul routes
[AIAA PAPER 84-2408; p 89 A85-13515
The revolutionary impact of evolving aeronautical technologies
[AIAA PAPER 84-2445] p 69 A85-13535
Extended range operations with two-engine airplanes - A regulatory view
[AIAA PAPER 84-2513] p 89 A85-13579
Air navigation — Russian book p 93 A85-14636
C/A code receivers for precise positioning applications p 95 A85-14838
The silencers — JT3D engine noise reduction options

[AD-A156326] p 866 N85-3515
The contribution made by flight mechanics to civ aviation p 878 N85-351
Introduction to European air traffic control
[AD-A156329] p 878 N85-351

CL-41 AIRCRAFT
TUTOR (CL-41A) tail flight load survey
p 254 N85-158

CLADDING
Investigation of the influence of some paint system and water displacing corrosion inhibitors on anod undermining corrosion of aluminum 2024 clad alloy – aircraft structures
[VTH-LR-443] p 598 N85-270

CLASSICAL MECHANICS
Periodic motions of generalized conservati mechanical systems whose equations of motion conta a large parameter — Russian book p 460 A85-3001

CLASSIFICATIONS
Low-resolution target classification from a staring infrared sensor
[AD-A151660] p 612 N85-2803

CLEAR AIR TURBULENCE
Clear turbulence forecasting - Towards a union of a and science
[AIAA PAPER 85-0014] p 298 A85-194
Identification of vortex-induced clear air turbulence usin airline flight records p 299 A85-218
Safety recommendation(s), A84-111 through -115
[REPT-4011C/27] p 484 N85-2374
The physical and empirical basis for a specific clear-a turbulence risk index
[NASA-CR-178522] p 914 N85-3554

CLIMATOLOGY
Institute of Environmental Sciences, Annual Technica Meeting, 29th, Los Angeles, CA, April 19-21, 1983, Proceedings p 436 A85-2885
The visibility climatology of McMurdo Sound-William Field, Antarctica
[AD-A148108] p 300 N85-1749
Optimization of a ground coupled heat pump
[DE85-000273] p 374 N85-133

CLIMBING FLIGHT
Benefits and costs of powered engine simulation at lo speeds
[AIAA PAPER 85-0381] p 253 A85-19710
Onboard near-optimal climb-dash energy management
p 497 A85-3278
Energy-modelled climb and climb-dash - The Kaise technique — reviewed for Me 262 jet fighter aircraft trajectories p 572 A85-3533
Wind tunnel results of advanced high speed propelle in the takeoff, climb, and landing operating regimes
[AIAA PAPER 85-1259] p 617 A85-4702
Wind tunnel results of advanced high speed propelle in the takeoff, climb and landing operating regimes
[NASA-TM-87054] p 740 N85-2992

CLOCKS
Clock coasting and altimeter error analysis for GPS
p 94 A85-1483
An aspect of the role of the clock in a GPS receiver
p 485 A85-3174
Laser clock
[AD-D011513] p 450 N85-2163

CLOSED CYCLES

Solid state compressor [AD-A150790] p 531 N85-24302

CLOUD COVER

Shipboard measurement of cloud bases and average surface visibility with an eye-safe lidar [AD-A144689] p 53 N85-10345

CLOUD GLACIATION

Droplet size distribution effects on aircraft ice accretion p 563 A85-35585

CLOUD HEIGHT INDICATORS

Shipboard measurement of cloud bases and average surface visibility with an eye-safe lidar [AD-A144689] p 53 N85-10345

CLOUD PHYSICS

Microburst explored p 56 A85-12174

In-flight electrical conductivity measurements [ONERA, TP NO. 1985-61] p 912 A85-47264

Aircraft flow effects on cloud droplet images and concentrations [AD-A146176] p 131 N85-12529

First stage of equipping a Do 28 as a research aircraft for icing, and first research results [ESA-TT-855] p 416 N85-19982

On the state of knowledge on meteorologically caused icing of aircraft in clouds [ESA-TT-881] p 801 N85-31736

CLOUDS

Aircraft flow effects on cloud droplet images and concentrations [AD-A146176] p 131 N85-12529

CLOUDS (METEOROLOGY)

Comparison of icing cloud instruments for 1982-1983 icing season flight program [AIAA PAPER 84-0020] p 163 A85-16098

Icing conditions encountered by a research aircraft p 299 A85-21141

CLUTCHES

Improved auxiliary clutch for CH-53 helicopters p 123 A85-13699

CLUTTER

Anomalous clutter interference in radar ranging p 335 A85-24912

Adaptivity and design criteria of a latest-generation MTD processor p 336 A85-25105

Radar signal processing p 589 A85-34443

CMOS

An analog CMOS autopilot p 583 A85-34096

COANDA EFFECT

Circulation control propellers for general aviation, including a BASIC computer program [NASA-CR-165968] p 773 N85-29959

COASTS

Avionics system design for requirements for the United States Coast Guard HH-65A Dolphin p 154 N85-14827

COATINGS

Compact, high efficiency plasma spray guns for jet engine coatings p 123 A85-14131

Polysulfide-polyurethane interfacial aspects p 434 A85-27905

Aircraft surface coatings [NASA-CR-3661] p 21 N85-10935

Turbine Engine Hot Section Technology (HOST) [NASA-TM-83022] p 28 N85-10951

Advanced thin film thermocouples [NASA-CR-175541] p 450 N85-21607

COAXIAL FLOW

Coaxial jet noise source distributions [AIAA PAPER 84-2361] p 64 A85-10895

Parametric analysis of the acoustic power emitted by coaxial jets p 918 A85-49179

COCKPIT SIMULATORS

Aircraft cockpit work station as exemplified by a flight simulator p 357 A85-25513

Naval Center seeks new uses for centrifuge-based simulator p 591 A85-33600

A modern air combat dome visual system [AIAA PAPER 85-1747] p 780 A85-42565

A digital interface for flight simulator cockpits [AIAA PAPER 85-1755] p 780 A85-42567

The display subsystem in the aircraft simulator - Simulate or stimulate? p 897 A85-49004

Advanced flight simulation for helicopter development p 277 N85-16815

Cockpit resources management and the theory of the situation p 333 N85-18022

Cockpit resource management training p 333 N85-18023

Research Flight Simulator for Helicopters (RFSH): Description and application to fire control system design [SNIAS-851-210-106] p 761 N85-31050

COCKPITS

MAGNA analysis of the T-38 aircraft student canopy - Response to in-flight aerodynamic pressure loads [AIAA PAPER 84-2390] p 97 A85-13503

Thin plasma panels squeeze into crammed aircraft p 106 A85-14009

The automated cockpit improves hands-off performance p 106 A85-14017

The night vision goggle compatible helicopter cockpit [MBB-UD-420-84-OE] p 163 A85-16089

1984 SAE aerospace handbook: Air transport cabin and flight deck safety provisions p 156 A85-17244

Current and future general aviation EFIS developments — electronic flight instrumentation systems [AIAA PAPER 84-2642] p 164 A85-17831

Micro-based control and display research — using flight simulators [AIAA PAPER 84-2666] p 166 A85-17867

Evolution of the Collision Avoidance System in the cockpit [AIAA PAPER 84-2734] p 152 A85-17888

The Cockpit Display of Traffic Information and the Threat Alert and Collision Avoidance System Integration - A review p 259 A85-21559

Cockpit technology in a modern commercial aircraft p 341 A85-25510

Flight-management systems p 385 A85-25520

Redesign of airplane windows due to environmental crazing of acrylic p 341 A85-26306

General aviation avionics - An overview p 410 A85-29873

A mission oriented approach to cockpit design as applied to observation and attack helicopters p 487 A85-32011

Versatile F/A-18 Hornet performs fighter and attack missions p 571 A85-34199

Flight instrumentation p 578 A85-34586

The cockpit of the Airbus A310 p 655 A85-37896

Cockpit of the future? p 655 A85-37925

Advanced Aircrew Display Symposium, 6th, Patuxent River, MD, May 15, 16, 1984, Proceedings p 655 A85-38951

A systematic program for the development and evaluation of airborne color display systems p 655 A85-38952

Airborne electronic color displays - A review of UK activity since 1981 p 656 A85-38953

Cockpit layout by cooperation between aircraft manufacturer and airline companies [DGLR PAPER 84-096] p 753 A85-40317

Specific differences in future cockpit design due to civil and military applications p 762 A85-40347

Hermes - A cockpit inspired by the Airbus A320 p 762 A85-40914

Adaptive noise cancellation in a fighter cockpit environment [AD-A153178] p 749 A85-41321

The metamorphoses of the military aircraft cockpit p 764 A85-42893

Organization of the cockpit in future aircraft p 825 A85-44239

Simplifying the cockpit p 888 A85-46074

Flight Management Systems create new crew training needs p 916 A85-48860

LED multifunction keyboard engineering study [AD-A145199] p 24 N85-10061

Training effectiveness evaluation and utilization demonstration of a low cost cockpit procedures trainer [AD-A145179] p 38 N85-10078

Technical Workshop: Advanced Helicopter Cockpit Design [NASA-CP-2351] p 154 N85-14806

Superaugmented rotorcraft program p 139 N85-14807

Civil law enforcement missions p 139 N85-14812

Integrated cockpit design for the Army helicopter improvement program p 161 N85-14816

HH-60D night hawk helicopter p 161 N85-14817

Avionics/crew station integration p 166 N85-14818

Operational requirements - system concepts p 161 N85-14823

Attack helicopter (AH-1T) cockpit systems integration p 161 N85-14826

Integration of sensor fusion in advanced helicopter cockpit design p 290 N85-16813

A cockpit-display concept for executing a multiple glide-slope approach for wake-vortex avoidance [NASA-TP-2386] p 281 N85-16869

Electronic displays: Their strengths and weaknesses for advanced high performance aircraft p 349 N85-19664

A safety evaluation of the relocation of the ACM (Air Combat Maneuver) panel in the F-14 ( )/AIP (Avionics Integration Program) [AD-A149598] p 419 N85-21158

Analysis of estimation algorithms for CDTI and CAS applications [NASA-CR-172444] p 505 N85-22387

YAV-8B Harrier p 578 N85-26605

A comparison of pictorial and speech warning messages in the modern cockpit [AD-A151917] p 579 N85-26706

Human factors in cockpit automation: A field study of flight crew transition [NASA-CR-177333] p 747 N85-29937

Crew systems and flight station concepts for a 1995 transport aircraft [NASA-CR-168068] p 781 N85-29973

CODING

Integrated control system engineering support [AD-A149742] p 426 N85-21177

COEFFICIENT OF FRICTION

The SEPCARB carbon-carbon materials, friction materials p 363 A85-24620

Determination of the optimum lubricant change period for the joints of the landing gear of aircraft p 695 A85-38600

Experimental study of heat transfer from shaft in cooled radial bearing of GNT-25 gas turbine p 529 N85-24068

COHERENT RADAR

Field tests and signature analysis of an imaging CO2 laser radar — for cruise missile guidance and targeting sensor p 334 A85-22651

Spectral characteristics of radar echoes from aircraft-dispensed chaff p 406 A85-26606

COLD FLOW TESTS

SFRJ simulator results - Experiment and analysis in cold flow — Solid Fuel RamJet [AIAA PAPER 85-0329] p 263 A85-19671

Numerical simulation of cold flow in an axisymmetric centerbody combustor p 507 A85-32801

COLLAPSE

Structural crashworthiness; International Symposium, 1st, University of Liverpool, Liverpool, England, September 14-16, 1983, Invited Lectures p 47 A85-10624

COLLISION AVOIDANCE

Operational evaluation of an experimental TCAS --- Traffic Alert and Collision Avoidance System [AIAA PAPER 84-2407] p 89 A85-13514

Enhanced TCAS II signal processor development --- Traffic alert and Collision Avoidance System [AIAA PAPER 84-2656] p 150 A85-17843

Evolution of the Collision Avoidance System in the cockpit [AIAA PAPER 84-2734] p 152 A85-17888

Enhanced TCAS II tracking accuracy --- Traffic Alert and Collision Avoidance System [AIAA PAPER 84-2738] p 152 A85-17889

New concepts in collision avoidance logic [AIAA PAPER 84-2737] p 153 A85-17890

Improved TCAS I for pilot warning indication [AIAA PAPER 84-2736] p 153 A85-17891

The Cockpit Display of Traffic Information and the Threat Alert and Collision Avoidance System Integration - A review p 259 A85-21559

The use of local functionals to construct a circumvention maneuver in game problems of evasion p 302 A85-22374

Enhanced collision avoidance system cuts unneeded alerts p 578 A85-35450

Effects of measurement errors in estimating the probability of vertical overlap — in air traffic p 567 A85-36510

The study of bird migration over a water area in the northwestern portion of the Black Sea and adjacent areas in order to prevent bird-aircraft collisions p 638 A85-37542

Observation of birds in the flight path of aircraft - An important stage in the prevention of bird strikes p 639 A85-37544

A method of estimating the probability of vertical overlap using observed height data p 749 A85-40986

The role of air traffic control in the co-ordination of civil and military operations p 749 A85-41728

Preventing collisions in air traffic - A system analysis with special emphasis on transponder-assisted on-board systems with selective addressing — German thesis p 834 A85-45524

Enhanced TCAS 2/CDTI traffic Sensor digital simulation model and program description [NASA-CR-172445] p 15 N85-10927

TCAS 2 logic performance during phase one operational evaluation [DOT/FAA/PM-84/20] p 154 N85-13793

A bird strike handbook for base-level managers [AD-A147928] p 293 N85-16006

Collision avoidance for Naval training aircraft [FAA-PM-84-4] p 410 N85-21136

TCAS II: Design and validation of the high-traffic-density surveillance subsystem [DOT/FAA/PM-84/5] p 489 N85-22375

Analyses of estimation algorithms for CDTI and CAS applications
[NASA-CR-172444] p 805 N85-22287

An analysis of the impacts of the Airport Radar Service Area (ARSA)
[AD-A150954] p 469 N85-23749

Helicopter user survey: Traffic alert and collision avoidance system (TCAS)
[FAA-PM-85-6] p 587 N85-25236

Aircraft accident report: United Airlines Flight 663, Boeing 727-222, N7647U, Denver, Colorado, May 31, 1984
[PB85-910405] p 565 N85-26886

Traffic alert and collision avoidance system: Operational simulation
[FAA-PM-85-10] p 750 N85-29841

System safety study of minimum TCAS 2 for instrument weather conditions
[FAA-PM-85-12] p 620 N85-33113

COLLISIONS

Aircraft accident report. Scandinavian Airlines System, Flight 901, McDonnell Douglas DC-10-30, John F. Kennedy International Airport, Jamaica, New York, February 28, 1984
[PB84-910415] p 149 N85-13798

COLLOCATION

Application of a new type of pole collocation equations to designing the control law of a bi-input-multi-output system p 804 A85-43240

COLOR

A systematic program for the development and evaluation of airborne color display systems
p 655 A85-38952

Airborne electronic color displays - A review of UK activity since 1981 p 656 A85-38953

Color CRT in the F-15 p 656 A85-38954

Peripheral vision displays: The future
p 24 N85-10058

Pictorial format display evaluation
[AD-A148252] p 348 N85-18968

Electronic displays: Their strengths and weaknesses for advanced high performance aircraft
p 349 N85-18664

Proceedings of the 6th Advanced Aircrew Display Symposium
[AD-A150044] p 419 N85-21180

A general area air traffic controller simulation using colour graphics
[AD-A153634] p 645 N85-28833

The development and evaluation of color display systems for airborne applications. Phase 1: Fundamental visual, perceptual, and display system considerations
[FAA/PM-85-19] p 887 N85-33700

COLOR CODING

Flow visualization using computer-generated color video displays of flow field survey data p 900 A85-47099

COMBAT

Validation of zero-order feedback strategies for medium-range air-to-air interception in a horizontal plane
p 70 A85-13702

Calculation of the exchange ratio for the Adaptive Maneuvering Logic program
[AIAA PAPER 85-0211] p 199 A85-19858

Insights into helicopter air combat maneuverability
p 493 A85-31957

Design considerations for helicopter effectiveness in air-to-air combat p 482 A85-31966

Eccentric two-target model for qualitative air combat game analysis
[AIAA PAPER 83-2122] p 535 A85-32782

A missile duel between two aircraft
p 703 A85-39563

Propulsion influences on air combat
[AIAA PAPER 85-1457] p 651 A85-36789

Dynamics of helicopter air combat
[DGLR PAPER 84-124] p 801 A85-40337

Helicopter air-to-air from the R&D perspective
p 708 A85-40536

Development of a simulator facility for helicopter air-to-air combat
[AIAA PAPER 85-1733] p 780 A85-42862

A modern air combat dome visual system
[AIAA PAPER 85-1747] p 780 A85-42865

Optimal fuselage aiming — of fighter aircraft-mounted guns
[AIAA PAPER 85-1961] p 811 A85-45845

Modeling combat maintenance operations
p 866 A85-49571

Modeling aircraft combat damage repair
p 866 A85-49576

HH-60D night hawk helicopter p 161 N85-14817

Computer sizing of fighter aircraft
[NASA-TM-86351] p 203 N85-16759

Evaluation of nose, roof, and mast mounted sensor platforms for piloting and sighting, integrated in future combat helicopters p 260 N85-16806

The design and development of an integrated core system for battlefield helicopters p 260 N85-16811

Air combat visual simulation using a head slaved projector
[AD-P004327] p 269 N85-17981

Binocular overlap in a fiber optic helmet mounted display
[AD-P004331] p 348 N85-17985

Air combat simulation: Methods, models, trends
p 468 N85-22359

Piloted simulation of one-on-one helicopter air combat at NOE flight levels
[NASA-TM-86686] p 586 N85-26720

The STOL and maneuver technology program integrated control system p 591 N85-26737

Design and implementation of input signals for identification of pilot/aircraft models
[ESA-TT-850] p 752 N85-31055

COMBINATORIAL ANALYSIS

Combinational performance/cost analysis of an autonomous navigation system for aircraft
p 388 N85-26840

COMBINED STRESS

Snap-through of initially buckled beams under uniform random pressure p 51 A85-12430

Strength analysis of aircraft structures by the step method under conditions of physical nonlinearity
p 183 A85-17071

Hygrothermally curvature stable laminates with tension-torsion coupling p 787 A85-43224

COMBUSTIBLE FLOW

Examining the validity of a combustor flow model with LDV
[AIAA PAPER 85-0085] p 209 A85-19487

Spectral methods for modeling supersonic chemically reacting flow fields
[AIAA PAPER 85-0302] p 218 A85-19651

An experimental investigation of an unsteady combusting flow in a pulse combustor
[AIAA PAPER 85-0322] p 291 A85-20885

A study of the pulsation driving mechanism in pulsating combustors p 368 A85-25477

Numerical study of a ramjet dump combustor flowfield
p 382 A85-29080

Implicit/explicit analysis of interactive phenomena in supersonic, chemically-reacting, mixing and boundary layer problems
[AIAA PAPER 85-1717] p 790 A85-40795

A more modern theory of combustion noise
p 916 A85-47309

Combustion hot section technology
p 32 N85-10961

Aerothermal modeling p 32 N85-10962

Aerothermal modeling program p 32 N85-10963

Dilution zone mixing studies p 33 N85-10964

Error reduction program — combustor performance evaluation codes
[NASA-CR-174776] p 610 N85-27584

COMBUSTION

Variable inlet vane assembly for a gas turbine combustion
[AD-D011220] p 27 N85-10083

Turbine Engine Hot Section Technology (HOST)
[NASA-TM-83022] p 28 N85-10951

Procedural aspects of testing aerodynamic models with combustion in high-enthalpy transient-mode installations
p 186 N85-14858

High pressure combustion test facility for gas turbine research
[NAL-TR-801] p 360 N85-19065

COMBUSTION CHAMBERS

Internal flows of relevance to gas-turbines
p 49 A85-11825

Energy characteristics of the combustion chambers of an aircraft engine when operating on natural gas
p 26 A85-11839

The fuel property/flame radiation relationship for gas turbine combustors p 111 A85-15350

Liquid-fueled ramjets
[ONERA, TP NO. 1984-112] p 111 A85-15832

Analysis of the effect on combustor noise measurements of acoustic waves reflected by the turbine and combustor inlet
[AIAA PAPER 84-2323] p 198 A85-16103

Examining the validity of a combustor flow model with LDV
[AIAA PAPER 85-0085] p 209 A85-19487

Calculation of confined swirling flows
[AIAA PAPER 85-0060] p 285 A85-19491

Computation of recirculating compressible flow in axisymmetric geometries
[AIAA PAPER 85-0185] p 286 A85-19575

Some improvements on an annular combustor of AI type turbojet engine p 264 A85-20235

Swirling flow in a research combustor
p 283 A85-21883

Analytical prediction of the thermal state of flight vehi engine chambers with internal film cooling under condi of pulsed operation p 380 A85-23

The effect of the operating parameters on t temperature field of gas flow behind a system of rad stabilizers p 380 A85-23

A study of the stability of combustion in a sta straight-flow combustion chamber p 350 A85-240

A study of the structure of the primary zone of cylindric combustion chambers p 351 A85-240

A experiment method to determine the air distribut of the holes along the flametube of gas turb combustor p 351 A85-252

A study of the pulsation driving mechanism in pulsati combustors p 368 A85-2547

Determination of liquid-fuel prevaporization an premixing in gas-turbine combustion chambers — Germ thesis p 443 A85-2878

Calculation of the disturbance to combustion chamb film cooling due to air injection through a row of jets
p 420 A85-290

Effects of an S-inlet on the flow in a dump combustor
p 382 A85-293

The control of annular combustor exit temperatu profiles p 421 A85-293

Numerical simulation of cold flow in an axisymmetric centerbody combustor p 507 A85-328

Design and performance evaluation of a two-phase variable geometry turbofan combustor
p 580 A85-340

Radiative transfer in a gas turbine combustor
[AIAA PAPER 85-1072] p 658 A85-376

Dynamic gas temperature measurement system
p 684 A85-377

The structure of the application software pack RAFIN for the analysis of physical processes in combustio chambers p 661 A85-3812

Flame radiation and linear heat transfer in a tubular-c combustor p 663 A85-382

Experiments in dilution jet mixing - Effects of multip rows and non-circular orifices
[AIAA PAPER 85-1104] p 664 A85-308

Combustion instability sustained by unsteady vorte combustion
[AIAA PAPER 85-1248] p 689 A85-396

Numerical solutions of ramjet nozzle flows
[AIAA PAPER 85-1270] p 631 A85-396

Advanced Floatwall combustor liner technolog eliminates TF30-P-100 transition duct fatigue crackin
[AIAA PAPER 85-1288] p 667 A85-3970

Comparison of advanced cooling concepts using col thermography — for high temperature-rise ga combustors
[AIAA PAPER 85-1289] p 667 A85-3970

Advanced liner-cooling techniques for gas turbi combustors
[AIAA PAPER 85-1290] p 667 A85-3970

Technology for the design of high temperature ris combustors
[AIAA PAPER 85-1292] p 668 A85-3970

Calculation of the flow in a dump combustor
[AIAA PAPER 85-1309] p 668 A85-3971

Small gas turbine combustor study - Fuel inject performance in a transpiration-cooled liner
[AIAA PAPER 85-1312] p 668 A85-39717

Application of 3-D aerothermal model and flo visualization technique to the combustor exit ga temperature study
[AIAA PAPER 85-1313] p 668 A85-3971

Application of system identification techniques t poststall combustor dynamics
[AIAA PAPER 85-1353] p 669 A85-3974

Combustion technology - A Navy perspective
[AIAA PAPER 85-1400] p 690 A85-3976

State of the art and research needs of pulsatin combustion
[ASME PAPER 84-WA/NCA-19] p 690 A85-3991

Combustors and their emission control technique
p 766 A85-4102

Impingement cooling of gas turbine components
p 767 A85-4178

A design technique for all sorts of gas turbi combustors p 768 A85-4178

Combustor development for FJR710/600 engine
p 768 A85-4179

Research and development on combustors fo advanced reheat gas turbine p 792 A85-4179

Thermal characteristics of gas turbine combustor in hig temperature operation p 792 A85-4179

Recent advances in vaporiser fuel injection technolog
p 768 A85-4179

Combustion efficiency of a premixed continuous flo combustor p 785 A85-4257

Future fundamental combustion research fo aeropropulsion systems
[AIAA PAPER 85-1398] p 771 A85-4287

Dispersion strengthened nickel for gas turbine applications p 786 A85-43132

The effect of direct heating on combustion efficiency of the chamber of jet engine in the simulation test on the ground p 835 A85-43689

Internal combustion engine combustion chamber process studies at NASA Lewis Research Center p 865 A85-45856

Combustion efficiency of a hydrogen-kerosene fuel in a straight-through channel p 836 A85-46221

Variable inlet vane assembly for a gas turbine combustor
[AD-D011220] p 27 N85-10083

Turbine Engine Hot Section Technology (HOST)
[NASA-TM-83022] p 28 N85-10951

Nonlinear structural and life analyses of a combustor liner p 29 N85-10955

Dynamic gas temperature measurement system p 29 N85-10958

Effects of surface chemistry on hot corrosion life: Overview p 32 N85-10980

Combustion hot section technology p 32 N85-10981

Aerothermal modeling p 32 N85-10982

Aerothermal modeling program p 32 N85-10983

Dilution zone mixing studies p 33 N85-10984

Combustion system for radiation investigations p 33 N85-10986

Validation of structural analysis methods using the in-house liner cyclic rigs p 33 N85-10987

Energy efficient engine component development and integration program
[NASA-CR-170034] p 33 N85-10990

Combined cycle ramjet engine
[AD-D011247] p 178 N85-14659

Verification of life prediction through component testing p 282 N85-15748

Analysis of sudden expansion flow in a two-dimensional duct with and without side-wall injection using the k-epsilon turbulence model p 371 N85-18282

Analytical fuel property effects: Small combustors, phase 2
[NASA-CR-1748[illegible]] p 365 N85-19175

Advanced liner-cooling techniques for gas turbine combustors
[NASA-TM-86952] p 397 N85-21115

Combustion research for gas turbine engines
[NASA-TM-86960] p 422 N85-21164

Energetical analysis of turbojet engine cycle p 506 N85-22825

Application of laser anemometry to jets in combustion chambers
[[illegible]-CO-210/83] p 531 N85-24253

Experiments in dilution jet mixing effects of multiple rows and non-circular orifices
[NASA-TM-86996] p 582 N85-25266

Analytical fuel property effects--small combustors
[NASA-CR-174738] p 582 N85-25709

Study of the primary zone of gas turbine hearths
[ONERA-RTS-22/3256-EY] p 583 N85-25719

Advanced High Pressure O2/H2 Technology
[NASA-CP-2372] p 586 N85-25962

Error reduction program — combustor performance evaluation codes
[NASA-CR-174776] p 610 N85-27584

Segmented zoned fuel injection system for use with a combustor
[AD-D011640] p 670 N85-27865

Predictions and measurements of isothermal flowfields in axisymmetric combustor geometries
[NASA-CR-174916] p 671 N85-27867

The role of surface generated radicals in catalytic combustion p 671 N85-27869

Future fundamental combustion research for aeropropulsion systems
[NASA-TM-87049] p 671 N85-27870

Reaction-bonded and fiber-reinforced SiC static and dynamic gas turbine components
[BMFT-FB-T-84-302] p 672 N85-27874

Multi-ducted inlet combustor research and development
[AD-A153753] p 673 N85-28946

Research test facility for evaporation and combustion of alternative jet fuels at high air temperatures
[AD-A153830] p 691 N85-29073

R and D activities of the Propulsion Division p 799 N85-32025

Flow modifying device
[NASA-CASE-LEW-13582-2] p 892 N85-35196

Development of advanced high-temperature heat flux sensors. Phase 2: Verification testing
[NASA-CR-174973] p 911 N85-35391

**COMBUSTION CONTROL**

Combustors and their emission control technique p 786 A85-41027

Energy efficient engine combustor test hardware detailed design report
[NASA-CR-167946] p 28 N85-10950

**COMBUSTION EFFICIENCY**

Energy characteristics of the combustion chambers of an aircraft engine when operating on natural gas p 26 A85-11839

Fuel effects on gas turbine combustion-liner temperature, pattern factor, and pollutant emissions p 26 A85-11964

Design and performance evaluation of a two-position variable geometry turbofan combustor p 580 A85-34005

Effects of heterogeneity of mixtures on gaseous emissions in premixed/prevaporized combustion p 793 A85-41800

Combustion efficiency of a premixed continuous flow combustor p 786 A85-42571

The effect of direct heating on combustion efficiency of the chamber of jet engine in the simulation test on the ground p 835 A85-43689

Combustion efficiency of a hydrogen-kerosene fuel in a straight-through channel p 836 A85-46221

Study of HTPB-based SOFRAM fuels
[FOA-C-20583-D3] p 437 N85-20150

The influence of fuel quality upon flame-tube temperature and flame radiation in a model gas-turbine primary zone
[K233] p 508 N85-22396

Influence of fuel properties on gas turbine combustion performance
[AD-A151484] p 596 N85-25448

The role of surface generated radicals in catalytic combustion p 671 N85-27869

**COMBUSTION PHYSICS**

A linearly correcting method of deviation function for considering the influence of pressure on the thermodynamic properties of combustion gas p 304 A85-20236

Radiative transfer in a gas turbine combustor
[AIAA PAPER 85-1072] p 656 A85-37682

The 'solution-large molecules' method for calculating the equilibrium composition of heterogeneous systems p 687 A85-39101

Numerical solutions of ramjet nozzle flows
[AIAA PAPER 85-1270] p 631 A85-39689

Combustion hot section technology p 32 N85-10981

Aerothermal modeling p 32 N85-10982

Aerothermal modeling program p 32 N85-10983

**COMBUSTION PRODUCTS**

delta function and generalized tables of thermodynamic properties for CnHm-air system combustion products p 43 A85-12358

An improved procedure for calculating the aerothermodynamic properties of a vitiated air test medium
[AIAA PAPER 85-0913] p 704 A85-37583

Critical assessment of thermophysical properties data of combustion gases for calculating the performance of gas turbine p 805 A85-41803

Combustion gas properties I-ASTM jet A fuel and dry air
[NASA-TP-2359] p 27 N85-10064

Heater block assembly for use in thermal oxidation testing of jet fuel
[AD-D011430] p 285 N85-17077

Study of deposition control using transpiration
[DE85-002339] p 373 N85-19376

Jet fuel instability mechanisms
[NASA-CR-175858] p 690 N85-28127

**COMBUSTION STABILITY**

Reheat buzz - An acoustically driven combustion instability
[AIAA PAPER 84-2321] p 41 A85-10966

An experimental investigation of an unsteady combusting flow in a pulse combustor
[AIAA PAPER 85-0322] p 281 A85-20865

A study of the stability of combustion in a small straight-flow combustion chamber p 350 A85-24000

Unstable combustion in the combustion chamber of a gas-turbine aircraft engine p 660 A85-39115

Fuel injection characterization and design methodology to improve lean stability
[AIAA PAPER 85-1183] p 684 A85-39644

Combustion instability sustained by unsteady vortex combustion
[AIAA PAPER 85-1248] p 688 A85-39676

State of the art and research needs of pulsating combustion
[ASME PAPER 84-WA/NCA-19] p 690 A85-39913

An experimental investigation of combustion pressure oscillations in solid fuel ramjets
[AD-A144870] p 43 N85-10147

Chemistry of fuel deposits and sediments and their precursors
[NASA-CR-174778] p 44 N85-10209

Radiation/catalytic augmented combustion
[AD-A148[illegible]58] p 364 N85-18101

**COMMAND AND CONTROL**

Multi-input/multi-output controller design for longitudinal decoupled aircraft motion p 114 A85-13633

Pilot command interfaces for discrete control of automated nap-of-earth flight
[AIAA PAPER 84-2621] p 172 A85-17859

Application of modern control to bank-to-turn guidance using digital simulation p 423 A85-28608

NATCS - Navigation Aided Target Control System for multiple drone applications p 642 A85-37803

Worldwide airborne command post switching and telecommunication system - Present and future p 823 A85-45134

**COMMERCE**

Attempt to regulate restrictive commercial practices in the field of air transportation within a transnational antitrust legal and institutional framework p 539 A85-30999

Foreign civil aviation competition: 1976 summary and implications
[NASA-TM-X-73907] p 1 N85-10907

International airport study: How to improve the effect of airports on trade and on export-related industries
[PB85-124923] p 429 N85-19992

**COMMERCIAL AIRCRAFT**

Data communications and teleprocessing systems on ground and on board of aircraft p 15 A85-12533

Demonstration of relaxed static stability on a commercial transport p 35 A85-12593

Using satellites to improve civilian aircraft surveillance coverage
[AIAA PAPER 84-2405] p 91 A85-13512

Propulsion technology projections for commercial aircraft
[AIAA PAPER 84-2446] p 108 A85-13536

Comparison of model and full scale inlet distortions for subsonic commercial transport inlets
[AIAA PAPER 84-2487] p 74 A85-13562

Hardware design techniques — systems integration for civil and military aircraft avionics p 244 A85-21450

Integrated communications - A designers view — for civil and military aircraft avionics p 245 A85-21462

Cockpit technology in a modern commercial aircraft p 341 A85-25510

Introduction into commercial service for electronic controls used on large turbofan engines
[SAE PAPER 841507] p 352 A85-25962

Technology and the market place - A changing air transport equation
[SAE PAPER 841545] p 312 A85-25983

Civil turbofan engines p 353 A85-26274

Aircraft engineering design - Design engineer's problems are now; Proceedings of the Aerospace Engineering Conference and Show, Los Angeles, CA, February 12-14, 1985
[AIAA PAPER 85-0847] p 341 A85-26305

Advanced composites p 433 A85-26849

A new era in commercial aircraft flight management p 382 A85-27448

The evolution of Shorts range of light transport aircraft p 412 A85-27450

Investigation of modern flight-control problems with regard to minimal fuel consumption, with consideration of arrival-time limitations, air-traffic density, and onboard real-time computation — German thesis p 409 A85-28794

JVX design update p 496 A85-31999

The closed-loop air-cycle option for equipment cooling on aircraft
[SAE PAPER 840940] p 570 A85-33752

Reynolds number and fan/inlet coupling effects on subsonic transport inlet distortion p 544 A85-34011

The history and evolution of aeronautical meteorology p 608 A85-35957

Techniques for accommodating control effector failures on a mildly statically unstable airplane p 584 A85-35982

Flight systems of future commercial aircraft p 587 A85-36426

Examination of fire safety of commercial aircraft cabins p 639 A85-37693

Costs and tariff levies in air transportation p 705 A85-37950

The ARINC 704 ring laser gyro Inertial Reference System p 643 A85-38526

Commercial aviation GPS Navigation Set architecture p 644 A85-38538

Aerodynamic test results for a wing-mounted turboprop propulsion installation
[SAE PAPER 841480] p 627 A85-39060

Repairing commercial aircraft jet engine nacelle composite structures
[SAE PAPER 841567] p 616 A85-39088
Prospects and problems of advanced open rotors for commercial aircraft
[AIAA PAPER 85-1191] p 685 A85-39849
Coordination of different types of air traffic
p 707 A85-40294
New configurations and their contribution to the reduction of commercial-aircraft operating costs
[DGLR PAPER 84-081] p 707 A85-40301
Aerodynamic-design trends for commercial aircraft
[DGLR PAPER 84-082] p 709 A85-40302
Wind-tunnel technology for the development of future commercial aircraft
[DGLR PAPER 84-127] p 778 A85-40340
Requirements for future aircraft programs from the perspective of an airline company in international competition p 706 A85-40346
Air transport development ventures
[SAE PAPER 841628] p 708 A85-40537
Commuter airlines - The manufacturer's viewpoint
p 745 A85-41337
Dash 8 - Made for the new commuter market
p 756 A85-41531
Gulfstream - Versatility through concentration
p 756 A85-41539
A new proposal for the reform of commercial air crash litigation p 863 A85-44096
Aeronautical satellite data link study
p 855 A85-45340
Advanced systems for the Gulfstream IV
[SAE PAPER 850900] p 885 A85-50117
Energy efficient engine component development and integration program
[NASA-CR-170034] p 33 N85-10990
USSR report: Transportation
[JPRS-UTR-84-028] p 72 N85-12002
Commercial aircraft noise
[PNR-90206] p 135 N85-12986
Aircraft navigation and landing technology: Status of implementation
[GPO-38-615] p 97 N85-12983
Airport activity statistics of certificated route air carriers
[AD-A148472] p 243 N85-16846
Design of a digital ride quality augmentation system for commuter aircraft
[AD-A148233] p 271 N85-16879
Study of advanced fuel system concepts for commercial aircraft and engines
[NASA-CR-174752] p 366 N85-19176
Study of advanced fuel system concepts for commercial aircraft
[NASA-CR-174751] p 415 N85-19978
Minister Bugayev on civil aviation in 1984, plans for 1985 p 468 N85-23689
Minister Bugayev reviews 1983 civil aviation work, sets course for 1984 p 468 N85-23695
Bugayev on civil aviation ministry's 1983 achievements p 468 N85-23696
Ilyushin bureau designer on fuel conservation research
p 564 N85-25231
Calculation and display of stack departure times for aircraft inbound to Heathrow Airport
[AD-A151991] p 588 N85-25241
Demonstration of relaxed stability on a commercial transport p 580 N85-26745
Realisation of relaxed static stability on a commercial transport p 580 N85-26746
Demonstration of relaxed static stability on a commercial transport p 679 N85-27898
Realisation of relaxed static stability on a commercial transport p 679 N85-27899
U.S. Civil airmen statistics for calendar year 1984
[AD-A156326] p 896 N85-35153

**COMMONALITY**
Common modular avionics - Partitioning and design philosophy
[AIAA PAPER 84-2745] p 184 A85-17886

**COMMUNICATION EQUIPMENT**
An adaptive airborne VLF communications array concept
[AIAA PAPER 84-2686] p 151 A85-17870
Maintenance test requirements of spread spectrum CNI systems — Communications-Navigation Identification
p 407 A85-26806
Worldwide airborne command post switching and intercommunication system - Present and future
p 823 A85-45134

**COMMUNICATION NETWORKS**
Operational air traffic control requirements for the new Voice Switching and Control System
[AIAA PAPER 84-2435] p 92 A85-13530
Applications of air-ground-air digital communication system ACARS/AIRCOM
[AIAA PAPER 84-2604] p 150 A85-17807
Test experience on an ultrareliable computer communication network
[AIAA PAPER 84-2649] p 194 A85-17836
New generation military tactical airborne communications systems - The interoperability challenge
p 244 A85-19275
Geostar - A multi-purpose satellite system to serve civil aviation needs p 486 A85-32465
Communication in automated air-traffic-control systems — Russian book p 644 A85-39847
The switched network approach to high speed communications p 822 A85-44894
Evolution of a 100 Mbps fiber optic serial data bus for aerospace applications p 862 A85-44896
Worldwide airborne command post switching and intercommunication system - Present and future
p 823 A85-45134
Aeronautical satellite data link study
p 855 A85-45340
A fault and damage tolerant network for an advanced transport aircraft p 886 A85-47760
Design and specification of a local area network architecture for use in real-time flight simulation
[AD-A152242] p 584 N85-26762

**COMMUNICATION SATELLITES**
The Geostar Satellite Navigation and Communications System p 94 A85-14829
Airborne Communications Restoral/Relay
p 487 A85-32232
Satellite communication performance evaluation model for aircraft systems p 566 A85-34490
Aeronautical satellite data link study
p 855 A85-45340
Technical evaluation report on the 48th Symposium of the Avionics Panel on Space System Applications to Tactical Operations
[AGARD-AR-203] p 346 N85-18989

**COMMUNITIES**
Test of dispersal of turbojet aircraft departure tracks at washington National Airport (1983-84), volume 1 report
[AD-A148111] p 306 N85-17669

**COMPACTING**
Modification of titanium powder metallurgy alloy microstructures by strain energizing and rapid omni-directional compaction p 596 A85-35524

**COMPARISON**
Predicted turbine stage performance using quasi-three-dimensional and boundary-layer analyses
p 580 A85-34013
Comparison of uniform perturbation solutions and numerical solutions for some potential flows past slender bodies
[NASA-CR-172485] p 147 N85-14799
Analysis of the flow field about a T-46 using PANAIR
[AD-A148811] p 236 N85-15689

**COMPATIBILITY**
Deployable Core Automated Maintenance System (DCAMS)
[AD-A153686] p 706 N85-29839
Determination of instrument errors by compatibility checking: Results from dynamic flight test data
[ARL/AERO-R-162] p 889 N85-34137

**COMPENSATORS**
Design of compensation schemes for a nonminimum-phase multivariable plant
p 458 A85-28810
Design of the robust flight control system by realizable linear compensator
[AIAA PAPER 85-1887] p 844 A85-45813
Design of a pitch orientation control system for aircraft control in stall region p 883 A85-47701
Multivariable flight control with time-scale separation
[NASA-CR-174320] p 266 N85-16873
Flight control system reconfiguration design using quantitative feedback theory
[AD-A151771] p 587 N85-26722

**COMPENSATORY TRACKING**
Digital homing guidance - Stability vs performance tradeoffs p 406 A85-26440
Sensitivity reduction and robust tracking with application to aircraft control p 513 A85-33283
Toward a unifying theory for aircraft handling qualities
p 651 A85-38654

**COMPLEX SYSTEMS**
Analyses and syntheses of radio-electronic complexes — Russian book p 124 A85-14631
Development tools - Case study for large systems — of digital avionics
[AIAA PAPER 84-2635] p 193 A85-17826
Theory of vibration conduction as a method for calculating the vibration of complex structures
p 287 A85-20454

**COMPONENT RELIABILITY**
Fatigue reliability of gas turbine engine compo under scheduled inspection maintenance
p 507 A85-3
Redundancy management in strapdown naviga systems p 644 A85-3
Usage monitoring - A milestone in engine management
[AIAA PAPER 85-1206] p 686 A85-3
A reliability and survivability assessment tool fault-tolerant integrated radio systems
p 834 A85-4
Engine cyclic durability by analysis and mat testing p 267 N85-15
A practical example of reducing life cycle costs increased availability p 296 N85-16
Reliability predictions for military avionics. Royal Sign and Radar Establishment reliability prediction method 250
[BR96221] p 505 N85-22
Current transmission systems p 510 N85-22
Establishment and maintenance of certifica standards for helicopter and turboprop power transmis systems p 503 N85-22
Estimate of fatigue stability of gas-turbine eng compressor vanes in probabilistic aspect
p 530 N85-24
High pressure compressor component performan report
[NASA-CR-168245] p 891 N85-34

**COMPOSITE MATERIALS**
Strengthening the study on the usability of adv materials p 42 A85-12
An equivalent strength method for optimum design composite laminates p 51 A85-12
High temperature ducts - A composite alternative
[AIAA PAPER 84-2519] p 70 A85-13
Aero engine components in composite materials - 2 years' experience p 111 A85-15
Europeans using composites, ceramics for rotorcr engine improvements p 263 A85-20
Fabrication and assembly of composite rear fusel (CRF) tooling and manufacturing for the UH helicopter p 200 A85-21
Composite curved frames for helicopter fusela structure p 252 A85-21
The all-composite airframes p 252 A85-21
Skirt material effects on air cushion dynamic heav stability p 307 A85-21
High performance composite materials: Ne applications and industrial production; Proceedings of th Fourth International Conference and Exhibition, Bordea France, October 17-20, 1983 p 362 A85-24
Use of high performance composite materials in mod aircraft structures p 341 A85-24
Propellers for the future p 353 A85-25
Applied composites - Aircraft structural applicati Proceedings of the Aerospace Engineering Confere and Show, Los Angeles, CA, February 12-14, 1985
[AIAA PAPER 85-0646] p 312 A85-26
Composite airframe production implementation
p 312 A85-26
Advanced composites p 433 A85-28
Recent advances in experimental characterization o composites; Proceedings of the Fall Meeting, Salt La City, UT, November 6-10, 1983 p 435 A85-30
Advanced methodology for quality control of composi rotor blades at Bell Helicopter Textron
p 525 A85-31
Integrated CADCAM - An approach for advanc composite primary aircraft structure p 703 A85-37
Development in UK rotor blade technology
p 615 A85-38
Recent advances in research and applications o composite materials in aerospace structures
p 784 A85-41
Engine materials p 784 A85-41
Structural plastics in sporting and general aviat aircraft p 885 A85-46
Weight control of composite parts in production
[SAWE PAPER 1629] p 886 A85-46
Advanced manufacturing development of a composi empennage component for L-1011 aircraft
[NASA-CR-165885] p 44 N85-11
All-composite Airbus empennage p 284 N85-15
Advances in composites technology
[NASA-TM-86353] p 284 N85-17
Composite structure repair, addendum
[AGARD-R-716-ADD] p 284 N85-17
Repair of composites p 284 N85-17
Composite repair of aircraft structures
p 285 N85-17
High-strength composite materials for aircraft, bod armor p 436 N85-20
Composite structural materials
[NASA-CR-175615] p 437 N85-21

Finger materials for air cushion vehicles. Volume 2: Base fabrics for finger materials
[AD-A149701] p 448 N85-21408
Research Reports: 1984 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-171317] p 462 N85-22210
Simple theoretical models for composite rotor blades
[NASA-CR-175820] p 499 N85-22382
Uses of composite materials p 520 N85-22686
Some optimization problems in static aeroelasticity for wings made of composite materials p 503 N85-24104
Recent developments in the dynamics of advanced rotor systems
[NASA-TM-86669] p 531 N85-24320
West Europe report: Science and technology
[JPRS-WST-84-012] p 601 N85-25552
MBB uses new CFC form tool for titanium alloy air intake p 601 N85-25563
Friction and wear behavior of aluminum and composite I-beam stiffened airplane skins
[NASA-TM-86418] p 652 N85-27652
Structural Analysis
[DFVLR-MITT-84-21] p 701 N85-29313
Impact dynamics research on composite transport structures
[NASA-TM-86391] p 797 N85-30367
R and D programmes at the National Aeronautical Laboratory
[AR-22] p 807 N85-32022
R and D activities of the Materials Science Division
p 788 N85-32024
New materials needs in aeronautics
[SNIAS-851-502-101] p 831 N85-33120
COMPOSITE STRUCTURES
Fatigue life prediction - Metals and composites
p 42 A85-11752
Divergence speed degradation of forward-swept wings with damaged composite skin p 16 A85-11998
Composite flexbeam tail rotor practical
p 1 A85-12082
A case study - Integrated design/analysis of an advanced composite fin assembly
[AIAA PAPER 84-2394] p 122 A85-13505
The design evolution of an advanced composite translating cowl
[AIAA PAPER 84-2523] p 101 A85-13585
Inspection and repair of advanced composite airframe structures for helicopters p 70 A85-14047
Non-destructive testing of aircraft composite structures p 123 A85-14107
Development of resins for damage tolerant composites - A systematic approach p 118 A85-14167
Design and fabrication of crashworthy composite external fuel tanks p 104 A85-15830
A survey of reported weight and cost savings for composite vs. metal airframes
[SAWE PAPER 1547] p 160 A85-18814
Measurements of the response of transport aircraft ceiling panels to fuel pool fires
[AIAA PAPER 85-0394] p 240 A85-19720
Composite structures; Proceedings of the National Specialists' Meeting, Philadelphia, PA, March 23-25, 1983 p 281 A85-21376
K747 composite main rotor blade modification, analyses and qualification for new high temperature requirements
p 251 A85-21378
Design, fabrication and verification of composite flexbeam tail rotor for AH-64 Apache helicopter
p 251 A85-21379
Development of a graphite/polyimide composite transmission housing p 281 A85-21380
Sikorsky composite rotor hub development
p 251 A85-21381
Tooling problems in the manufacture of AH-64 Composites Flexbeam Tail Rotor p 200 A85-21382
Ground test experience with large composite structures for commercial transports p 251 A85-21383
Structural analysis and testing of ACAP subcomponents — Advanced Composite Airframe Program
p 251 A85-21384
Advanced-composite joints and fittings for primary structural components p 290 A85-21385
Crashworthiness of helicopter composite structures
p 251 A85-21386
Advanced composites - Designed to survive — helicopter safety in modern battlefield p 251 A85-21387
Environmental effects and durability evaluation of advanced composite fuselage structures
p 251 A85-21388
Flexible matrix composites applied to bearingless rotor systems p 281 A85-21389
Utilization of analytical equipment in design and process problems solution and failure analysis of composites
p 281 A85-21390
Kevlar aramid fibers vs other fibers for reinforcement of composite structures p 292 A85-21392
Universal matrices to obtain thermal load vectors for the family of anisotropic plane triangular finite elements
p 291 A85-22232
Innovation in aircraft structures - Fifty years ago and today p 311 A85-23180
Crash energy absorption properties of composite structural elements p 362 A85-24815
The effect of acoustic/thermal environments on advanced composite fuselage panels
p 445 A85-29251
A synthesizing procedure for transient temperatures in composed structures
[AIAA PAPER 85-0630] p 523 A85-30319
Influence of warpage on composite aeroelastic theories
[AIAA PAPER 85-0710] p 491 A85-30359
Environmental and structural assessment of four year in-commercial service composite helicopter structures
p 483 A85-31956
Designing for a crashworthy all-composite helicopter fuselage p 483 A85-31960
Delamination control of composite rotor hubs
p 519 A85-31962
A design methodology for a compliant matrix composite bearingless main rotor p 496 A85-31996
Aeroelastic stability analysis of a composite rotor blade p 496 A85-32847
Factory automation for composite structures manufacturing p 526 A85-33007
Fasteners for composite structures examined
p 682 A85-37074
Repair procedures for composite sinewave substructure p 686 A85-37380
Improved resins for wet layup repair of advanced composite structure p 686 A85-37381
An overview of structural repair adhesives
p 686 A85-37407
Repairing commercial aircraft jet engine nacelle composite structures
[SAE PAPER 841587] p 616 A85-39058
Assessment of damage tolerance in composites
p 688 A85-39598
Damage tolerance of composite cylinders
p 688 A85-39600
The 'Spheriflex' - A new rotor-hub concept
p 755 A85-40920
Stress analysis of a SPF/DB composite sandwich panel p 792 A85-41121
Static test techniques for composite airframe structures developed on the U.S. Army/Sikorsky ACAP
p 759 A85-43222
Acoustic emission monitoring of flaw growth in a graphite-epoxy experimental wing segment
p 907 A85-48084
Aspects of certification of civil aircraft structures in composite materials p 865 A85-48570
The first British designed and built composite sailplane
p 865 A85-48573
Manufacture of composite propeller blades for commuter aircraft
[SAE PAPER 850875] p 910 A85-50106
The structural dynamics of Electro-Impulse De-icing on the Lear Fan Kevlar Composite leading edge
[SAE PAPER 850917] p 885 A85-50127
Effect of stress concentrations in composite structures
[NASA-CR-173976] p 44 N85-11140
Solvent resistant thermoplastic composite matrices
p 120 N85-12980
Composite fracture toughness and impact characterization p 120 N85-12983
Full-scale testing, production and cost analysis data for the advanced composite stabilizer for Boeing 737 aircraft. Volume 1: Technical summary
[NASA-CR-3849] p 179 N85-13912
Design, ancillary testing, analysis and fabrication data for the advanced composite stabilizer for Boeing 737 aircraft. Volume 1: Technical summary
[NASA-CR-3848] p 179 N85-13913
Design, ancillary testing, analysis and fabrication data for the advanced composite stabilizer for Boeing 737 aircraft, volume 2
[NASA-CR-166011] p 179 N85-13914
Full-scale testing, production and cost analysis data for the advanced composite stabilizer for Boeing 737 aircraft, volume 2
[NASA-CR-166012] p 179 N85-13915
Verification of a computer program for vibration analysis of composite wing cores
[NAL-TR-825] p 190 N85-15167
Composite structure repair, addendum
[AGARD-R-716-ADD] p 284 N85-17057
Design, fabrication and test of composite curved frames for helicopter fuselage structure
[NASA-CR-172438] p 574 N85-25247
Expedient runway surfacing with post tensioning system for expeditionary airfields
[AD-D011677] p 761 N85-29876
Automated fabrication of composite structures for helicopters
[SNIAS-851-210-104] p 761 N85-31049
COMPOSITE WRAPPING
Continuous filament wound composite concepts for aircraft fuselage structures
[AIAA PAPER 84-0869] p 411 A85-26764
COMPOSITION (PROPERTY)
Compound class quantitation of JP-5 jet fuels by high performance liquid chromatography-differential refractive index detection
[AD-A145754] p 120 N85-12185
COMPOUNDING
Milling of Si3N4 with Si3N4 hardware
[NASA-TM-86864] p 43 N85-10191
COMPRESSED AIR
An experimental study of the start-up of a gas turbine engine by means of compressed air and an electric starter p 51 A85-11842
Performance of a new nose-lip hot-air anti-icing concept
[AIAA PAPER 85-1117] p 664 A85-39614
COMPRESSED GAS
Internal hysteresis experienced on a high pressure syn gas compressor p 187 N85-14122
COMPRESSIBILITY
Compressible lifting surface theory for propeller performance calculation p 143 A85-16508
Investigations into the effects of scale and compressibility on lift and drag in the RAE 5m pressurized low-speed wind tunnel p 236 N85-16773
New discovery in supersonic flight research
p 314 N85-18041
COMPRESSIBILITY EFFECTS
Investigations into the effects of scale and compressibility on lift and drag in the RAE 5m pressurised low-speed wind tunnel p 592 A85-34999
Flutter parametric studies of cantilevered twin-engine-transport type wing with and without winglet. Volume 1: Low-speed investigations
[NASA-CR-172410-VOL-1] p 129 N85-13269
Investigations into the effects of scale and compressibility on lift and drag in the RAE 5m pressurised low-speed wind tunnel
[RAE-TM-AERO-2006] p 477 N85-22372
COMPRESSIBLE BOUNDARY LAYER
Measurement of the development of the boundary layer in the annulus walls of a fourstage compressor
[CUED/A-TURBO-TR-121] p 52 N85-10299
COMPRESSIBLE FLOW
A note on the instability of columnar vortices
p 46 A85-10360
Choking phenomena in multiflow nozzles with and without viscosity effects p 3 A85-10540
Acoustic pressures emanating from a turbomachine stage
[AIAA PAPER 84-2325] p 4 A85-10870
A time-split finite-volume algorithm for three-dimensional flowfield simulation p 73 A85-12706
Exact solution of compressible potential flow past a body of revolution at zero incidence - Especially for high subsonic flow p 144 A85-18528
Spectral methods for the Euler equations. I - Fourier methods and shock capturing p 185 A85-18884
An incremental block-line-Gauss-Seidel method for the Navier-Stokes equations
[AIAA PAPER 85-0033] p 207 A85-19470
Calculation of compressible potential flow about multielement airfoils using a finite field-panel approach
[AIAA PAPER 85-0038] p 207 A85-19473
Flows over low Reynolds number airfoils - Compressible Navier-Stokes numerical solutions
[AIAA PAPER 85-0107] p 210 A85-19523
Numerical solution of the Euler equations for high-speed, blended wing-body configurations
[AIAA PAPER 85-0123] p 211 A85-19534
Numerical solution of unsteady viscous flow past rotor sections
[AIAA PAPER 85-0129] p 212 A85-19540
A study of compressible turbulent free shear layers using laser Doppler velocimetry
[AIAA PAPER 85-0177] p 213 A85-19569
Computation of recirculating compressible flow in axisymmetric geometries
[AIAA PAPER 85-0186] p 286 A85-19575
A new singular integral method for compressible potential flow
[AIAA PAPER 85-0481] p 225 A85-19776
Computation of transonic inlet flows — German thesis
p 227 A85-19844
Matrix solution of compressible flow on S(1) surface through a turbomachine blade row with splitter vanes or tandem blades p 227 A85-20228

Flowfield analysis of low bypass ratio test cells
p 285 A85-21829
Calculation of friction and heat transfer in turbulent flow of a compressible gas in a plane duct
p 291 A85-22114
Implicit upwind methods for the compressible Navier-Stokes equations p 317 A85-25134
Hybrid approach to steady transonic normal shock-compressible laminar boundary layer interactions over airfoils with suction
[AIAA PAPER 85-0522] p 386 A85-27876
Finite element methods for first-order hyperbolic systems with particular emphasis on the compressible Euler equations p 446 A85-30216
An assessment of numerical solutions of the compressible Navier-Stokes equations
p 525 A85-32582
Nonlinear conical flow -- Book p 544 A85-34273
An aerodynamic theory based on time-domain aeroacoustics p 546 A85-35135
Triangular finite element methods for the Euler equations p 601 A85-36414
Numerical methods for the time dependent compressible Navier-Stokes equations p 583 A85-36415
A general theory of hybrid problems of fully 3-D compressible potential flow in turbo-rotors. I - Axial flow, stream function formulation p 622 A85-37831
Shock/turbulent boundary-layer interaction in a compression corner
[AIAA PAPER 85-1567] p 711 A85-40662
Computational study of unsteady compressible flow around an airfoil by a block pentadiagonal matrix scheme
[AIAA PAPER 85-1682] p 718 A85-40774
Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method
[AIAA PAPER 85-1196] p 719 A85-40817
Prediction of the Reynolds stress in a compressor passage
[AIAA PAPER 85-1197] p 790 A85-40818
A Mach 2.0 plus supersonic inlet study using the Navier-Stokes equations
[AIAA PAPER 85-1211] p 720 A85-40820
Implicit boundary treatment for joined and disjoint patched mesh systems
[AIAA PAPER 85-1503] p 791 A85-40839
ICFD - Interdisciplinary Computational Fluid Dynamics
[AIAA PAPER 85-1522] p 785 A85-40854
Overset grids in compressible flow
[AIAA PAPER 85-1524] p 803 A85-40856
Finite element methods for high speed flows
[AIAA PAPER 85-1533] p 791 A85-40863
External compression inlet predictions using an implicit, upwind, multiple zone approach
[AIAA PAPER 85-1521] p 722 A85-40866
Recent tendency of flow field calculations with three-dimensional separation around high velocity vehicle p 723 A85-40982
A numerical study of spin effects on axisymmetric flow past a body of revolution
[AIAA PAPER 85-1805] p 724 A85-41402
Numerical analysis of aerodynamic characteristics of an aeroplane wing in compressible flow
p 725 A85-41606
The three-dimensional compressible flow in a radial inflow turbine scroll p 729 A85-41626
An interactive scheme for three-dimensional transonic flows p 737 A85-42862
Application of the method of quasi-continuous vorticity distribution over the skeleton surface for aeroplane wing design p 738 A85-43053
Computational technique for compressible vortex flows past wings at large incidence p 816 A85-45836
A computational study of complex three-dimensional compressible turbulent flowfields p 869 A85-46526
Measurement of the development of the boundary layer in the annulus walls of a fourstage compressor
[CUED/A-TURBO-TR-121] p 52 N85-10269
Inviscid compressible flow past a multi-element aerofoil p 236 N85-16776
Efficient self-consistent viscous-inviscid solutions for unsteady transonic flow
[NASA-TM-86335] p 329 N85-18859
Computations of two-dimensional airfoil-vortex interactions -- helicopter rotor flowfields
[NASA-CR-3885] p 479 N85-23709
Gasdynamic evaluation of choking cascade turns
[AD-A151854] p 603 N85-25776
Recent progress in computational aerodynamics
p 558 N85-26629
Supersonic flow around blunt wedge
p 626 N85-28158
On the evaluation of boundary layer measurements on boattailed bodies of revolution in axisymmetric compressible subsonic flow
[ESA-TT-883] p 798 N85-31471
Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method
[NASA-CR-174975] p 876 N85-35162

COMPRESSIBLE FLUIDS
High frequency properties in the unsteady linearized potential flow of a compressible fluid p 78 A85-14662
Variational principle for two dimensional flows of the compressible ideal fluid with incontinuous surfaces
p 980 A85-49704
Analysis of the surface load and radiated sound of a vibrating airfoil with application to the experiment of Brooks
[NASA-CR-3884] p 306 N85-18880

COMPRESSION LOADS
Crack growth retardation and acceleration models
p 126 A85-15662
The distortion of a supersonic turbulent boundary layer by bulk compression and surface curvature
[AIAA PAPER 85-0299] p 218 A85-18846
The weight reduction potential of advanced composites
[SAWE PAPER 1579] p 901 A85-48805

COMPRESSION TESTS
Filament winding of aircraft engine nacelle components p 175 A85-16050

COMPRESSOR BLADES
Computation of unsteady aerodynamic pressure coefficients in a transonic straight cascade. II
[ONERA, TP NO. 1984-118] p 80 A85-15626
Calculation and analysis of the three-dimensional flow in centrifugal compressor impellers p 228 A85-20231
Experimental investigation of backswept centrifugal compressor impeller. I p 284 A85-20243
A prediction research of rotating stall in axial compressors p 316 A85-24097
Compressor cascades research using a helium-driven shock tube p 318 A85-25457
Numerical simulation of unsteady flow in a compressor rotor cascade
[AIAA PAPER 85-0130] p 323 A85-26263
The nonlinear model for predicting rotating stall in multistage axial-flow compressors p 471 A85-31739
Probabilistic characteristics of the frequency spectrum of the natural vibrations of turbocompressor blades
p 526 A85-32758
A compatible mixed design and analysis finite element method for the design of turbomachinery blades
p 599 A85-34706
Probabilistic prediction of the fatigue life of the compressor blades of gas-turbine engines under two-level programmed loading p 688 A85-37367
Unsteady blade row interactions in a multi-stage compressor
[AIAA PAPER 85-1134] p 630 A85-39818
Axial-flow compressor stage post-stall analysis
[AIAA PAPER 85-1349] p 632 A85-39741
Development of computational flow analysis for blade rows p 727 A85-41813
Measurement of the radial flow along a low speed compressor blading during unstalled and stalled operation p 729 A85-41834
Analyses of cascade flutter as a multi-eigenvalue problem (on cascade composed of two groups of blades having different natural frequencies)
p 769 A85-41836
Slipping behavior and fretting fatigue in the disk/blade dovetail region p 770 A85-41852
Blade vibration on radial impellers excited by rotating stall-cells and during surge p 771 A85-41864
Optimization of cascade blade mistuning. I - Equations of motion and basic inherent properties
p 771 A85-42366
Some observations on circumferentially grooved casing treatment -- in compressors p 771 A85-42442
Jet engine blade repair at the Oklahoma Air Logistics Center, Propulsion Division
[AD-P004003] p 72 N85-11993
Annular groove in compressor casing as device for control of air stream p 509 N85-22632
Influence of surface roughness on compressor blades at high reynolds number in a two-dimensional cascade
[AD-A151866] p 603 N85-25777
Precision die forging of blades or gas turbines
p 672 N85-28146

COMPRESSOR EFFICIENCY
A study on configurations of casing treatment for axial flow compressors p 26 A85-10674
Experimental investigation of losses and secondary flow in an axial compressor stage p 524 A85-31007
A generalization of experimental data on heat trans
from the working medium to the housing component
the compressor of a gas-turbine engine
p 660 A85-381
Quantitative evaluation of transient heat transfer on axi
flow compressor stability
[AIAA PAPER 85-1352] p 687 A85-397
A consideration concerning stall and surge limitatio
within centrifugal compressors. II p 793 A85-41
Development of high specific speed centrifug
compressors for turbochargers p 793 A85-41

COMPRESSOR ROTORS
The role of forbidden signals and apparent Mach numb
in transonic compressor cascades p 5 A85-110
Computation of potential flow on S2 stream surface fo
a transonic axial-flow compressor rotor
p 315 A85-240
Numerical simulation of unsteady flow in a compress
rotor cascade
[AIAA PAPER 85-0130] p 323 A85-262
Noise bands associated with the turbulence-
interaction p 862 A85-44
Energy efficient engine component development an
integration program
[NASA-CR-170034] p 33 N85-10
Experimental on-stream elimination of resonant whirl
a large centrifugal compressor p 187 N85-141
Problems and possibilities for life extension in gas turbi
components p 287 N85-157
Investigation of gas-turbine engine blower impelle
vibrations with change in engine intake conditions
p 530 N85-241
Ceramic turbochargers: A case study of a near-te
application of high-strength ceramics
[DE85-008465] p 700 N85-280

COMPRESSORS
Kinetics of a gas adsorption compressor
p 438 A85-28
The use of countergravity casting for producin
compressor body castings of AK-7 alloy
p 441 A85-277
Numerical determination of detached internal flow wi
the example of a radial compression tunnel -- Germ
thesis p 443 A85-287
Conference on Fluid Machinery, 7th, Budapest, Hunga
September 13-16, 1983, Proceedings. Volumes 1 & 2
p 524 A85-307
Experimental investigation of a simulated compresso
airfoil trailing-edge flowfield p 474 A85-328
Procedure for the calculation of the characteristics o
axial, respectively radial, one or multistage thermal fl
machines, taking into consideration also the effect o
adjustable guide devices -- German thesis
p 598 A85-334
Configuration of a shock wave interacting with a centere
compression fan p 544 A85-343
Prediction of the Reynolds stress in a compressor
passage
[AIAA PAPER 85-1197] p 790 A85-408
Core compressor developments for large civil
engines p 788 A85-41
Measurement of the development of the boundary lay
in the annulus walls of a fourstage compressor
[CUED/A-TURBO-TR-121] p 52 N85-102
Energy efficient engine. High pressure compressor
detail design report
[NASA-CR-168669] p 36 N85-10
Development of a Beam linear engine-driven
heat-actuated heat pump
[DE84-016847] p 129 N85-131
Open-cycle vapor compression heat pump
[PB85-101475/GAR] p 186 N85-14
Verification of life prediction through component
testing p 282 N85-157
Turbo fluid machinery and diffusers
[NASA-TM-77487] p 298 N85-172
On one design principle of surge protector for gas turbin
engine compressor p 370 N85-182
New air supply-prime mover facility for engine te
detailed p 446 N85-203
Magnetically actuated compressor
[NASA-CASE-GSC-12799-1] p 448 N85-214
Annular groove in compressor casing as device fo
control of air stream p 509 N85-228
Automating the study of error in discrete aerodynamic
fairing design p 504 N85-2417
Solid state compressor
[AD-A150790] p 531 N85-243
An experimental study of aerodynamic dampi
characteristics of a compressor annular cascade in hig
speed flow and the visualization of annular cascade flo
[NAL-TR-836] p 602 N85-257
Testing of materials and coatings for jet engi
components under simulated operational conditions
[B8560073] p 672 N85-2787

Bladeless diffuser for gas turbine engine
[AD-D011682] p 672 N85-28843
Compressor and turbine models - numerical stability and other aspects
[AD-A152611] p 673 N85-28848
Nonlinear global stability analysis of compressor stall phenomena
[NASA-CR-174808] p 773 N85-29880
High pressure compressor component performance report
[NASA-CR-168245] p 891 N85-34136
Combined cold compressor/ejector helium refrigerator
[DE85-008408] p 910 N85-34326
COMPUTATION
Numerical optimization design of advanced transonic wing configurations
[AIAA PAPER 85-0424] p 246 A85-19739
Survey of ONERA activities on adaptive-wall applications and computation of residual corrections
p 82 N85-12813
An inviscid computational method for supersonic inlets
[AD-A149887] p 86 N85-12042
Mathematical modeling of the AEDC (Arnold Engineering Development Center) propulsion wind tunnel (16T)
[AD-A151298] p 583 N85-25275
Recent progress in computational aerodynamics
p 586 N85-26626
Error reduction program — combustor performance evaluation codes
[NASA-CR-174776] p 610 N85-27384
Heating parameter estimation using coaxial thermocouple gages in wind tunnel test articles
[AD-A153039] p 699 N85-28328
A method for computing the core flow in three-dimensional leading-edge vortices
[NASA-TM-87469] p 741 N85-29822
Research on optimal control, stabilization and computational algorithms for aerospace applications
[NASA-CR-172528] p 776 N85-29970
COMPUTATIONAL CHEMISTRY
The 'solution-large molecules' method for calculating the equilibrium composition of heterogeneous systems
p 887 A85-39101
COMPUTATIONAL FLUID DYNAMICS
Method for calculating separated subsonic gas flow past wings p 2 A85-10114
Higher approximations in the transonic expansion of the solution to the Chaplygin equation p 3 A85-10117
Airfoil trailing edge flow measurements and comparison with theory, incorporating open wind tunnel corrections
[AIAA PAPER 84-2266] p 4 A85-10831
Unsteady forces on a body immersed in viscous fluids. I - For a uniformly accelerated elliptic cylinder
p 47 A85-10971
Computation of internal flows: Methods and applications; Proceedings of the Energy Sources Technology Conference, New Orleans, LA, February 12-16, 1984
p 49 A85-11630
Analysis of the flow field in an engine inlet particle separator p 5 A85-11633
Internal flows of relevance to gas-turbines
p 49 A85-11636
Periodic internal flows — in gas turbines
p 5 A85-11643
Design method for highly-loaded blades with blockage in cascade p 5 A85-11644
Analytical study of blowing boundary layer control for subsonic V/STOL inlets p 5 A85-11646
Theoretical study of two-dimensional and three-dimensional potential flows with rotational source terms - Application to turbomachines — French thesis
p 50 A85-11729
Induced drag and lift of wing by the piecewise continuous kernel function method p 6 A85-11976
Euler equation simulation of propeller-wing interaction in transonic flow p 6 A85-11977
Computation of vortex flow around a canard/delta combination p 6 A85-11980
Computational transonic analysis of canted winglets
p 6 A85-11982
Comment on 'PAN AIR applications to aero-propulsion integration' p 6 A85-11990
Simplified transonic integral equations for lifting profiles and wings p 6 A85-12034
Interaction between a weak oblique shock wave and a turbulent boundary layer in purely supersonic flow
p 6 A85-12036
Metric-discontinuous zonal grid calculations using the Osher scheme p 6 A85-12151
A kernel function method for computing unsteady load on three-dimensional wings in transonic flow
p 7 A85-12355
Root locus method and automatic identification of modes in flutter analysis p 36 A85-12386
Improvement and extension of a computational method for three-dimensional transonic flows
[ONERA, TP NO. 1984-99] p 8 A85-12620
Calculation of unsteady transonic separated flows by viscous-inviscid interaction
[ONERA, TP NO. 1984-100] p 8 A85-12621
An introduction to theoretical and computational aerodynamics — Book p 8 A85-12624
Effect of a buried-wire gage on the separation bubble Numerical study p 73 A85-12704
A time-split finite-volume algorithm for three-dimensional flowfield simulation p 73 A85-12708
Application of the Godunov method and its second-order extension to cascade flow modeling
[AIAA PAPER 83-1941] p 73 A85-12714
A characteristics approach to swept shock-wave/boundary-layer interactions
p 73 A85-12717
The numerical solution of flow around a rotating circular cylinder in uniform shear flow p 122 A85-12768
A numerical study of gas-particle supersonic flow past blunt bodies - The case of axisymmetric flow
p 74 A85-12771
Numerical solutions of the Euler equations for complex three-dimensional aerodynamic configurations
[AIAA PAPER 84-2369] p 74 A85-13509
Modular potential flow computation including fuselage and wing tip effects p 75 A85-13677
Computational simulation of free vortex flows using an Euler code p 76 A85-13951
A multigrid method for computing the transonic flow over two closely-coupled airfoil components
p 76 A85-13952
Calculation of unsteady fan rotor response caused by downstream flow distortions
[AIAA PAPER 84-2282] p 76 A85-13960
Two-dimensional unsteady flow in Comprex rotor
p 123 A85-13995
A method for calculating turbulent 3-D flows in diffusers p 79 A85-14689
Computation of unsteady aerodynamic pressure coefficients in a transonic straight cascade
p 79 A85-14693
CFD is nearing a new plateau — current panel methods in aircraft design p 103 A85-15074
Analysis of airfoil leading-edge separation bubbles
[AIAA PAPER 83-0300] p 79 A85-15327
A general perturbation approach for computational fluid dynamics p 80 A85-15334
Application of the implicit MacCormack scheme to the parabolized Navier-Stokes equations p 80 A85-15335
Role of constraints in inverse design for transonic airfoils p 80 A85-15337
Dynamics of spatial motion of an aeroplane with deformable controls p 115 A85-15716
Aerodynamic methods used in France for the study of propellers for high-speed aircraft
[ONERA, TP NO. 1984-120] p 81 A85-15840
On the use of inverse modes of calculation in 2D cascades and ducts
[ONERA, TP NO. 1984-132] p 81 A85-15846
Development of a procedure for calculating two-dimensional boundary layers at gas turbine blades — German thesis p 81 A85-15873
Application of the finite element technique to aerodynamic problems of aircraft p 104 A85-15882
A numerical analysis of unsteady separated flow by the discrete vortex method combined with the singularity method p 81 A85-15884
Propulsive efficiency of an oscillating cylinder in supersonic flow p 140 A85-16181
Numerical analysis of the combined flow of a reaction jet and an external stream with allowance for the effect of boundary layers and a turbulent mixing zone
p 141 A85-16186
Computational-experimental study of a Laval nozzle with a cylindrical throat p 141 A85-16189
Numerical analysis of heat transfer on the surface of a delta wing in hypersonic air flow at large angles of attack p 141 A85-16190
Free perturbations of a laminar hypersonic flow behind an airfoil p 141 A85-16218
A finite element penalty algorithm for the parabolic Navier-Stokes equations for turbulent three-dimensional flow p 182 A85-16296
A random choice method for two-dimensional steady supersonic shock wave diffraction problems
p 141 A85-16531
An integral approach to the determination of the asymptotic behavior of supersonic flow
p 141 A85-16616
Exact solutions of singular equations for viscous transonic flows p 142 A85-16839
Computation of flow around wings based on the Euler equations p 142 A85-18066
Potential equation for transonic steady flow with large longitudinal disturbance and line relaxation
p 142 A85-18281
The hopscotch finite volume method for solving the Euler equations p 143 A85-18282
NAS - Supercomputing master tool for aeronautics — Numerical Aerodynamic Simulation p 195 A85-18442
T2 wind tunnel adaptive walls - Design, construction and some typical results p 175 A85-18501
Steady and unsteady transonic airloads on a supercritical wing p 143 A85-18509
Transonic solutions for a multielement airfoil using the full-potential equations p 144 A85-18512
The influence of leading-edge load alleviation on supersonic wing design p 144 A85-18515
The aerodynamic behavior of infinite swept wings - Another point of view p 144 A85-18517
Roll up of strake leading/trailing-edge vortex sheets for double-delta wings p 144 A85-18519
Exact solution of compressible potential flow past a body of revolution at zero incidence - Especially for high subsonic flow p 144 A85-18528
An analysis of unsteady torque on a quasi-three-dimensional centrifugal impeller
p 185 A85-18531
Viscous/inviscid analysis of curved sub- or supersonic wall jets p 145 A85-18677
Approximate factorization schemes for three-dimensional nonlinear supersonic potential flow
p 145 A85-18678
Efficient solution of the Euler and Navier-Stokes equations with a vectorized multiple-grid algorithm
p 145 A85-18679
Treatment of supersonic flows with embedded subsonic regions p 145 A85-18681
Noniterative cross-flow integration for the pressure-split analysis of subsonic mixing-layer problems
p 145 A85-18687
Computation of three-dimensional flows for application to transonic compressors
[ONERA, TP NO. 1984-146] p 204 A85-19280
An improved version of the LTRAN2 for high frequency domain p 205 A85-19401
Comparative study of various quadratures for subsonic lifting surface chordwise integrals p 205 A85-19404
An analysis of the flow past an S-shaped rotor by discrete vortex model p 206 A85-19405
Theoretical study on supersonic jet plumes
p 206 A85-19439
Numerical solutions of viscous transonic flow in turbomachinery cascades
[AIAA PAPER 85-0007] p 206 A85-19454
Euler solution of axisymmetric flows about bodies of revolution using a multigrid method
[AIAA PAPFR 85-0017] p 206 A85-19460
Current status of numerical solutions of the Navier-Stokes equations
[AIAA PAPER 85-0032] p 207 A85-19469
An incremental block-line-Gauss-Seidel method for the Navier-Stokes equations
[AIAA PAPER 85-0033] p 207 A85-19470
A multistage time-stepping scheme for the Navier-Stokes equations
[AIAA PAPER 85-0035] p 207 A85-19472
Calculation of compressible potential flow about multielement airfoils using a finite field-panel approach
[AIAA PAPER 85-0038] p 207 A85-19473
Computational study of circulation control with suction
[AIAA PAPER 85-0042] p 206 A85-19477
The effect of phase-difference on the spreading rate of a laminar circular jet under bi-modal excitation
[AIAA PAPER 85-0045] p 208 A85-19479
Examining the validity of a combustor flow model with LDV
[AIAA PAPER 85-0055] p 209 A85-19487
Calculation of confined swirling flows
[AIAA PAPER 85-0060] p 285 A85-19491
Computational thermo-fluid dynamics contributions to advanced gas turbine engine design
[AIAA PAPER 85-0083] p 262 A85-19509
A quasi-conservative lambda formulation — for inviscid transonic flow simulation
[AIAA PAPER 85-0088] p 210 A85-19511
Flows over low Reynolds number airfoils - Compressible Navier-Stokes numerical solutions
[AIAA PAPER 85-0107] p 210 A85-19523
A zonal computational approach to thrust augmentor optimization
[AIAA PAPER 85-0110] p 262 A85-19525
A comparison of Euler and Navier-Stokes solutions for supersonic flow over a conical delta wing
[AIAA PAPER 85-0111] p 210 A85-19526
Solution of the unsteady Euler equations for fixed and rotor wing configurations
[AIAA PAPER 85-0120] p 211 A85-19531

Three-dimensional Euler solutions with grid embedding
[AIAA PAPER 85-0121] p 211 A85-19532

A comparison of finite volume flux vector splittings for the Euler equations
[AIAA PAPER 85-0122] p 211 A85-19533

Numerical study on the dynamic stall process of a NACA 0012 airfoil
[AIAA PAPER 85-0128] p 212 A85-19539

Numerical solution of unsteady viscous flow past rotor sections
[AIAA PAPER 85-0129] p 212 A85-19540

Calculation of viscous nozzle flows by the unsteady method of characteristics
[AIAA PAPER 85-0131] p 212 A85-19542

The use of panel methods for the development of low-subsonic wall interference and blockage corrections
[AIAA PAPER 85-0159] p 212 A85-19556

A procedure for the calculation of supersonic flows with strong viscous-inviscid interaction
[AIAA PAPER 85-0166] p 213 A85-19562

Numerical computation of viscous flowfields about multiple component airfoils
[AIAA PAPER 85-0167] p 213 A85-19563

Analysis of circulation control airfoils using an implicit Navier-Stokes solver
[AIAA PAPER 85-0171] p 213 A85-19565

A new iterative matrix solution procedure for three-dimensional panel methods
[AIAA PAPER 85-0176] p 213 A85-19568

Measurements of separating boundary layer and wake of an airfoil using laser Doppler velocimetry
[AIAA PAPER 85-0181] p 214 A85-19572

Computation of unsteady shock-induced vortex separation
[AIAA PAPER 85-0183] p 214 A85-19573

Computation of recirculating compressible flow in axisymmetric geometries
[AIAA PAPER 85-0186] p 296 A85-19575

Prediction of subsonic/transonic separated flow about airfoils
[AIAA PAPER 85-0205] p 215 A85-19589

A class of airfoils having finite trailing edge pressure gradients
[AIAA PAPER 85-0206] p 215 A85-19590

Prediction of HIMAT RPRV component interference effects at transonic speeds
[AIAA PAPER 85-0213] p 215 A85-19593

A simple analytical method for predicting axisymmetric turbulent jet flowfields in a freestream
[AIAA PAPER 85-0231] p 216 A85-19614

Numerical solution of the full-potential equation for rotors and oblique wings using a new wake model
[AIAA PAPER 85-0269] p 216 A85-19621

Linearized potential flow analysis of complex aircraft configurations by HISSS, a higher order panel method
[AIAA PAPER 85-0281] p 217 A85-19632

Calculation of steady flow about propellers by means of a surface panel method
[AIAA PAPER 85-0283] p 218 A85-19634

Optimized discrete-singularity representation of axisymmetric bodies — for potential flow
[AIAA PAPER 85-0284] p 218 A85-19635

Euler calculations for multielement airfoils using Cartesian grids
[AIAA PAPER 85-0291] p 218 A85-19641

Numerical solution of the two-dimensional Euler equations by second-order upwind difference schemes
[AIAA PAPER 85-0292] p 218 A85-19642

Multigrid solution of the Euler equations using implicit schemes
[AIAA PAPER 85-0293] p 218 A85-19643

A relaxation approach to patched-grid calculations with the Euler equations
[AIAA PAPER 85-0295] p 218 A85-19644

A Navier-Stokes investigation of a circulation control airfoil
[AIAA PAPER 85-0300] p 219 A85-19646

A study of the effects of numerical dissipation on the calculation of supersonic separated flows
[AIAA PAPER 85-0301] p 219 A85-19650

The computational treatment of supersonic wake flows in INCOREL
[AIAA PAPER 85-0304] p 219 A85-19653

A three-dimensional Navier-Stokes/Euler code for blunt-body flow computations
[AIAA PAPER 85-0361] p 220 A85-19696

A Navier-Stokes calculation of 3-D, turbulent flow near a propeller in a shear flow
[AIAA PAPER 85-0365] p 220 A85-19698

Recent advances in computational transonic aerodynamics
[AIAA PAPER 85-0366] p 221 A85-19699

The numerical simulation of steady transonic rotational flow using a dual potential formulation
[AIAA PAPER 85-0368] p 221 A85-19701

Shock waves in transonic channel flows at moderate Reynolds number
[AIAA PAPER 85-0369] p 221 A85-19702

Navier-Stokes computations of axisymmetric transonic flows with a two-equation model of turbulence
[AIAA PAPER 85-0373] p 221 A85-19705

Evaluation of low Reynolds number turbulence models for attached and separated flows
[AIAA PAPER 85-0375] p 298 A85-19706

Progress in development of a Navier-Stokes solver for evaluation of iced airfoil performance
[AIAA PAPER 85-0410] p 222 A85-19731

Computational particle trajectory analysis on a 3-dimensional engine inlet
[AIAA PAPER 85-0411] p 222 A85-19732

Three-dimensional airflow and hydrometeor trajectory calculation with applications
[AIAA PAPER 85-0412] p 222 A85-19733

Shock induced vortices on elliptic cones in supersonic flow
[AIAA PAPER 85-0433] p 223 A85-19746

Split-flux-vector solutions of the Euler equations for three-dimensional configurations
[AIAA PAPER 85-0434] p 223 A85-19747

Solution method for a hovering helicopter rotor using the Euler equations
[AIAA PAPER 85-0436] p 223 A85-19749

Trapping of free vortex by airfoils with surface suction
[AIAA PAPER 85-0446] p 224 A85-19756

Evaluation of vortex wake predictions in the SWINT code
[AIAA PAPER 85-0450] p 224 A85-19759

A comparative study between an implicit and explicit algorithm for transonic airfoils
[AIAA PAPER 85-0480] p 225 A85-19777

A new singular integral method for compressible potential flow
[AIAA PAPER 85-0481] p 225 A85-19778

Efficient self-consistent viscous-inviscid solutions for unsteady transonic flow
[AIAA PAPER 85-0482] p 225 A85-19779

Grid adaptation for the 2-D Euler equations
[AIAA PAPER 85-0484] p 225 A85-19781

Noniterative three-dimensional grid generation using parabolic partial differential equations
[AIAA PAPER 85-0485] p 300 A85-19782

A three-dimensional adaptive grid method — for computational fluid dynamics
[AIAA PAPER 85-0486] p 225 A85-19783

Application of a variational method for generating adaptive grids — for gas dynamics past airfoils
[AIAA PAPER 85-0487] p 226 A85-19784

An implicit, conservative, zonal-boundary scheme for Euler equation calculations
[AIAA PAPER 85-0488] p 226 A85-19785

Simulation of transonic three-dimensional nacelle/inlet flowfields using an Euler/Navier-Stokes algorithm
[AIAA PAPER 85-0084] p 226 A85-19798

Computation of transonic inlet flows — German thesis
p 227 A85-19844

Circulation around thick wings with free vortices — German thesis p 227 A85-19848

A subdomain finite element method for solving the conservative full potential equation for transonic profile flows — German thesis p 227 A85-19854

Matrix solution of compressible flow on S(1) surface through a turbomachine blade row with splitter vanes or tandem blades p 227 A85-20228

Complete three-dimensional flow solution of a cascade incorporating splitter vanes of arbitrary geometry
p 228 A85-20230

Calculation and analysis of the three-dimensional flow in centrifugal compressor impellers p 228 A85-20231

A fast algorithm for solving the conservative transonic S1 full potential equation employing non-orthogonal curvilinear coordinates and non-orthogonal velocity components p 228 A85-20239

A stream function relaxation method for solving transonic S1 stream surface with respect to non-orthogonal curvilinear coordinates p 228 A85-20240

Hypersonic multicycle gas jet with a strongly underexpanded stream at the nozzle section
p 229 A85-20554

Euler computations of AGARD Working Group 07 airfoil test cases
[AIAA PAPER 85-0018] p 229 A85-20851

Navier-Stokes computations for exotic airfoils
[AIAA PAPER 85-0109] p 230 A85-20855

Design of aerodynamic bodies using artificial intelligence/expert system technique
[AIAA PAPER 85-0112] p 301 A85-20856

Recent improvements in efficiency, accuracy, and convergence for implicit approximate factorization algorithms — computational fluid dynamics
[AIAA PAPER 85-0360] p 230 A85-20868

A numerical simulation of the NFAC (National Full- Aerodynamics Complex) open-return wind tunnel flow
[AIAA PAPER 85-0437] p 230 A85-20

Experimental and theoretical analysis of lam separation bubbles
[AIAA PAPER 84-2201] p 288 A85-208

A large-scale computer facility for computation aerodynamics p 301 A85-217

Real-gas flowfields about three-dimension configurations p 231 A85-218

Evaluation of a stalled airfoil analysis program
p 231 A85-218

Experimental results for Reynolds number effects o trailing vortices p 232 A85-218

Shock-fitting solution of the supersonic flowfield in a rounded internal corner p 232 A85-218

Computation of choked and supersonic turbomachine flows by a modified potential method
p 232 A85-218

Shock-free turbomachinery blade design
p 232 A85-218

Calculation of three-dimensional unstea incompressible flows by a vortex method
p 281 A85-22

Approximate factorization algorithm fo three-dimensional transonic nacelle/inlet flowfie computations p 314 A85-23

Thin turbomachinery blade design using a finite-volum method p 314 A85-23

An approximate method for calculating flow in the mixi chambers of bypass engines under conditions o incomplete mixing of gas flows p 350 A85-23

Computation of potential flow on S2 stream surface fo a transonic axial-flow compressor rotor
p 315 A85-240

A multigrid method for calculating transonic flows in cascades p 315 A85-240

Numerical solutions for transonic stream equations o flow along S1 relative stream surface employin non-orthogonal curvilinear coordinates and correspondin velocity components p 315 A85-240

Solution of transonic S1 surface flow by successive reversing the direction of integration of the stream functio equation p 315 A85-240

Transonic cascade flow with given shock shapes solve by separate supersonic and subsonic computations
p 315 A85-240

A prediction research of rotating stall in axi compressors p 316 A85-240

Computer-aided analysis of the convergence to stead state of discrete approximations to the Euler equations
p 316 A85-244

Transonic shock wave - Boundary layer interaction a a convex wall p 317 A85-248

Application of a two-dimensional grid solver to three-dimensional problems — of flows around aircra configurations p 317 A85-2512

A perspective of theoretical and applied computationa fluid dynamics p 368 A85-2512

Analysis of steady, two-dimensional, chemically reacting nonequilibrium, inviscid flow in nozzles
p 317 A85-2512

Implicit upwind methods for the compressib Navier-Stokes equations p 317 A85-2513

Base pressure of a projectile within the transonic flig regime p 317 A85-2513

The solution of variational finite element method for th inverse problem on S2 relative stream surface in turbines p 318 A85-2521

Some analytical solutions applicable to verify 3-D numerical methods in turbomachines
p 318 A85-2521

General characteristic theory of aerodynamics wi oblique curvilinear coordinate system
p 318 A85-25217

On the use of parametric differentiation to predict wea shock waves p 319 A85-254

Finite difference computations of flow about supersonic lifting bodies p 319 A85-2547

Cooling of a turbine profile in the case of air injectio through porous areas p 352 A85-256

The role of computers in aerodynamic and structura research and development at Avions Marce Dassault-Breguet Aviation p 341 A85-2601

Flow fields near bodies placed in rarefied subsonic an supersonic jets p 322 A85-2601

Wing-in-ground effect aerodynamic predictions usin PANAIR
[AIAA PAPER 84-2429] p 322 A85-2602

Numerical simulation of unsteady flow in a compresso rotor cascade
[AIAA PAPER 85-0133] p 323 A85-263

A special boundary element technique in transonic flow p 385 A85-26

A full Navier-Stokes solution of viscous gas flow through profile cascade on S1 stream surface of revolution employing nonorthogonal curvilinear coordinate system p 385 A85-26669

Impact of computational fluid dynamics on development test facilities p 439 A85-26754

Computation of wind tunnel wall effects in ducted rotor experiments p 419 A85-26755

Efficient algorithm for unsteady transonic aerodynamics of low-aspect-ratio wings p 385 A85-26756

A comparison of separated flow airfoil analysis methods p 385 A85-26758

A finite element method for the solution of two-dimensional transonic flows in cascades p 386 A85-26821

Two-dimensional viscous simulation of inlet/diffuser flows with terminal shocks p 386 A85-27081

An investigation on turbulent heat transfer of an axisymmetric jet impinging on a flat plate p 440 A85-27235

Numerical calculation of a laminar two dimensional straight cascade flow p 386 A85-27348

A FORTRAN subroutine for the solution of periodic block-tridiagonal systems p 457 A85-27506

The numerical analysis of transonic flow around a circular airfoil using hybrid difference scheme p 386 A85-27825

A viscous-inviscid interaction method for computing unsteady transonic separation
[ONERA, TP NO. 1985-5] p 387 A85-27885

Transition calculations in three-dimensional flows
[ONERA, TP NO. 1985-7] p 387 A85-27887

Implicit Total Variation Diminishing (TVD) schemes for steady-state calculations — in gas dynamics p 386 A85-28209

Incompressible flow round an airfoil n a straight-line cascade and between parallel walls, with some phenomena in the boundary layer taken into consideration p 386 A85-28373

Problems of contemporary mechanics. Parts 1 & 2 p 442 A85-28376

Numerical determination of detached internal flow with the example of a radial compression tunnel — German thesis p 443 A85-28796

Cavitation models of separated flow of a low-viscosity fluid past wing profiles p 390 A85-29004

A comparison of different calculation methods for axisymmetric fields in convergent-divergent nozzles p 390 A85-29047

Viscid/inviscid interaction analysis of separated trailing-edge flows p 390 A85-29076

Monotone switches in implicit algorithms for potential equations applied to transonic flows p 391 A85-29078

Analysis of turbulent underexpanded jets. I - Parabolized Navier-Stokes model, SCIPVIS p 391 A85-29080

Newton-like minimal residual methods applied to transonic flow calculations p 456 A85-29081

Mach reflection flowfields associated with strong shocks p 391 A85-29082

A field panel/finite difference method for potential unsteady transonic flow p 391 A85-29084

Transonic flow calculations using triangular finite elements p 391 A85-29088

Unsteady laminar boundary-layer separation on oscillating configurations p 391 A85-29089

Transverse jet breakup and atomization with rapid vaporization along the trajectory p 444 A85-29092

Numerical study of a ramjet dump combustor flowfield p 392 A85-29093

Computation of three-dimensional viscous flows using a space-marching method p 392 A85-29259

A theorem on swirl loss in propeller wakes p 392 A85-29265

A type-dependent splitting scheme with variable parameters for the longitudinal large-disturbance potential equation p 393 A85-29693

The effect of a small blowing on vortex-breakdown of a swirling flow p 393 A85-29864

Modelling turbulent recirculating flows in complex geometries p 445 A85-29967

Self-oscillations in a jet impinging on a barrier p 394 A85-30109

Viscous effects on transonic airfoil stability and response
[AIAA PAPER 85-0586] p 469 A85-30321

A new approach to apply the potential gradient method for supersonic unsteady airloads
[AIAA PAPER 85-0596] p 469 A85-30325

The computation of second-order accurate unsteady aerodynamic generalized forces
[AIAA PAPER 85-0597] p 469 A85-30326

Coupling linearized far-field boundary conditions with non-linear near-field solutions in transonic flow
[AIAA PAPER 85-0599] p 469 A85-30328

Transonic calculations for a flexible supercritical wing and comparison with experiment
[AIAA PAPER 85-0665] p 470 A85-30407

An integral method for calculating the effects on turbulent boundary-layer development of sweep and taper p 470 A85-30994

Spurious entropy production and very accurate solutions to the Euler equations p 471 A85-30996

An experimental and numerical study of flow past a wedge of finite width at angles of sideslip p 471 A85-31476

Modeling of gas flows with shock waves — Russian book p 472 A85-31869

Toward a unified aerodynamic model for use in rotor blade stability analyses p 473 A85-32001

Simulation of initially forced mixing layers p 525 A85-32031

Computation of hydraulic losses in a plane profile cascade p 525 A85-32503

An assessment of numerical solutions of the compressible Navier-Stokes equations p 526 A85-32582

A harmonic gradient method for unsteady supersonic flow calculations p 473 A85-32583

Numerical simulation of cold flow in an axisymmetric centerbody combustor p 507 A85-32601

Analysis of aerothermal loads on spherical dome protuberances p 473 A85-32602

Unsteady flow about a Joukowski airfoil in the presence of moving vortices p 473 A85-32603

Analysis of turbulent underexpanded jets. II - Shock noise features using SCIPVIS p 537 A85-32605

Computation of three-dimensional turbulent shear flows in corners p 474 A85-32607

A new stream function formulation for the steady Euler equations p 474 A85-32609

Transonic shock-wave/turbulent boundary-layer interactions in a circular duct p 474 A85-32610

Viscous shock-layer flowfield analysis by an explicit-implicit method p 474 A85-32612

The high Reynolds number finite flat-plate cascade p 474 A85-32616

Some iterative schemes for transonic potential flows p 474 A85-32624

Numerical optimization method for airfoil design p 475 A85-33014

Multi-dimensional case of an entropic variational formulation of conservative hyperbolic systems p 535 A85-33018

Comparison of various numerical techniques in gas dynamics p 475 A85-33354

A numerical calculation of nonequilibrium flow past a wing in the approximation of a thin shock layer p 544 A85-33593

Simulation of rotating stall by the vortex method p 544 A85-34012

Nonlinear conical flow — Book p 544 A85-34273

A compatible mixed design and analysis finite element method for the design of turbomachinery blades p 599 A85-34706

A method for predicting unsteady potential flow about an aerofoil p 545 A85-34707

Computation of steady supersonic flows by a flux-difference/splitting method p 545 A85-34735

Knudsen layer characteristics for a highly cooled blunt body in hypersonic rarefied flow p 545 A85-35127

Comparison of inviscid and viscous computations with an interferometrically measur[illegible]ransonic flow p 545 A85-35129

An aerodynamic theory based on time-domain aeroacoustics p 546 A85-35135

Perturbations of a transonic flow with vanishing shock waves p 546 A85-35152

Accelerated convergence of Jameson's finite-volume Euler scheme using van der Houwen integrators p 610 A85-35175

Determination of forward edge eddies in delta wings p 547 A85-35260

Grid generation for wing-tail-fuselage configurations p 547 A85-35579

Assessment of preliminary prediction techniques for wing leading-edge vortex flows at supersonic speeds p 547 A85-35580

An inverse boundary element method for single component airfoil design p 548 A85-35591

A fast algorithm of the finite difference method for computation of the transonic flow past an arbitrary airfoil with the conservative full-potential equation p 548 A85-35742

A mixed finite difference analysis of the internal and external transonic flow fields of inlets with centerbody p 548 A85-35743

A study for calculating rotor loads using free vortex concept p 600 A85-35746

Experimental investigation of heat transfer to bluff cylinders and cones in hypersonic rarefied gas flow p 548 A85-35747

The perfection and application of the flutter subcritical response analytical method p 573 A85-35748

Wall-interference calculation of wind tunnel with octagonal sections using conformal mapping method p 592 A85-35750

A method for the estimation of jet interferences p 549 A85-35751

A cryogenic high-Reynolds number transonic wind tunnel with pre-cooled and restricted flow p 592 A85-35752

A locally linearized panel method for transubsonic flow past an oscillating wing p 549 A85-35755

Transonic pressure distribution computations of a flexible wing p 549 A85-35756

Finite difference computation of the flow around airfoils in two-dimensional transonic slotted wall wind tunnel p 549 A85-35764

Advances in the study of separated flows p 550 A85-35765

Some problems in discrete vortex numerical modelling on vortex motion behind a circular cylinder p 550 A85-35766

A calculation of slender delta wing with leading-edge separation by Quasi-Vortex-Lattice method p 550 A85-35768

The split-coefficient matrix method for supersonic three dimensional flow p 550 A85-35771

An implicit technique for computation of base flowfield p 551 A85-35778

A numerical study of the separation flow by Navier-Stokes equation past a circular cylinder and sphere p 551 A85-35782

The aerodynamical calculation of the wing section with separation p 551 A85-35784

Numerical analysis of a 3-D separated flow p 552 A85-35792

A method computing viscous/inviscid interaction with laminar separation p 552 A85-35795

Fundamentals of transonic flow — Book p 552 A85-35810

Finite element solution of non-viscous flows in cascades of blades p 552 A85-36335

Viscous influence in axisymmetric laminar supersonic flow over blunt bodies p 552 A85-36339

Design of a transonic flow with compression shock p 553 A85-36344

Numerical methods for the time dependent compressible Navier-Stokes equations p 553 A85-36415

Large CYBER 205 model of the Euler equations for vortex-stretched turbulent flow around delta wings p 553 A85-36675

A numerical investigation of a viscous hypersonic air flow around elongated blunted bodies at large angles of attack p 619 A85-37333

Gas flow in nozzles and jets p 619 A85-37337

Determination of aerodynamic characteristics of bodies in weakly perturbed gas flows p 619 A85-37341

A review of some approximate methods used in aerodynamic heating analyses
[AIAA PAPER 85-0906] p 620 A85-37580

Numerical simulation of hypersonic viscous fore- and afterbody flows over capsule-type vehicles at angles of attack
[AIAA PAPER 85-0924] p 620 A85-37593

Computational methods for hypersonic viscous flow over finite ellipsoid-cones at incidence
[AIAA PAPER 85-0925] p 620 A85-37594

The finite element formulation of airflow around a deformable wing by using the incremental finite element method p 621 A85-37879

Flow-field matrix solution for flow along arbitrarily twisted S1 surface employing non-orthogonal curvilinear coordinates p 622 A85-37927

Quasi-three-dimensional blade design code p 622 A85-37928

The solution of transonic flow through three-dimensional turbine blade p 622 A85-37929

Families of variational principles for the semi-inverse and type-A hybrid problems on a S2-streamsheet in mixed-flow turbomachines p 622 A85-37930

A general theory of hybrid problems of fully 3-D compressible potential flow in turbo-rotors. I - Axial flow, stream function formulation p 622 A85-37931

Computation of the thrust performance of axisymmetric nozzles p 622 A85-37932

A study on the method for solving the equation of subsonic oscillatory lifting-surface theory. IV - Computer program SOLST 1 p 622 A85-38355

Instability of plane-parallel supersonic gas flows in the linear approximation p 623 A85-38551

A second-order approximate method for transonic small-disturbance potential flow and its application to the analysis of flows over airfoils p 625 A85-38922

An integral method of wall interference correction for low speed wind tunnel p 682 A85-38962

The computation of transonic nozzle flow-field by a time-dependent method p 625 A85-38963

Numerical simulation of three-dimensional transonic flow in a turbomachinery p 625 A85-38965

The numerical calculation of the pressure distribution of sharp edge slender wings with leading or side edge vortex separation p 625 A85-38966

The characteristics compatibility conditions on the boundary points are applied to time-marching methods for transonic flow past plane cascades p 625 A85-38967

An extension of the generalized vortex-lattice method of supersonic sideslipping wings p 626 A85-38972

Computations of projectile Magnus effect at transonic velocities p 626 A85-38981

Numerical solution of two- and three-dimensional rotor tip leakage models p 626 A85-38989

Simplified implicit block-bidiagonal finite difference method for solving the Navier-Stokes equations
p 695 A85-39003

The free interaction in a supersonic flow over a porous wall p 626 A85-39021

Characteristics of a two-dimensional turbulent jet in a bounded slipstream p 695 A85-39131

Computation of three-dimensional flow using the Euler equations and a multiple-grid scheme
p 627 A85-39200

Computational/experimental pressure distributions on a transonic, low-aspect-ratio wing p 628 A85-39210

Multigrid calculation of transonic flow past wing-tail-fuselage combinations p 628 A85-39216

A computational study of the unsteady shock-wave structure in a two-dimensional transonic rotor
p 629 A85-39578

External compression supersonic inlet analysis using a finite difference two-dimensional Navier-Stokes code
p 629 A85-39581

Numerical simulation of a supercritical inlet flow
[AIAA PAPER 85-1214] p 630 A85-39658

Application of 3-D flow computations to gas turbine aerodynamic design
[AIAA PAPER 85-1216] p 630 A85-39659

On the modelling of a fully-relaxed propeller slipstream
[AIAA PAPER 85-1262] p 630 A85-39685

Numerical solutions of ramjet nozzle flows
[AIAA PAPER 85-1270] p 631 A85-39689

Calculation of the flow in a dump combustor
[AIAA PAPER 85-1309] p 666 A85-39716

Application of Runge Kutta time marching scheme for the computation of transonic flows in turbomachines
[AIAA PAPER 85-1332] p 631 A85-39728

Accurate and efficient solutions of transonic internal flows
[AIAA PAPER 85-1334] p 631 A85-39729

PNS predicted shock location and jump conditions at supersonic and hypersonic speeds — Parabolized Navier-Stokes
[AIAA PAPER 85-1407] p 632 A85-39766

Numerical investigation of internal high-speed viscous flows using a parabolic technique
[AIAA PAPER 85-1409] p 632 A85-39768

A further assessment of numerical annular dump diffuser flow calculations
[AIAA PAPER 85-1440] p 633 A85-39779

Results of AGARD assessment of prediction capabilities for nozzle afterbody flows
[AIAA PAPER 85-1464] p 633 A85-39793

Two-dimensional turbulent flow analysis in turbomachinery by the finite element method
[ASME PAPER 84-WA/FM-2] p 633 A85-39874

Vertical plate fin with conjugated forced convection-conduction turbulent flow
[ASME PAPER 84-WA/HT-8] p 698 A85-39878

Measurement and prediction of model-rotor flow fields
[AIAA PAPER 85-1558] p 710 A85-40683

Evaluation of Euler and Navier-Stokes solutions for leading-edge and shock-induced separations
[AIAA PAPER 85-1563] p 711 A85-40688

Shock/turbulent boundary-layer interaction in a compression corner
[AIAA PAPER 85-1567] p 711 A85-40692

The entrainment effect of a leading-edge vortex
[AIAA PAPER 85-1584] p 712 A85-40703

Lift due to thickness for low aspect ratio wings in incompressible flow
[AIAA PAPER 85-1586] p 712 A85-40705

An investigation of film cooling on a hypersonic vehicle using a PNS flow analysis code
[AIAA PAPER 85-1591] p 712 A85-40707

Transonic airfoil design based on Navier-Stokes equation to attain arbitrarily specified pressure distribution - An iterative procedure
[AIAA PAPER 85-1592] p 712 A85-40708

Refined numerical solution of the transonic flow past a wedge
[AIAA PAPER 85-1593] p 713 A85-40709

New iterative algorithm between stream function and density for transonic cascade flow
[AIAA PAPER 85-1594] p 713 A85-40710

Computation of three-dimensional transonic viscous flowfields using unsteady parabolized Navier-Stokes equations
[AIAA PAPER 85-1595] p 713 A85-40711

Transonic flow calculations around isolated inlet configurations
[AIAA PAPER 85-1596] p 713 A85-40712

A Navier-Stokes solution procedure for analysis of steady two-dimensional transonic nozzle flows
[AIAA PAPER 85-1597] p 713 A85-40713

Recent developments in the modeling of high speed jets, plumes and wakes
[AIAA PAPER 85-1616] p 714 A85-40724

Comparison of experiment and computation for a missile base region flowfield with a centered propulsive jet
[AIAA PAPER 85-1618] p 714 A85-40725

Experimental and numerical investigation of supersonic flow through a square duct
[AIAA PAPER 85-1522] p 714 A85-40728

Computation of internal incompressible separated flows using a space-marching technique
[AIAA PAPER 85-1624] p 790 A85-40730

Transonic turbulent flow computations for axisymmetric afterbodies
[AIAA PAPER 85-1639] p 715 A85-40741

Numerical solution of transonic wing flows using an Euler/Navier-Stokes zonal approach
[AIAA PAPER 85-1640] p 715 A85-40742

Improvements in transonic airfoil potential flow calculations
[AIAA PAPER 85-1642] p 715 A85-40743

Computation of unsteady transonic aerodynamics with steady state fixed by truncation error injection
[AIAA PAPER 85-1644] p 715 A85-40744

Computation of flow around a circular cylinder in a supercritical regime
[AIAA PAPER 85-1660] p 715 A85-40756

Numerical simulation of flow through scramjet inlets using a three-dimensional Navier-Stokes code
[AIAA PAPER 85-1664] p 716 A85-40760

Inviscid flow field analysis of maneuvering hypersonic vehicles using the SCM formulation and parabolic grid generation — Split-Coefficient Matrix
[AIAA PAPER 85-1682] p 716 A85-40767

Time-dependent Navier-Stokes computations of separated flows over airfoils
[AIAA PAPER 85-1684] p 717 A85-40769

On the accuracy of the pseudocompressibility method in solving the incompressible Navier-Stokes equations
[AIAA PAPER 85-1689] p 717 A85-40772

Computational study of unsteady compressible flow around an airfoil by a block pentadiagonal matrix scheme
[AIAA PAPER 85-1692] p 718 A85-40774

Total pressure loss in vortical solutions of the conical Euler equations
[AIAA PAPER 85-1701] p 718 A85-40777

2-D and 3-D Euler flow calculations with a second-order accurate Galerkin finite element method
[AIAA PAPER 85-1706] p 718 A85-40779

Unsteady transonic flow calculations for interfering lifting surface configurations
[AIAA PAPER 85-1711] p 719 A85-40783

Implicit/explicit analyses of interactive phenomena in: supersonic, chemically-reacting, mixing and boundary layer problems
[AIAA PAPER 85-1717] p 790 A85-40785

Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method
[AIAA PAPER 85-1196] p 719 A85-40817

Prediction of the Reynolds stress in a compressor passage
[AIAA PAPER 85-1197] p 790 A85-40818

A Mach 2.0 plus supersonic inlet study using the Navier-Stokes equations
[AIAA PAPER 85-1211] p 720 A85-40820

Extension of CFD technology used to design the JVX inlet
[AIAA PAPER 85-1215] p 720 A85-40822

Computational Fluid Dynamics Conference, 7th, Cincinnati, OH, July 15-17, 1985, Technical Papers
[ONERA, TP NO. 1985-75] p 790 A85-40926

An implicit time-marching method for studying unsteady flow with massive separation
[AIAA PAPER 85-1489] p 790 A85-40929

Unsteady viscous flow round moving circular cylinders and airfoils
[AIAA PAPER 85-1490] p 720 A85-40930

A time-accurate multiple-grid algorithm
[AIAA PAPER 85-1493] p 802 A85-409

GMRES acceleration of computational fluid dynamic codes
[AIAA PAPER 85-1494] p 802 A85-409

Convergence acceleration for a three-dimensiona Euler/Navier-Stokes zonal approach
[AIAA PAPER 85-1495] p 720 A85-409

Numerical study of a non-centered scheme wi application to aerodynamics
[AIAA PAPER 85-1497] p 720 A85-409

Analysis of three-dimensional separated flow with th boundary-layer equations
[AIAA PAPER 85-1499] p 791 A85-409

Implicit boundary treatment for joined and disjoi patched mesh systems
[AIAA PAPER 85-1503] p 791 A85-409

Navier-Stokes solution for hypersonic flow over a indented nosetip
[AIAA PAPER 85-1504] p 721 A85-409

Navier-Stokes solution of the flow field around complete aircraft
[AIAA PAPER 85-1509] p 721 A85-409

Computation of three-dimensional viscous transonic flows with the LU factored scheme
[AIAA PAPER 85-1510] p 721 A85-409

A fast, time-accurate unsteady full potential scheme
[AIAA PAPER 85-1512] p 802 A85-409

Implicit TVD schemes for hyperbolic conservation law in curvilinear coordinates
[AIAA PAPER 85-1513] p 721 A85-409

Transonic flows about oscillating airfoils using the Eu equations
[AIAA PAPER 85-1514] p 721 A85-409

ICFD - Interdisciplinary Computational Fluid Dynamic
[AIAA PAPER 85-1522] p 755 A85-409

A 3-D chimera grid embedding technique
[AIAA PAPER 85-1523] p 802 A85-409

Overset grids in compressible flow
[AIAA PAPER 85-1524] p 803 A85-409

A self-adaptive-grid method with application to airfo flow
[AIAA PAPER 85-1525] p 722 A85-409

Two- and three-dimensional grid generation for interna flow applications of computational fluid dynamics
[AIAA PAPER 85-1526] p 803 A85-409

An efficient iteration strategy for the solution of the Eule equations
[AIAA PAPER 85-1529] p 803 A85-409

Finite element methods for high speed flows
[AIAA PAPER 85-1533] p 791 A85-409

A new finite element approach for prediction o aerothermal loads - Progress in inviscid flow computations
[AIAA PAPER 85-1533] p 722 A85-409

An implicit algorithm for solving 2D rotational flow in an aircraft engine fan frame
[AIAA PAPER 85-1534] p 722 A85-409

External compression inlet predictions using an implicit, upwind, multiple zone approach
[AIAA PAPER 85-1521] p 722 A85-409

3-D finite element solution of steady Euler transonic flow by stream vector correction
[AIAA PAPER 85-1532] p 722 A85-409

Numerical calculation of unsteady transonic potentia flow over three-dimensional wings p 723 A85-409

Categories and calculations of three-dimensiona boundary-layer-separation p 791 A85-409

Recent tendency of flow field calculations wit three-dimensional separation around high velocity vehicle p 723 A85-409

Computer-system structure for solving flow problems - A complex approach to design p 724 A85-41228

Asymptotic calculations of gasdynamic quantities nea the separation of a limiting shock layer
p 724 A85-41275

A numerical study of spin effects on axisymmetric flow past a body of revolution
[AIAA PAPER 85-1605] p 724 A85-4140

Computational study of three-dimensional wak structure
[AIAA PAPER 85-1617] p 725 A85-4140

Computation of transonic vortex flows past delta wings integral equation approach
[AIAA PAPER 85-1582] p 725 A85-4141

A comparison between implicit and hybrid methods fo the calculation of steady and unsteady inlet flows
[AIAA PAPER 85-1125] p 725 A85-41417

Three dimensional CSCM method for the compressible Navier-Stokes equations with application to a multi-nozzl exhaust flowfield
[AIAA PAPER 85-1193] p 726 A85-41419

A numerical method for duct flow with boundary lay separation
[AIAA PAPER 85-1410] p 726 A85-4142

A parabolized Navier-Stokes algorithm for separated supersonic internal flows
[AIAA PAPER 85-1411] p 726 A85-41423

An improved kernel function computation in subsonic unsteady lifting surface theory p 726 A85-41730

Implicit flux-split schemes for the Euler equations
[AIAA PAPER 85-1680] p 803 A85-41743

Fully-three dimensional flow field analysis through turbine stages - Comparison between computation and experiments p 727 A85-41805

Some applications of actuator and semi-actuator disk theory to the problem of intake/engine compatibility
p 727 A85-41810

Development of computational flow analysis for blade rows p 727 A85-41813

Time dependent computation of the Euler equations for designing 2-D cascades, including the case of transonic shock free design p 727 A85-41814

A numerical method to weaken shock in transonic cascades p 727 A85-41815

A comparison of the Streamline Curvature Method with the Matrix Method used for turbo-machinery design in non-orthogonal curvilinear coordinate system
p 728 A85-41816

Purely three-dimensional analysis of a flow in an axial rotor by panel method p 728 A85-41817

Finite element analysis for 3-D compressible potential flow in turbomachinery p 728 A85-41818

Two-dimensional unsteady flow in Comprex rotor
p 728 A85-41819

Aerodynamic responses of turbine rotor blade to sinusoidal gust of large vorticity p 729 A85-41835

Large-angle cone-shaped bodies in supersonic three-dimensional stream p 730 A85-42040

Estimation of the wave resistance of bodies of revolution with a front separation zone in supersonic flow
p 730 A85-42119

Numerical analysis of turbulent flow past a plate using equations for fluctuations p 794 A85-42121

Computation of the tip vortex off a low-aspect-ratio wing p 730 A85-42352

High angle-of-attack calculations of the subsonic vortex flow on slender bodies p 730 A85-42353

Future fundamental combustion research for aeropropulsion systems
[AIAA PAPER 85-1398] p 771 A85-42671

Numerical computation of hypersonic laminar near-wake flow via Navier-Stokes solver
[AIAA PAPER 85-1672] p 731 A85-42673

Flow structure capturing on overset patched meshes
[AIAA PAPER 85-1690] p 731 A85-42690

Engineering flowfield method with angle-of-attack applications p 731 A85-42913

Transonic aerodynamic computations for a canard configuration p 731 A85-42931

Symposium on Numerical and Physical Aspects of Aerodynamic Flows, 3rd, California State University, Long Beach, CA, January 21-24, 1985, Proceedings
p 732 A85-42951

Developments in the simulation of separated flows using finite difference methods p 732 A85-42953

The computation of viscid/inviscid interaction on airfoils with separated flow p 732 A85-42954

A quasi-simultaneous finite difference approach for strongly interacting flow p 732 A85-42956

Application of a viscous-inviscid interaction method to predict transonic separated flows p 732 A85-42957

Newton solution of coupled Euler and boundary layer equations p 733 A85-42958

Airfoils with separation and the resulting wakes
p 733 A85-42959

Research into multi-element aerofoil aerodynamics
p 733 A85-42960

Vorticity dynamics - A viscous point of view over aerodynamics p 733 A85-42961

Finite analytic prediction of turbulent flow past an inclined cylinder p 733 A85-42963

Viscous-inviscid interaction computations using a pseudo Navier-Stokes approach p 733 A85-42964

Comparison of interactive and Navier Stokes calculations of separating boundary layer flows
p 734 A85-42965

Development of a Navier-Stokes analysis to investigate the mechanism of shock/wave boundary layer interactions p 734 A85-42966

Assessment of wind tunnel corrections for multielement airfoils at transonic speeds p 734 A85-42968

Transonic interactions of unsteady vortical flows
p 734 A85-42969

Numerical solution of unsteady two-dimensional viscous flow around bodies p 734 A85-42970

Oscillating oblique shock interaction with a laminar boundary layer p 735 A85-42971

Unsteady airfoil boundary layers - Experiment and computation p 735 A85-42972

Boundary layers on oscillating airfoils
p 735 A85-42973

Analyses of two-dimensional incompressible flow past airfoils using unsteady Navier-Stokes equations
p 735 A85-42975

Computation of three-dimensional shock-wave/turbulent boundary-layer interaction flows
p 736 A85-42980

Numerical simulation of shock/boundary-layer interaction using a finite-volume Runge-Kutta time-stepping scheme p 736 A85-42982

Computation of velocity and pressure variation across thick turbulent stern flows p 736 A85-42985

3-D separation on bodies with elliptic cross-section and near root-section of wing-body combination
p 737 A85-42987

A three-dimensional boundary-layer analysis including heat-transfer and blade-rotation effects
p 737 A85-42988

Prediction of dynamic separation characteristics using a time-stepping viscid/inviscid approach
p 737 A85-42990

An interactive scheme for three-dimensional transonic flows p 737 A85-42992

Application of the method of quasi-continuous vorticity distribution over the skeleton surface for aeroplane wing design p 738 A85-43053

Numerical calculation of flow field in afterburner diffuser of turbofan engine p 772 A85-43244

Nonlinear applications of slender-body theory to missile aerodynamics
[AIAA PAPER 85-1775] p 812 A85-43836

Nonaxisymmetric, discontinuous body, second-order, linear, supersonic flow prediction
[AIAA PAPER 85-1810] p 813 A85-43858

Application of the SWINT code to wing/body/tail geometries
[AIAA PAPER 85-1811] p 813 A85-43859

A numerical investigation of the aerodynamics of biconic and non-circular flared configurations
[AIAA PAPER 85-1814] p 814 A85-43862

Projectile aerodynamics prediction with CSCM-S upwind implicit relaxation algorithm
[AIAA PAPER 85-1836] p 814 A85-43874

Inviscid analysis of advanced turboprop propeller flow fields
[AIAA PAPER 85-1263] p 814 A85-43977

A numerical method for second order thin airfoil theory p 815 A85-44626

An inviscid model of unsteady aerofoil flow with fixed upper surface separation p 816 A85-45166

Comparison of supercritical airfoil flow calculations with wind tunnel results p 816 A85-45701

Transonic panel method for the full potential equation applied to multicomponent airfoils
[AIAA PAPER 83-1855] p 816 A85-45704

Modeling of turbulent flowfields through a cascade of airfoils at stall conditions p 816 A85-45716

Computational technique for compressible vortex flows past wings at large incidence p 816 A85-45836

Computational aerodynamic design of the Gulfstream IV wing p 817 A85-45843

Computed static stall of a supercritical airfoil
p 867 A85-47103

Extension and use of numerical procedure for the three dimensional unsteady transonic flows
[ONERA, TP NO. 1985-67] p 868 A85-47260

An examination of turbulence models for a separating three-dimensional turbulent boundary layer
[ONERA, TP NO. 1985-74] p 904 A85-47273

Aerodynamic models for propellers for fast aircraft
[ONERA, TP NO. 1985-55] p 868 A85-47301

Prediction of the inception of cavitation on blade profiles of hydraulic turbomachines p 906 A85-47849

Computational methods for discontinuities in fluids
p 907 A85-48220

Some contributions to the modelling of discontinuous flows p 907 A85-48224

A computational study of complex three-dimensional compressible turbulent flowfields p 869 A85-48526

Theoretical and experimental study of nonadiabatic transonic shock/boundary-layer interaction
p 869 A85-48529

Calculation of three-dimensional flowfields by the unsteady method of characteristics p 869 A85-48532

Numerical analysis of transonic flow around a two-dimensional airfoil by solving full Navier-Stokes equations p 869 A85-48875

A finite difference model for flows around an air intake
[AAAF PAPER NT 84-11] p 870 A85-48991

Numerical simulations of viscous fluid flows in air intakes at high angles of attack
[AAAF PAPER NT 84-12] p 907 A85-48992

Calculation of the flow in an air intake duct by numerical solution of the Euler equations
[AAAF PAPER NT 84-24] p 870 A85-48998

Modeling techniques for transonic airfoils
p 871 A85-49014

Verification of calculation methods for unsteady airloads in the prediction of transonic flutter
[AIAA PAPER 84-0871] p 871 A85-49126

Grid generation and flow calculations for aircraft geometries p 871 A85-49129

Numerical optimization of circulation control airfoil at high subsonic speed p 871 A85-49131

Full potential solutions of three-dimensional supersonic flows p 871 A85-49133

A wind tunnel inlet flow simulation
p 871 A85-49141

Unsteady lifting-line theory as a singular-perturbation problem p 871 A85-49353

Computation of inviscid incompressible flow with rotation p 871 A85-49356

A note on the steady high-Reynolds-number flow about a circular cylinder p 872 A85-49369

Approximate calculation of flow field in an inlet with arbitrary cross sections and curved axis
p 872 A85-49652

On the abrupt turbulent reattachment downstream of leading-edge laminar separation p 872 A85-49698

A simple and effective difference scheme in aerodynamics p 872 A85-49702

Variational principle families for hybrid problems of blade-to-blade flow along axisymmetric stream-sheet - A unified variable-domain approach p 872 A85-49703

A calculating method of the breakdown feature of the leading-edge separating vortex for slender delta wings
p 873 A85-49707

Analytical solutions for unsteady Prandtl-Meyer flow
p 873 A85-49710

Computational methods for complex flowfields
[AD-A145219] p 11 N85-10019

Experimental data base for computers program assessment. Report of the Fluid Dynamics Panel Working Group 04: Addendum
[AGARD-AR-138-ADD] p 11 N85-10020

Transonic wing and far field test data on a high aspect ratio transport wing for three dimensional computational method evaluation p 19 N85-10021

Computational thermo-fluid dynamics contributions to advanced gas turbine engine design
[NASA-TM-86865] p 27 N85-10069

Aerothermal modeling p 32 N85-10982

Aerothermal modeling program p 32 N85-10983

Inverse design technique for cascades
[NASA-CR-3836] p 81 N85-12008

Status and prospects of computational fluid dynamics for unsteady transonic viscous flows
[NASA-TM-86018] p 85 N85-12037

Numerical studies of unsteady transonic flow over an oscillating airfoil
[NASA-TM-86011] p 128 N85-12316

Development of computational fluid dynamics at NASA Ames Research Center
[NASA-TM-86021] p 87 N85-12866

Simulation of separated transonic airfoil flow by finite-difference viscous-inviscid interaction
p 146 N85-13768

The numerical simulation of steady transonic rotational flow using a dual potential formulation
p 146 N85-13770

Flow calculation on a thin wing, with specific attention to separation point at the trailing edge
[FTW-FO-1721] p 146 N85-13787

Review of requirements and status of simulation and scaling of transonic, viscous flows
[AD-A146357] p 189 N85-15137

Analysis of the flow field about a T-45 using PANAIR
[AD-A148811] p 236 N85-15699

Current problems in turbomachinery fluid dynamics
[AD-A147127] p 294 N85-16074

Detailed study of the flow around a multi-element airfoil. Comparison with calculations p 236 N85-16775

A numerical study of several supersonic flows
p 325 N85-17995

Numerical approach for the aerodynamic analysis of airfoils with laminar separation
[NASA-CR-172496] p 326 N85-18001

Calculating heat transfer coefficients for turbine profiles taking surface curvature and elevated flow turbulence into account p 371 N85-18212

Turbulent jet flow in a channel with a circulation region
p 371 N85-18218

NASA Lewis Research Center/University Graduate Research Program on Engine Structures
[NASA-TM-86916] p 372 N85-18375

Effects of airfoil shape, thickness, camber, and angle of attack on calculated transonic unsteady airloads
[NASA-TM-86320] p 328 N85-18957

Unsteady transonic flow calculations for two-dimensional canard-wing configurations with aeroelastic applications
[NASA-TM-86375] p 329 N85-18960
Viscous effects on transonic airfoil stability and response
[NASA-TM-86374] p 329 N85-18961
A fast algorithm of the finite difference method for computation of the transonic flow past an arbitrary airfoil with the conservative full-potential equation
p 395 N85-20181
A mixed finite difference analysis of the internal and external transonic flow fields of inlets with centerbody
p 446 N85-20192
A study for calculating rotor loads using free vortex concept p 395 N85-20194
Three-dimensional unsteady lifting surface theory in the subsonic range
[NASA-TM-77812] p 397 N85-21111
Transonic interactions of unsteady vortical flows
[NASA-TM-86858] p 397 N85-21113
Combustion research for gas turbine engines
[NASA-TM-86863] p 422 N85-21164
F-14A aircraft high-speed flow simulations
[NASA-CR-172569] p 478 N85-23702
Transonic Unsteady Aerodynamics and its Aeroelastic Applications
[AGARD-CP-374] p 542 N85-25171
Trends in computational capabilities for fluid dynamics
p 601 N85-25172
Numerical studies of unsteady transonic flow over oscillating airfoil p 554 N85-25174
Calculation of harmonic aerodynamic forces of aerofoils and wings from the Euler equations p 554 N85-25177
Calculation of unsteady transonic separated flows by viscous-inviscid interaction p 554 N85-25178
A semi-empirical unsteady transonic method with supersonic free stream p 555 N85-25179
Status and prospects of computational fluid dynamics for unsteady transonic flow p 556 N85-25180
Improvement and extension of a numerical procedure for the three dimensional unsteady transonic flows
p 555 N85-25181
Application of time-linearized methods to oscillating wings in transonic flow and flutter p 586 N85-25182
Computation of unsteady transonic flows about two-dimensional and three-dimensional AGARD standard configurations p 556 N85-25183
Calculation of unsteady transonic flow around a high swept wing p 556 N85-25184
Unsteady transonic aerodynamic and aeroelastic calculations about airfoils and wings
p 555 N85-25185
The application of transonic unsteady methods for calculation of flutter airloads p 586 N85-25186
The development of unsteady transonic 3-D full potential code and its aeroelastic applications
p 555 N85-25187
Transonic aerodynamic and aeroelastic characteristics of a variable sweep wing
[NASA-TM-86677] p 558 N85-25203
Flow over a biconic configuration with an afterbody compression flap
[AD-A151882] p 603 N85-25776
Three-dimensional boundary layers and shear flows activities at ONERA/CERT p 587 N85-25785
Three-dimensional boundary layer research at NLR
p 603 N85-25787
Brief review of current work in the UK on three dimensional boundary layers p 603 N85-25788
Proceedings of the NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-1] p 543 N85-26611
Some numerical analyses of flows with separation
p 605 N85-26616
The role of computational fluid dynamics in aeronautical engineering p 605 N85-26629
A method for simulating 3-D aircraft flow fields with jet plume effects
[NASA-CR-175802] p 559 N85-26664
Low Reynolds number vehicles
[AGARD-AG-288] p 560 N85-26666
Application of CFD techniques toward the validation of nonlinear aerodynamic models
[NASA-TM-86715] p 560 N85-26671
Numerical solution of transonic normal shock wave-boundary layer interaction using the Bohning-Zierep model — wind tunnel flow
[VTH-LR-416] p 562 N85-26683
Theoretical investigation of three-dimensional shock wave turbulent boundary layer interactions. Part 3
[AD-A152251] p 607 N85-27177
Adaptive grid generation for numerical solution of Burger's equation
[AD-A152217] p 611 N85-27636
Future fundamental combustion research for aeropropulsion systems
[NASA-TM-87049] p 671 N85-27870
Two approaches for the prediction of plume-induced separation
[AD-A154086] p 741 N85-29835
Calculation of transonic flows around an aircraft configuration with motorized nacelle
[SNIAS-851-111-108] p 742 N85-31008
Transonic calculations for a flexible supercritical wing and comparison with experiment
[NASA-TM-86426] p 742 N85-31012
Calculation of flow around the SF 310 airplane using a full potential equation method
[FFA-TN-1984-63] p 744 N85-31022
A theory of quasi-conical solutions of noninteger degree — flow fields on supersonic wings
[VTH-LR-420] p 744 N85-31024
A supersonic potential gradient method for the calculation of unsteady aerodynamic pressures on harmonically oscillating wings
[DFVLR-FB-85-11] p 744 N85-31026
Verification of calculation methods for unsteady airloads in the prediction of transonic flutter
[NLR-MP-84016-U] p 744 N85-31027
A new finite element approach: Progress in inviscid flow computations
[NASA-TM-86434] p 798 N85-31450
COMPUTATIONAL GRIDS
Metric-discontinuous zonal grid calculations using the Osher scheme p 6 A85-12151
A multigrid method for computing the transonic flow over two closely-coupled airfoil components
p 76 A85-13852
The circular cylinder in subsonic and transonic flow
p 79 A85-15329
Efficient solution of the Euler and Navier-Stokes equations with a vectorized multiple-grid algorithm
p 145 A85-18679
Euler solution of axisymmetric flows about bodies of revolution using a multigrid method
[AIAA PAPER 85-0017] p 206 A85-19480
Three-dimensional Euler solutions with grid embedding
[AIAA PAPER 85-0121] p 211 A85-19532
Multigrid solution of the Euler equations using implicit schemes
[AIAA PAPER 85-0293] p 218 A85-19643
Finite volume solution of the two-dimensional Euler equations on a regular triangular mesh
[AIAA PAPER 85-0435] p 223 A85-19748
Grid adaptation for the 2-D Euler equations
[AIAA PAPER 85-0484] p 225 A85-19781
Noniterative three-dimensional grid generation using parabolic partial differential equations
[AIAA PAPER 85-0485] p 300 A85-19782
A three-dimensional adaptive grid method — for computational fluid dynamics
[AIAA PAPER 85-0486] p 225 A85-19783
Application of a variational method for generating adaptive grids — for gas dynamics past airfoils
[AIAA PAPER 85-0487] p 226 A85-19784
A multigrid method for calculating transonic flows in cascades p 315 A85-24092
Application of a two-dimensional grid solver for three-dimensional problems — of flows around aircraft configurations p 317 A85-25127
Two-dimensional deforming finite element methods for surface ablation p 388 A85-25147
Automatic adaptive grid refinement for the Euler equations p 391 A85-28087
A mapped, factored-implicit scheme for the computation of duct and far-field acoustics p 462 A85-29087
Coupling linearized far-field boundary conditions with non-linear near-field solutions in transonic flow
[AIAA PAPER 85-0089] p 466 A85-30328
Grid generation for fluid mechanics computations
p 524 A85-31185
Grid generation for inlet configurations using conformal mapping p 474 A85-32830
Grid generation for wing-tail-fuselage configurations
p 547 A85-35579
Multigrid acceleration of an iterative method with application to transonic potential flow
p 583 A85-36404
Triangular finite element methods for the Euler equations p 601 A85-36414
Computation of three-dimensional flow using the Euler equations and a multiple-grid scheme
p 627 A85-38200
A further assessment of numerical annular dump diffuser flow calculations
[AIAA PAPER 85-1440] p 633 A85-39779
Adaptive mesh solution for supersonic conical flow in a rectilinear inlet
[AIAA PAPER 85-1626] p 714 A85-40732
Inviscid flow field analysis of maneuvering hyperso vehicles using the SCM formulation and parabolic g generation — Split-Coefficient Matrix
[AIAA PAPER 85-1662] p 716 A85-4
Three-dimensional unsteady Euler equations solutio on dynamic grids
[AIAA PAPER 85-1704] p 760 A85-4
Simulation of Nacelle-afterbody/exhaust-jet flowfie using a three-dimensional Navier-Stokes algorithm
[AIAA PAPER 85-1283] p 720 A85-4
A time-accurate multiple-grid algorithm
[AIAA PAPER 85-1493] p 802 A85-4
Implicit boundary treatment for joined and disjo patched mesh systems
[AIAA PAPER 85-1503] p 781 A85-4
Navier-Stokes simulations of rotor-stator interac using patched and overlaid grids
[AIAA PAPER 85-1519] p 721 A85-4
A 3-D chimera grid embedding technique
[AIAA PAPER 85-1523] p 802 A85-4
Overset grids in compressible flow
[AIAA PAPER 85-1524] p 803 A85-4
A self-adaptive-grid method with application to air flow
[AIAA PAPER 85-1525] p 722 A85-4
Two- and three-dimensional grid generation for intern flow applications of computational fluid dynamics
[AIAA PAPER 85-1526] p 803 A85-4
Newton solution of direct and inverse transonic Eu equations
[AIAA PAPER 85-1530] p 722 A85-4
An implicit algorithm for solving 2D rotational flow i an aircraft engine fan frame
[AIAA PAPER 85-1534] p 722 A85-4
External compression inlet predictions using an impl upwind, multiple zone approach
[AIAA PAPER 85-1521] p 722 A85-4
Flow structure capturing on overset patched mes
[AIAA PAPER 85-1680] p 731 A85-4
Convergence characteristics of a vortex-lattice meth for nonlinear configuration aerodynamics
p 816 A85-4
A three-dimensional, block-structured finite element g generation scheme — for flow around aircraft modeling
p 869 A85-4
Inviscid and viscous flows in cascades with an expl multiple-grid algorithm p 869 A85-4
Grid generation and flow calculations for aircr geometries p 871 A85-4
Embedded-grid generation with complete continu across interfaces for multi-element airfoils
p 11 N85-1
Analytical construction of flight vehicle surfaces
p 182 N85-14
Adaptive grid generation for numerical solution o Burger's equation
[AD-A152217] p 611 N85-27
Generation by conformal mappings of aerofoil section and of certain other simple shapes suitable for tw aerodynamic and stress-concentration problems
[AD-A154801] p 819 N85-331
Use of a hyperbolic grid generation scheme in simulati supersonic viscous flow about three-dimensional wing configuration
[NASA-TM-85344] p 874 N85-341
COMPUTER AIDED DESIGN
The average $100,000,000 design engineer
p 49 A85-11
An effective interface between computer-stored desi descriptions and analysis tools p 58 A85-11
An equivalent strength method for optimum design o composite laminates p 51 A85-12
Interactive Graphics for Geometry Generation - A program with a contemporary design
[AIAA PAPER 84-2389] p 131 A85-13
MAGNA analysis of the T-38 aircraft student canop Response to in-flight aerodynamic pressure loads
[AIAA PAPER 84-2390] p 97 A85-13
A system approach for designing a crashworth helicopter using program KRASH

Design of a radar guidance mechanism using MECSYN ANIMEC
[ASME PAPER 84-DET-138] p 566 A85-33774
A compatible mixed design and analysis finite element method for the design of turbomachinery blades
p 590 A85-34706
A method for predicting unsteady potential flow about an aerofoil p 546 A85-34707
Designing aircraft on small computers
p 573 A85-36147
Computer aided tube routing design in aircrafts
p 615 A85-37183
A program for computerized structural resizing of aircraft structure subject to strength and local panel buckling criteria under multiple loading p 653 A85-37187
Integrated CADCAM - An approach for advanced composite primary aircraft structure p 703 A85-37211
Software-engineering elements in the problem of the optimal design of lift systems for flight vehicles
p 646 A85-37323
The structure of the application software pack RAFIPKS for the analysis of physical processes in combustion chambers p 661 A85-39122
Computer-aided start-system design and verification
[SAE PAPER 841506] p 661 A85-39152
The employment of 3-D programs in aircraft design
[DGLR PAPER 84-113] p 754 A85-40329
Use of CAD/CAM systems during the development/construction of the A320
[DGLR PAPER 84-116] p 801 A85-40332
Improvements in transonic airfoil potential flow calculations
[AIAA PAPER 85-1642] p 715 A85-40743
Extension of CFD technology used to design the JVX inlet
[AIAA PAPER 85-1215] p 720 A85-40822
Computer-system structure for solving flow problems - A complex approach to design p 724 A85-41228
A design technique for all sorts of gas turbine combustors p 766 A85-41789
Combustor development for FJR710/600 engine
p 766 A85-41790
Main stages and problems in the design of low-gain active antennas p 794 A85-42106
Application of computer-aided structural optimization in the design of aircraft components
[MBB-UT-21-84-OE] p 758 A85-42685
Iterative three-dimensional transonic wing design using integral equations p 731 A85-42928
Interactive computer modeling of airframe structures
p 759 A85-43225
Quick geometry generation and surface mesh partition for arbitrary 3-D bodies p 759 A85-43242
Design of flight vehicles and their systems
p 854 A85-44832
Advanced Computer Aided Engineering requirements for electronics p 859 A85-45146
Applications of numerical optimization methods to helicopter design problems - A survey
p 828 A85-45792
Computational aerodynamic design of the Gulfstream IV wing p 817 A85-45843
Weight design and efficiency of passenger aircraft. Handbook (2nd revised and enlarged edition) — in Russian p 828 A85-46564
Parameter space design of control systems using interactive computer graphics p 916 A85-47681
Computer-aided design of control systems via parameter optimization method (CADCS/POM) - An interactive graphics approach p 917 A85-47784
Electronic Equipment Thermal Management
p 906 A85-49530
ITAD - A CAD system for environmental reliability design — Integrated Thermal Avionic Design
p 918 A85-49531
A user's view of CARE III — computer aided reliability estimation p 918 A85-49570
An evaluation of improved analytically based weight estimation methodologies
[SAWE PAPER 1616] p 883 A85-49920
Computer aided determination of rotor blade mass properties
[SAWE PAPER 1628] p 884 A85-49926
Applications of numerical optimization methods to helicopter design problems: A survey
[NASA-TM-86010] p 19 N85-10036
The Influence of Large Scale Computing on Aircraft Structural Design
[AGARD-R-706] p 20 N85-10040
Large scale computing in aeronautical design
p 20 N85-10043
Air Force honeycomb shaping at SM-ALC (Sacramento Air Logistics Center)
[AD-P004008] p 72 N85-11985
Increase in the economy of design and process planning by integrated and graphic data processing, phase 2 — aircraft design
[BMFT-FB-W-84-028] p 196 N85-14589
Control system design language implementation of a gas turbine starting controller
[AD-A147886] p 266 N85-15732
Design of an airfoil leading edge slat using an inverse aerodynamic calculation method p 256 N85-16777
Design of a digital ride quality augmentation system for commuter aircraft
[AD-A148233] p 271 N85-16879
Correction of engraving stamp for forming blanks of gas turbine engine blades p 371 N85-18213
SUBOPT: A CAD program for suboptimal linear regulators
[NASA-CR-172536] p 376 N85-19702
Study for the optimization of a transport aircraft wing for maximum fuel efficiency. Volume 1: Methodology, criteria, aeroelastic model definition and results
[NASA-CR-172551] p 499 N85-22378
A description of the Langley wireframe geometry standard (LaWGS) format
[NASA-TM-85767] p 499 N85-22380
Preliminary development of an approximation procedure for supercritical wing design optimization applications
[AD-A150177] p 500 N85-22383
Redesign of fuselage compartments by method of special contours p 500 N85-22784
Construction of profiles of intermediate blade sections from master profiles given on conical surfaces
p 529 N85-24075
Preliminary helicopter design decision making based on flight performance factors
[AD-A151488] p 575 N85-25254
The structural finite element model of the C-5A
p 604 N85-25885
IPAD: Integrated Programs for Aerospace-vehicle Design
[NASA-CR-3890] p 610 N85-26221
Computational aerodynamics for aircraft wing design
p 576 N85-26627
A numerical design method for three-dimensional transonic wings p 577 N85-26631
Three-dimensional wing boundary layer analysis program BLAY and its application p 559 N85-26632
Design-To-Cost (DTC) methodology to achieve affordable avionics p 578 N85-26645
A modern control design methodology with application to the CH-47 helicopter
[AD-A151946] p 587 N85-26723
Development and application of optimum sensitivity analysis of structures
[NASA-CR-175857] p 608 N85-27257
The application of computer aided structural optimization to the design of aircraft components
[MBB-UT-21/84-O] p 578 N85-27728
Aerodynamic research in preparation for a new Dutch transport aircraft with supercritical wings
[B8580077] p 636 N85-27836
Methods for design aerodynamics of modern transport aircraft
[DFVLR-FB-85-05] p 636 N85-27838
USAF damage tolerant design handbook: Guidelines for the analysis and design of damage tolerant aircraft structures, revision B
[AD-A153161] p 652 N85-27858
Advanced secondary power system for transport aircraft
[NASA-TP-2463] p 673 N85-28944
MBB expands CADAM system for a 320 program
p 704 N85-29099
Design of the nacelle for the A-320 aircraft
[SNIAS-851-111-111] p 761 N85-31046
R and D activities of the Aerodynamics Division
p 745 N85-32023
R and D activities of the Propulsion Division
p 798 N85-32025

**COMPUTER AIDED MANUFACTURING**
An effective interface between computer-stored design descriptions and analysis tools p 58 A85-11661
CAD/CAM integration - The imperatives
p 185 A85-18439
Computer-graphics: An overview - The state of the technology at General Dynamics Convair Division
[SAWE PAPER 1514] p 195 A85-18806
Cost reduction advantages of CAD/CAM
[SAWE PAPER 1549] p 186 A85-18816
Fabrication and assembly of composite rear fuselage (CRF) tooling and manufacturing for the UH-60 helicopter p 200 A85-21394
Impact of CAD/CAM on modification of flight test vehicles p 383 A85-28658
Automatic inspection and precision grinding of spiral bevel gears p 525 A85-31978
AH-64A production line Automatic Test Equipment
p 465 A85-31979
Factory automation for composite structures manufacturing p 528 A85-33007
Integrated CADCAM - An approach for advanced composite primary aircraft structure p 703 A85-37211
Robotic drilling of acrylic windshields and canopies for fighter aircraft p 703 A85-37396
Use of CAD/CAM systems during the development/construction of the A320
[DGLR PAPER 84-116] p 801 A85-40332
DoD Robotics Application Workshop Proceedings
[AD-A145867] p 71 N85-11978
Flexible manufacturing system for the production of aircraft parts
[PNR-90237] p 466 N85-23687

IPAD: Integrated Programs for Aerospace-vehicle Design
[NASA-CR-3890] p 610 N85-26221
The application of numerical control (NC) in manufacturing wind tunnel models
[B8580078] p 699 N85-28140
Automated fabrication of composite structures for helicopters
[SNIAS-851-210-104] p 761 N85-31049

COMPUTER AIDED MAPPING
Digital map products and the avionics requirement - Can DMA meet the challenge? p 821 A85-44989
F-15 digital map feasibility demonstration system p 832 A85-44990
Integrated Terrain Access/Retrieval System p 832 A85-44992
Future electronic map systems p 832 A85-44993
Evaluation of Defense Mapping Agency Level V high resolution data for training simulator applications p 849 A85-45119
Airborne Electronic Terrain Map System - Conclusions p 834 A85-45152

COMPUTER ASSISTED INSTRUCTION
Air Force honeycomb shaping at SM-ALC (Sacramento Air Logistics Center)
[AD-P004005] p 72 N85-11985
Producing high scene content with perspective validity
[AD-P004314] p 358 N85-17968

COMPUTER COMPONENTS
Some problems in the development of CAD systems — for design of minicomputer digital components p 200 A85-20466

COMPUTER DESIGN
VLSI chip set for high-performance avionic computers
[AIAA PAPER 84-2730] p 184 A85-17887
Description of MBB computerized design techniques for A320 p 303 N85-17194

COMPUTER GRAPHICS
Interactive Graphics for Geometry Generation - A program with a contemporary design
[AIAA PAPER 84-2389] p 131 A85-13502
Development of a 3-D interactive graphics flight path analysis program for the T-38 aircraft
[AIAA PAPER 84-2439] p 113 A85-13533
Visual simulation takes flight — Computer-generated imagery for improving realism of aircraft landing p 116 A85-15581
Dynamic analyses of large-scale mechanical systems and animated graphics
[AIAA PAPER 83-0946] p 184 A85-16340
Computer-graphics: An overview - The state of the technology at General Dynamics Convair Division
[SAWE PAPER 1514] p 196 A85-18806
Application of computer graphics to the preliminary design of aircraft p 340 A85-24250
Pictorial format program - Past, present, and future p 656 A85-38958
Estimation of hot gas reingestion for a VTOL aircraft at the conceptual design stage
[SAE PAPER 841555] p 663 A85-39207
Quick geometry generation and surface mesh partition for arbitrary 3-D bodies p 759 A85-43242
Advances in computer-generated imagery for flight simulation p 850 A85-44124
Construction of a special computer for image production using synthetic aperture radar — German thesis p 834 A85-45550
Predictor laws for pictorial flight displays p 824 A85-46328
Flow visualization using computer-generated color video displays of flow field survey data p 903 A85-47099
Parameter space design of control systems using interactive computer graphics p 916 A85-47681
Computer-aided design of control systems via parameter optimization method (CADCS/POM) - An interactive graphics approach p 917 A85-47784
Recent advances in computer image generation p 918 A85-49005
Analyses of on-board CIG (Computer Image Generator) applications for aircrew training
[AD-A145214] p 38 N85-10079
Graphics software for the display of body deformation motion
[FW-FO-1640] p 106 N85-12886
Increase in the economy of design and process planning by integrated and graphic data processing, phase 2 — aircraft design
[BMFT-FB-W-84-028] p 198 N85-14589
A Computer-generated topographic display system for navigation and mission planning in helicopters p 259 N85-16800
Description of MBB computerized design techniques for A320 p 303 N85-17194
The IMAGE 3 Conference Proceedings
[AD-A148630] p 313 N85-17962
Interactive Graphics Simulator: Design, development and effectiveness/cost evaluation
[AD-A149417] p 376 N85-19712
A description of the Langley wireframe geometry standard (LaWGS) format
[NASA-TM-85767] p 499 N85-22390
Graphic simulation of a machine-repairman model
[AD-A151761] p 543 N85-26633
The interactive generation of specifications for an onboard software sense (GISELE) p 679 N85-27906
AEV local verification for aviation, precipitation, and temperature programs: AV, REL, TEM
[PB85-179125] p 800 N85-30568
A feasibility study for the use of electronic flight strips in ATC controller workstations
[DFVLR-FB-85-08] p 751 N85-31039
DYNA3D, INGRID, and TAURUS: An integrated, interactive software system for crashworthiness engineering
[DE85-010926] p 860 N85-32948

COMPUTER NETWORKS
Test experience on an ultrareliable computer communication network
[AIAA PAPER 84-2649] p 194 A85-17836
The Navy's tactical data network
[AIAA PAPER 84-2716] p 152 A85-17862
NAS - Supercomputing master tool for aeronautics — Numerical Aerodynamic Simulation p 195 A85-18442
CAD systems for knowledge transfer p 375 A85-24609
Data flow methods for dynamic system simulation - A CSSL-IV microcomputer network interface p 458 A85-28614
Development of a generic architecture — in computers p 535 A85-31991

COMPUTER PROGRAM INTEGRITY
Software Quality Assurance Program for the AH-64 Advanced Attack Helicopter (AAH) p 456 A85-32010

COMPUTER PROGRAMMING
Modular programming structure applied to the simulation of non-linear aircraft models p 132 A85-15661
The use of structured methods in the development of large software-based avionics systems
[AIAA PAPER 84-2595] p 192 A85-17903
The selection of the desired transfer coefficients for analog computers p 610 A85-35653
Developing an off-line environment for testing real time aerodynamics simulation
[AIAA PAPER 85-1751] p 803 A85-42086
Applications of numerical optimization methods to helicopter design problems - A survey p 826 A85-45792
Applications of numerical optimization methods to helicopter design problems: A survey
[NASA-TM-86010] p 19 N85-10036
An inviscid computational method for supersonic inlets
[AD-A145997] p 86 N85-12042
Integrated control system engineering support
[AD-A149742] p 426 N85-21177
Research Reports: 1984 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-171317] p 462 N85-22210
Design for tactical avionics maintainability, technical evaluation report
[AGARD-AR-204] p 506 N85-23796
Unsteady transonic aerodynamic and aeroelastic calculations about airfoils and wings p 555 N85-25185
Rotorcraft digital advanced avionics system (Rodaas) p 576 N85-26608
A method to calculate the parameters of wings of arbitrary planform
[AD-A152989] p 635 N85-27831
Informatics Division p 797 N85-31416
Development of NATOPS (Naval Air Training and Operating Procedure Standardization) performance software for the H-46D helicopter
[AD-A156069] p 867 N85-35190

COMPUTER PROGRAMS
Progress toward the development of an aircraft icing analysis capability
[AIAA PAPER 84-0105] p 13 A85-10653
An effective interface between computer-stored design descriptions and analysis tools p 58 A85-11661
New developments in aeroelastic research p 51 A85-12352
Maintenance impact of current loads recording methodology on crack-growth based individual aircraft tracking
[AIAA PAPER 84-2410] p 97 A85-13516
ACAP crashworthiness analysis by KRASH p 103 A85-14046
New results in fault latency modelling — in redundant flight control system p 107 A85-14457
CFD is nearing a new plateau — current panel methods in aircraft design p 103 A85-15074
A computer program for assisting in the prelimin design of twin-engined propeller-driven general avia aircraft p 156 A85-1722
Software controlled display/pushbutton — for avionic
[AIAA PAPER 84-2667] p 164 A85-178
An improved version of the LTRAN2 for high frequency domain p 205 A85-1940
Analytical determination of propeller performanc degradation due to ice accretion
[AIAA PAPER 85-0339] p 264 A85-208
Software design methods — for civil and military aircra avionics systems p 301 A85-214
Development of asymptotic algorithms in the Fo package of applications programs — for sea surface effec vehicle design p 233 A85-223
Friendly ejection seat trajectory computer program p 330 A85-2275
An intelligent flight-management aid for procedur execution p 332 A85-2579
Using flowcharts to map ATLAS route p 456 A85-28
Automatic monitoring of aviation terminal forecasts p 532 A85-30
Assessment of three-dimensional inviscid codes an loss calculations for turbine aerodynamic computation
[ASME PAPER 84-GT-187] p 475 A85-329
Design and performance of a fixed, nonacceleratin guide vane cascade that operates over an inlet flow ang range of 60 deg
[ASME PAPER 84-GT-75] p 475 A85-329
Predicted turbine stage performance usi quasi-three-dimensional and boundary-layer analyses p 580 A85-3401
Software-engineering elements in the problem of th optimal design of lift systems for flight vehicles p 646 A85-3732
A study on the method for solving the equation o subsonic oscillatory lifting-surface theory. IV - Comput program SOLST 1 p 622 A85-383
Computer study of a jet flap ASTVOL 'Harrier'
[SAE PAPER 841457] p 650 A85-3920
The employment of 3-D programs in aircraft desi
[DGLR PAPER 84-113] p 754 A85-403
A data-processing procedural chain in structur mechanics
[DGLR PAPER 84-115] p 801 A85-403
Numerical analysis of the dynamic characteristics of a helicopter rotor blade with various boundary conditions p 757 A85-4160
Generic fault-tolerance techniques for critical avionic systems
[AIAA PAPER 85-1900] p 860 A85-48
A generalized computer code for developing dynam gas turbine engine models (DIGTEM) p 890 A85-490
Handheld computer weight and balance computation for military aircraft
[SAWE PAPER 1582] p 877 A85-49
Three degree of freedom steady state point performanc program: Updated version 1
[CSIR-NIAST-83/48] p 8 N85-100
Implementation of the supersonic triplet singularity int the USTORE computer code
[CSIR-NIAST-83/47] p 8 N85-100
Experimental data base for computers program assessment. Report of the Fluid Dynamics Panel Working Group 04: Addendum
[AGARD-AR-138-ADD] p 11 N85-1002
Impact of new computing systems on computational mechanics and flight-vehicle structures technology p 20 N85-1004
Transonic flow analyses for rotors. Part 1 Three-dimensional quasi-steady, full-potential calculatio
[NASA-TP-2375-PT-1] p 11 N85-1091
VORCOR: A computer program for calculating characteristics of wings with edge vortex separation by using a vortex-filament and-core model
[NASA-CR-165902] p 13 N85-109
PAN AIR: A computer program for predicting subsonic or supersonic linear potential flows about arbitrar configurations using a higher order panel method. Volume 3: Case manual (version 1.0)
[NASA-CR-3253] p 13 N85-109
Enhanced TCAS 2/CDTI traffic Sensor digital simulatio model and program description
[NASA-CR-172445] p 15 N85-109
Burner liner thermal/structural load modelling p 30 N85-109
Computations for the 16-foot transonic tunnel, NASA Langley Research Center
[NASA-TM-86319] p 39 N85-110
Turbofan noise generation. Volume 2: Compu programs
[NASA-CR-167952] p 65 N85-117
A data base for three-dimensional all-interference co evaluation p 83 N85-12

An interference assessment approach for a three-dimensional slotted tunnel with sparse wall pressure data p 84 N85-12030

Estimation of helicopter performance using a program based on blade element analysis
[AD-A146341] p 105 N85-12055

Development of the code NSFOIL for analyzing high Reynolds number transonic flow around an airfoil
[NAL-TR-816] p 147 N85-14801

PROGRAM VSAERO: A computer program for calculating the non-linear aerodynamic characteristics of arbitrary configurations: User's manual
[NASA-CR-166476] p 148 N85-14802

HH-60D night hawk helicopter p 161 N85-14817

Certification of advanced systems
p 167 N85-14829

Analysis of the flow field about a T-45 using PANAIR
[AD-A146811] p 236 N85-15699

NyKINM, a further development of KINM 22 — simulation of a robot attack on an aircraft
[FOA-C-20559-D8(E3)] p 258 N85-15720

NOISEMAP 4.4 computer program update, operator's manual, addendum 1
[AD-A147091] p 302 N85-16503

ATE user's view on design for maintainability
p 202 N85-16737

Built-in-test for first line testing p 202 N85-16739

Development of a Helicopter integrated navigation system p 245 N85-16802

A Generalized Escape System Simulation (GESS) computer program. Volume 2: GESS programmer's manual, version 2
[AD-A148363] p 243 N85-16845

A voice-actuated wind tunnel model leak checking system
[NASA-TM-86359] p 313 N85-17936

Preliminary results from the unsteady airfoil model USTAR2
[AD-P004171] p 325 N85-17956

Automatic land vehicle navigation using road map data
[DE84-017178] p 338 N85-18043

Analysis of inviscid transonic flow around an airfoil by diagonal form of IAF scheme
[NAL-TR-831] p 328 N85-18955

Inviscid analysis of unsteady blade tip flow correlation studies
[NASA-CR-172506] p 329 N85-18958

Efficient self-consistent viscous-inviscid solutions for unsteady transonic flow
[NASA-TM-86335] p 329 N85-18959

LOVEL-84: A LOw-VELocity aerodynamic heating code for flat plates, wedges, and cones
[DE85-002604] p 395 N85-19933

FTASUM: Aviation forecast summaries
[PB85-112977] p 455 N85-21908

Interface specifications for SCR (Software Cost Reduction) (A-7E) extended computer module, revised
[AD-A149948] p 459 N85-22024

Method for the prediction of the installation aerodynamics of a propfan at subsonic speeds
[NASA-CR-3887] p 476 N85-22369

An experiment in software reliability
[NASA-CR-172553] p 536 N85-24813

Trends in computational capabilities for fluid dynamics
p 601 N85-25172

Unsteady analysis of rotor blade tip flow
[NASA-CR-3898] p 556 N85-25202

The development of a performance and mission planning program for the A-7E aircraft
[AD-A151717] p 578 N85-25256

A user's manual for AMEER flight path trajectory simulation code
[DE85-006580] p 576 N85-25260

Mathematical modeling of the AEDC (Arnold Engineering Development Center) propulsion wind tunnel (16T)
[AD-A151293] p 583 N85-25275

Crack closure characteristics considering center cracked and compact tension specimens
[AD-A151702] p 605 N85-25907

Proceedings of the NAL Symposium on Aircraft Computational Aerodynamics
[NAL-SP-1] p 543 N85-26811

Computer software for aerodynamic design of aircraft developed within the National Aerospace Laboratory
p 558 N85-26813

A computer program for the drag prediction of subsonic, turbine powered aircraft in the en-route configuration
[VTH-LR-412] p 561 N85-26881

Generation of flight paths using heuristic search
[AD-A151949] p 569 N85-26894

The effect of load factor on aircraft handling qualities
[AD-A152118] p 587 N85-26724

ESP (External-Stores Program): A pilot computer program for determining flutter-critical external-store configurations. Volume 3, part 1: Program compilation
[AD-A152270] p 586 N85-26727

Interactive design of specifications for airborne software set (GISELE) p 610 N85-26753

The flight control system for the Experimental Aircraft Programme (EAP) demonstrator aircraft
p 591 N85-26755

Evaluating syntactic constraints to speech recognition in a fighter aircraft environment
[AD-A152117] p 607 N85-27119

Development and application of optimum sensitivity analysis of structures
[NASA-CR-175857] p 608 N85-27257

Error reduction program — combustor performance evaluation codes
[NASA-CR-174776] p 610 N85-27584

Computer assisted flight schedule optimization
[AD-A151689] p 611 N85-27623

Users manual for coordinate generation code CRDSRA
[NASA-CR-172584] p 634 N85-27824

User's manual for airfoil flow field computer code SRAIR
[NASA-CR-172585] p 634 N85-27825

Addition of flexible body option to the TOLA computer program, part 1
[NASA-CR-132732-1] p 652 N85-27855

Addition of flexible body option to the TOLA computer program. Part 2: User and programmer documentation
[NASA-CR-132732-2] p 652 N85-27856

Predictions and measurements of isothermal flowfields in axisymmetric combustor geometries
[NASA-CR-174916] p 671 N85-27867

Operational and developmental experience with the F/A-18A digital flight control system
p 678 N85-27895

Certifying complex digital systems on civil aviation aircraft p 680 N85-27907

Heating parameter estimation using coaxial thermocouple gages in wind tunnel test articles
[AD-A153039] p 699 N85-28328

Flight testing for performance and flying qualities
p 654 N85-28920

DEAN: A program for dynamic engine analysis
[NASA-TM-87033] p 673 N85-28945

Description and illustration of the use of CRACKS IV
[AD-A153543] p 701 N85-29325

Application of two-dimensional unsteady aerodynamic to a free-tip rotor response analysis
[NASA-CR-177346] p 741 N85-29933

AEV local verification for aviation, precipitation, and temperature programs: AV, REL, TEM
[PB85-179125] p 800 N85-30568

SANDRAG: A computer code for predicting drag of bodies of revolution at zero angle of attack in incompressible flow
[DE85-011170] p 804 N85-30884

Computer programs for smoothing and scaling airfoil coordinates
[NASA-TM-84666] p 742 N85-31011

Preliminary sizing and performance of aircraft
[NASA-TM-86357] p 829 N85-32111

Component-specific modeling
[NASA-CR-174925] p 836 N85-32119

Development and validation of a general purpose linearization program for rigid aircraft models
[NASA-TM-86737] p 847 N85-32122

Design of an expert-system flight status monitor
[NASA-TM-86739] p 860 N85-32794

Component-specific modeling
[NASA-CR-174765] p 891 N85-34140

Analysis of incompressible cascade flows using state-of-the-art computer programs
[AD-A155850] p 876 N85-35173

Development of NATOPS performance software for the SH-3D and SH-3H helicopters
[AD-A156140] p 887 N85-35192

**COMPUTER SYSTEMS DESIGN**

A validation methodology for fault-tolerant clock synchronization
[AIAA PAPER 84-2648] p 193 A85-17835

A standard computer bus for MIL-STD-1750A avionics computers
[AIAA PAPER 84-2679] p 194 A85-17860

Integrated on-board monitoring and test concepts
[AIAA PAPER 84-2709] p 166 A85-17875

A design methodology for integrated avionic systems
p 301 A85-21458

Fault tolerant computer system for the A129 helicopter p 504 A85-31271

DARPA stressing development of pilot's associate system p 802 A85-40917

Design of airborne fiber-optic data bus system
p 750 A85-43245

The Lockheed Cybernetics Console - An artificial intelligence tool p 858 A85-43690

Design for tactical avionics maintainability, technical evaluation report
[AGARD-AR-204] p 505 N85-23798

**COMPUTER SYSTEMS PERFORMANCE**

The AFA computerized mission planning system
p 347 A85-25653

A unified method for evaluating real-time computer controllers and its application p 458 A85-29408

A unified method for evaluating real-time computer controllers: A case study — aircraft control
[NASA-CR-174168] p 132 N85-13478

**COMPUTER SYSTEMS PROGRAMS**

Automated benchmark generation based upon a specification language
[AIAA PAPER 84-2667] p 194 A85-17849

Designing a priority driven multi-frame rate flight executive
[AIAA PAPER 85-0309] p 268 A85-19656

Automatic ATLAS program generator (AAPG) for the advanced electronic warfare test set
p 456 A85-26817

Development of a generic architecture — in computers p 535 A85-31991

Adaptable air data computer standardization
p 833 A85-45025

Reinventing the DAIS wheel in Ada — distributed avionics executive p 858 A85-45073

Investigating version dependence in fault-tolerant software p 302 N85-16749

The effect on software design of testing by symbolic execution p 303 N85-16750

Reliable software design for avionics and space applications p 303 N85-16751

Software test handbook: Software test guidebook, volume 2
[AD-A147289] p 303 N85-17578

SUBOPT: A CAD program for suboptimal linear regulators
[NASA-CR-172536] p 376 N85-19702

Crack growth geometry in aluminum alloy sheet material under flight simulation loading. 1: A comparison between TWIST and miniTWIST FALSTAFF and short FALSTAFF. 2: Effect of truncating high loads
[VTH-LR-441] p 436 N85-20119

Interface specifications for SCR (Software Cost Reduction) (A-7E) extended computer module, revised
[AD-A149948] p 459 N85-22024

Description of a computer program treating transonic steady state aeroelastic effects for a canard or tail airplane
[FFA-TN-1983-23] p 561 N85-26674

Development and evaluation of a Fault-Tolerant Multiprocessor (FTMP) computer. Volume 2: FTMP software
[NASA-CR-166072] p 804 N85-30706

Definition and layout of a traffic generator for an air traffic control simulation
[ESA-TT-888] p 748 N85-31034

DYNA3D, INGRID, and TAURUS: An integrated, interactive software system for crashworthiness engineering
[DE85-010928] p 860 N85-32846

**COMPUTER TECHNIQUES**

Simulation in engineering sciences: Applications to the automatic control of mechanical and energy systems; Proceedings of the International Symposium, Nantes, France, May 9-11, 1983 p 131 A85-15651

The impact of advanced computational techniques on digital avionics signal processor performance
[AIAA PAPER 84-2653] p 194 A85-17840

A method for testing a digital flight control system without the use of ground support equipment
[AIAA PAPER 84-2664] p 172 A85-17851

Computers and progress in aviation
p 199 A85-20453

AUTOTESTCON '83; Proceedings of the Conference, Fort Worth, TX, November 1-3, 1983
p 455 A85-26776

Fuel economies effected by the use of FMS in an advanced TMA p 412 A85-27604

FMS airline experience to date p 408 A85-27606

New airborne systems developed for navaids test and calibration p 488 A85-32489

Calculation of the flow in a dump combustor
[AIAA PAPER 85-1309] p 668 A85-39716

A measuring and computing off-line and on-line system for a turbine laboratory p 795 A85-43052

Computer and information technology in the year 2000 - A projection p 917 A85-48024

The Influence of Large Scale Computing on Aircraft Structural Design
[AGARD-R-706] p 20 N85-10040

Impact of new computing systems on computational mechanics and flight-vehicle structures technology p 20 N85-10042
Large scale computing in aeronautical design p 20 N85-10043
Analysis of on-board CIG (Computer Image Generator) applications for aircrew training [AD-A145214] p 38 N85-10079
AGARD Highlights [AGARD-HIGHLIGHTS-84/2] p 67 N85-11972
DoD Robotics Application Workshop Proceedings [AD-A143867] p 71 N85-11978
Air force plasma spray at SA-ALC (San Antonio Air Logistics Center) [AD-P004004] p 72 N85-11984
Computer sizing of fighter aircraft [NASA-TM-86351] p 203 N85-16759
Description of MBB computerized design techniques for A320 p 306 N85-17194
Aviation maintenance computerized management information systems: Perspective for the future [AD-A150637] p 467 N85-22349
Avionics Flight Evaluation System (AFES) p 505 N85-22357
Calculation and display of stack departure times for aircraft inbound to Heathrow Airport [AD-A151991] p 586 N85-25241
Computer software for aerodynamic design of aircraft developed within the National Aerospace Laboratory p 556 N85-26613
Planning fuel-conservative descents in an airline environmental using a small programmable calculator: Algorithm development and flight test results [NASA-TP-2393] p 575 N85-26705
Adaptive grid generation for numerical solution of Burger's equation [AD-A152217] p 611 N85-27606
ACT applied to helicopter flight control p 678 N85-27691
Some flight test results with redundant digital flight control systems p 678 N85-27692
Turbulence structure in the boundary layers of an oscillating airfoil [AD-A153631] p 637 N85-28626
MBB expands CADAM system for a 320 program p 704 N85-29099
Deployable Core Automated Maintenance System (DCAMS) [AD-A153666] p 706 N85-29639
COMPUTER VISION
Computer understanding of air traffic control displays p 499 A85-32499
Robotic drilling of acrylic windshields and canopies for fighter aircraft p 703 A85-37396
Simulators - How real does the visual system need to be? p 886 A85-49948
COMPUTERIZED SIMULATION
Computer simulation of hovercraft heave dynamics and control p 66 A85-11966
Computational simulation of free vortex flows using an Euler code p 78 A85-13951
New results in fault latency modelling — in redundant flight control system p 107 A85-14457
Suboptimal filtering for aided GPS navigation p 94 A85-14632
Visual simulation takes flight — Computer-generated imagery for improving realism of aircraft landing p 116 A85-15581
Simulation in engineering sciences: Applications to the automatic control of mechanical and energy systems; Proceedings of the International Symposium, Nantes, France, May 9-11, 1983 p 131 A85-15651
A user-operated model to study strategy in aircraft evacuation p 148 A85-16240
Aircraft delay impact on a central terminal hall - A simulation model p 174 A85-16269
Multi-sensor surveillance performance evaluation tool — using computerized simulation [AIAA PAPER 84-2631] p 193 A85-17627
Enhanced TCAS II signal processor development — Traffic alert and Collision Avoidance System [AIAA PAPER 84-2656] p 150 A85-17643
A simulator application of a 'hands-on throttle and stick' concept to a transport pilot/autopilot interface [AIAA PAPER 84-2687] p 165 A85-17666
Micro-based control and display research — using flight simulators [AIAA PAPER 84-2688] p 165 A85-17667
MISI - A general, modular, and interactive flight vehicle simulation program p 195 A85-18716
Computer geometric simulation of cruise missile center of gravity versus fuel consumption [SAWE PAPER 1511] p 159 A85-18804
Numerical simulations of the effect of ventilation control on fire and smoke spread in aircraft cabins [ASME PAPER 84-HT-104] p 149 A85-18843
Lightning simulation facilities in the United States and Europe [AIAA PAPER 85-0093] p 273 A85-19515
Numerical solution of the Euler equations for high-speed, blended wing-body configurations [AIAA PAPER 85-0123] p 211 A85-19534
Aircraft turbojet engine modeling using artificial intelligence techniques [AIAA PAPER 85-0253] p 262 A85-19316
Inexpensive calibrations for the influence function method using the interference distributed loads code — for prediction of store loads in aircraft flow fields [AIAA PAPER 85-0270] p 247 A85-19620
Calculation of the exchange ratio for the Adaptive Maneuvering Logic program [AIAA PAPER 85-0311] p 199 A85-19688
Body flow field simulation and force/moment prediction at transonic speeds [AIAA PAPER 85-0423] p 222 A85-19738
Computational aerodynamic design of the Gulfstream IV wing [AIAA PAPER 85-0427] p 223 A85-19742
Experimental methods for wind-tunnel flight-mechanics investigations using dynamically similar aircraft models — German thesis p 249 A85-19836
Newton iteration formulas for correcting temperature and pressure in thermodynamic calculation of rocket engines p 279 A85-20226
Recent improvements in efficiency, accuracy, and convergence for implicit approximate factorization algorithms — computational fluid dynamics [AIAA PAPER 85-0360] p 230 A85-20908
A numerical simulation of the NFAC (National Full-scale Aerodynamics Complex) open-return wind tunnel inlet flow [AIAA PAPER 85-0437] p 230 A85-20909
Prediction of performance of aircraft gas turbines p 284 A85-21662
The dynamics of ball separators in ball bearings. II - Results of optimization study [ASLE PREPRINT 84-AM-6C-3] p 309 A85-25957
Simulating 'the right stuff' p 389 A85-26249
Overview of icing research at ONERA [AIAA PAPER 85-0335] p 401 A85-26628
Summer Computer Simulation Conference, 15th, Vancouver, Canada, July 11-13, 1983, Proceedings. Volumes 1 & 2 p 457 A85-26801
The use of engineering simulation to support aircraft flight testing at the U.S. Air Force Flight Test Center p 413 A85-28634
Aircraft performance in a JAWS microburst p 483 A85-28776
An investigation of association region in maneuvering multi-target tracking p 410 A85-29667
Grid generation for fluid mechanics computations p 524 A85-31186
The application of the optimal model-following method to the design of elevator controllers p 511 A85-31342
Mixing four-dimensional equipped and unequipped aircraft in the terminal area p 486 A85-32778
A nonlinear pilot model for hover p 513 A85-32783
Moving targets, distributed, real-time simulation using Ada p 609 A85-34131
Identification of power analysis models for ETS-III operation p 586 A85-34426
A fast algorithm of the finite difference method for computation of the transonic flow past an arbitrary airfoil with the conservative full-potential equation p 546 A85-35742
Random air traffic generation for computer models p 567 A85-36609
Effects of measurement errors in estimating the probability of vertical overlap — in air traffic p 567 A85-36510
First-order feedback strategies for variable speed planar pursuit-evasion games p 703 A85-37196
European transonic wind tunnel p 681 A85-37461
Engine system field experience simulation program [SAE PAPER 841601] p 659 A85-38071
Aircraft performance in a JAWS microburst p 701 A85-39213
Modelling vortex flowfields by supercomputers with super-size memory p 628 A85-39242
The development of a hardware-in-the-loop engine simulation facility [AIAA PAPER 85-1283] p 682 A85-39706
The development of the generalized escape system simulation program [ASME PAPER 84-WA/DSC-30] p 661 A85-39869
Dynamics of helicopter air combat [DGLR PAPER 84-124] p 801 A85-40337
A real time executive for the control of a multicomputer simulation complex [AIAA PAPER 85-1754] p 802 A85-40684
The ideal-liquid concept in calculations on the detached flow around blunt objects with a turbulent shear layer at the boundary of the detachment region p 730 A85-42287
Onboard simulation - A newly emerging technology and the potential of the helmet mounted display as an embedded training device [AIAA PAPER 85-1737] p 757 A85-42864
Developing an off-line environment for testing real time aerodynamics simulation [AIAA PAPER 85-1751] p 803 A85-42868
Putting the 'super' in supercomputers p 804 A85-42894
The use of a simulated multifunction keyboard (SMFK) in MFK software development projects p 859 A85-45101
Real time simulation of airborne radar systems p 849 A85-45124
A reliability and survivability assessment tool for fault-tolerant integrated radio systems p 824 A85-45143
General aviation needs cost-effective flight simulators p 897 A85-48659
Flight Management Systems create new crew training needs p 916 A85-48660
Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 p 867 A85-49001
Evaluation of the benefits of advanced avionics system technologies through computer simulation p 869 A85-49003
Recent advances in computer image generation p 918 A85-49005
Rotorcraft simulation at Ames p 897 A85-49006
Evaluation of the AFTI/F-16 on the LAMARS (large amplitude multi-mode aerospace research simulator) p 881 A85-49008
A wind tunnel inlet flow simulation p 871 A85-49141
Modeling combat maintenance operations p 866 A85-49571
Modeling aircraft combat damage repair p 866 A85-49576
Generalized Escape System Simulation - Its purpose, recent modifications, and potential p 884 A85-49946
Simulators - How real does the visual system need to be? p 886 A85-49948
VORCOR: A computer program for calculating characteristics of wings with edge vortex separation by using a vortex-filament and-core model [NASA-CR-166602] p 13 N85-10821
Enhanced TCAS 2/CDTI traffic Sensor digital simulation model and program description [NASA-CR-172445] p 15 N85-10927
Numerical simulation of the subsonic wing-rock phenomenon p 116 N85-12084
Rotary-wing aircraft noise measurements: Analysis of variations and proposed measurement standard [AD-A146207] p 135 N85-12682
A comparison of Wortmann airfoil computer-generated lift and drag polars with flight and wind tunnel results [NASA-TM-86036] p 87 N85-12688
Simulation of separated transonic airfoil flow by finite-difference viscous-inviscid interaction p 145 N85-13786
A Q-GERT network simulation model for examining pipeline time in the Navy's J-52 intermediate level jet engine repair cycle [AD-A147269] p 201 N85-15680
Computer sizing of fighter aircraft [NASA-TM-86351] p 203 N85-16759
Development of a Helicopter integrated navigation system p 245 N85-16802
A Generalized Escape System Simulation (GESS) computer program. Volume 2: GESS programmer's manual, version 2 [AD-A146363] p 243 N85-16846
Supermaneuverability [AD-P004153] p 342 N85-17939
The IMAGE 3 Conference Proceedings [AD-A148636] p 313 N85-17962
Geographic subdivision and top level data structures. Columbus, Magellan, and expanding CIG (Computer Image Generation) horizons [AC-P004317] p 374 N85-17971
CIG (Computer image generation) data bases in an instance: Bits and pieces [AD-P004318] p 375 N85-17972
The generation of three-dimensional data bases using a building block approach [AD-P004319] p 379 N85-17973
Control systems analyses program: A tool for analysis of the GE-VSCDP (General Electric-Visual System Component Display Program) image display system [AD-P004325] p 356 N85-17979

Air combat visual simulation using a head slaved projector
[AD-P004327] p 389 N85-17981

The fiber-optic helmet-mounted display
[AD-P004330] p 348 N85-17984

Baffled eye and confounded brain or using visual illusions to train blind pilots
[AD-P004332] p 359 N85-17986

On-board Computer Image Generator (CIG) applications
[AD-P004335] p 378 N85-17989

CIG (Computer Image Generator) goes to war: The tactical illusion
[AD-P004336] p 378 N85-17990

AVTS (Advanced Visual Technology System): A high fidelity visual simulator
[AD-P004338] p 359 N85-17992

An analytic model of gas turbine engine installations
[AD-A146708] p 354 N85-18059

Interactive Graphics Simulator: Design, development and effectiveness/cost evaluation
[AD-A148417] p 376 N85-19712

Wildlife Hazards to Aircraft Conference and Training Workshop: Proceedings
[AD-A148330] p 402 N85-19938

Acta Electronica Sinica (selected articles)
[AD-A148829] p 447 N85-20252

Deflection model of a CT4-A undercarriage
[AD-A149778] p 417 N85-21156

A safety evaluation of the relocation of the ACM (Air Combat Maneuver) panel in the F-14 ( )/AIP (Avionics Integration Program)
[AD-A149596] p 419 N85-21158

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 4: Computer simulation of multiple acceptance criteria
[FAA-PM-84-12-VOL-4] p 431 N85-21183

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 5: Summary of validation studies
[FAA-PM-84-12-VOL-5] p 431 N85-21184

Space shuttle pilot-induced-oscillation research testing
p 498 N85-22351

Dynamic wind tunnel testing for active control research p 514 N85-22352

T700 cutter life improvement program
[AD-A150450] p 528 N85-23089

Automatic Dynamic Aircraft Modeler (ADAM), volume 1
[AD-A151410] p 575 N85-25252

A user's manual for AMEER flight path trajectory simulation code
[DE85-006580] p 576 N85-25260

The effects of atmospheric turbulence on an air-to-air optical communication link
[AD-A151840] p 602 N85-25700

Low-resolution target classification from a staring infrared sensor
[AD-A151690] p 612 N85-26358

Numerical simulation of transonic flutter of a high-aspect ratio transport wing p 596 N85-26630

Graphic simulation of a machine-repairman model
[AD-A151761] p 543 N85-26633

Simulation: A tool for cost-effective systems design and live test reduction p 613 N85-26657

Generalized escape system simulation: Its purpose, recent modifications and potential
[DE85-005571] p 565 N85-26689

Study of the primary zone of gas turbine hearths
[ONERA-RTS-22/3256-EY] p 583 N85-26719

The effect of load factor on aircraft handling qualities
[AD-A152118] p 587 N85-26724

Probabilistic computer model of optimal runway turnoffs
[NASA-CR-172549] p 594 N85-26760

An empirical self-protection chaff model
[AD-A151928] p 607 N85-27115

Pulsewidth modulated speed control of brushless dc motors
[AD-A151986] p 607 N85-27148

The NAVTAG (Naval Tactical Game) system and its modification to include the SH-60B helicopter
[AD-A152004] p 611 N85-27624

Addition of flexible body option to the TOLA computer program. Part 2: User and programmer documentation
[NASA-CR-132732-2] p 652 N85-27856

OLGA: An open loop gust alleviation system
p 678 N85-27897

Stressed-strained state of tightening buckles in sectional runners of gas turbines p 672 N85-28149

Adding computationally efficient realism to Monte Carlo turbulence simulation
[NASA-TP-2469] p 704 N85-28708

Operations research
[B8581897] p 704 N85-28712

Experimental and theoretical determination of the wing-induced lateral wind on the tail surfaces in oscillating rolling motion. Part 2: Theoretical investigations for calculation of the lateral wind
[IFD-1/84-PT-2] p 654 N85-28940

DEAN: A program for dynamic engine analysis
[NASA-TM-87033] p 673 N85-28945

Compressor and turbine models - numerical stability and other aspects
[AD-A153811] p 673 N85-28946

Piloted simulation of an algorithm for onboard control of time-optimal intercept
[NASA-TP-2445] p 681 N85-28949

Circulation control propellers for general aviation, including a BASIC computer program
[NASA-CR-165988] p 773 N85-29959

Analysis of rotorcraft crash dynamics for development of improved crashworthiness design criteria
[FAA-CT-85-11] p 747 N85-31031

Definition and layout of a traffic generator for an air traffic control simulation
[ESA-TT-888] p 748 N85-31034

Flow modeling at the base region of missiles
[SNIAS-851-320-101] p 782 N85-31228

Development and validation of a general purpose linearization program for rigid aircraft models
[NASA-TM-86737] p 847 N85-32122

The impact of supercomputers on experimentation: A view from a national laboratory
[NASA-TM-86822] p 918 N85-34510

Energy management of three-dimensional minimum-time intercept
[NASA-CR-176174] p 887 N85-35186

**COMPUTERS**

Computer software for aerodynamic design of aircraft developed within the National Aerospace Laboratory
p 556 N85-26613

**CONCENTRATION (COMPOSITION)**

Aircraft flow effects on cloud droplet images and concentrations
[AD-A146176] p 131 N85-12529

Simultaneous cabin and ambient ozone measurements on two Boeing 747 airplanes. Volume 3: October 1978 - July 1979
[NASA-TM-36683] p 454 N85-21872

The distribution of higher n-alkanes in partially frozen middle distillate fuels
[AD-A153940] p 692 N85-29074

**CONCORDE AIRCRAFT**

Avionics and civil aircraft systems: The present and the future
[SNIAS-851-111-104] p 751 N85-31038

**CONCRETES**

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 3: Statistical analysis of 3 methods for determining maximum specific gravity of bituminous concrete mixtures
[FAA-PM-84-12-VOL-3] p 430 N85-21182

**CONCURRENT PROCESSING**

Ada - Will DOD's new computer language cut software cost? p 459 A85-29669

**CONDENSATION**

Studies of condensation effects on airfoil testing in a transonic cryogenic tunnel
[AIAA PAPER 85-0229] p 274 A85-19603

Condensation phenomena in supersonic nozzles
p 393 A85-29989

**CONDENSERS**

Modeling of a second-generation solar-driven Rankine air conditioner
[DE84-015132] p 52 N85-10223

**CONDENSING**

Spontaneous vapor condensation in nonequilibrium supersonic monodisperse flow p 47 A85-10550

**CONDITIONING (LEARNING)**

Control of mammals at airports
[AD-P004192] p 404 N85-19957

**CONES**

Laminar boundary layer stability experiments on a cone at Mach 8. III - Sharp cone at angle of attack
[AIAA PAPER 85-0492] p 228 A85-19787

LOVEL-84: A LOw-VELocity aerodynamic heating code for flat plates, wedges, and cones
[DE85-002604] p 395 N85-19933

Experimental investigation of heat transfer to bluff cylinders and cones in hypersonic rarefied gas flow
p 396 N85-20195

**CONFERENCES**

Laminar turbulent boundary layers; Proceedings of the Energy Sources Technology Conference, New Orleans, LA, February 12-16, 1984 p 48 A85-11619

Unsteady turbulent boundary layers and friction; Proceedings of the Energy Sources Technology Conference, New Orleans, LA, February 12-15, 1984
p 48 A85-11626

Computation of internal flows: Methods and applications; Proceedings of the Energy Sources Technology Conference, New Orleans, LA, February 12-16, 1984
p 49 A85-11630

Failure prevention and reliability - 1983; Proceedings of the Fifth Conference, Dearborn, MI, September 11-14, 1983 p 49 A85-11666

Institute of Navigation, Annual Meeting, 39th, Houston, TX, June 20-23, 1983, Proceedings p 91 A85-13442

Israel Annual Conference on Aviation and Astronautics, 25th, Technion - Israel Institute of Technology, Haifa and Tel Aviv, Israel, February 23-25, 1983, Collection of Papers p 70 A85-13676

Annual Airline Plating and Metal Finishing Forum, 19th, San Antonio, TX, March 7-10, 1983, Proceedings
p 123 A85-14126

Institute of Navigation, Annual Meeting, 40th, Cambridge, MA, June 25-28, 1984 p 93 A85-14826

Simulation in engineering sciences: Applications to the automatic control of mechanical and energy systems; Proceedings of the International Symposium, Nantes, France, May 9-11, 1983 p 131 A85-15651

Damage tolerance of metallic structures: Analysis methods and applications p 125 A85-15859

Structural failure, product liability and technical insurance; Proceedings of the First International Conference, Technische Universitaet Wien, Vienna, Austria, September 26-29, 1983 p 181 A85-16251

Digital Avionics Systems Conference, 6th, Baltimore, MD, December 3-6, 1984, Proceedings
p 137 A85-17801

Composite structures; Proceedings of the National Specialists' Meeting, Philadelphia, PA, March 23-25, 1983 p 281 A85-21376

Design and advanced concepts of avionics/weapons system integration; Proceedings of the Symposium, London, England, April 3, 4, 1984 p 200 A85-21456

SAFE Association, Annual Symposium, 21st, San Antonio, TX, November 5-8, 1983, Proceedings
p 330 A85-22751

Airborne reconnaissance VII; Proceedings of the Meeting, San Diego, CA, August 23, 24, 1983
p 366 A85-24251

High performance composite materials: New applications and industrial production; Proceedings of the Fourth International Conference and Exhibition, Bordeaux, France, October 17-20, 1983 p 362 A85-24809

AIRMEC 83 - International Aircraft Maintenance Engineering Exhibition and Conference, 3rd, Duesseldorf, West Germany, April 12-15, 1983, Conference Reports
p 311 A85-25225

Applied composites - Aircraft structural applications; Proceedings of the Aerospace Engineering Conference and Show, Los Angeles, CA, February 12-14, 1985
[AIAA PAPER 85-0846] p 312 A85-26301

Aircraft engineering design - Design engineer's problems are now; Proceedings of the Aerospace Engineering Conference and Show, Los Angeles, CA, February 12-14, 1985
[AIAA PAPER 85-0847] p 341 A85-26305

Advances in cryogenic engineering. Volume 29 - Proceedings of the Cryogenic Engineering Conference, Colorado Springs, CO, August 15-17, 1983
p 438 A85-26501

Institute of Environmental Sciences, Annual Technical Meeting, 29th, Los Angeles, CA, April 19-21, 1983, Proceedings p 438 A85-26551

AUTOTESTCON '83; Proceedings of the Conference, Fort Worth, TX, November 1-3, 1983
p 455 A85-26776

Radio Technical Commission for Aeronautics, Annual Assembly Meeting and Technical Symposium, Washington, DC, November 15-17, 1983, Proceedings and Supplement p 382 A85-27527

International Conference on Air Cushion Technology, Vancouver, Canada, September 25-27, 1984, Preprints
p 462 A85-28476

Summer Computer Simulation Conference, 15th, Vancouver, Canada, July 11-13, 1983, Proceedings. Volumes 1 & 2 p 457 A85-28601

Flight testing today: Innovative management and technology; Proceedings of the Fourteenth Annual Symposium, Newport Beach, CA, August 15-19, 1983
p 383 A85-28632

ITSC '83; Proceedings of the Tenth International Thermal Spraying Conference, Essen, West Germany, May 2-6, 1983 p 443 A85-28801

Soviet Doctrine and Aviation Technology Study Seminar, Washington, DC, April 12, 13, 1985, Proceedings
p 463 A85-29949

Recent advances in experimental characterization of composites; Proceedings of the Fall Meeting, Salt Lake City, UT, November 6-10, 1983 p 435 A85-30151

Structures, Structural Dynamics, and Materials Conference, 26th, Orlando, FL, April 15-17, 1985, Technical Papers. Parts 1 & 2 p 522 A85-3022

Conference on Fluid Machinery, 7th, Budapest, Hungary, September 13-16, 1983, Proceedings. Volumes 1 & 2 p 524 A85-30775

American Helicopter Society, Annual Forum, 40th, Arlington, VA, May 16-18, 1984, Proceedings p 465 A85-31951

Israel Annual Conference on Aviation and Astronautics, 26th, Haifa, Israel, February 8, 9, 1984, Collection of Papers p 615 A85-37176

Scientific ballooning - IX; Proceedings of the Seventh Symposium, Graz, Austria, June 25-July 7, 1984 p 615 A85-38301

Institute of Navigation, National Technical Meeting, San Diego, CA, January 17-19, 1984, Proceedings p 643 A85-38526

Lighter-Than-Air Systems Conference, 6th, Norfolk, VA, June 26-28, 1985, Technical Papers p 616 A85-38776

Advanced Aircrew Display Symposium, 6th, Patuxent River, MD, May 15, 16, 1984, Proceedings p 655 A85-38951

Advances in aerospace propulsion; Proceedings of the Aerospace Congress and Exposition, Long Beach, CA, October 15-18, 1984
[SAE SP-584] p 656 A85-39067

Starting systems technology; Proceedings of the Aerospace Congress and Exposition, Long Beach, CA, October 15-18, 1984
[SAE SP-586] p 661 A85-39151

V/STOL: An update and overview; Proceedings of the Aerospace Congress and Exposition, Long Beach, CA, October 15-18, 1984
[SAE SP-591] p 616 A85-39201

Flight Simulation Technologies Conference, St. Louis, MO, July 22-24, 1985, Technical Papers p 778 A85-40551

Computational Fluid Dynamics Conference, 7th, Cincinnati, OH, July 15-17, 1985, Technical Papers
[ONERA, TP NO. 1985-75] p 790 A85-40926

1983 Tokyo International Gas Turbine Congress, Tokyo, Japan, October 23-29, 1983, Proceedings. Volumes 1, 2 & 3 p 767 A85-41776

Symposium on Numerical and Physical Aspects of Aerodynamic Flows, 3rd, California State University, Long Beach, CA, January 21-24, 1985, Proceedings p 732 A85-42951

PM aerospace materials; Proceedings of the International Conference, Bern, Switzerland, November 12-14, 1984. Volumes 1 & 2 p 785 A85-43126

Beta titanium alloys in the 80's; Proceedings of the Symposium, Atlanta, GA, March 8, 1983 p 851 A85-43651

Atmospheric Flight Mechanics Conference, 12th, Snowmass, CO, August 19-21, 1985, Technical Papers p 837 A85-43826

Radiation, propagation, fluid-structure coupling; Colloquium on Aeronautical Acoustics, 9th, Compiegne, France, November 14-16, 1984, Reports. Parts 1 & 2 p 861 A85-44037

Radio Technical Commission for Aeronautics, Annual Assembly Meeting and Technical Symposium, Washington, DC, November 13-15, 1984, Proceedings p 809 A85-44303

NAECON 1984; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 21-25, 1984. Volumes 1 & 2 p 810 A85-44976

Guidance, Navigation and Control Conference, Snowmass, CO, August 19-21, 1985, Technical Papers p 842 A85-45876

1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volumes 1, 2 & 3 p 916 A85-47676

European Workshop on Probe Calibrations p 896 A85-48523

Fibre reinforced composites '84; Proceedings of the International Conference, University of Liverpool, England, April 3-5, 1984 p 900 A85-48562

Aerospace simulation; Proceedings of the Conference, San Diego, CA, February 2-4, 1984 p 897 A85-49001

Annual Reliability and Maintainability Symposium, San Francisco, CA, January 24-26, 1984, Proceedings p 906 A85-49526

Aeronautics Technology Possibilities for 2000: Report of a workshop
[NASA-CR-174018] p 1 N85-10001

Experimental data base for computers program assessment. Report of the Fluid Dynamics Panel Working Group 04: Addendum
[AGARD-AR-138-ADD] p 11 N85-10020

Proceedings of the Aviation Accident Investigation Symposium
[PB84-917004] p 14 N85-10029

Peripheral Vision Horizon Display (PVHD)
[NASA-CP-2306] p 23 N85-10044

Technical Review of the Solid Particle Receiver Program
[DE84-015181] p 56 N85-10461

Turbine Engine Hot Section Technology (HOST)
[NASA-TM-83022] p 26 N85-10861

Wind Tunnel Wall Interference Assessment and Correction, 1983
[NASA-CP-2319] p 82 N85-12011

Rotordynamic Instability Problems in High-Performance Turbomachinery
[NASA-CP-2338] p 186 N85-14116

Technical Workshop: Advanced Helicopter Cockpit Design
[NASA-CP-2351] p 184 N85-14806

Proceedings of the International Conference and Exposition on Structural Impact and Crashworthiness
[AD-A147846] p 242 N85-15703

Engine Cyclic Durability by Analysis and Testing
[AGARD-CP-368] p 266 N85-15738

Helicopter Guidance and Control Systems for Battlefield Support
[AGARD-CP-359] p 204 N85-16787

Proceedings of the workshop on unsteady separated flow held at the United States Air Force Academy on August 10-11, 1983
[AD-A148249] p 313 N85-17887

The IMAGE 3 Conference Proceedings
[AD-A148636] p 313 N85-17962

Simulating speed and height cues in the C-130 weapon system trainer
[AD-P004313] p 358 N85-17967

Producing high scene content with perspective validity
[AD-P004314] p 356 N85-17968

Geographic subdivision and top level data structures. Columbus, Magellan, and expanding CIG (Computer Image Generation) horizons
[AD-P004317] p 374 N85-17971

An overview of the research program at the visual technology research simulator
[AD-P004321] p 359 N85-17975

Considerations in an optical variable acuity display system
[AD-P004323] p 377 N85-17977

Control systems analysis program: A tool for analysis of the GE-VSCDP (General Electric-Visual System Component Display Program) image display system
[AD-P004325] p 356 N85-17979

The fiber-optic helmet-mounted display
[AD-P004330] p 348 N85-17984

Binocular overlap in a fiber optic helmet mounted display
[AD-P004331] p 348 N85-17985

Baffled eye and confounded brain or using visual illusions to train blind pilots
[AD-P004332] p 359 N85-17986

On-board Computer Image Generator (CIG) applications
[AD-P004335] p 376 N85-17989

CIG (Computer Image Generator) goes to war: The tactical illusion
[AD-P004336] p 376 N85-17990

Military applications of the Singer Link-Miles IMAGE visual system
[AD-P004337] p 359 N85-17991

Flight Training Technology for Regional/Commuter Airline Operations: Regional Airline Association/NASA Workshop Proceedings
[NASA-CP-2346] p 332 N85-18009

Propagation Influences on Digital Transmission Systems: Problems and Solutions
[AGARD-CP-363] p 373 N85-19269

Calendar of selected aeronautical and space meetings
[AGARD-CAL-84/2] p 379 N85-19817

Wildlife Hazards to Aircraft Conference and Training Workshop: Proceedings
[AD-A148330] p 402 N85-19838

Proceedings of the 6th Advanced Aircrew Display Symposium
[AD-A150044] p 419 N85-21160

Proceedings of the Symposium on Electromagnetic Windows (17th) held at Georgia Inst. of Technology, Engineering Experiment Station, Atlanta, Georgia on 25-27 July 1984. Part 2
[AD-A149125] p 449 N85-21444

Gears and Power Transmission Systems for Helicopters and Turboprops
[AGARD-CP-369] p 502 N85-23765

Finite Element Methods in South Africa 1983 — conference
[S-332] p 536 N85-24863

Transonic Unsteady Aerodynamics and its Aeroelastic Applications
[AGARD-CP-374] p 542 N85-25171

Roundtable on effective use of flight simulators p 583 N85-25190

NASA R and T aerospace plane vehicles: Progre and plans
[NASA-TM-86429] p 585 N85-2708

Three-Dimensional Boundary Layers
[AGARD-R-719] p 603 N85-2578

Proceedings of the NAL Symposium on Aircra Computational Aerodynamics
[NAL-SP-1] p 543 N85-2681

Technical evaluation report on the Flight Mechanic Symposium on Active Control Systems: Review, Evaluation and Projections
[AGARD-AR-220] p 586 N85-26730

Advanced High Pressure O2/H2 Technology
[NASA-CP-2372] p 595 N85-26862

Active Control Systems: Review, Evaluation and Projections
[AGARD-CP-384] p 676 N85-2790

Adaptive wall wind tunnels and wall interference correction methods
[DFVLR-IB-222-84-A-37] p 683 N85-27912

Proceedings of the 9th US Air Force and the Federa Republic of Germany Data Exchange Agreement Meeting, Viscous and Interacting Flow Field Effects
[AD-A153020] p 699 N85-2828

Proceedings of Meteorological Motor Glider (MEMO) Workshop '84
[DFVLR-MITT-85-04] p 914 N85-35542

Proceedings of the 14th Army Science Conference. Volume 2: Principal authors I through O
[AD-A149201] p 919 N85-3568

CONFIGURATION MANAGEMENT

A reconfigurable redundancy management strategy fo a triplex DFBW system p 35 A85-12361

CONFINEMENT

Behavior of turbulent gas jets in an axisymmetric confinement
[NASA-CR-174829] p 581 N85-25285

CONFORMAL MAPPING

An analysis of the flow past an S-shaped rotor by discrete vortex model p 206 A85-19405

Grid generation for inlet configurations using conformal mapping p 474 A85-32833

Wall-interference calculation of wind tunnel with octagonal sections using conformal mapping method p 592 A85-35750

A conformal mapping suitable for problems involving interaction between given geometries and known fa fields
[AD-A149050] p 376 N85-19744

Applications of the conformal mapping method to the solution of mechanical vibrations problems p 528 N85-23103

Investigation of potential and viscous flow effects contributing to dynamic stall
[AD-A151696] p 602 N85-25773

Generation by conformal mappings of aerofoil sections and of certain other simple shapes suitable for both aerodynamic and stress-concentration problems
[AD-A154901] p 619 N85-33112

CONGRESSIONAL REPORTS

The congressional authorization process as it applies to aeronautical research and technology p 462 A85-29555

Aircraft navigation and landing technology: Status of implementation
[GPO-38-616] p 97 N85-1298

Satellite navigation
[S-HRG-98-856] p 246 N85-16651

Semiannual report to Congress on the effectiveness of the civil aviation security program
[AD-A149522] p 334 N85-18967

Ultralight aircraft technology and public safety
[GPO-38-948] p 405 N85-21131

Legislation to improve airline safety
[GPO-38-222] p 405 N85-21132

Wind shear detection technology
[GPO-38-920] p 455 N85-21879

The impact of weather on aviation safety
[GPO-35-520] p 565 N85-26686

FAA regulation of 9-seat and under passenger aircraft
[GPO-42-703] p 747 N85-31032

Status of air traffic control system
[S-HRG-98-1197] p 750 N85-31036

Aviation safety (aircraft passenger survivability and cabin safety)
[GPO-38-847] p 876 N85-34130

CONICAL BODIES

Conical bodies with a star-shaped transverse cross section, having a reserve of static stability p 229 A85-20557

Measured and predicted vortex-induced leeward heating on a biconic at Mach 6 and 10
[AIAA PAPER 85-1061] p 621 A85-37675

Diffraction of a single plane wave by a conical wing p 623 A85-38483

The isolated nature of solutions with a strong attached shock wave at the edges of a conical wing and a wedge
p 623 A85-38488

Flow over a biconic configuration with an afterbody compression flap
[AD-A151882] p 603 N85-25776

Aerodynamic characteristics of the standard dynamics model in coning motion at Mach 0.6
[NASA-TM-86717] p 817 N85-32094

CONICAL FLOW

The conditions of physical validity for a supersonic flow around a conical obstacle with a small aperture
p 3 A85-10413

Supersonic flow over a cone with power-law injection through the cone surface p 3 A85-10465

Conical flow near external axial corners as a bifurcation problem p 145 A85-18676

Approximate factorization schemes for three-dimensional nonlinear supersonic potential flow
p 145 A85-18678

A comparison of Euler and Navier-Stokes solutions for supersonic flow over a conical delta wing
[AIAA PAPER 85-0111] p 210 A85-19529

Shock induced vortices on elliptic cones in supersonic flow
[AIAA PAPER 85-0433] p 223 A85-19746

Shock-fitting solution of the supersonic flowfield in a rounded internal corner p 232 A85-21856

The discussion of the position of conical shock of axisymmetric air intake of supersonic aircraft relative to the leading edge of the cowl lip p 316 A85-24096

Flow field studies on a biconic model in high enthalpy non-equilibrium flow p 320 A85-25480

Conical flows near edge breaks of surfaces dividing the supersonic wake flows of an ideal gas
p 389 A85-28441

Nonlinear conical flow — Book p 544 A85-34273

Upstream influence in conically symmetric flow
p 546 A85-35153

Computational methods for hypersonic viscous flow over finite ellipsoid-cones at incidence
[AIAA PAPER 85-0925] p 620 A85-37584

Conical similarity of shock/boundary-layer interactions generated by swept and unswept fins
p 626 A85-38884

Adaptive mesh solution for supersonic conical flow in a rectilinear inlet
[AIAA PAPER 85-1626] p 714 A85-40732

Inviscid hypersonic flow around a conical flat-top wing-body combination p 723 A85-41011

Large-angle cone-shaped bodies in supersonic three-dimensional stream p 730 A85-42040

Flow Cones for airplane flight test flow visualization
p 903 A85-47085

Conical stagnation points in the flow around an external corner — delta wings
[VTH-LR-396] p 581 N85-26680

CONICAL NOZZLES

The effect of the pitch of axisymmetric nozzles on the efficiency of the nozzle assembly and of the turbine stage p 680 A85-39107

Nozzle wall roughness effects on free-stream noise and transition in the pilot low-disturbence tunnel
[NASA-TM-86389] p 910 N85-34355

CONICAL SCANNING

Spectral characteristics of radar echoes from aircraft-dispensed chaff p 406 A85-26606

CONJUGATE GRADIENT METHOD

GMRES acceleration of computational fluid dynamics codes
[AIAA PAPER 85-1494] p 802 A85-40933

CONNECTORS

Aerodynamic improvement of the reducer of a gas turbine p 6 A85-11840

Fiber optics applications for MIL-STD-1750
[AD-A151113] p 575 N85-25251

CONSERVATION EQUATIONS

Treatment of supersonic flows with embedded subsonic regions p 145 A85-18681

Entropy condition satisfying approximations for the full potential equation of transonic flow p 385 A85-26916

CONSERVATION LAWS

Periodic motions of generalized conservative mechanical systems whose equations of motion contain a large parameter — Russian book p 460 A85-30017

Implicit TVD schemes for hyperbolic conservation laws in curvilinear coordinates
[AIAA PAPER 85-1513] p 721 A85-40948

CONSOLES

The Lockheed Cybernetics Console - An artificial intelligence tool p 858 A85-43690

CONSTITUTIVE EQUATIONS

Biaxial constitutive equation development for single crystals
[NASA-CR-174056] p 65 N85-11862

On thermomechanical testing in support of constitutive equation development for high temperature alloys
[NASA-CR-174879] p 605 N85-25894

Finite element analysis of notch behavior using a state variable constitutive equation p 798 N85-31548

CONSTRAINTS

Explicit constraint approximation forms in structural optimization. II - Numerical experiences
p 125 A85-15806

New performance requirements for MIL-T-25959 tiedown adjusters p 330 A85-22762

The extended range operation of twin-engined public transport aircraft. I p 881 A85-49173

Simple nonrestrictive arm restraint system
[AD-D011216] p 14 N85-10026

Aircraft chocks
[AD-A145135] p 38 N85-10077

Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing
[NASA-CR-3917] p 886 N85-35184

CONSTRUCTION

Airport site selection and design
[AD-P004193] p 429 N85-19959

Landscape management on airports for reduction of bird populations
[AD-P004194] p 429 N85-19960

Inexpensive multipurpose landscaping
p 429 N85-19961

New runway enables IL-76 flights to Tenkeli in far north p 430 N85-21108

CONSTRUCTION INDUSTRY

Deputy minister on civil aviation construction projects
p 517 N85-23692

CONSTRUCTION MATERIALS

Expedient runway surfacing with post tensioning system for expeditionary airfields
[AD-D011677] p 781 N85-29976

CONTAINERS

Flame radiation and linear heat transfer in a tubular-can combustor p 683 A85-39580

CONTAINMENT

Fuel containment and damage tolerance for large composite primary aircraft structures. Phase 1: Testing
[NASA-CR-166091] p 902 N85-35241

CONTAMINATION

Flight evaluation of an insect contamination protection system for laminar flow wings
[SAE PAPER 850860] p 884 A85-50102

Contamination and distortion of steady flow field induced by discrete frequency in aircraft gas turbines
[AD-A147092] p 294 N85-16073

CONTINUOUS WAVE RADAR

Doppler effect and its influence on low-altitude CW altimeters p 106 A85-13971

Applications of FM-CW CO2 waveguide laser radar
p 334 A85-22650

Radio frequency test facility for evaluation of missile hardware p 432 A85-28621

CONTINUUM MECHANICS

Fatigue crack growth under variable amplitude loading
p 386 A85-23711

CONTOURS

Contour assessment of formed wing panels
[SAE PAPER 850884] p 896 A85-50131

CONTRACT INCENTIVES

Using incentives to improve maintainability
[AD-A153792] p 706 N85-29841

CONTRACT MANAGEMENT

Establishing realistic requirements for reliability, maintainability, and built-in-test p 909 A85-49539

Using incentives to improve maintainability
[AD-A153792] p 706 N85-29841

CONTRACT NEGOTIATION

USAF negotiating contracts for F100, F110 improvements p 581 A85-35448

V-22 Osprey development contract tests new procurement policy p 541 A85-36421

Using incentives to improve maintainability
[AD-A153792] p 706 N85-29841

CONTRACTORS

Integrated control system engineering support
[AD-A149742] p 426 N85-21177

The evolution of the U.S. helicopter industry
[AD-A154290] p 709 N85-29913

CONTRACTS

The evolution of the U.S. helicopter industry
[AD-A154290] p 709 N85-29913

CONTRAROTATING PROPELLERS

The effects of installation on single- and counter-rotation propeller noise
[AIAA PAPER 84-2263] p 58 A85-10830

Noise of counter-rotation propellers
[AIAA PAPER 84-2305] p 60 A85-10856

Analysis of counter-rotating propeller performance
[AIAA PAPER 85-0005] p 262 A85-19453

Noise of counter-rotation propellers
p 705 A85-39220

Noise radiation patterns of counter-rotation and unsteadily loaded single-rotation propellers
p 862 A85-45840

CONTROL

NASA three-laser airborne differential absorption lidar system electronics
[NASA-CR-174293] p 298 N85-17353

Successful control of gulls and other birds at a sanitary landfill
[AD-P004198] p 453 N85-19965

CONTROL BOARDS

LED multifunction keyboard engineering study
[AD-A145199] p 24 N85-10061

Crew systems and flight station concepts for a 1995 transport aircraft
[NASA-CR-166068] p 781 N85-29973

CONTROL CONFIGURED VEHICLES

Robust model following system and its application — for nonlinear aircraft control p 57 A85-10998

Robust flight control for CCV aircraft
p 172 A85-18715

Design and flight testing of digital direct side-force control laws p 423 A85-26430

Approach and landing technologies for STOL fighter configurations p 414 A85-29254

Computer-aided frequency domain synthesis of a robust active flutter suppression control law
[AIAA PAPER 85-0754] p 511 A85-30373

Effect of active control system nonlinearities on the L-1011-3(ACS) design gust loads
[AIAA PAPER 85-0755] p 511 A85-30374

Design of a flutter suppression system for an experimental drone aircraft p 497 A85-32584

Design and microprocessor implementation of an integrated load alleviation-pitch manoeuvre flight controller for relaxed stability aircraft p 840 A85-45052

Synthesis of direct lift control laws via eigenstructure assignment p 840 A85-45054

Application of frequency domain handling qualities criteria to the longitudinal landing task
[AIAA PAPER 85-1848] p 842 A85-45877

Reducing landing dispersions through flight control improvements on a turboprop-powered transport aircraft (The Lockheed High Technology Test Bed)
[AIAA PAPER 85-1850] p 842 A85-45879

Flight control law synthesis for an elastic vehicle by eigenspace assignment
[AIAA PAPER 85-1898] p 846 A85-45970

Application of a new multivariable model-following method to decoupled flight control p 846 A85-46339

Mission adaptive wing p 828 A85-46499

Further application of output predictive algorithmic control to terrain following p 894 A85-47734

A 320 to have combined automatic pilot, flight control system p 515 N85-24186

CONTROL EQUIPMENT

Reliability and precision of the actuating mechanisms of aircraft control systems — Russian book
p 355 A85-23723

Multiple sensor — for digital flight control systems
p 763 A85-41017

CONTROL SIMULATION

Model problem concerning the control of the lateral motion of an aircraft during landing p 35 A85-10451

Conversational time domain analysis for structural dynamics and control interaction problems
[AIAA PAPER 84-1871] p 57 A85-10562

Computer simulation of hovercraft heave dynamics and control p 66 A85-11665

A modelling approach for autopilot design of a rolling missile p 115 A85-13691

Simulation in engineering sciences: Applications to the automatic control of mechanical and energy systems; Proceedings of the International Symposium, Nantes, France, May 9-11, 1983 p 131 A85-15651

The modelling and control of RC helicopter — Radio Control p 115 A85-15657

The design of an on-board look-ahead-simulation for approach p 96 A85-15658

A fault-tolerant approach to helicopter swashplate control p 172 A85-18335

MISI - A general, modular, and interactive flight vehicle simulation program p 195 A85-18716

An empirical study of the methodology for real-time air traffic control system simulation testing
p 375 A85-24065

Development of advanced fighter flight controls using flight simulators
[AIAA PAPER 84-2441] p 356 A85-26323

Summer Computer Simulation Conference, 15th, Vancouver, Canada, July 11-13, 1983, Proceedings. Volumes 1 & 2 p 457 A85-28601

Digital simulation of adaptive guidance and control system of a homing missile p 409 A85-28604

Modeling and simulation in missile target tracking p 409 A85-28607
Application of modern control to bank-to-turn guidance using digital simulation p 423 A85-28608
Fixed step friction model p 443 A85-28609
The use of Ada in distributed simulations p 457 A85-28612
Multibus-based parallel processor for simulation p 457 A85-28613
A functional language approach in high-speed digital simulation p 458 A85-28615
Simulation of aircraft control systems on flight simulators p 415 A85-28661
Problems in the simulation of the automatic flight control systems of aircraft p 424 A85-28664
Check of an electronic model of controlled systems p 489 A85-30122
Time scheduling of a mix of 4D equipped and unequipped aircraft p 483 A85-33278
Simulating the works - From crew input to system response — integrated airborne weapon systems [AIAA PAPER 85-1738] p 773 A85-40555
A real time executive for the control of a multicomputer simulation complex [AIAA PAPER 85-1754] p 802 A85-40564
Aircraft control integration - Methodology and performance impact [AIAA PAPER 85-1424] p 775 A85-40639
Aeroservoelastic modeling methodology for active control simulation p 839 A85-45044
Asymmetric aeroservoelastic modeling for Active Control Simulation [AIAA PAPER 85-1861] p 843 A85-45890
Simulation study of an automatic trim system for reducing the control forces on a light twin after an engine failure [SAE PAPER 850913] p 885 A85-50124
Modal synthesis of multidimensional PI-regulators for objects with inertial sections p 529 N85-24064
In-flight investigation of the influence of pitch damping and pitch control effectiveness on landing approach flying qualities of statically unstable transport aircraft [DFVLR-FB-84-12] p 676 N85-27980
A preliminary evaluation of a failure detection filter for detecting and identifying control element failures in a transport aircraft [NASA-TM-87576] p 898 N85-35204

CONTROL STABILITY
Controllability and observability of linear time delay systems p 132 A85-15654
Optimum parametric control of objects with a lagging argument p 192 A85-17088
Line-of-sight reconstruction for faster homing guidance p 153 A85-18328
Nonconservative evaluation of uniform stability margins of multivariable feedback systems p 455 A85-26427
Digital homing guidance - Stability vs performance tradeoffs p 408 A85-26440
A multiloop robust controller design study using singular value gradients p 703 A85-39564
Time-domain stability robustness measures for linear regulators p 703 A85-39565
Analysis of missile control system stability with Monte Carlo method p 776 A85-42438
Application of a new type of pole collocation equations to designing the control law of a bi-input-multi-output system p 804 A85-43240
Sensitivity analysis of automatic flight control systems using singular value concepts [AIAA PAPER 85-1899] p 844 A85-45914
Stability robustness improvement using constrained optimization techniques [AIAA PAPER 85-1931] p 859 A85-45930
1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volumes 1, 2 & 3 p 916 A85-47676
Design of a pitch orientation control system for aircraft control in stall region p 863 A85-47701
Wind-tunnel investigation of a full-scale canard-configured general aviation airplane [NASA-TP-2382] p 395 N85-19925
Static longitudinal stability and control characteristics of the Fokker F27 Friendship calculated by simple handbook methods [VTH-LR-394] p 588 N85-26729

CONTROL STICKS
Investigation of limb-sidestick dynamic interaction with roll control [AIAA PAPER 85-1853] p 843 A85-45882
Biodynamic resistant control stick [AD-D011380] p 259 N85-15721

CONTROL SURFACES
Dynamics of spatial motion of an aeroplane with deformable controls p 115 A85-15716
Analysis of longitudinal natural vibrations of an aeroplane with moving deformable control surfaces p 115 A85-15718
Design and manufacture of composite control surfaces p 312 A85-26304
Measured and calculated airloads on a transport wing model p 392 A85-29263
Active vibration suppression of a cantilever wing p 487 A85-32344
Flight control system technology in the civil transport aircraft (Airbus-Program) - Status and key points of new development requirements [DGLR PAPER 84-089] p 775 A85-40308
Unsteady aerodynamics on the ZKP large-scale model as a result of rapid control-surface motion [DGLR PAPER 84-130] p 710 A85-40342
Use of the pseudo-inverse for design of a reconfigurable flight control system [AIAA PAPER 85-1900] p 844 A85-45915
The application of the detection filter to aircraft control surface and actuator failure detection and isolation [AIAA PAPER 85-1973] p 846 A85-45964
Analysis of asymmetric natural vibrations of an aeroplane with moving deformable control surfaces p 866 A85-49672
Analysis of natural vibrations of a deformable aeroplane with fixed control systems p 863 A85-49673
Integral equation of lifting surfaces in Laplace domain and analytic continuation of its pressure kernel [NAL-TR-786T] p 9 N85-10009
Advanced composite stabilizer for Boeing 737 aircraft [NASA-CR-166461] p 21 N85-10034
Improvement of Aerodynamic Performance Through Boundary Layer Control and High Lift Systems [AGARD-CP-365] p 204 N85-16771
Transonic steady- and unsteady-pressure measurements on a high-aspect-ratio supercritical-wing model with oscillating control surfaces [NASA-TM-81868] p 327 N85-18003
Subsonic and transonic pressure measurements on a high-aspect-ratio supercritical-wing model with oscillating control surfaces [NASA-TM-83201] p 327 N85-18004
Wind-tunnel investigation of a full-scale canard-configured general aviation airplane [NASA-TP-2382] p 395 N85-19925
Multivariable control law design for the AFTI/F-16 with a failed control surface [AD-A151906] p 586 N85-25271
Harrier p 576 N85-26696
Flight control system reconfiguration design using quantitative feedback theory [AD-A151771] p 587 N85-26722
The aerodynamics of controls p 590 N85-26746
X-29 digital flight control system design p 677 N85-27899
The aerodynamics of control p 679 N85-27901
Method of calculating separation flow of subsonic gas stream around wings p 636 N85-28161
A study of aerodynamic control in stalled flight leading-edge vortex formation analyses [AD-A153758] p 636 N85-28929
Gust load alleviation of a cantilevered rectangular elastic wing. Wind tunnel experiment and analyses [NAK-TR-86] p 681 N85-28950

CONTROL SYSTEMS DESIGN
Computer simulation of hovercraft heave dynamics and control p 66 A85-11665
Multi-rate digital flight control systems p 36 A85-12360
A reconfigurable redundancy management strategy for a triplex DFBW system p 36 A85-12361
YF16-CCV multivariable flight control design with uncertain parameters p 114 A85-13681
A modelling approach for autopilot design of a rolling missile p 116 A85-13901
Third generation digital flight controls p 170 A85-17230
Backup modes for the F/A-18 digital flight control system [AIAA PAPER 84-2622] p 171 A85-17819
A highly monitored digital flight control system for the AV-8B Harrier II [AIAA PAPER 84-2624] p 171 A85-17821
Multivariable control system design techniques - An application to a short takeoff and landing aircraft [AIAA PAPER 84-2625] p 171 A85-17822
Aircraft automatic digital flight control system with inversion of the model in the feed-forward path [AIAA PAPER 84-2627] p 171 A85-17823
Ultrareliable fault-tolerant control systems [AIAA PAPER 84-2650] p 194 A85-17837
Optimal simultaneous structural and control design of maneuvering flexible spacecraft p 177 A85-18338
Model reduction of control systems [AFWAL-TM-83-183-FIGC] p 196 A85-18350
Investigations for the use of an active control in aircraft — German thesis p 269 A85-19828
The development of digital attitude controllers - Its pas present and future p 302 A85-2244
A design methodology for pitch pointing flight contro systems p 423 A85-2849
Information approach to fixed-gain design p 456 A85-2860
Design of compensation schemes for a nonminimum-phase multivariable plant p 456 A85-2861
Aircraft control systems - A projection to the yea 2000 p 424 A85-2912
Check of an electronic model of controlled systems p 489 A85-3012
The application of the optimal model-following metho to the design of elevator controllers p 511 A85-3134
A piloted simulator investigation of decoupling helicopters by using a model following control system p 511 A85-3108
The AH-64 Back-Up Control System p 512 A85-3200
Development and evaluation of a generic activ helicopter vibration controller p 496 A85-3200
Advanced AFCS developments on the XV-15 tilt roto research aircraft — Automatic Flight Control System p 512 A85-3201
Active flutter suppression using eigenspace and line quadratic design techniques p 512 A85-3277
An Optimal, Proportional-plus-Integral/Tracking contro law for aircraft applications p 513 A85-3328
Sensitivity reduction and robust tracking with applicatio to aircraft control p 513 A85-3328
Shortcomings of modern control as applied to fighte flight control design p 513 A85-3330
Output feedback design for aircraft with ill-conditione dynamics p 536 A85-3330
A robust pitch pointing control law p 513 A85-3330
Robotic drilling of acrylic windshields and canopies fo fighter aircraft p 703 A85-3738
Automatic flight control system (AFCS) of helicopte using an optical control algorithm p 674 A85-3838
Time-domain stability robustness measures for linea regulators p 703 A85-3956
Development and evaluation of an integrated flight an propulsion control system [AIAA PAPER 85-1423] p 689 A85-3977
Optimization of control systems using the minima criterion — Russian book p 801 A85-3997
Pipeline control system with high safety reliability — fo transportation of aviation fuels p 779 A85-4064
Flight control systems and sensors for air transport p 775 A85-4101
Flight control technology in transport p 775 A85-41015
Multiple sensor — for digital flight control systems p 763 A85-41017
Optical technology for flight control systems p 776 A85-41019
New functional requirement to aero-engine control system p 766 A85-41030
Development of low cost digital control system for smal gas turbine engine p 769 A85-4103
Aeroservoelastic modeling methodology for activ control simulation p 839 A85-4504
Robustness enhancement for LQG digital fligh controller design p 840 A85-4504
A robust flight control design for the C-135 aircraft Horowitz's method p 840 A85-4504
Design of direct digital flight-mode control systems fo high-performance aircraft with multiple actuato non-linearities p 840 A85-45051
Multivariable digital flight control design of the X-29A using output feedback p 840 A85-45053
Synthesis of direct lift control laws via eigenstructur assignment p 840 A85-4505
Quantitative synthesis of highly uncertain, multipl input-output, flight control system for the forward swep wing X-29 aircraft p 841 A85-45055
Self-Repairing Flight Control System Reliability & Maintainability Program executive overview p 810 A85-4505
A control law for the self-repairing/digital flight control system p 841 A85-45057
Guidance, Navigation and Control Conference, Snowmass, CO, August 19-21, 1985, Technical Papers p 842 A85-45876
Active aeroelastic oscillation control on the F/A-18 aircraft [AIAA PAPER 85-1858] p 843 A85-4588
Asymmetric aeroservoelastic modeling for Active Control Simulation [AIAA PAPER 85-1861] p 843 A85-4589
Design of the robust flight control system by realizable linear compensator [AIAA PAPER 85-1897] p 844 A85-45913

Use of the pseudo-inverse for design of a reconfigurable flight control system
[AIAA PAPER 85-1900] p 844 A85-45915
Quantitative feedback design approach to robust flying qualities
[AIAA PAPER 85-1902] p 844 A85-45916
Multi-input multi-output automatic design synthesis for performance and robustness
[AIAA PAPER 85-1929] p 858 A85-45925
Stability robustness improvement using constrained optimization techniques
[AIAA PAPER 85-1931] p 858 A85-45930
Design for an Ada-based architecture for critical flight controls
[AIAA PAPER 85-1954] p 858 A85-45940
A second order adaptive controller for wing flutter control
[AIAA PAPER 85-1965] p 826 A85-45949
Totally robust control - A new concept for design of flight control systems
[AIAA PAPER 85-1974] p 845 A85-45955
Generic faults - The first word — flight control system errors
[AIAA PAPER 85-1979] p 858 A85-45957
Stability of adaptive control algorithms - Theoretical examination and simulation for F-4 flight control
[AIAA PAPER 85-1986] p 845 A85-45965
Design of fast non-interacting digital flight-mode control systems for high-performance aircraft
[AIAA PAPER 85-1993] p 846 A85-45974
Design of an expert-system flight status monitor
[AIAA PAPER 85-1998] p 834 A85-45975
Eigenstructure assignment and its application in design of flight control system p 860 A85-46822
1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volumes 1, 2 & 3
p 916 A85-47676
Parameter space design of control systems using interactive computer graphics p 916 A85-47681
Time-controlled aircraft guidance in uncertain winds and temperatures p 879 A85-47687
Design of optimal low-sensitivity controllers with prespecified eigenvalues - Application to aircraft lateral motion p 893 A85-47696
Design of decoupled longitudinal flight control laws utilizing eigensystem assignment p 893 A85-47697
Design of a pitch orientation control system for aircraft control in stall region p 893 A85-47701
Modal insensitivity with optimality — in feedback control p 917 A85-47735
Computer-aided design of control systems via parameter optimization method (CADCS/POM) - An interactive graphics approach p 917 A85-47784
A fluidic flight control system demonstrator
p 894 A85-47786
Performance evaluation of an electrofluidic flight control actuator p 894 A85-47789
Control system reconfiguration p 917 A85-47793
A new era of fuel controls p 869 A85-48073
Forward-Swept Wing control system development
p 894 A85-48011
Model reduction for control system design
p 172 N85-13799
Using the control system design environment in the design of a data link receiver unit for the Coast Guard HH-65A helicopter
[AD-A148524] p 271 N85-16880
Personnel protection concepts for advance escape system design p 334 N85-19658
Robustness of continuous multivariable flight controls
[ONERA-RT-12/7224-SY] p 425 N85-19987
Robustness of continuous multivariable flight controls
[ONERA-RT-11/7224-SY] p 425 N85-19988
Some aspects of the design of a fly-by-wire flying control system for a supersonic V/STOL fighter aircraft
[COLL-AERON-8413] p 425 N85-21175
Activities in flight mechanics and flight control
[ISSN-0720-7808] p 515 N85-23803
Multivariable control law design for the AFTI/F-16 with a failed control surface
[AD-A151908] p 586 N85-25271
Cost Effective and Affordable Guidance and Control Systems
[AGARD-CP-360] p 543 N85-26638
Some aspects of how to design cost-effective flight control systems p 586 N85-26639
Design adequacy: An effectiveness factor
p 606 N85-26642
A modern control design methodology with application to the CH-47 helicopter
[AD-A151946] p 587 N85-26723
Application of linear optimal control theory to the design of the elevator control system of the DHC-2 Beaver experimental aircraft
[VTH-LR-411] p 588 N85-26729
The flight control system for the Experimental Aircraft Programme (EAP) demonstrator aircraft
p 591 N85-26756
The STOL and maneuver technology program integrated control system p 591 N85-26757
Some aspects of how to design cost-effective flight control systems
[MBB-LKE-32/S/PUB/143] p 591 N85-27729
The state-of-the-art and future of flight control systems p 677 N85-27885
Aspects of application of ACT systems for pilot workload alleviation p 677 N85-27887
Application of AFTI/F-16 task-tailored control modes in advanced multirole fighters p 677 N85-27888
X-29 digital flight control system design
p 677 N85-27889
The evolution of ACS for helicopters: Conceptual simulation studies to preliminary design
p 677 N85-27890
ACT applied to helicopter flight control
p 678 N85-27891
An update of experience on the fly by wire Jaguar equipped with a full-time digital flight control system
p 678 N85-27893
ACT flight research experience p 678 N85-27894
Operational and developmental experience with the F/A-18A digital flight control system
p 679 N85-27895
Flight testing and development of the F/A-18A digital flight control system p 678 N85-27896
OLGA: An open loop gust alleviation system
p 678 N85-27897
The flight control system for the Experimental Aircraft Programme (EAP) demonstration aircraft
p 680 N85-27908
Automatic flight control modes for the AFTI/F-111 mission adaptive wing aircraft p 680 N85-27909
The STOL and maneuver technology program integrated control system development p 680 N85-27910
Research Flight Simulator for Helicopters (RFSH): Description and application to fire control system design
[SNIAS-851-210-106] p 761 N85-31050
Performance improvements of a highly integrated digital electronic control system for an F-15 airplane
[NASA-TM-86746] p 837 N85-32120
A preliminary investigation of handling qualities requirements for helicopter instrument flight during decelerating approach maneuvers and overshoot
[AD-A154650] p 847 N85-32125
Flight test experience and controlled impact of a large, four-engine, remotely piloted airplane
[NASA-TM-86738] p 847 N85-33123
Application of frequency domain handling qualities criteria to the longitudinal landing task
[NASA-TM-86728] p 847 N85-33124
The interpretation of flying qualities requirements for flight control system design
[NASA-CR-177942] p 848 N85-33125
CONTROL THEORY
The role of modern control theory in the design of controls for aircraft turbine engines p 109 A85-13627
Multi-input/multi-output controller design for longitudinal decoupled aircraft motion p 114 A85-13633
A problem concerning the incomplete-feedback control of linear Markovian systems with random parameters
p 192 A85-17055
Optimum parametric control of objects with a lagging argument p 192 A85-17058
The problem of determining the optimum flight control law for an aircraft p 170 A85-17064
Calculation of the probabilistic characteristics of nonlinear control systems using a trigonometric version of the factorial interpolation method p 192 A85-17065
A design methodology for pitch pointing flight control systems p 423 A85-26429
A method for high order linear system reduction and nonlinear system simplification p 457 A85-27514
Structural and algorithmic aspects of the design of a mathematical-modeling system for problems of ballistics, control, and navigation p 432 A85-28391
Nonlinear state feedback control of uncertain linear systems and application to control of aircraft
p 513 A85-33294
System-theoretical solution of the failure diagnosis problem using the example of a flight engine — German thesis p 580 A85-33404
New concepts in control theory, 1959-1984 (Dryden Lectureship in Research) — for aerospace flight control
p 703 A85-39551
Identification of linear dynamic control plants by means of signal expansion on the basis of the Walsh function
p 803 A85-42675
Application of a new type of pole collocation equations to designing the control law of a bi-input-multi-output system p 804 A85-43240
Development of control laws for a flight test maneuver autopilot for an F-15 aircraft
[AIAA PAPER 85-1889] p 843 A85-45886
An adaptive guidance algorithm for aerospace vehicles
[AIAA PAPER 85-1917] p 850 A85-45921
Stability of adaptive control algorithms - Theoretical examination and simulation for F-4 flight control
[AIAA PAPER 85-1986] p 845 A85-45965
1984 American Control Conference, San Diego, CA, June 6-8, 1984, Proceedings. Volumes 1, 2 & 3
p 916 A85-47676
Orbit control of a synchronous satellite — Russian book p 899 A85-49448
Model simplification of flight control systems
p 36 N85-11000
Research on optimal control, stabilization and computational algorithms for aerospace applications
[NASA-CR-174318] p 303 N85-17603
Testing of the digital flight control system of the German CCV fighter experimental aircraft p 514 N85-22361
Model reduction for control system design
[NASA-CR-170417] p 514 N85-22396
Large antenna control methods: Current status and future trends p 518 N85-23845
Modal synthesis of multidimensional PI-regulators for objects with inertial sections p 529 N85-24064
High specific power aircraft turn maneuvers: Tradeoff of time-to-turn versus change in specific energy
[AD-A151701] p 575 N85-25257
Multivariable control law design for the AFTI/F-16 with a failed control surface
[AD-A151908] p 586 N85-25271
Flight control system reconfiguration design using quantitative feedback theory
[AD-A151771] p 587 N85-26722
Application of linear optimal control theory to the design of the elevator control system of the DHC-2 Beaver experimental aircraft
[VTH-LR-411] p 588 N85-26729
Technical evaluation report on the Flight Mechanics Symposium on Active Control Systems: Review, Evaluation and Projections
[AGARD-AR-220] p 588 N85-26730
ACT applied to helicopter flight control
p 589 N85-26738
The flight control system for the Experimental Aircraft Programme (EAP) demonstrator aircraft
p 591 N85-26755
Design of robust controllers for a multiple input-multiple output control system with uncertain parameters application to the lateral and longitudinal modes of the KC-135 transport aircraft
[AD-A153100] p 675 N85-27877
Controller requirements for uncoupled aircraft motion, volume 1
[AD-A153173] p 675 N85-27878
Controller requirements for uncoupled aircraft motion, volume 2
[AD-A153300] p 676 N85-27879
Active Control Systems: Review, Evaluation and Projections
[AGARD-CP-384] p 676 N85-27883
Nonlinear global stability analysis of compressor stall phenomena
[NASA-CR-174906] p 773 N85-29960
Research on optimal control, stabilization and computational algorithms for aerospace applications
[NASA-CR-172528] p 776 N85-29970
Development of control laws for a flight test maneuver autopilot for an F-15 aircraft
[NASA-TM-86736] p 847 N85-33122
CONTROLLABILITY
Controllability and observability of linear time delay systems p 132 A85-15654
Toward a unifying theory for aircraft handling qualities
p 651 A85-39554
Flight evaluation of longitudinal flying qualities parameters
[AIAA PAPER 85-1789] p 838 A85-43847
Interaction between display dynamics and handling qualities in manual control tasks
[AIAA PAPER 85-1805] p 838 A85-43855
A user friendly introduction to handling qualities
p 839 A85-45040
Handling-qualities investigation of conventional helicopter directional control characteristics
[AIAA PAPER 85-1947] p 845 A85-45936
Integrated Application of Active Controls (IAAC) technology to an advanced subsonic transport project-longitudinal handling qualities study of a relaxed-stability airplane
[NASA-CR-3660] p 36 N85-11005
Simulation evaluation of two VTOL control/display systems in IMC approach and shipboard landing
[NASA-TM-85996] p 173 N85-14841

Operational requirements versus technological capabilities
p 204 N85-16796

The development of a dynamic model of a generalized combat aircraft with forward wings for the identification of stability and control characteristics
[CAR-84-33] p 343 N85-19050

Simulation of aircraft behaviour on and close to the ground
[NASA-TM-87460] p 501 N85-23754

A preliminary investigation of handling qualities requirements for helicopter instrument flight during decelerating approach maneuvers and overshoot
[NRC-24173] p 662 N85-27857

ACT flight research experience p 676 N85-27894

How to handle failures in advanced flight control systems of future transport aircraft p 679 N85-27905

Mission requirements and handling qualities
p 680 N85-29818

Development of control laws for a flight test maneuver autopilot for an F-15 aircraft
[NASA-TM-86736] p 847 N85-33122

Application of frequency domain handling qualities criteria to the longitudinal landing task
[NASA-TM-86728] p 847 N85-33124

Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing
[NASA-TP-2451] p 886 N85-34144

Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 1: Analysis methods
[NASA-CR-177943-VOL-1] p 896 N85-35202

Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 2: Data
[NASA-CR-177943-VOL-2] p 896 N85-35203

CONTROLLERS

Multi-input/multi-output controller design for longitudinal decoupled aircraft motion p 114 A85-13633

The development of digital attitude controllers - Its past, present and future p 302 A85-22449

A unified method for evaluating real-time computer controllers and its application p 458 A85-29406

Active flutter suppression using eigenspace and linear quadratic design techniques p 512 A85-32779

On the controllability limit of a human operator when using a Bang-Bang type controller p 804 A85-42699

Combining quantitative and qualitative reasoning in aircraft failure diagnosis
[AIAA PAPER 85-1906] p 811 A85-45917

Aircraft cabin pressurization control system tester
[AD-D011225] p 38 N85-10081

A unified method for evaluating real-time computer controllers: A case study — aircraft control
[NASA-CR-174168] p 132 N85-13479

Control system design language implementation of a gas turbine starting controller
[AD-A147696] p 299 N85-15732

Flutter control with unsteady aerodynamic models
[AD-A147858] p 270 N85-15753

Experience of one UK electronic equipment supplier with bite on engine/flight control systems over the past ten years p 296 N85-16736

Mission-oriented requirements for updating MIL-H-8501. Volume 1: STI proposed structure — military rotorcraft
[NASA-CR-177331-VOL-1] p 271 N85-16877

Modal reduction for control system design
[NASA-CR-170417] p 514 N85-22398

Large antenna control methods: Current status and future trends p 516 N85-23645

Model synthesis of multidimensional PI-regulators for objects with inertial sections p 529 N85-24084

Effects of side-stick controllers on rotorcraft handling qualities for terrain flight
[NASA-TM-86688] p 586 N85-25267

Design of robust controllers for a multiple input-multiple output control system with uncertain parameters application to the lateral and longitudinal modes of the KC-135 transport aircraft
[AD-A153100] p 675 N85-27877

Controller requirements for uncoupled aircraft motion, volume 2
[AD-A153300] p 678 N85-27879

ACT applied to helicopter flight control
p 678 N85-27891

CONVECTION

The role of convective perturbations in supercritical inlet oscillations p 526 N85-22563

CONVECTION CURRENTS

Measurements for the determination of the vertical structure of the convective boundary layer — atmospheric boundary layer p 915 N85-35550

CONVECTIVE FLOW

Effect of airfoil mean loading on convected gust interaction noise
[AIAA PAPER 84-2324] p 133 A85-13955

Computation of forced laminar convection in rotating cavities p 600 A85-35592

Vertical plate fin with conjugated forced convection-conduction turbulent flow
[ASME PAPER 84-WA/HT-6] p 698 A85-39676

CONVECTIVE HEAT TRANSFER

The effects of surface discontinuities on convective heat transfer in hypersonic flow
[AIAA PAPER 85-0971] p 620 A85-37821

Transition measurements via heat-transfer instrumentation on a 0.5 bluntness 9.75-deg cone at Mach 7 with and without mass addition
[AIAA PAPER 85-1004] p 621 A85-37846

Application of boundary element method to heat transfer coefficient measurements around a gas turbine blade
[ASME PAPER 84-WA/HT-60] p 698 A85-39697

Impingement cooling of turbine airfoils by multiple two-dimensional jets p 768 A85-41786

Determination of the local heat transfer coefficients of three simulated smooth ice formation characteristics on a cylinder
[AIAA PAPER 85-1636] p 819 A85-43673

Combined analysis and optimization of extended heat transfer surfaces p 856 A85-46482

Optimization of combined convective and film cooling of perforated baffle blades in gas turbines
p 529 N85-24067

Unsteady heat transfer due to time-dependent free stream velocity p 699 N85-27947

CONVERGENCE

Accelerated convergence for incompressible flow calculations
[AIAA PAPER 85-0058] p 209 A85-19469

Recent improvements in efficiency, accuracy, and convergence for implicit approximate factorization algorithms — computational fluid dynamics
[AIAA PAPER 85-0360] p 230 A85-20868

Computer-aided analysis of the convergence to steady state of discrete approximations to the Euler equations
p 316 A85-24449

Accelerated convergence of Jameson's finite-volume Euler scheme using van der Houwen integrators
p 610 A85-35175

The effect of channel convergence on heat transfer in a passage with short pin fins
[NASA-TM-83801] p 53 N85-10303

Random equations in aerodynamics
[NASA-CR-174279] p 238 N85-16925

CONVERGENT NOZZLES

An experimental investigation of the aerodynamics of nozzle flow in a rectangular passage
p 847 A85-35600

Study of an asymmetric flap nozzle as a thrust-vectoring device p 629 A85-39582

Experimental investigation of shock-cell noise reduction for dual-stream nozzles in simulated flight
[NASA-CR-3846] p 135 N85-13549

Experimental investigation of shock-cell noise reduction for single stream nozzles in simulated flight
[NASA-CR-3845] p 135 N85-13550

Static internal performance of a two-dimensional convergent nozzle with thrust-vectoring capability up to 60 deg
[NASA-TP-2381] p 328 N85-18951

CONVERGENT-DIVERGENT NOZZLES

Single expansion ramp nozzle development status
[AIAA PAPER 84-2455] p 108 A85-13543

Supersonic jet shock noise reduction
[AIAA PAPER 84-2278] p 196 A85-18099

Computational-experimental study of a Laval nozzle with a cylindrical throat p 141 A85-16169

A comparison of different calculation methods for axisymmetric fields in convergent-divergent nozzles
p 390 A85-29047

An analytical and experimental investigation of annular propulsive nozzles p 392 A85-29253

Experimental investigation of shock-cell noise reduction for dual-stream nozzles in simulated flight
[NASA-CR-3846] p 135 N85-13549

Experimental investigation of shock-cell noise reduction for single stream nozzles in simulated flight
[NASA-CR-3845] p 135 N85-13550

Static investigation of several yaw vectoring concepts on nonaxisymmetric nozzles
[NASA-TP-2432] p 637 N85-28924

COOLERS

A fast cool-down J-T minicryocooler
p 433 A85-26510

Modeling of a second-generation solar-driven Rankine air conditioner
[DE84-015132] p 52 N85-10223

COOLING

Comparison of advanced cooling concepts using color thermography — for high temperature-rise gas combustors
[AIAA PAPER 85-1289] p 667 A85-39702

Small gas turbine combustor study - Fuel injector performance in a transpiration-cooled liner
[AIAA PAPER 85-1312] p 668 A85-39717

The effect of channel convergence on heat transfer in a passage with short pin fins
[NASA-TM-83801] p 53 N85-1030

Heat transfer and pressure drop in blade cooling channels with turbulence promoters
[NASA-CR-3837] p 128 N85-1231

Vibration isolated cold plate assembly
[AD-D011444] p 373 N85-1938

Energy losses at leading edge of turbine blade during multirow jet cooling p 508 N85-2282

Pressure drop and coefficients of internal heat transfer necessary for transpiration cooling p 527 N85-2283

Fabrication of ceramic substrate-reinforced and free forms
[NASA-TM-86994] p 518 N85-2392

Experimental study of heat transfer from shaft in cooled radial bearing of GNT-25 gas turbine
p 529 N85-2406

Opacity control technique for jet engine test cells
[AD-D011669] p 774 N85-2990

Observations of the use of the setapoint detector
[AD-A154533] p 853 N85-3220

COOLING FINS

Optimization of combined convective and film cooling of perforated baffle blades in gas turbines
p 529 N85-24067

COOLING SYSTEMS

An experimental study of the hydraulic characteristics of air flow in the cooling slots of the nozzle guide vanes of gas turbine engines p 350 A85-24001

Fluid motion in the regions of abrupt expansion of the channels of rotor-cooling systems of energy-converting machines p 442 A85-28473

The closed-loop air-cycle option for equipment cooling on aircraft
[SAE PAPER 840940] p 570 A85-33752

Helicopter cooling, air cycle/vapor cycle trade-offs
[SAE PAPER A840942] p 570 A85-33753

Development and testing of forced-air cooled enclosures for high density electronic equipment
[SAE PAPER 840952] p 566 A85-33763

Turbine component technology p 766 A85-41028

Environmental control systems for helicopters compared p 756 A85-41070

Air-cycle air conditioning of turbine-powered general aviation and commuter aircraft
[SAE PAPER 850901] p 886 A85-50118

COORDINATE TRANSFORMATIONS

Efficient algorithm for unsteady transonic aerodynamics of low-aspect-ratio wings p 385 A85-28756

COORDINATES

Flow-field matrix solution for flow along arbitrarily twisted S1 surface employing non-orthogonal curvilinear coordinates p 622 A85-37927

Generation of 3-dimensional body fitted coordinates using hyperbolic partial differential equations
[AD-A148059] p 327 N85-18006

Coordinate determination errors in measuring characteristics of radiation field of airborne antennas
p 528 N85-22919

Computer programs for smoothing and scaling airfoil coordinates
[NASA-TM-84666] p 742 N85-31011

COPOLYMERS

GC-FTIR (Fourier Transform Infrared Spectrometry) of jet fuels
[AD-A148272] p 288 N85-1713

CORE FLOW

A theory for the core of a three-dimensional leading-edge vortex
[AIAA PAPER 85-0108] p 210 A85-1962

CORIOLIS EFFECT

A method for the prediction of Coriolis induced secondary flows and their influence on heat transfer in rotating ducts p 601 A85-3667

Hydraulic forces on a centrifugal impeller undergoing synchronous whirl p 187 N85-1412

CORNER FLOW

Conical flow near external axial corners as a bifurcation problem p 145 A85-1667

Shock-fitting solution of the supersonic flowfield in a rounded internal corner p 232 A85-2185

Investigations of the longitudinal flow in corner configurations in the hypersonic regime. II - Corners between swept wedges p 232 A85-2214

Experimental and theoretical investigations of the supersonic flow field on a two-dimensional step — German thesis p 318 A85-2544

Computation of three-dimensional turbulent shear flows in corners p 474 A85-3260

Shock/turbulent boundary-layer interaction in a compression corner
[AIAA PAPER 85-1567] p 711 A85-4068

Some contributions to the modelling of discontinuous flows p 907 A85-46224

Experimental method for the study of corner flows [AAAF PAPER NT 84-06] p 870 A85-46966

Three-dimensional boundary layers and shear flows activities at ONERA/CERT p 597 N85-25785

Conical stagnation points in the flow around an external corner — delta wings [VTH-LR-396] p 581 N85-26680

CORRECTION

Wall influence corrections in wind tunnels: Blockage correction according to the wall pressure signature method [FW-FO-1613] p 86 N85-12875

Determination of corrections to flow direction measurements obtained with a wing-tip mounted sensor [NASA-CR-174412] p 329 N85-18862

CORRELATION

Correlation and prediction of rotating stall inception by divergence method p 629 A85-39245

Analysis of pressure gradient-velocity correlation in turbulent, premixed flames p 325 N85-17894

Inviscid analysis of unsteady blade tip flow correlation studies [NASA-CR-172506] p 329 N85-18868

CORROSION

Reactions of NaCl with gaseous SO3, SO2, and O2 p 42 A85-11897

Aircraft corrosion and detection methods p 541 A85-36143

Wear and corrosion of components under stress and subjected to motion [AD-A145781] p 128 N85-12372

Corrosion in civil aircraft structures [SNIAS-851-111-105] p 787 N85-31291

CORROSION PREVENTION

Corrosion-inhibiting gas-turbine engine lubricant. I Accelerated test development and validation [ASLE PREPRINT 84-AM-5D-3] p 383 A85-25961

Corrosion-inhibiting gas-turbine engine lubricant. II - Fluid formulation and evaluation [ASLE PREPRINT 84-AM-5D-4] p 383 A85-25962

Dehumidification as a means of preventing atmospheric corrosion in aircraft engines and avionic systems p 708 A85-41734

Aircraft surface coatings [NASA-CR-3661] p 21 N85-10935

Protective coatings for aircraft structures: A review [VTH-LR-413] p 577 N85-26704

Corrosion in civil aircraft structures [SNIAS-851-111-105] p 787 N85-31291

CORROSION RESISTANCE

The effect of mercury on the load-bearing capacity of the structural elements of aircraft p 435 A85-28994

Development of coatings for the protection of gas turbine blades against high temperature oxidation and corrosion p 519 A85-32433

Improvement of the corrosion resistance of turbine engine bearings [AD-A147430] p 285 N85-15731

Mechanisms of corrosion fatigue in high strength I/M (Ingot Metallurgy) and P/M (Powder Metallurgy) aluminum alloys [AD-A151177] p 597 N85-25478

Investigation of the influence of some paint systems and water displacing corrosion inhibitors on anodic undermining corrosion of aluminum 2024 clad alloy — aircraft structures [VTH-LR-443] p 596 N85-27009

Corrosion in civil aircraft structures [SNIAS-851-111-105] p 787 N85-31291

Development of a mathematical model for predicting the percentage fatigue life increase resulting from shot peened components [AD-A155774] p 912 N85-35425

CORROSION TESTS

Application of laboratory test data to engineering design — stress corrosion threshold data applied to structural failure p 599 A85-33630

Method for evaluating petrol products corrosivity using piezoelectric crystals. Part 2: Instruction manual — jet engine corrosion tests [FOA-C-40196-B4] p 121 N85-13073

Forced corrosion tests of construction components of passenger aircraft fuselages p 436 N85-20082

COSMIC RAY SHOWERS

Ultra high energy events in ECHOS series and primary energy spectrum [HE-3.7-9] p 920 N85-35966

COST ANALYSIS

The relationship between an advanced avionic system architecture and the elimination of the need for an Avionics Intermediate Shop (AIS) p 439 A85-26804

Radial tires undergo operational tests on military, civil aircraft p 496 A85-32800

The acquisition and operating cost of an advertising airship p 562 A85-34261

Developing a derivative engine [AIAA PAPER 85-1462] p 765 A85-40843

An M principle - Pay me now or spend more later p 909 A85-49581

Energy efficient engine. Volume 1: Component development and integration program [NASA-CR-173084] p 34 N85-10992

Logistics support costs for the B-1B aircraft can be reduced [AD-A145846] p 72 N85-11996

Modern structural materials. Present situation and evolution prospects — aircraft materials [SNIAS-842-551-101] p 105 N85-12886

A practical example of reducing life cycle costs and increased availability p 296 N85-16736

MBB uses superplastic forming, diffusion bonding for alloys p 446 N85-20177

MBB cost-reduction plan for Airbus construction described p 542 N85-25616

Evaluation of radio navigation systems and their configuration with respect to minimum cost [ESA-TT-847] p 751 N85-31043

COSTS

The embedded test (BIT): Impact on the total cost of possession p 202 N85-16734

Worldwide birdstrike statistics of Lufthansa German Airlines [AD-P004163] p 403 N85-19945

Inexpensive multipurpose landscaping p 428 N85-19961

Jet fuel property changes and their effect on producibility and cost in the U.S., Canada, and Europe [NASA-CR-174840] p 598 N85-27012

Flying in spite of the weather [NLR-MP-84021-U] p 644 N85-27847

COUNTER ROTATION

The analysis of counter-rotating propeller systems [SAE PAPER 850869] p 873 A85-50104

Laser velocimeter measurements of the flow fields around single- and counter-rotation propeller models [SAE PAPER 850870] p 873 A85-50105

COUPLED MODES

Vibration and flutter of mistuned bladed-disk assemblies [AIAA PAPER 84-0991] p 181 A85-16095

Natural mode analysis of N blades disc coupled system - Modal synthesis of symmetric structure with Cnv group p 445 A85-29147

A possible causative flow mechanism for body rock — nonlinear pitch-yaw-roll coupling in high-performance aircraft p 512 A85-32593

COUPLERS

Fiber optic data bus using Frequency Division Multiplexing (FDM) and an asymmetric coupler [NASA-TM-86015] p 129 N85-13139

COUPLING

An analytical investigation of dynamic coupling in nonlinear, geared rotor systems p 607 N85-27218

**COUPLING CIRCUITS**
A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder
[ONERA, TP NO. 1985-47] p 904 A85-47256
**COUPLINGS**
Vibrations of rotors connected through couplings with backlash p 672 N85-26147
**COWLINGS**
The design evolution of an advanced composite translating cowl
[AIAA PAPER 84-2523] p 101 A85-13585
Low-speed aerodynamic test of an axisymmetric supersonic inlet with variable cowl slot
[AIAA PAPER 85-1210] p 719 A85-40819
Low-speed aerodynamic test of an axisymmetric supersonic inlet with variable cowl slot
[NASA-TM-87039] p 582 N85-26710
**CRACK ARREST**
Crack arrest in structural ceramics p 41 A85-11671
**CRACK CLOSURE**
Crack growth retardation and acceleration models p 126 A83-15862
Crack closure characteristics considering center cracked and compact tension specimens
[AD-A151702] p 605 N85-25907
**CRACK GEOMETRY**
Eddy current jet engine disk-crack monitor p 47 A85-11100
Stress intensity factors for an arc crack in a rotating disc p 599 A85-34974
Theoretical study of airborne electromagnetic leakage p 826 A85-45139
Bonded repair of damage p 910 A85-50063
**CRACK INITIATION**
Influence of fighter aircraft load spectrum variations on fatigue crack initiation and growth p 683 A85-37181
Estimation of the threshold in fatigue crack initiation models: A Bayesian approach
[AD-A144847] p 54 N85-10410
Nonlinear structural and life analyses of a combustor liner p 29 N85-10955
Pre-HOST high temperature crack propagation p 29 N85-10956
Life prediction and constitutive behavior: Overview p 31 N85-10973
Creep-fatigue life prediction for engine hot section materials (isotropic) p 31 N85-10974
Constitutive model development for isotropic materials p 31 N85-10975
Life prediction and constitutive models for anisotropic materials p 31 N85-10976
Engineering significance of fatigue thresholds and short fatigue cracks for structural design
[NLR-MP-84001-U] p 700 N85-28430
Creep fatigue life prediction for engine hot section materials (isotropic)
[NASA-CR-168228] p 774 N85-31057
**CRACK PROPAGATION**
A simplified approach for assessing spectrum loading effects in preliminary design — crack propagation in flight vehicle structures p 48 A85-11613
Statistical fatigue crack propagation of IN100 at elevated temperatures p 41 A85-11614
Fatigue crack growth analysis under random spectrum loading using the generalized Willenborg model p 49 A85-11668
A new method for determining threshold values of creep crack growth p 50 A85-11669
Critical analysis of flaw acceptance methods p 50 A85-11754
An experimental study on effect of overload on fatigue life p 51 A85-12364
Accumulation of fracture probability as damage accumulation for the prediction of service life and crack propagation in dynamically loaded aviation sheet metal p 122 A85-12944
Maintenance impact of current loads recording methodology on crack-growth based individual aircraft tracking
[AIAA PAPER 84-2410] p 97 A85-13516
Crack growth of lugs under spectrum loading
[AIAA PAPER 84-2451] p 122 A85-13540
Effect of residual stresses on crack growth from a hole p 124 A85-15339
Stress intensity factors for cracks at a double row of holes p 125 A85-15584
Crack growth life-time prediction under aeronautical type loading
[ONERA, TP NO. 1984-113] p 125 A85-15833
Damage accumulation techniques in damage tolerance analysis p 126 A85-15861
Crack growth retardation and acceleration models p 126 A85-15862
Repair of Mirage III aircraft using the BFRP crack-patching technique p 137 A85-16244
Development of a fatigue crack propagation model of Incoloy 901 p 280 A85-20758
Fatigue crack growth behavior of 7XXX aluminum alloys under simple variable amplitude loading p 280 A85-20759
Interpretation of fatigue crack growth in aluminium alloys under programmed block loading p 281 A85-20790
Fatigue crack growth under variable amplitude loading p 356 A85-23711
Evaluation of cumulative damage models for fatigue crack growth in an aircraft engine alloy p 433 A85-27095
Stochastic crack propagation in fastener holes
[AIAA PAPER 85-0666] p 522 A85-30251
Influence of fighter aircraft load spectrum variations on fatigue crack initiation and growth p 683 A85-37181
Crack growth analysis in multiple load path structure p 693 A85-37186
Crack propagation analysis of longitudinal skin cracks in a pressurized cabin p 645 A85-37188
Fatigue-crack propagation in aircraft Duralumin shell structures p 695 A85-38918
Mechanical properties of advanced titanium powder metallurgy compacts p 783 A85-40250
Fatigue crack growth due to periodic underloads and overloads p 784 A85-41484
Stochastic crack propagation in fastener holes p 855 A85-45845
Crack growth in aluminium alloy sheet material under flight-simulation loading p 853 A85-46489
An analogue method for crack propagation life prediction p 856 A85-46825
Low temperature and loading frequency effects on crack growth and fracture toughness of 2024 and 7475 aluminum p 900 A85-47974
Acoustic emission monitoring of flaw growth in a graphite-epoxy experimental wing segment p 907 A85-48084
Recent advances in fatigue crack growth predictions p 910 A85-50065
Flight simulation fatigue crack propagation in metal/carbon-epoxy laminates
[NLR-TR-83006-U] p 54 N85-10416
Pre-HOST high temperature crack propagation p 29 N85-10956
Crack resistance of pressed and rolled semifinished goods of aluminum alloys used in load-bearing aircraft wing structures p 120 N85-12245
Fractographic observation and estimation of crack growth curve of aluminum alloy under random flight simulation loading
[NAL-TR-824] p 180 N85-14913
Constitutive modeling of engine materials
[AD-A146830] p 190 N85-15189
Cumulative damage modeling of fatigue crack growth p 267 N85-15741
Engineering property comparisons of PM and IM aluminum alloy forgings
[AD-B088146L] p 298 N85-17398
Crack growth geometry in aluminum alloy sheet material under flight simulation loading. 1: A comparison between TWIST and miniTWIST FALSTAFF and short FALSTAFF. 2: Effect of truncating high loads
[VTH-LR-441] p 436 N85-20119
Fatigue crack propagation in mirage 1110 wing main spar specimens and the effects of spectrum truncation on life
[ARL/STRUC-R-405] p 417 N85-21152
Advanced life analysis methods. Volume 1: Cracking data survey and NDI (nondestructive inspection) assessment for attachment lugs
[AD-A150419] p 529 N85-23108
Advanced life analysis methods. Volume 5: Executive summary and damage tolerance criteria recommendations for attachment lugs
[AD-A151017] p 502 N85-23761
Advanced life analysis methods. Volume 3: Experimental evaluation of crack growth analysis methods for attachment lugs
[AD-A151058] p 531 N85-24319
Fatigue Crack Topography
[AGARD-CP-376] p 531 N85-24321
Two recent cases of marker load applications on cargo/fighter aircraft fatigue tests p 532 N85-24325
Periodic loading sequences for the systematic marking of fatigue crack fracture surfaces p 532 N85-24329
Application of optical and electron microscopic techniques in the fractographic determination of fatigue crack growth rates p 532 N85-24334
Finger materials for air cushion vehicles. Volume 1: Flexible coatings for finger materials
[AD-A151438] p 601 N85-25545
Initial quality of advanced joining concepts
[AD-A152241] p 606 N85-27027
USAF damage tolerant design handbook: Guidelines for the analysis and design of damage tolerant aircraft structures, revision B
[AD-A153161] p 652 N85-2708
Structural Analysis
[DFVLR-MITT-84-21] p 701 N85-29313
Description and illustration of the use of CRACKS IV
[AD-A153543] p 701 N85-29325
Hold-time effects in elevated temperature fatigue crack propagation
[AD-A154146] p 797 N85-30376
R and D activities of the Materials Science Division p 788 N85-32024
Fatigue lives of specimens representing critical locations in Mirage 3 spars under Australian and Swiss test spectra
[ARL-STRUC-R-415] p 887 N85-35187
**CRACK TIPS**
The influence of an inclusion or a hole on the bending of a cracked beam p 123 A85-13703
Fracture analysis of stiffened structure p 125 A85-1588
**CRACKING (CHEMICAL ENGINEERING)**
Jet fuel property changes and their effect on productivity and cost in the U.S., Canada, and Europe
[NASA-CR-174840] p 586 N85-27012
**CRACKING (FRACTURING)**
Advanced Floatwall combustor liner technology eliminates TF30-P-100 transition duct fatigue cracking
[AIAA PAPER 85-1288] p 667 A85-39701
Periodic loading sequences for the systematic marking of fatigue crack fracture surfaces p 532 N85-24329
**CRACKS**
Effect of sonic boom on a cracked plaster-wood wall p 191 A85-16256
Detection of electromagnetic radiation leakage through small structural openings p 826 A85-45140
Cumulative damage modeling of fatigue crack growth p 267 N85-15741
Problems and possibilities for life extension in gas turbine components p 267 N85-15742
Disc fatigue life predictions for gas turbine engines p 267 N85-15743
Finger materials for air cushion vehicles. Volume 2: Base fabrics for finger materials
[AD-A149701] p 448 N85-21408
Hold-time effects in elevated temperature fatigue crack propagation
[AD-A154146] p 797 N85-30376
**CRANES**
The Cyclo-Crane - A new concept to heavy vertical lift
[AIAA PAPER 85-0871] p 646 A85-38786
A new concept of hybrid airship
[AIAA PAPER 85-0868] p 649 A85-38796
Snatching Harrier from the air with Skyhook p 781 A85-42880
Getting hooked — ship deck aircraft capture and hangar packaging p 848 A85-44750
**CRASH LANDING**
Development of an energy absorbing passenger seat for the S-720 test aircraft p 332 A85-26306
Did safe jet fuel flunk its final exam? p 745 A85-41053
Safety recommendation(s), A-84-65
[REPT-3906] p 484 N85-23743
Safety recommendation(s), A-84-93 through -95
[REPT-3983/33] p 484 N85-23746
Air carrier overwater emergency equipment and procedures
[PB85-917006] p 820 N85-32105
**CRASHES**
Annual review of aircraft accident data: US air carrier operations calendar year 1981
[NTSB/ARC-85/01] p 406 N85-21134
Safety recommendation(s), A-84-93 through -95
[REPT-3983/33] p 484 N85-23746
Structures and Dynamics Division research and technology plans for FY 1985 and accomplishments for FY 1984
[NASA-TM-86417] p 605 N85-25895
General Aviation Crashworthiness Project. Phase 2: Impact severity and potential injury prevention in general aviation accidents
[PB85-917002] p 747 N85-29938
Analysis of rotorcraft crash dynamics for development of improved crashworthiness design criteria
[FAA-CT-85-11] p 747 N85-31031
**CRASHWORTHINESS**
Structural crashworthiness; International Symposium, 1st, University of Liverpool, Liverpool, England, September 14-16, 1983, Invited Lectures p 47 A85-10824
A system approach for designing a crashworthy helicopter using program KRASH
[AIAA PAPER 84-2448] p 96 A85-13538
ACAP crashworthiness analysis by KRASH p 103 A85-14048

Design and fabrication of crashworthy composite external fuel tanks p 104 A85-15630

Impact of MIL-STD-1290 crashworthiness requirements on design of helicopter composite structures [SAWE PAPER 1567] p 160 A85-18819

Crashworthiness of helicopter composite structures p 251 A85-21386

Energy absorbing qualities of fiber reinforced plastic tubes p 282 A85-21393

Development and testing of the Martin-Baker crashworthy seat p 340 A85-22753

Crash energy absorption properties of composite structural elements p 362 A85-24815

Designing for a crashworthy all-composite helicopter fuselage p 493 A85-31960

Crashworthy design considerations for general aviation seats [SAE PAPER 850855] p 884 A85-50101

Crashworthiness of light aircraft fuselage structures: A numerical and experimental investigation p 20 N85-10389

Full-scale crash-test evaluation of two load-limiting subfloors for general aviation airframes [NASA-TP-2380] p 129 N85-13267

A study of crashworthiness of light aircraft fuselage structures: A numerical and experimental investigation [UTIAS-288] p 149 N85-14803

Proceedings of the International Conference and Exposition on Structural Impact and Crashworthiness [AD-A147846] p 242 N85-15703

General Aviation Crashworthiness Project. Phase 2: Impact severity and potential injury prevention in general aviation accidents [PB85-917002] p 747 N85-29938

Impact dynamics research on composite transport structures [NASA-TM-86391] p 797 N85-30367

The role of aircraft panel materials in cabin fires and their properties [FAA-CT-84-30] p 820 N85-32104

Seat experiments for the full-scale transport aircraft controlled impact demonstration [AD-A155024] p 820 N85-32106

DYNA3D, INGRID, and TAURUS: An integrated, interactive software system for crashworthiness engineering [DE85-010628] p 860 N85-32946

Flight test experience and controlled impact of a large, four-engine, remotely piloted airplane [NASA-TM-86738] p 847 N85-33123

Aviation safety (aircraft passenger survivability and cabin safety) [GPO-39-847] p 878 N85-34130

Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing [NASA-CR-3917] p 886 N85-35164

CRAY COMPUTERS

ONERA - The aeronautics supercomputer is put into service p 302 A85-22274

CREEP ANALYSIS

Strength analysis of fan-shaped wing considering temperature deformation and creep deformations p 163 N85-14983

CREEP PROPERTIES

A new method for determining threshold values of creep crack growth p 50 A85-11669

Low temperature creep and fracture of near alpha titanium alloys p 687 A85-38748

Nonlinear structural and life analyses of a combustor liner p 29 N85-10955

Creep-fatigue life prediction for engine hot section materials (isotropic) p 31 N85-10974

Life prediction and constitutive models for anisotropic materials p 31 N85-10976

Creep fatigue life prediction for engine hot section materials (isotropic) [NASA-CR-168228] p 774 N85-31057

CREEP RUPTURE STRENGTH

Creep life predictions in nickel-based superalloys p 42 A85-12100

CREEP STRENGTH

Orientation relationship between alpha-prime titanium and silicide S2 in alloy Ti-6Al-5Zr-0.5Mo-0.25Si p 434 A85-27814

Improving reliability and lifetime of rejuvenated turbine blades p 855 A85-45803

Advanced stress analysis methods applicable to turbine engine structures [NASA-CR-175573] p 422 N85-21165

CREW PROCEDURES (INFLIGHT)

An intelligent flight-management aid for procedure execution p 332 A85-25793

Errare humanum est — human factors contributing to aircraft navigation errors p 567 A85-36429

All-weather low altitude penetration p 821 A85-44052

A comparative evaluation of EMADS (Engine Monitoring and Display System) and conventional engine instruments [AD-A145901] p 112 N85-12060

Aircraft accident report, Scandinavian Airlines System, Flight 901, McDonnell Douglas DC-10-30, John F. Kennedy International Airport, Jamaica, New York, February 28, 1984 [PB84-910415] p 149 N85-13788

CREW STATIONS

Avionics/crew station integration p 166 N85-14818

Display Techniques for Advanced Crew Stations (DTACS). Phase 1: Display techniques study [AD-A148822] p 259 N85-15722

Proceedings of the 6th Advanced Aircrew Display Symposium [AD-A150044] p 419 N85-21160

Crew systems and flight station concepts for a 1995 transport aircraft [NASA-CR-166068] p 781 N85-29973

CREW WORKSTATIONS

PILX's Desk Flight Station p 258 A85-21555

An argument for standardization in modern aircraft crew stations p 657 A85-38961

CRIME

Tethered aerostat operations in the marine environment [AIAA PAPER 85-0880] p 640 A85-38776

CRITERIA

Experimental investigation of a breakdown criterion for a vortex in an incompressible flow — delta wing [ONERA-RT-27/1147-AY] p 395 N85-19935

CRITICAL FLOW

Flow around a circular cylinder in the first subregion of the critical range [AIAA PAPER 85-1715] p 725 A85-41413

CRITICAL TEMPERATURE

External fuel vaporization study, phase 2 [NASA-CR-174079] p 45 N85-11252

CRITICAL VELOCITY

Optimization of flutter characteristics p 288 A85-20828

Multimode instability prediction method [AIAA PAPER 85-0737] p 523 A85-30370

Critical speed testing of the Grumman X-29A power take-off shaft subsystem [SAE PAPER 841603] p 662 A85-39163

CROP DUSTING

Effectiveness of agricultural aviation p 106 N85-13460

Operation of aviation support bases p 118 N85-13461

Director on institute's civil aviation projects p 204 N85-16764

CROSS COUPLING

Cross coupling in pilot/vehicle systems [AIAA PAPER 85-1787] p 838 A85-43845

CROSS FLOW

Noniterative cross-flow integration for the pressure-split analysis of subsonic mixing-layer problems p 145 A85-18897

Turbulence structure of a three dimensional impinging jet in a cross stream [AIAA PAPER 85-0044] p 208 A85-19478

Flow visualization of lateral jet injection into swirling crossflow [AIAA PAPER 85-0059] p 209 A85-19490

Crossflow drag of finite-length rectangular wing-bodies [AIAA PAPER 85-0451] p 224 A85-19760

Disturbance-wave interactions in flows with crossflow [AIAA PAPER 85-0494] p 226 A85-19788

Experiments on the stability of crossflow vortices in swept-wing flows [AIAA PAPER 85-0493] p 231 A85-20873

Leading-edge separations and cross-flow shocks on delta wings p 317 A85-25126

Vorticity growth and decay in the jet in cross flow p 317 A85-25148

Numerical calculation of subsonic jets in crossflow with reduced numerical diffusion [AIAA PAPER 85-1441] p 697 A85-39780

Effects of non-uniform velocity profiles on dual jets in a crossflow [AIAA PAPER 85-1674] p 716 A85-40763

Visualization of the vortex flow over delta and double-delta wings p 867 A85-47149

Pool fire-ventilation crossflow experiments in a simulated aircraft cabin interior p 877 A85-49130

Jet array impingement flow distributions and heat transfer characteristics: Effects of initial crossflow and nonuniform array geometry p 30 N85-10967

Dilution zone mixing studies p 33 N85-10984

Dilution jet mixing p 33 N85-10985

Tunnel constraint for a jet in crossflow p 84 N85-12027

A study of flow past an airfoil with a jet issuing from its lower surface [NASA-CR-166810] p 86 N85-12860

Computer programs to predict induced effects of jets exhausting into a crossflow [NASA-CR-166591] p 146 N85-13776

Turbulent bouyant flow and pressure variations around a circular cylinder in a cross uniform flow near the ground p 371 N85-18287

Effect of inclination, transverse intertip spacing, and logitudinal pitch on crossflow heat transfer from an array of finned tubes p 373 N85-19359

Development of a temperature measurement system with application to a jet in a cross flow experiment [NASA-CR-174896] p 581 N85-25262

Numerical calculation of subsonic jets in crossflow with reduced numerical diffusion [NASA-TM-87003] p 581 N85-25263

A study of aerodynamic control in stalled flight leading-edge vortex formation analysis [AD-A153758] p 638 N85-28926

Acrosswind response of towers and stacks of circular cross-section p 798 N85-30354

Wingtip vortex propeller [NASA-CASE-LAR-13019-1] p 892 N85-35194

CRUISE MISSILES

Designing a cruise missile - General Dynamics' BGM-109 Tomahawk p 158 A85-18441

Computer geometric simulation of cruise missile center of gravity versus fuel consumption [SAWE PAPER 1511] p 159 A85-18804

Aerodynamic configured missiles - Promise and future [AIAA PAPER 85-0345] p 248 A85-19884

Field tests and signature analysis of an imaging CO2 laser radar — for cruise missile guidance and targeting sensor p 334 A85-22651

CRUISING FLIGHT

Periodic optimal cruise of an atmospheric vehicle p 102 A85-13701

Periodic optical cruise of an atmospheric vehicle p 158 A85-18330

An evaluation of the exhaust system configuration from the cruise efficiency criteria of an engine in an aircraft system p 660 A85-39121

Classical and neo-classical cruise-dash optimization p 650 A85-39212

Factors influencing rotor aerodynamics in hover and forward flight p 816 A85-45793

Insight. Background information for multipurpose pilots: Flight phenomena p 22 N85-10940

CRYOGENIC COOLING

Thermal design of rotatable cryogenic heat pipe joints — for heat exchangers in space applications [AIAA PAPER 85-0068] p 279 A85-19495

CRYOGENIC EQUIPMENT

Advances in cryogenic engineering. Volume 29 - Proceedings of the Cryogenic Engineering Conference, Colorado Springs, CO, August 15-17, 1983 p 438 A85-26501

A fast cool-down J-T minicryocooler p 438 A85-26510

Magentically actuated compressor [NASA-CASE-GSC-12799-1] p 448 N85-21404

Cryogenic test technology, 1984 [AGARD-AR-212] p 700 N85-29116

Results of variable enthalpy tests of CPR-488 TIP panels in MSFC Hot Gas Facility [NASA-CR-170889] p 902 N85-35237

CRYOGENIC WIND TUNNELS

The European transonic wind-tunnel ETW - A cryogenic solution p 174 A85-17240

ETW, the European cryogenic wind tunnel will be built in Cologne, West Germany p 175 A85-18723

Studies of condensation effects on airfoil testing in a transonic cryogenic tunnel [AIAA PAPER 85-0229] p 274 A85-19603

The most spectacular equipment - ETW p 276 A85-21422

Progress toward magnetic suspension and balance systems for large wind tunnels p 427 A85-29252

Pressure measurement system for the National Transonic Facility p 445 A85-29568

Exploratory flutter test in a cryogenic wind tunnel [AIAA PAPER 85-0736] p 515 A85-30389

A cryogenic high-Reynolds number transonic wind tunnel with pre-cooled and restricted flow p 592 A85-35752

Wind tunnel project demonstrates difficulties of European cooperation p 592 A85-36419

European transonic wind tunnel p 681 A85-37491

The Kryo-Kanal Koeln (KKK) as an example of a higher-Reynolds-number wind tunnel [DGLR PAPER 84-095] p 777 A85-40314

pages tightly bound

READEX FICHE best copy available

The application of cryogenics to high Reynolds number testing in wind tunnels. I - Evolution, theory, and advantages p 780 A85-41328

An external insulation system for a cryogenic wind tunnel p 780 A85-41340

Review of the advanced technology airfoil test program in the 0.3-meter transonic cryogenic tunnel p 85 N85-12033

Some experience with Barnwell-Sewall type correction to two-dimensional airfoil data p 85 N85-12034

Adaptation of a four-wall interference assessment/correction procedure for airfoil tests in the 0.3-m TCT p 85 N85-12035

Description of the insulation system for the Langley 0.3-Meter Transonic Cryogenic Tunnel [NASA-TM-86274] p 276 N85-15755

Initial investigation of cryogenic wind tunnel model filler materials [NASA-TM-86363] p 380 N85-18069

Exploratory flutter test in a cryogenic wind tunnel [NASA-TM-86380] p 451 N85-21088

Cryogenic wind tunnels: A selected annotated bibliography [NASA-TM-86348] p 516 N85-22401

Measurements in the flow field of a cylinder with a laser transit anemometer and a drag rake in the Langley 0.3 m transonic cryogenic tunnel [NASA-TM-86399] p 531 N85-24270

Cryogenic test technology, 1984 [AGARD-AR-212] p 700 N85-29116

High Reynolds number tests of a NASA SC(3)-0712(B) airfoil in the Langley 0.3-meter transonic cryogenic tunnel [NASA-TM-86371] p 740 N85-29826

Pressure distribution from high Reynolds number tests of a NASA SC(3)-0712(B) airfoil in the Langley 0.3-meter transonic cryogenic tunnel [NASA-TM-86370] p 740 N85-29827

Sidewall boundary-layer effects in two-dimensional airfoil testing [NASA-CR-176034] p 781 N85-31085

CRYOGENICS

Advances in cryogenic engineering. Volume 29 - Proceedings of the Cryogenic Engineering Conference, Colorado Springs, CO, August 15-17, 1983 p 438 A85-28501

CRYSTAL DISLOCATIONS

The influence of microstructure on the temperature-dependent flow properties of Ti-6Al-4V p 687 A85-38749

CRYSTALLIZATION

The distribution of higher n-alkanes in partially frozen middle distillate fuels [AD-A153940] p 692 N85-29074

CUES

An in-flight investigation of a twin fuselage configuration in approach and landing [NASA-CR-172366] p 173 N85-13801

CUMULATIVE DAMAGE

An experimental study on effect of overload on fatigue life p 51 A85-12364

Accumulation of fracture probability as damage accumulation for the prediction of service life and crack propagation in dynamically loaded aviation sheet metal p 122 A85-12944

Damage accumulation techniques in damage tolerance analysis p 126 A85-15861

Considerations for damage analysis of gas turbine hot section components [ASME PAPER 84-PVP-77] p 169 A85-18792

Evaluation of cumulative damage models for fatigue crack growth in an aircraft engine alloy p 433 A85-27095

Stochastic crack propagation in fastener holes [AIAA PAPER 85-0666] p 522 A85-30251

United States Air Force engine damage tolerance requirements [AIAA PAPER 85-1209] p 665 A85-39857

Damage tolerance design for aircraft hubs made of cast magnesium alloy p 852 A85-44250

Stochastic crack propagation in fastener holes p 855 A85-45845

Equivalent damage: A critical assessment p 29 N85-10952

Modifications of flight-by-flight load sequences to provide for good fracture surface readability [NLR-MP-84012-U] p 799 N85-31577

CURING

Solvent resistant thermoplastic composite matrices p 120 N85-12960

Evaluation of experimental epoxy monomers [NASA-TM-87476] p 597 N85-26996

CURTAINS

Results of tests of the SRB aft skirt heat shield curtain in the MSFC Hot Gas Facility [NASA-CR-170968] p 899 N85-35223

CURVATURE

NASA-FAA helicopter Microwave Landing System curved path flight test p 486 A85-31960

CURVE FITTING

Determination of quantitative relationships between selected critical helicopter design parameters [AD-A152034] p 577 N85-26700

CURVED BEAMS

Composite curved frames for helicopter fuselage structure p 252 A85-21396

Design, fabrication and test of composite curved frames for helicopter fuselage structure [NASA-CR-172439] p 574 N85-25247

CURVED PANELS

Sonic fatigue design method for the response of CFRP stiffened-skin panels p 52 A85-12474

A nonlinear analysis of infinitely long graphite-epoxy cylindrical panels loaded with internal pressure [AIAA PAPER 85-0770] p 522 A85-30291

Vortex sheet modeling with higher order curved panels p 797 N85-31429

CUSHIONCRAFT GROUND EFFECT MACHINE

Skirt material effects on air cushion dynamic heave stability p 307 A85-21840

Planning of air cushion transport vehicles p 530 N85-24180

CUSHIONS

Hovercraft skirt design and manufacture p 694 A85-38020

CUTTERS

The Bristol wire strike protection system — helicopter wire cutter p 754 A85-40462

T700 cutter life improvement program [AD-A150450] p 528 N85-23089

CUTTING

T700 cutter life improvement program [AD-A150450] p 528 N85-23089

CV-990 AIRCRAFT

MIZEX, 1984, NASA CV-990 flight report [NASA-TM-86216] p 800 N85-30451

CYBERNETICS

The Lockheed Cybernetics Console - An artificial intelligence tool p 858 A85-43680

CYCLES

View of future requirements for engine cyclic durability by analyses and testing p 267 N85-15751

Exergetical analyses of turbojet engine cycle p 508 N85-22825

CYCLIC LOADS

Fatigue crack growth analyses under random spectrum loading using the generalized Willenborg model p 49 A85-11668

Partial alpha-colony fractures and their protrusions during cyclic loading of a titanium alloy p 42 A85-11907

Effect of residual stresses on crack growth from a hole p 124 A85-15339

Fatigue crack growth under variable amplitude loading p 366 A85-23711

Fatigue crack growth due to periodic underloads and overloads p 784 A85-41484

Crack growth in aluminum alloy sheet material under flight-simulation loading p 853 A85-46489

Benchmark notch test for life prediction p 28 N85-10953

Nonlinear structural and life analyses of a combustor liner p 29 N85-10955

CYLINDERS

A generalized discrete-vortex method for sharp-edged cylinders p 546 A85-35132

Approximate relationships for determining pressure at the surface of a sphere or a cylinder for arbitrary free-stream Mach numbers p 624 A85-38563

A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder [ONERA, TP NO. 1985-47] p 904 A85-47258

Electromagnetic resonances of cylinders and aircraft model with resistive wires [NASA-CR-174200] p 192 N85-15319

CYLINDRICAL BODIES

A nonstationary transition process caused by injection of a gas into the near wake of a body in a supersonic flow p 619 A85-37336

The separation of a turbulent boundary layer within a two-face angle before an obstruction p 619 A85-37340

Flow past rectangular cylinder of square section placed on a plane boundary p 724 A85-41024

Unsteady heat transfer of oscillating wake flows p 726 A85-41781

Estimation of the wave resistance of bodies of revolution with a front separation zone in supersonic flow p 730 A85-42119

Finite analytic prediction of turbulent flow past an inclined cylinder p 733 A85-42963

The propagation of a subsonic turbulent jet in a close plane container of varying length p 816 A85-44

Study of residual stresses introduced into TA6ZrD ( cylinders by quenching — compressor disk alloy [PNR-90240] p 372 N85-184

Experimental investigation of heat transfer to sl cylinders and cones in hypersonic rarefied gas flow p 396 N85-201

Investigation of potential and viscous flow effects contributing to dynamic stall [AD-A151696] p 602 N85-257

Measurements of the symmetric aerodynamic coefficients for flat faced cylinders in the angle of attac regime 0 to 90 deg for transonic and supersonic speed [FFA-TN-1984-04] p 581 N85-268

CYLINDRICAL SHELLS

The buckling of a stiffened cylindrical shell heated by an internal gas flow with varying thermodynamic parameters p 166 A85-1691

Stability of the shell structures of powerplants wi variable stiffness parameters p 183 A85-1705

A nonlinear analysis of infinitely long graphite-epoxy cylindrical panels loaded with internal pressure [AIAA PAPER 85-0770] p 522 A85-3029

The sound field in a finite cylindrical shell p 537 A85-3119

Mechanisms of acoustical energy transfer by a cylindrical shell near the ring frequency p 861 A85-4403

The transmission of acoustic energy by a finite cylindrical shell excited by external plane waves p 861 A85-4404

The propagation of acoustic modes in the annular circular duct of turbomachinery in the presence of swirling mean flow p 861 A85-4404

D

DAMAGE

The damage tolerance design philosophy p 46 A85-1054

Metallurgical aspects of metallic materials and damage tolerance in accessory gearboxes p 46 A85-1054

United States Air Force engine damage tolerance requirements [AIAA PAPER 85-1209] p 665 A85-398

Development of powder metallurgy 2XXX series Al alloys for high temperature aircraft structural applications [NASA-CR-172406] p 44 N85-112

The F-15 flight loads tracking program p 253 N85-159

Cumulative damage modeling of fatigue crack growth p 267 N85-157

Advances in composites technology [NASA-TM-86353] p 284 N85-170

Repair of composites p 284 N85-170

Advanced life analysis methods. Volume 1: Cracking data survey and NDI (nondestructive inspection assessment for attachment lugs [AD-A150419] p 529 N85-231

Advanced life analysis methods. Volume 5: Executive summary and damage tolerance criteria recommendations for attachment lugs [AD-A151017] p 502 N85-237

Description and illustration of the use of CRACKS [AD-A152543] p 701 N85-292

Fuel containment and damage tolerance in large composite primary aircraft structures [NASA-CR-166093] p 787 N85-300

Fuel containment and damage tolerance for large composite primary aircraft structures. Phase 1: Testing [NASA-CR-166091] p 902 N85-352

DAMAGE ASSESSMENT

Divergence speed degradation of forward-swept wings with damaged composite skin p 16 A85-11

A methodology for analyzing laser induced structural damage [AIAA PAPER 84-2521] p 122 A85-13

Damage tolerance of metallic structures: Analysis methods and applications p 125 A85-15

Air force damage tolerance design philosophy p 126 A85-15

Fatigue life evaluation program for the Kfir aircraft p 645 A85-371

Concepts and application of aircraft damage tolerance analyses p 645 A85-372

Review of aircraft accident data: US General Aviation [PB84-230960] p 14 N85-10

Results of tests of advanced flexible insulation vort and flow environments in the North American Aerodynamics Laboratory lowspeed wind tunnel usi 0.0405-scale Space Shuttle Orbiter model 16-0 (te OA-309) [NASA-CR-167692] p 39 N85-100

USAF damage tolerant design handbook: Guidelines for the analysis and design of damage tolerant aircraft structures, revision B
[AD-A153161] p 652 N85-27858
DAMPERS
A study of characteristics of the 'long' hydrodynamic dampers of gas turbine engine rotors with allowance for lubricant turbulization and cavitation in the damper clearance p 349 A85-23278
DAMPING
Influence of sampling rate on the calculated fidelity of an aircraft simulation p 57 A85-11083
The rolling vortex-damping of supersonic wing
p 872 A85-48705
Experimental on-stream elimination of resonant whirl in a large centrifugal compressor p 187 N85-14121
Hydrodynamic impeller stiffness, damping, and inertia in the rotordynamics of centrifugal flow pumps
p 187 N85-14125
Integrated Technology Rotor/Flight Research Rotor (ITR/FRR) concept definition
[NASA-CR-166445] p 345 N85-16970
A study of transonic flutter of a two-dimensional airfoil using the U-g and p-k methods
[LR-615] p 398 N85-21121
An experimental study of aerodynamic damping characteristics of a compressor annular cascade in high speed flow and the visualization of annular cascade flow
[NAL-TR-838] p 602 N85-25759
Hyperbolic phenomena in the flow of viscoelastic fluids
[AD-A153693] p 700 N85-29186
A research program to reduce the interior noise in general aviation aircraft, index and summary
[NASA-CR-178178] p 919 N85-35595
DAMPING TESTS
The performance of a sealed squeeze-film bearing in a flexible support structure p 440 A85-27476
An energy approach to linearizing squeeze-film damper forces p 440 A85-27479
DATA ACQUISITION
Recent data from the airlines lightning strike reporting project
[AIAA PAPER 84-2406] p 69 A85-13513
Data acquisition and processing for steady-state inlet pressure distortion at a turbojet engine face
p 143 A85-18286
Use of expanded AIDS in engine health monitoring on the CF6-80 engine for the A310 Airbus
[SAE PAPER 841505] p 352 A85-25980
Solving the pilot's wind-shear problem
p 400 A85-27366
PADDS - A Portable Airborne Digital Data System
p 418 A85-28652
Time-space position information at Edwards Air Force Base, California p 427 A85-28657
Army aviation maintenance data and supportability interface p 465 A85-31980
Recent data from the airlines lightning strike reporting project p 482 A85-32591
Development of automatic data acquisition system for RJ 500 engine p 516 A85-33353
Applications of state estimation in aircraft flight-data analysis p 650 A85-36211
Determining operating and support costs with USAF DO56 maintenance data collection system
p 865 A85-46653
Data input, processing and presentation — helicopter rotor balance measurement
[NASA-TM-77730] p 66 N85-10856
Spring program summary, 1983
[PB84-222223] p 192 N85-15330
Operational Loads Data
[AGARD-CP-375] p 201 N85-15664
Operational loads measurement: A philosophy and its implementation p 253 N85-15665
Navy operational loads data sources and systems

Helicopter data acquisition in WHL
p 254 N85-15676
USAF approach to airborne structural data recording: Airborne Data Acquisition Multifunction System (ADAMS)
p 292 N85-15683
Noise measurement flight test: Data-analyses, Sikorsky S-76A helicopter
[AD-A148525] p 306 N85-17673
ADAPS (Airborne Data Acquisition and Processing System) operation and maintenance manual
[AD-A148297] p 419 N85-19963
Development of a multiplane multispeed balancing system for turbine systems
[NASA-CR-174790] p 518 N85-22400
Operational loads measurement: A philosophy and its implementation — aircraft structures
[AD-A149445] p 536 N85-23308
Data processing on the rotor test stand at DFVLR in Brunswick: Microprogrammable interfaces and array processor as key components in a PDP 11 real time data acquisition and processing system
[DFVLR-MITT-85-03] p 684 N85-27921
Determination of instrument errors by compatibility checking: Results from dynamic flight test data
[ARL/AERO-R-162] p 889 N85-34137
Development and operation of a measuring data acquisition system for use in light airplanes
p 912 N85-35556
DATA BASE MANAGEMENT SYSTEMS
Data base management for ATE reliability enhancement p 456 A85-28807
Flexible manufacturing system for the production of aircraft parts
[BLL-PNR-90237-(8019.3153)] p 297 N85-17159
Automated and interactive data base generation
[AD-P004316] p 374 N85-17970
Geographic subdivision and top level data structures, Columbus, Magellan, and expanding CIG (Computer Image Generation) horizons
[AD-P004317] p 374 N85-17971
CIG (Computer image generation) data bases in an instance: Bits and pieces
[AD-P004318] p 375 N85-17972
Research Reports: 1984 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-171317] p 462 N85-22210
Avionics Data Base users manual
[AD-A153810] p 657 N85-28942
DATA BASES
An effective interface between computer-stored design descriptions and analysis tools p 58 A85-11661
Some concepts for improving non-precision approach guidance through use of on-board data bases
p 95 A85-14637
On the development of a data base for the Navstar GPS phase IIB user equipment DT&E (OR) field testing
p 95 A85-14639
Noseboom position error prediction data base update
p 418 A85-28650
Review of empirical and analytical specific impulse methodologies
[AIAA PAPER 85-1434] p 669 A85-39776
Defense Mapping Agency digital data bases — new sub-systems for current and near operational aircraft
p 821 A85-44986
Evaluation of Defense Mapping Agency Level V high resolution data for training simulator applications
p 849 A85-45119
Initial European Central Data Bank of air traffic demand now in operational trials p 879 A85-46852
Pressure distribution on a swept wing aircraft in flight
p 11 N85-10025
A data base for three-dimensional all-interference code evaluation p 83 N85-12017
Spring program summary, 1983
[PB84-222223] p 192 N85-15330
Managing recoverable aircraft components in the PPB and related processes: Executive summary
[AD-A148806] p 308 N85-16867
Mission-oriented requirements for updating MIL-H-8501. Volume 2: STI background and rationale — military rotorcraft
[NASA-CR-177331-VOL-2] p 271 N85-16878
The generation of three-dimensional data bases using a building block approach
[AD-P004319] p 379 N85-17973
Diagnosis: Using automatic test equipment and an artificial intelligence expert system
[AD-A151916] p 610 N85-27576
Avionics Data Base users manual
[AD-A153810] p 657 N85-28942
DATA COMPRESSION
Data compression for noiseless channels
p 527 N85-22851
DATA CORRELATION
Simulator study of flight characteristics of several large, dissimilar, cargo transport airplanes during approach and landing
[NASA-TP-2357] p 38 N85-11002
DATA FLOW ANALYSIS
Data flow methods for dynamic system simulation - A CSSL-IV microcomputer network interface
p 458 A85-28614
A signal processor with distributed control and multidimensional scalability p 858 A85-45005
DATA INTEGRATION
An approach to the multi-sensor integration problem — for aerial surveillance p 93 A85-14443
DATA LINKS
Applications of air-ground-air digital communication system ACARS/AIRCOM
[AIAA PAPER 84-2604] p 150 A85-17807
An experimental aeronautical satellite data link
[AIAA PAPER 84-2691] p 151 A85-17869
Remote maintenance monitoring using a digital data link
[AIAA PAPER 84-2677] p 152 A85-17877
The Navy's tactical data network
[AIAA PAPER 84-2716] p 152 A85-17882
Integration of advanced displays, FMS, speech recognition and data link p 407 A85-27605
Applications of wavelength division multiplexing (WDM) and time division multiplexing (TDM) to aircraft data links
p 853 A85-44365
A unified approach to data communications in aircraft
p 822 A85-44995
Aeronautical satellite data link study
p 855 A85-45340
Using the control system design environment in the design of a data link receiver unit for the Coast Guard HH-65A helicopter
[AD-A148624] p 271 N85-16880
The evolution of methods of air traffic control
[AD-A149606] p 410 N85-21137
DATA MANAGEMENT
MERIT: A man/computer data management and enhancement system for upper air nowcasting/forecasting in the United States — Minimum Energy Routes using Interactive Techniques (MERIT) p 56 N85-10558
DATA PROCESSING
Real time data processing for avionics testing on the A-6E
[AIAA PAPER 84-2686] p 175 A85-17852
Data acquisition and processing for steady-state inlet pressure distortion at a turbojet engine face
p 143 A85-18286
Quantifying AFTI/F-16 gust alleviation characteristics using frequency response analysis p 424 A85-28641

DATA TRANSMISSION
Meeting the challenge of ESM/ECM integration p 889 A85-49091
Data compression for noiseless channels p 527 N85-22851
A method of estimating aircraft attitude from fly by wire flight control system data p 586 N85-26653

DC 10 AIRCRAFT
Results of winglet development studies for DC-10 derivatives
[NASA-CR-3677] p 22 N85-10936
Safety recommendation(s), A-84-123 and -124
[REPT-3894B/93] p 563 N85-25222
DC-10 winglet flight evaluation
[NASA-CR-3704] p 760 N85-29949
Flight-service program for advanced composite rudders on transport aircraft
[NASA-CR-174537] p 760 N85-29950

DC 8 AIRCRAFT
The silencers — JT3D engine noise reduction options p 167 A85-16272
Aircraft accident report: Flying Tigers, Inc., Flight 2468, McDonell Douglas DC8-63, N797FT, Chambers Field, Naval Air Station, Norfolk, Virginia, October 25, 1983
[PB84-910408] p 14 N85-10925

DC 9 AIRCRAFT
The Cincinnati DC-9 experience - Lessons in aircraft and airport safety p 746 A85-42075
Safety recommendation(s), A-84-76 through -78
[REPT-3751E] p 564 N85-25224

DEAD RECKONING
Reference systems for the evaluation of dead-reckoning navigation equipment p 489 N85-22358

DEBRIS
Chemical nature of wear debris — in lubricating oils used in gas turbine engines
[ASLE PREPRINT 84-LC-3A-1] p 343 A85-25964

DECCA NAVIGATION
Early history of the Decca Navigator system p 824 A85-46994

DECELERATION
Vector optimization of aircraft deceleration in air p 423 A85-27795
Time-optimal deceleration of the rotation of an axisymmetric rigid body near the center of mass p 432 A85-28455
Improving inflight negative Gz restraint for aircrewmen
[AD-A151909] p 585 N85-26688

DECISION MAKING
Judgment and discipline - Recipe fo. survival p 241 A85-21582
Automating the decision support for ATE operations management p 456 A85-26836
System status display information
[NASA-CR-172347] p 107 N85-12889
Critical conditions for the automatic control of landing from decision height in variable winds
[UTIAS-284] p 154 N85-14830
Performance evaluation of A-10 aircraft mainteance units and aircraft using constrained facet analysis
[AD-A146955] p 201 N85-15660
Distribution and storage of aviation turbine fuel for military operations in northern Australia
[AD-A147180] p 283 N85-15821
Preliminary helicopter design decision making based on flight performance factors
[AD-A151488] p 575 N85-25254
Design adequacy: An effectiveness factor p 606 N85-26642
The economics of private sector R and D decisionmaking in aeronautics
[NASA-CR-176007] p 807 N85-30962

DECISIONS
Selected American decisions on the Warsaw Convention and related matters - February 1981 to June 1984. I p 462 A85-30167

DECOUPLING
A modern control design methodology with application to the CH-47 helicopter
[AD-A151946] p 587 N85-26723

DEFECTS
Built-in-test for first line testing p 202 N85-16739
Aerostructure nondestructive evaluation by thermal field detection. Phase 2: Technique refinement and quantitative determination of flaw detection capabilities
[AD-A149622] p 417 N85-21155

DEFENSE COMMUNICATIONS SYSTEM (DCS)
Feasibility of a UHF/TDM communications link for the worldwide airborne command post (WWABNCP) system p 823 A85-45133

DEFENSE INDUSTRY
The evolution of the U.S. helicopter industry
[AD-A154290] p 709 N85-29813

DEFENSE PROGRAM
Aerospace design and projected defence policy p 708 A85-41317
Fiscal year 1986 technical objective document
[AD-A151039] p 530 N85-25000

DEFLECTION
Development of a pneumatic thrust deflector
[SAE PAPER 841558] p 683 A85-39209
Initial sailplane project: The RP-1 p 129 N85-12976
Second sailplane project: The RP-2 p 129 N85-12977
Deflection model of a CT4-A undercarriage
[AD-A149776] p 417 N85-21156

DEFLECTORS
Flameholder with integrated air mixer
[AD-D011549] p 421 N85-21161

DEFORMATION
The effect of the deformation of the parachute material on the aeroelastic characteristics of the parachute during opening p 140 A85-16152
A discrete model for the analysis of natural vibrations of a deformable aeroplane p 757 A85-41605
Stereo Electro-optical Tracking System (SETS)
[NASA-CR-172471] p 295 N85-16096
Advanced stress analysis methods applicable to turbine engine structures
[NASA-CR-175573] p 422 N85-21165

DEGRADATION
Performance degradation of helicopter rotor in forward flight due to ice p 746 A85-42937
Storage stability of jet fuels
[AD-A146360] p 160 N85-14843

DEGREES OF FREEDOM
The discrete nature of the motion of a system during surface working p 524 A85-31473
Three degree of freedom steady state point performance program: Updated version 1
[CSIR-NIAST-83/48] p 8 N85-10005
Effect of aerodynamic and angle-of-attack uncertainties on the May 1979 entry flight control system of the Space Shuttle from Mach 8 to 1.5
[NASA-TP-2365] p 280 N85-15778
Discrete modifications to continuous dynamic structural systems p 372 N85-18410
An alignment fixture for a 2-Degree-of-Freedom (TDF) gyroscope
[AD-A148685] p 339 N85-18988
Simulator study of the stall departure characteristics of a light general aviation airplane with and without a wing-leading-edge modification
[NASA-TM-86309] p 574 N85-25250
Ground-based and in-flight simulator studies of flight characteristics of a twin-fuselage passenger transport airplane during approach and landing
[NASA-TP-2451] p 895 N85-34144

DEHUMIDIFICATION
Dehumidification as a means of preventing atmospheric corrosion in aircraft engines and avionic systems p 708 A85-41734

DEICERS
A summary of NASA's research on the fluid ice protection system
[AIAA PAPER 85-0467] p 241 A85-19758
Icing tunnel tests of Electro-Impulse De-Icing of an engine inlet and high-speed wings
[AIAA PAPER 85-0466] p 241 A85-20872
To take off and to land safely, Hoechst 1678 for ice and snow free runways p 149 N85-13791
Electro-expulsive separation system
[NASA-CASE-ARC-11613-1] p 700 N85-2915

DEICING
The Federal Aviation Administration's Engineering and Development Aircraft Icing Program
[AIAA PAPER 85-0015] p 247 A85-19459
Full two-dimensional transient solutions of electrothermal aircraft blade deicing
[AIAA PAPER 85-0413] p 248 A85-19734
Thermal analyses techniques for design of VSTOL aircr rotor ice protection
[AIAA PAPER 85-0340] p 332 A85-26387
Electroimpulse deicing nears operation p 400 A85-27384
Overview of icing research at ONERA
[AIAA PAPER 85-0335] p 401 A85-26028
Electro-impulse de-icing of a turbofan engine inlet
[AIAA PAPER 85-1118] p 754 A85-40811
Advanced technologies promise sales boost for genera aviation aircraft p 865 A85-4808
The structural dynamics of Electro-Impulse De-icing on the Lear Fan Kevlar Composite leading edge
[SAE PAPER 850917] p 885 A85-50127
Flight testing a liquid ice protection system on a single-engine airplane
[SAE PAPER 850923] p 885 A85-50128
To take off and to land safely, Hoechst 1678 for ic and snow free runways p 149 N85-13791
Analytical and physical modeling program for the NASA Lewis Research Center's Altitude Wind Tunnel (AWT)
[NASA-TM-86919] p 276 N85-15757
Official on Soviet research in deicing techniques p 563 N85-25191

DELAMINATING
Delamination control of composite rotor hubs p 519 A85-31982
Forced corrosion tests of construction components of passenger aircraft fuselages p 436 N85-20062

DELAY
FAA requirements for model to support capacity, delay, noise and energy programs
[AD-A155815] p 880 N85-35179

DELPHI METHOD (FORECASTING)
A description of a logistically ideal aircraft
[AD-A148425] p 258 N85-1696

DELTA FUNCTION
delta function and generalized tables of thermodynamic properties for CnHm-air system combustion products p 43 A85-12358

DELTA WINGS
Computation of vortex flow around a canard/delta combination p 6 A85-11980
Hypersonic large-deflection similitude for oscillating delta wings p 76 A85-14853
Numerical analysis of heat transfer on the surface of a delta wing in hypersonic air flow at large angles of attack p 141 A85-16190
A vortex-lattice method for general, unsteady aerodynamics p 144 A85-16511
Flow over double-delta wing and wing body at high alpha p 144 A85-16518
Roll up of strake leading/trailing-edge vortex sheets for double-delta wings p 144 A85-16519
Study of delta wing characteristics as a fan blade model. I - Visualization of three-dimensional flow by smoke wire method p 144 A85-16527
Conical flow near external axial corners as a bifurcation problem p 145 A85-16675
Three-dimensional effects on a pitching lifting surface
[AIAA PAPER 85-0041] p 208 A85-19476
Flow visualization of high angle of attack vortex wake structures
[AIAA PAPER 85-0102] p 286 A85-19520
A comparison of Euler and Navier-Stokes solutions for supersonic flow over a conical delta wing
[AIAA PAPER 85-0111] p 210 A85-19528
Subsonic wing rock of slender delta wings
[AIAA PAPER 85-0198] p 214 A85-19582
An attached flow design of a noninterfering leading edge extension to a thick delta wing
[AIAA PAPER 85-0350] p 220 A85-1966
An optimality criterion method for structures with stress, displacement and frequency constraints p 290 A85-21985
A method of forecasting active constraint with the applications to structural optimization p 291 A85-22445
Leading-edge separations and cross-flow shocks on delta wings p 317 A85-25126
Subsonic wing rock of slender delta wings p 385 A85-26760
Aerodynamic characteristics of delta planes p 389 A85-28396
Flow past V-wings with a break in the leading edge p 389 A85-28445

Euler solutions of transonic vortex flows around the Dillner wing p 392 A85-29261

Study of flow field in the near wake of delta wings p 472 A85-31753

Calculation of nonlinear subsonic characteristics of wings with thickness and camber at high incidence p 545 A85-35126

The discrete vortices from a delta wing p 546 A85-35150

Determination of forward edge eddies in delta wings p 547 A85-35260

Assessment of preliminary prediction techniques for wing leading-edge vortex flows at supersonic speeds p 547 A85-35580

Fundamental aerodynamic characteristics of delta wings with leading-edge vortex flows p 547 A85-35581

An investigation of the tabbed vortex flap p 547 A85-35583

A calculation of slender delta wing with leading-edge separation by Quasi-Vortex-Lattice method p 550 A85-35788

Aerodynamic hysteresis in stationary separated flow past elongated bodies p 552 A85-35881

Theoretical determination of pressure coefficient Cp on double wedged delta wing and its agreement with experimental results p 552 A85-36340

Validity of solution of three-dimensional linearised boundary value problem for axial disturbance velocity u, in transonic-supersonic flow p 553 A85-36341

Wing optimization and fuselage integration for future generation of supersonic aircraft p 618 A85-37212

Numerical and experimental determination of secondary separation on delta wings in subsonic flow p 628 A85-39219

Evaluation of Euler and Navier-Stokes solutions for leading-edge and shock-induced separations
[AIAA PAPER 85-1563] p 711 A85-40688

The entrainment effect of a leading-edge vortex
[AIAA PAPER 85-1584] p 712 A85-40703

Total pressure loss in vortical solutions of the conical Euler equations
[AIAA PAPER 85-1701] p 718 A85-40777

Computation of transonic vortex flows past delta wings integral equation approach
[AIAA PAPER 85-1582] p 725 A85-41415

Computation of turbulent separated flows over wings p 737 A85-42991

Some developments in vortex motion research p 738 A85-43239

Supersonic aerodynamic characteristics of some reentry concepts for angles of attack up to 90 deg
[AIAA PAPER 85-1795] p 812 A85-43849

Measurements of canard-induced roll oscillations
[AIAA PAPER 85-1830] p 839 A85-43871

The supercritical regime of hypersonic flow past a delta wing p 815 A85-44152

Prediction of leading-edge vortex behaviour to supplement the suction analogy p 815 A85-44525

Hypersonic flow past a wing at large angles of attack with a detached shock wave p 815 A85-44788

Computational technique for compressible vortex flows past wings at large incidence p 816 A85-45836

Visualization of the vortex flow over delta and double-delta wings p 867 A85-47149

Determination of leading-edge vortex trajectories by schlieren photography p 904 A85-47150

Some results of experimental and analytical buffeting investigations on a delta wing
[ONERA, TP NO. 1985-59] p 868 A85-47262

A calculating method of the breakdown feature of the leading-edge separating vortex for slender delta wings p 873 A85-49707

On vortex bursting
[NASA-TM-77587] p 9 N85-10006

Prediction of aerodynamic characteristics of fighter wings at high angles of attack
[AD-A145107] p 10 N85-10017

Force and moment measurements on a 74 deg delta wing with an apex flap
[NASA-CR-166081] p 12 N85-10916

The lateral-directional characteristics of a 74-degree Delta wing employing gothic planform vortex flaps
[NASA-CR-3848] p 82 N85-12009

Flow calculation on a thin wing, with specific attention to separation point at the trailing edge
[FTW-FO-1721] p 146 N85-13787

A visual study of a delta wing in steady and unsteady motion
[AD-P004158] p 324 N85-17943

Experimental investigation of a breakdown criterion for a vortex in an incompressible flow — delta wing
[ONERA-RT-27/1147-AY] p 395 N85-19935

Unsteady flows around 3-dimensional wings
[AD-A149893] p 399 N85-21124

A calculation of slender delta wing with leading-edge separation by quasi-vortex-lattice method p 400 N85-21423

Stability of vortex structures during separation flow past array of wings p 481 N85-24110

An exploratory study of apex fence flaps on a 74 deg delta wing
[NASA-CR-172463] p 557 N85-25208

Investigation of the Vortex Tab
[NASA-CR-172586] p 557 N85-25209

Flow past a flat plat with a vortex/sink combination
[JIAA-TR-58] p 558 N85-25215

Conical stagnation points in the flow around an external corner — delta wings
[VTH-LR-396] p 561 N85-26680

Lee-side flow over delta wings at supersonic speeds
[NASA-TP-2430] p 739 N85-29921

Experimental and theoretical study of the longitudinal aerodynamic characteristics of delta and double-delta wings at Mach numbers of 1.60, 1.90, and 2.16
[NASA-TP-2433] p 739 N85-29922

China has developed a new version of fighter aircraft
[AD-A155293] p 830 N85-32118

Vortex boundary-layer interactions
[NASA-CR-176192] p 911 N85-35373

**DENMARK**

Finnair, LOT, SAS reps in USSR on present operations, plans p 333 N85-18035

**DENSITY (MASS/VOLUME)**

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 3: Statistical analysis of 3 methods for determining maximum specific gravity of bituminous concrete mixtures
[FAA-PM-84-12-VOL-3] p 430 N85-21182

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 4: Computer simulation of multiple acceptance criteria
[FAA-PM-84-12-VOL-4] p 431 N85-21183

Trends of petroleum fuels
[DE85-000116] p 522 N85-24023

**DENSITY DISTRIBUTION**

Optical tomography for flow visualization of the density field around a revolving helicopter rotor blade p 48 A85-11264

A system of shock and rarefection waves in flows past bodies with complex shapes p 618 A85-37330

**DENSITY MEASUREMENT**

Application of laser interferometry to density measurements in free jets p 206 A85-19406

Tomographic reconstruction of three-dimensional flow over airfoils
[AIAA PAPER 85-0479] p 225 A85-19776

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 3: Statistical analysis of 3 methods for determining maximum specific gravity of bituminous concrete mixtures
[FAA-PM-84-12-VOL-3] p 430 N85-21182

Field validation of statistically-based acceptance plan for bituminous airport pavements. Volume 4: Computer simulation of multiple acceptance criteria
[FAA-PM-84-12-VOL-4] p 431 N85-21183

**DEOXIDIZING**

Metallurgy Institute's developments for alloy and aircraft producers p 120 N85-12268

**DEPLOYMENT**

Aerodynamic studies linked to the development of deployable nozzles — for upper stage ballistic missiles
[ONERA, TP NO. 1984-149] p 205 A85-19263

Deployment sequence mode selection system for aircraft ejection seat
[AD-D011464] p 334 N85-18868

Integrated paratroop door
[AD-D011507] p 416 N85-21148

Deployable Core Automated Maintenance System (DCAMS)
[AD-A153695] p 706 N85-29839

**DEPOSITION**

Initial feasibility ground test of a proposed photogrammetric system for measuring the shapes of ice accretions on helicopter rotor blades during forward flight
[NASA-TM-87391] p 106 N85-12887

Liquid phase products and solid deposit formation from thermally stressed model jet fuels
[NASA-TM-86874] p 121 N85-13066

Evaluation of jet fuel deposit kinetics. Lot 4
[AD-A147196] p 284 N85-15922

Jet fuel instability mechanisms
[NASA-CR-175856] p 690 N85-28127

**DEPOSITS**

Evaluation of jet fuel deposit kinetics. Lot 4
[AD-A147196] p 284 N85-15922

Study of deposition control using transpiration
[DE85-002339] p 373 N85-19378

**DESCENT**

Descending flight and its optimization p 756 A85-41398

Effects of aircraft and flight parameters on energy-efficient profile descents in time-based metered traffic
[NASA-CR-172338-ADD] p 245 N85-15706

Reference energy-altitude descent guidance: Simulator evaluation — aircraft descent and fuel conservation
[NASA-TP-2383] p 261 N85-16868

Planning fuel-conservative descents in an airline environmental using a small programmable calculator: Algorithm development and flight test results
[NASA-TP-2393] p 579 N85-26705

**DESCENT PROPULSION SYSTEMS**

Descent vehicles — Russian book p 899 A85-49435

**DESCENT TRAJECTORIES**

Time-controlled aircraft guidance in uncertain winds and temperatures p 879 A85-47687

Feedback control for fuel-optimal descents using singular perturbation techniques p 893 A85-47688

**DESIGN ANALYSIS**

Development of the aerospace structures technology damping design guide p 39 A85-12477

A case study - Integrated design/analysis of an advanced composite fin assembly
[AIAA PAPER 84-2394] p 122 A85-13505

The value of wind tunnel tests in student design projects
[AIAA PAPER 84-2529] p 101 A85-13588

Developing aircraft passenger seats for safety and economy p 90 A85-15170

Role of constraints in inverse design for transonic airfoils p 80 A85-15337

Design and fabrication of crashworthy composite external fuel tanks p 104 A85-15630

Common modular avionics - Partitioning and design philosophy
[AIAA PAPER 84-2745] p 184 A85-17896

IDAS - An Interactive Design and Analysis System — for aircraft
[SAWE PAPER 1515] p 195 A85-18807

Modular simulators, their feasibility, design, and procurement
[AIAA PAPER 85-0312] p 274 A85-19659

TRO-2D - A code for rational transonic aerodynamic optimization
[AIAA PAPER 85-0425] p 223 A85-19740

Design of aerodynamic bodies using artificial intelligence/expert system technique
[AIAA PAPER 85-0112] p 301 A85-20856

Shock-free turbomachinery blade design p 232 A85-21864

Trends in civil aircraft design p 200 A85-22226

Development and testing of the Martin-Baker crashworthy seat p 340 A85-22753

A high energy stage for the National Space Transportation System
[IAF PAPER 84-15] p 381 A85-23200

Adaptivity and design criteria of a latest-generation MTD processor p 336 A85-25105

The dynamics of ball separators in ball bearings. II - Results of optimization study
[ASLE PREPRINT 84-AM-6C-3] p 369 A85-25957

Propellers for the future p 353 A85-26275

The addition of quasi-three-dimensional terms into a finite element method for transonic turbomachinery blade-to-blade flows p 386 A85-26920

Improving the flying qualities of your aeroplane p 412 A85-27449

Principles of the design of ground support facilities for air transport p 426 A85-27723

New model introduction - The operators' perspective — in helicopter industry p 482 A85-31981

Design considerations for helicopter effectiveness in air-to-air combat p 482 A85-31995

A design methodology for a compliant matrix composite bearingless main rotor p 496 A85-31996

Advanced technology impact on LHX helicopter preliminary design p 496 A85-31998

Contingency power concepts for helicopter turboshaft engine p 506 A85-32005

Definition of requirements for 5000 horsepower class demonstrator engine p 506 A85-32008

Design and performance of a fixed, nonaccelerating guide vane cascade that operates over an inlet flow angle range of 60 deg
[ASME PAPER 84-GT-75] p 475 A85-32964

Hovercraft skirt design and manufacture p 694 A85-38233

The ARINC 704 ring laser gyro Inertial Reference System p 643 A85-38528

The design and development of the Grace Aircraft GAC-20 airship
[AIAA PAPER 85-0869] p 648 A85-38784

Selecting design parameters for an engine from the totality of flight conditions p 659 A85-39103
Fuel injection characterization and design methodology to improve lean stability
[AIAA PAPER 85-1183] p 664 A85-39844
Specific differences in future cockpit design due to civil and military applications p 782 A85-40347
A flexible design for a general purpose simulation facility
[AIAA PAPER 85-1752] p 779 A85-40563
Design and performance comparison of three high-speed fans p 768 A85-41807
Design of flight vehicles and their systems
p 854 A85-44832
A quantitative measure of monochrome CRT displays — for aircraft cockpits p 833 A85-45103
Thermal design criteria for standardized avionic modules as applied to system design p 826 A85-45137
The economicality of equipping aircraft with gas turbine-propeller propulsion — German thesis
p 826 A85-45525
Applications of numerical optimization methods to helicopter design problems - A survey
p 826 A85-45792
Generic fault-tolerance techniques for critical avionics systems
[AIAA PAPER 85-1980] p 880 A85-45973
How autopilot requirements constrain the aerodynamic design of homing missiles p 894 A85-47717
Modal insensitivity with optimality — in feedback control p 917 A85-47735
A systematic approach to designing for testability
p 909 A85-49586
Advanced escape systems p 877 A85-49625
An evaluation of improved analytically based weight estimation methodologies
[SAWE PAPER 1616] p 883 A85-49920
USAF damage tolerance methods applied to general aviation aircraft design and analysis
[SAE PAPER 850915] p 885 A85-50129
Sport aircraft design trends - Shaping the future of general aviation
[SAE PAPER 850881] p 886 A85-50130
Aerodynamics of liquid-cooled aircraft engine installations
[SAE PAPER 850896] p 891 A85-50132
Applications of numerical optimization methods to helicopter design problems: A survey
[NASA-TM-86010] p 19 N85-10036
Development trends and requirements of propulsion system technology for civil aircraft p 27 N85-10038
Energy efficient engine flight propulsion system preliminary analysis and design report
[NASA-CR-174701] p 28 N85-10947
Energy efficient engine high pressure turbine test hardware detailed design report
[NASA-CR-167955] p 34 N85-10995
Inverse design technique for cascades
[NASA-CR-3836] p 81 N85-12008
Design, ancillary testing, analysis and fabrication data for the advanced composite stabilizer for Boeing 737 aircraft, volume 2
[NASA-CR-166011] p 179 N85-13914
Avionics system design for requirements for the United States Coast Guard HH-65A Dolphin
p 134 N85-14827
The need for a dedicated public service helicopter design p 154 N85-14828
A theoretical design method for 3-dimensional transonic wings
[NAL-TR-830] p 161 N85-14834
A description of a logistically ideal aircraft
[AD-A148425] p 258 N85-16866
Integrated Technology Rotor/Flight Research Rotor (ITR/FRR) concept definition study
[NASA-CR-166444] p 346 N85-16881
A radome for air traffic control SSR radar systems
[AD-P004373] p 449 N85-21487
Dynamic wind-tunnel testing of active controls by the NASA Langley Research Center p 514 N85-22353
Possible technological answers to new design requirements for power transmission systems
p 510 N85-23779
Design of a basic airfoil for a slightly swept wing. Part 1: Theoretical transonic airfoil design
[ESA-TT-892] p 761 N85-31054

DESIGN TO COST
The average $100,000,000 design engineer
p 49 A85-11660
Technical and economical aspects in manufacturing aviation and space components by using superplastic forming (SPF) and/or superplastic forming/diffusion bonding (SPF/DB)
[MBB-BB-572-84-OE] p 181 A85-16087
JVX design to cost methodology — Joint Services Advanced Vertical Lift Aircraft Program
[SAWE PAPER 1581] p 863 A85-49912
Design-To-Cost (DTC) methodology to achieve affordable avionics p 578 N85-26645

DESTRUCTIVE TESTS
Seat experiments for the full-scale transport aircraft controlled impact demonstration
[AD-A155024] p 820 N85-32106

DETACHMENT
Hypersonic flow past a wing at large angles of attack with a detached shock wave p 615 A85-44788

DETECTION
Sensor failure detection for jet engines using analytical redundancy
[AIAA PAPER 84-1452] p 167 A85-16097
Compound class quantitation of JP-5 jet fuels by high performance liquid chromatography-differential refractive index detection
[AD-A145754] p 120 N85-12185
The use of synthetic aperture radar imagery to detect hazards to navigation
[AD-A148324] p 339 N85-18871
Evaluation of a fault tolerant system for an integrated avionics sensor configuration with TSRV flight data
[NASA-CR-172589] p 657 N85-25941
A preliminary evaluation of a failure detection filter for detecting and identifying control element failures in a transport aircraft
[NASA-TM-87576] p 896 N85-35204

DETONATION
A model of hypersonic two-dimensional oblique detonation wave ramjet
[UTIAS-TN-257] p 891 N85-34139

DETONATION WAVES
A model of hypersonic two-dimensional oblique detonation wave ramjet
[UTIAS-TN-257] p 891 N85-34139

DH 115 AIRCRAFT
Long term durability of urea formaldehyde glued joints removed from Vampire aircraft
[AD-A149053] p 346 N85-18985

DHC 2 AIRCRAFT
Application of linear optimal control theory to the design of the elevator control system of the DHC-2 Beaver experimental aircraft
[VTH-LR-411] p 588 N85-25729

DIAGNOSIS
A cost-effective integrated diagnostics support system
p 439 A85-25797

DIAMETERS
The flow past two cylinders having different diameters
p 696 A85-39240

DIAPHRAGMS (MECHANICS)
A new technique to break diaphragms electrically in a double-tube short duration jet simulation facility
p 682 A85-38975

DIELECTRICS
Propagation of an ion jet near a dielectric surface
p 197 A85-16187
Studies in fin-line antenna design for imaging array applications p 526 A85-33245

DIES
Correction of engraving stamp for forming blanks of gas turbine engine blades p 371 N85-18213
Precision die forging of blades or gas turbines
p 672 N85-28148

DIESEL ENGINES
The use of high-temperature ceramics in diesel and gas-turbine engines (Review) p 518 A85-31487
Ceramic technology for advanced heat engines program plan
[DE84-013587] p 121 N85-13055
FRG ceramic engine components (PET)
p 297 N85-17193
Structural ceramics in transportation: Fuel implications and economic impacts
[DE85-003024] p 436 N85-20130
JP-8 and JP-5 as compression ignition engine fuel
[AD-A150796] p 521 N85-24022
Future of ceramic turbochargers: Promises and pitfalls
[DE85-008209] p 700 N85-28380
Ceramic Technology for Advanced Heat Engines Project
[DE85-008755] p 691 N85-29052
Ceramic coatings for heat engine materials: Status and future needs
[DE85-008759] p 691 N85-29053
Ceramic coatings for heat engine materials
[DE85-005238] p 691 N85-29054

DIESEL FUELS
The determination of biological impurities in fuels
p 179 A85-16949
JP-8 and JP-5 as compression ignition engine fuel
[AD-A150796] p 521 N85-24022
Trends of petroleum fuels
[DE85-000116] p 522 N85-2402
The distribution of higher n-alkanes in partially frozen middle distillate fuels
[AD-A153840] p 692 N85-2907

DIFFERENCE EQUATIONS
Numerical solution of the two-dimensional Euler equations by second-order upwind difference schemes
[AIAA PAPER 85-0292] p 218 A85-1984
Numerical analysis of a 3-D separated flow
p 552 A85-3579
Implicit flux-split schemes for the Euler equations
[AIAA PAPER 85-1680] p 803 A85-4174
A simple and effective difference scheme in aerodynamics p 872 A85-4970
Upwind-difference methods for aerodynamic problems governed by the Euler equations
[REPT-84-23] p 635 N85-2783

DIFFERENTIAL EQUATIONS
Automatic adaptive grid refinement for the Euler equations p 301 A85-2908
Identification of integro-differential systems for application to unsteady aerodynamics and aeroelasticity
[AIAA PAPER 85-1763] p 858 A85-4382
Singular asymptotic expansions in nonlinear rotordynamics
[NASA-CR-174012] p 39 N85-10100
Iterative method of calculating strength of airframe members using finite element method
p 162 N85-1498
Singular asymptotic expansions in nonlinear rotordynamics p 451 N85-2221
Application of Floquet theory to helicopter blade flapping stability
[AD-A154480] p 760 N85-2995

DIFFERENTIAL GEOMETRY
A realistic aerial combat duel as a differential game study p 535 A85-3328

DIFFUSERS
A method for calculating turbulent 3-D flows in diffusers p 79 A85-1488
Effect of inlet and outlet flow conditions on the flow and performance of subsonic two-dimensional diffuser
p 229 A85-20241
The response of normal shocks in diffusers
p 318 A85-25150
Tests of wall suction and blowing in highly offset diffusers p 385 A85-26751
Two-dimensional viscous simulation of inlet/diffuser flows with terminal shocks p 386 A85-27091
The effect of quality of gas jet mixing in the mixing chamber of a subsonic jet pump on the diffuser performance p 442 A85-28374
Analysis of unsteady inviscid diffuser flow with a shock wave p 580 A85-34010
A further assessment of numerical annular dump diffuser flow calculations
[AIAA PAPER 85-1440] p 633 A85-3977
Flowfield and performance measurements in a vaned radial diffuser
[ASME PAPER 84-WA/FM-7] p 634 A85-3987
Numerical calculation of flow field in afterburner diffuser of turbofan engine p 772 A85-43244
Turbo fluid machinery and diffusers
[NASA-TM-77467] p 298 N85-1738
Mathematical modeling of the AEDC (Arnold Engineering Development Center) propulsion wind tunnel (16T)
[AD-A151280] p 593 N85-25275

DIFFUSION
A comment on controlled diffusion foil
p 723 A85-4099
Study of controlled diffusion stator blading
[NASA-CR-167996] p 354 N85-1805
Strutless diffuser for gas turbine engine
[AD-D011682] p 672 N85-2894

DIFFUSION FLAMES
Computation of the aerothermodynamic field of laminar diffusion flames p 41 A85-1055
A standard aircraft diffusion flame: Spectral characteristics and a feasibility study for developing an alternate calibration source for aircraft optical fire detection systems
[AD-A150231] p 520 N85-2278

DIFFUSION WELDING
Technical and economical aspects in manufacturing aviation and space components by using superplastic forming (SPF) and/or superplastic forming/diffusion bonding (SPF/DB)
[MBB-BB-572-84-OE] p 181 A85-1608
Essential design features of A310
[SAWE PAPER 1569] p 160 A85-1882
Pilot production of superplastically formed/diffusion bonded T-38 main landing gear doors
[AIAA PAPER 84-0933] p 616 A85-3921
MBB uses superplastic forming, diffusion bonding for alloys p 446 N85-2017

**DIGITAL COMMAND SYSTEMS**
Design and flight testing of digital direct side-force control laws p 423 A85-26430
An Optimal, Proportional-plus-Integral/Tracking control law for aircraft applications p 513 A85-33282
Design of fast non-interacting digital flight-mode control systems for high-performance aircraft
[AIAA PAPER 85-1903] p 846 A85-45974
Closing the design loop on HiMAT (highly maneuverable aircraft technology)
[NASA-TM-85923] p 162 N85-14836
Robustness of discrete-time dynamical systems: Application to the multivariable digital control of combat aircraft
[ONERA-NT-1984-2] p 425 N85-19986
Application of AFTI/F-16 task-tailored control modes in advanced multirole fighters p 677 N85-27888
X-29 digital flight control system design p 677 N85-27889
Some flight test results with redundant digital flight control systems p 678 N85-27892
**DIGITAL COMPUTERS**
Investigation of the semiautomatic control of an aircraft using timer redundancy in onboard digital computers of the flight-path control system p 35 A85-10470
Digital computer architecture as applied to an advanced flight control system
[AIAA PAPER 85-1949] p 846 A85-45967
Generic fault-tolerance techniques for critical avionics systems
[AIAA PAPER 85-1980] p 860 A85-45973
Development and flight evaluation of an augmented stability active controls concept: Executive summary
[NASA-CR-166009] p 37 N85-11006
Turbine blade damping study, introduction p 113 N85-12881
Investigation of semiautomatic aircraft control processes employing time redundancy in on-board digital trajectory control computers p 270 N85-16046
Automatic land vehicle navigation using road map data
[DE84-017178] p 338 N85-18043
Interface specifications for SCR (Software Cost Reduction) (A-7E) extended computer module, revised
[AD-A149948] p 459 N85-22024
An update of experience on the fly by wire Jaguar equipped with a full-time digital flight control system p 678 N85-27893
Operational and developmental experience with the F/A-18A digital flight control system p 678 N85-27895
Flight testing and development of the F/A-18A digital flight control system p 678 N85-27896
**DIGITAL DATA**
Remote maintenance monitoring using a digital data link
[AIAA PAPER 84-2677] p 152 A85-17877
Defense Mapping Agency digital data bases — new sub-systems for current and near operational aircraft p 821 A85-44988
Evaluation of Defense Mapping Agency Level V high resolution data for training simulator applications p 849 A85-45119
**DIGITAL FILTERS**
Application of digital signal processing to a low data rate communications receiver
[AIAA PAPER 84-2652] p 183 A85-17839
**DIGITAL INTEGRATORS**
Rotorcraft digital advanced avionics system (RODAAS) functional description
[NASA-CR-166611] p 568 N85-25237
**DIGITAL NAVIGATION**
Computer optimized TACAN navigation for high performance aircraft
[AIAA PAPER 84-2436] p 92 A85-13531
Flight critical system design guidelines and validation methods
[AIAA PAPER 84-2461] p 113 A85-13548
Navigation processing of the Flight Management Computer System for the Boeing 737-300 p 93 A85-14827
Automated benchmark generation based upon a specification language
[AIAA PAPER 84-2667] p 194 A85-17849
A method for testing a digital flight control system without the use of ground support equipment
[AIAA PAPER 84-2664] p 172 A85-17851
Integrated navigation p 245 A85-21461
Trends in digital flight control systems p 269 A85-21465
The Geostar position determination and digital message system p 487 A85-32219
Marriage of inertial-reference and air-data systems now assured p 488 A85-32486
A comparison of several digital map-aided navigation techniques p 642 A85-37829
Description and test methods for a frequency output accelerometer p 694 A85-38536
System engineering takes the byte out of MIL-STD-1553 — avionics data bus p 832 A85-44999
Technology considerations of Integrated Communication Navigation Identification Avionics (ICNIA) p 823 A85-45131
**DIGITAL RADAR SYSTEMS**
A new digital X-band SLAR p 46 A85-10263
An algorithm for radiometric and geometric correction of digital SLAR data p 56 A85-11216
The APG-66 radar and its derivative applications
[AIAA PAPER 84-2609] p 150 A85-17813
Ramp's new primary surveillance radar — Radar Modernization Project p 153 A85-18145
Digital homing guidance - Stability vs performance tradeoffs p 406 A85-26440
Design of a new airport surveillance radar (ASR-9) p 408 A85-27832
Airport surface detection equipment p 408 A85-27833
The SDF - A radar avionics software development environment p 858 A85-45068
Preventing collisions in air traffic - A system analysis with special emphasis on transponder-assisted on-board systems with selective addressing — German thesis p 834 A85-45524
Construction of a special computer for image production using synthetic aperture radar — German thesis p 834 A85-45550
**DIGITAL SIMULATION**
A digital simulation study of 2-dimensional flutter active suppression system p 172 A85-18280
NAS - Supercomputing master tool for aeronautics — Numerical Aerodynamic Simulation p 195 A85-18442
Considerations in level of fidelity in real-time avionic system simulations
[AIAA PAPER 84-2437] p 338 A85-26322
Digital simulation of adaptive guidance and control system of a homing missile p 409 A85-28604
Application of modern control to bank-to-turn guidance using digital simulation p 423 A85-28606
Fixed step friction model p 443 A85-28609
The use of Ada in distributed simulations p 457 A85-28612
Multibus-based parallel processor for simulation p 457 A85-28613
A functional language approach in high-speed digital simulation p 458 A85-28615
An approach to adaptive autopilot synthesis, with stabilization of a single-rotor helicopter used as an example p 584 A85-36573
A comparison of several digital map-aided navigation techniques p 642 A85-37829
Optimal generalized multistep integration formulae for real-time digital simulation
[AIAA PAPER 85-1740] p 802 A85-40556
Turbofan-engine nonrecoverable stall computer-simulation development and validation
[AIAA PAPER 85-1432] p 765 A85-40840
Geographic subdivision and top level data structures, Columbus, Magellan, and expanding CIG (Computer Image Generation) horizons
[AD-P004317] p 374 N85-17971
A preliminary evaluation of a failure detection filter for detecting and identifying control element failures in a transport aircraft
[NASA-TM-87576] p 896 N85-35204
**DIGITAL SYSTEMS**
Multi-rate digital flight control systems p 35 A85-12360
Integrated modular flight control - Costs and benefits
[AIAA PAPER 84-2490] p 114 A85-13564
Communication control group technology insertion for the S-3A p 93 A85-14454
Digital Avionics Systems Conference, 6th, Baltimore, MD, December 3-6, 1984, Proceedings p 137 A85-17801
Digital fuel quantity indicating system for aircraft
[AIAA PAPER 84-2602] p 163 A85-17805
Architectural solutions to safety problems of digital flight Critical systems for commercial transports
[AIAA PAPER 84-2603] p 193 A85-17806
Applications of air-ground-air digital communication system ACARS/AIRCOM
[AIAA PAPER 84-2604] p 150 A85-17807
An overview of the digital avionics assessment activities being conducted by the Federal Aviation Administration at NASA-Ames Research Center
[AIAA PAPER 84-2605] p 163 A85-17808
Current and future general aviation EFIS developments — electronic flight instrumentation systems
[AIAA PAPER 84-2642] p 164 A85-17831
The impact of advanced computational techniques on digital avionics signal processor performance
[AIAA PAPER 84-2653] p 194 A85-17840
Gate array, standard cell, and fully custom - Building blocks for the digital avionics designer
[AIAA PAPER 84-2711] p 184 A85-17880
A terrain data/digital map system for LHX — Light Helicopter
[AIAA PAPER 84-2723] p 152 A85-17885
The de-ja vu of all electric/all digital aircraft — future integrated system technology of commercial and military aircraft
[AIAA PAPER 84-2739] p 157 A85-17893
An assessment of the 1990 digital/electric airplane
[AIAA PAPER 84-2740] p 157 A85-17894
Predicted performance benefits of an adaptive digital engine control system on an F-15 airplane
[AIAA PAPER 85-0255] p 263 A85-19801
Adaptivity and design criteria of a latest-generation MTD processor p 336 A85-25105
Living with EICAS - Operational experience to date on the 757 and 767 — Engine Indication and Crew Alerting System
[SAE PAPER 841506] p 352 A85-25981
The Expeditionary Test Set - A fresh approach to automatic testing p 439 A85-26800
Enhancing the F-111 avionics intermediate shop with dynamic test stations p 381 A85-26834
Flight testing the Digital Electronic Engine Control (DEEC) A unique management experience p 420 A85-28636
PADDS - A Portable Airborne Digital Data System p 418 A85-28652
Uses of a digital electronic theodolite system in a weapon separation program p 418 A85-28655
F-14D for digital p 492 A85-30572
Low cost GPS receiver design considerations p 485 A85-32195
A GPS fast acquisition receiver p 486 A85-32205
High dynamic, low volume GPS receiver p 487 A85-32206
Design of digital flight control systems for helicopters p 673 A85-37195
Integrated flight/propulsion control - Adaptive engine control system mode
[AIAA PAPER 85-1425] p 669 A85-39772
Aircraft flight recorder system p 762 A85-40979
Multiple sensor — for digital flight control systems p 763 A85-41017
A digital interface for flight simulator cockpits
[AIAA PAPER 85-1755] p 780 A85-42667
Microwave receivers enter a new era p 821 A85-44070
Digital map products and the avionics requirement - Can DMA meet the challenge? p 821 A85-44989
F-15 digital map feasibility demonstration system p 832 A85-44990
Integrated Terrain Access/Retrieval System p 832 A85-44992
Future electronic map systems p 832 A85-44993
Digital signal processing utilizing a generic instruction set p 854 A85-45006
A Standard Central Air Data Computer (SCADC) with worldwide applications p 833 A85-45026
Meeting the electric power needs for aircraft digital electronics p 835 A85-45036
Integrated flight/propulsion control - HIDEC modes p 839 A85-45042
Robustness enhancement for LQG digital flight controller design p 840 A85-45048
Real-time analysis of a digital multiloop flight control system p 840 A85-45050
Design and microprocessor implementation of an integrated load alleviation-pitch manoeuvre flight controller for relaxed stability aircraft p 840 A85-45052
Multivariable digital flight control design of the X-29A using output feedback p 840 A85-45053
A control law for the self-repairing/digital flight control system p 841 A85-45057
A concept for more test time on flight software p 858 A85-45076
Error corrective coding for MIL-STD-1553B aircraft stores management systems p 823 A85-45127
Feasibility of a UHF/TDM communications link for the worldwide airborne command post (WWABNCP) system p 823 A85-45133
Digital flight control and avionics integration techniques p 834 A85-45156
Integration of digital aircraft controls - Benefits and dangers
[AIAA PAPER 85-1951] p 851 A85-45937
The use of Ada in digital flight control systems
[AIAA PAPER 85-1953] p 834 A85-45939
Design for an Ada-based architecture for critical flight controls
[AIAA PAPER 85-1954] p 859 A85-45940
JA-37 Digital Automatic Flight Control System (DAFCS) operational maintenance experience
[AIAA PAPER 85-1913] p 849 A85-45972

An adaptive control of an electro-hydraulic position control system p 893 A85-47702

A user's view of CARE III — computer aided reliability estimation p 918 A85-49570

Improved capabilities of the new general aviation digital autopilots
[SAE PAPER 850914] p 695 A85-50125

Design of a digital ride quality augmentation system for commuter aircraft
[NASA-CR-172419] p 20 N85-10037

Expert systems in maintenance diagnostics for self-repair of digital flight control systems
[AD-P003933] p 58 N85-11613

High-temperature optically activated GaAs power switching for aircraft digital electronic control
[NASA-CR-174711] p 116 N85-12801

The effect of aircraft generated electromagnetic interference (EMI) on future avionics systems: A compendium
[AD-A146380] p 189 N85-15101

Systems study for an Integrated Digital-Electric Aircraft (IDEA)
[NASA-CR-3840] p 255 N85-15714

Predicted performance benefits of an adaptive digital engine control system of an F-15 airplane
[NASA-TM-85916] p 265 N85-15729

Experience of one UK electronic equipment supplier with bite on engine/flight control systems over the past ten years p 296 N85-16738

A digital piloting system for the combat helicopter p 280 N85-16806

Integrated digital/electric aircraft concepts study
[NASA-CR-3841] p 257 N85-16851

Design of a digital ride quality augmentation system for commuter aircraft
[AD-A148233] p 271 N85-16879

Transdigitizer for relaying signals from Global Positioning System (GPS) satellites
[AD-D011442] p 339 N85-18970

Integrated control system engineering support
[AD-A149742] p 426 N85-21177

Testing of the digital flight control system of the German CCV fighter experimental aircraft p 514 N85-22361

Rotorcraft digital advanced avionics system (Rodaas) p 576 N85-26808

Application of AFTI/F-16 task-tailored control modes in advanced multirole fighters p 589 N85-26735

X-29A digital flight control system design p 589 N85-26736

Some flight test results with redundant digital flight control systems p 589 N85-26739

An update on experience on the fly by wire Jaguar equipped with a full-time digital flight control system p 589 N85-26740

Operational and developmental experience with the F/A-18A digital flight control system p 589 N85-26742

Flight testing and development of the F/A-18A digital flight control system p 590 N85-26743

Automatic flight control modes for the AFTI/F-111 mission adaptive wing aircraft p 591 N85-26756

Certifying complex digital systems on civil aviation aircraft p 680 N85-27907

Energy Efficient Engine (E3) controls and accessories detail design report
[NASA-CR-168017] p 772 N85-29957

Performance improvements of a highly integrated digital electronic control system for an F-15 airplane
[NASA-TM-86748] p 837 N85-32120

DIGITAL TECHNIQUES

Third generation digital flight controls p 170 A85-17230

A highly monitored digital flight control system for the AV-8B Harrier II
[AIAA PAPER 84-2624] p 171 A85-17821

Aircraft automatic digital flight control system with inversion of the model in the feed-forward path
[AIAA PAPER 84-2627] p 171 A85-17823

Accuracies of digital engine monitoring proven by performance
[AIAA PAPER 84-2753] p 166 A85-17901

Application of digital interferogram evaluation techniques to the measurement of three-dimensional flow fields
[AIAA PAPER 85-0037] p 288 A85-20852

The development of digital attitude controllers - its past, present and future p 302 A85-22449

Introduction into commercial service for electronic controls used on large turbofan engines
[SAE PAPER 841507] p 352 A85-25982

Passive navigation by triangulation and tracking of undistinguished features in successive high-resolution images p 642 A85-37830

The development of a hardware-in-the-loop engine simulation facility
[AIAA PAPER 85-1293] p 682 A85-39706

The Dynamic Data Analyzer (DDA), an aircraft aero-propulsion digital analysis tool
[AIAA PAPER 85-1212] p 779 A85-40821

Fault detection and accommodation testing on an F100 engine in an F-15 airplane — digital engine control system
[AIAA PAPER 85-1294] p 765 A85-40830

Development of low cost digital control system for small gas turbine engine p 769 A85-41539

Development of a simulator facility for helicopter air-to-air combat
[AIAA PAPER 85-1733] p 780 A85-42862

Digital fringe reduction techniques applied to the measurement of three-dimensional transonic flow fields p 907 A85-48521

Semianalytic modeling of aerodynamic shapes
[NASA-TP-2413] p 398 N85-21120

DIGITAL TO ANALOG CONVERTERS

A graphical approach to understanding and preventing the phenomenon of aliasing p 858 A85-45041

DIGITAL TRANSDUCERS

Digital optical transducers for helicopter flight control systems p 368 A85-25331

Advanced air data system concepts p 833 A85-45027

DILUTION

Dilution zone mixing studies p 33 N85-10984

Dilution jet mixing p 33 N85-10985

Development of a temperature measurement system with application to a jet in a cross flow experiment
[NASA-CR-174896] p 581 N85-25262

DIMENSIONAL ANALYSIS

Computation of three-dimensional shock wave and boundary-layer interactions
[NASA-TM-86780] p 911 N85-35372

DIPOLE ANTENNAS

Tactical HF communication for military helicopters using the NVIS mode p 297 N85-16807

Artificial and natural icing tests YEH-60A quick fix helicopter
[AD-A155147] p 830 N85-32116

DIPOLES

Diffraction of a baffled dipole - Frequency dependence p 611 A85-33915

DIRECT CURRENT

Pulsewidth modulated speed control of brushless dc motors
[AD-A151966] p 607 N85-27148

DIRECT LIFT CONTROLS

Synthesis of direct lift control laws via eigenstructure assignment p 840 A85-45064

Low-speed characteristics of a circulation control airfoil with AFT camber and a spiral trailing edge
[AD-A150851] p 481 N85-23725

Basic consideration of the lifting capability of stoppable rotors
[AD-A150850] p 502 N85-23759

DIRECTIONAL ANTENNAS

Reflector antennas with directional effect in the near-field Characteristics and applications — German thesis p 287 A85-19637

DIRECTIONAL CONTROL

Handling-qualities investigation of conventional helicopter directional control characteristics
[AIAA PAPER 85-1947] p 845 A85-45936

Relative control effectiveness technique with application to airplane control coordination
[NASA-TP-2416] p 501 N85-23753

Controller requirements for uncoupled aircraft motion, volume 1
[AD-A153173] p 675 N85-27876

DIRECTIONAL SOLIDIFICATION (CRYSTALS)

Performance assessment of exothermic compounds for directional solidification p 596 A85-34201

Superalloy microstructural variations induced by gravity level during directional solidification p 900 A85-48274

Materials for advanced turbine engines. Project 2: Rene 150 directionally solidified superalloy turbine blades, volume 2
[NASA-CR-167993] p 112 N85-12059

Directionally solidified gas turbine alloys
[PNR-90264] p 901 N85-34279

DIRECTIONAL STABILITY

Theory of wing rock
[AIAA PAPER 85-0199] p 288 A85-19583

Theory of wing rock p 895 A85-49139

DIRECTORS (ANTENNA ELEMENTS)

Studies in fin-line antenna design for imaging array applications p 526 A85-33245

DISCIPLINING

Judgment and discipline - Recipe for survival p 241 A85-21582

DISCONNECT DEVICES

A robotic quick disconnect wrist for aircraft bulkhead inspection
[AIAA PAPER 85-0700] p 534 A85-30267

Torso restraint system
[AD-D011609] p 584 N85-26

DISCONTINUITY

Studies on the interference of wings and propelle slipstreams
[NASA-CR-175753] p 557 N85-25210

DISCRETE FUNCTIONS

Discrete modifications to continuous dynamic structura systems p 372 N85-18410

DISKS (SHAPES)

A fault-tolerant approach to helicopter swashpla control p 172 A85-18335

An analysis of the resistance of two disks in turbule flow of an incompressible fluid p 390 A85-2846

Explosive forming of low carboon steel sheet into stepped disc shape p 694 A85-3816

Hot isostatically pressed manufacture of high strengt MERL 76 disk and seal shapes
[NASA-CR-168550] p 45 N85-11225

Basic study of bladed disk structural response
[AD-A146226] p 112 N85-1208

DISPENSERS

Short-range antiarmor flight vehicles of th Apache/CWS family
[DGLR PAPER 84-125] p 707 A85-4003

DISPERSING

Dispersion strengthened aluminium extrusions p 786 A85-4314

DISPLACEMENT

A study of crashworthiness of light aircraft fuselag structures: A numerical and experimental investigatio
[UTIAS-286] p 149 N85-1480

The collected data for ramp function tests on a NAC 23012 aerofoil. Volume 1: Description and pressur data
[GU-AERO-8413-VOL-1] p 875 N85-3412

DISPLACEMENT MEASUREMENT

A new method for determining threshold values of cree crack growth p 50 A85-11

DISPLAY DEVICES

Volume phase holograms and their application to avioni displays p 47 A85-1063

Looking around at visuals — for flight simulation p 123 A85-13

The automated cockpit improves hands-o performance p 106 A85-14017

Current and future general aviation EFIS developmen — electronic flight instrumentation systems
[AIAA PAPER 84-2642] p 164 A85-1783

Software controlled display/pushbutton — for avioni
[AIAA PAPER 84-2657] p 164 A85-1784

Recent advances in electroluminescent display applicable to future crew-station interfaces
[AIAA PAPER 84-2663] p 164 A85-1784

alpha-Si addressed liquid crystal aircraft display
[AIAA PAPER 84-2659] p 165 A85-1784

An advanced media interface for control of moder transport aircraft navigational systems
[AIAA PAPER 84-2686] p 165 A85-178

Micro-based control and display research — using flig simulators
[AIAA PAPER 84-2688] p 165 A85-178

Modern announcement methods in air terminals p 175 A85-1

The Cockpit Display of Traffic Information and the Thre Alert and Collision Avoidance System Integration - A review p 259 A85-215

Contemporary problems in airborne displays p 346 A85-225

Integration of advanced displays, FMS, speec recognition and data link p 407 A85-2750

Computer understanding of air traffic control displays p 488 A85-324

Flight instrumentation p 578 A85-345

Terrain/wire and wirelike obstacles warning system fo helicopters p 655 A85-3838

Advanced avionics management system prevents pilo from being swamped by information overload p 655 A85-3840

Advanced Aircrew Display Symposium, 6th, Patuxe River, MD, May 15, 16, 1984, Proceedings p 655 A85-3895

A systematic program for the development an evaluation of airborne color display systems p 655 A85-3895

Airborne electronic color displays - A review of UK activi since 1981 p 656 A85-3895

Color CRT in the F-15 p 656 A85-3895

Integration of sensor and display subsystems p 656 A85-3895

Modernizing engine displays p 656 A85-3895

Display technology and the role of human factors p 656 A85-3895

Pictorial format program - Past, present, and future p 656 A85-389

The Command Flight Path Display - All weather, all missions p 656 A85-38959

An argument for standardization in modern aircraft crew stations p 657 A85-38961

Specific differences in future cockpit design due to civil and military applications p 762 A85-40347

A simulated infrared model board
[AIAA PAPER 85-1748] p 789 A85-40560

Interaction between display dynamics and handling qualities in manual control tasks
[AIAA PAPER 85-1805] p 838 A85-43855

The Icarus multicolor visual display system for fighter aircraft p 831 A85-44051

Information displays for piloting modern aircraft
p 825 A85-44238

Information displays in the modern aircraft - The equipment manufacturer's point of view
p 831 A85-44240

Effects of specification on airborne display hardware
p 833 A85-45102

A quantitative measure of monochrome CRT displays — for aircraft cockpits p 833 A85-45103

Flight evaluation of highly augmented controls and electronic displays for precision approach and landing of powered-lift aircraft
[AIAA PAPER 85-1944] p 827 A85-45934

Predictor laws for pictorial flight displays
p 824 A85-46326

Flow visualization using computer-generated color video displays of flow field survey data p 903 A85-47099

The display subsystem in the aircraft simulator - Simulate or stimulate? p 897 A85-49004

Head-up displays for general aviation
[SAE PAPER 850902] p 889 A85-50119

Peripheral Vision Horizon Display (PVHD)
[NASA-CP-2306] p 23 N85-10044

Peripheral vision horizon display on the single seat night attack A-10 p 23 N85-10053

Extracts from the test plan for in-flight evaluation of the NT-33A peripheral vision display p 23 N85-10055

NASA Ames-Dryden T-37 demonstration comments
p 23 N85-10056

Early Air Force Flight Test Center (AFFTC) experience with Peripheral Vision Horizon Displays (PVHD)
p 24 N85-10057

Peripheral vision displays: The future
p 24 N85-10058

A production peripheral vision display system
p 24 N85-10059

A preliminary flight evaluation of the peripheral vision display using the NT-33A aircraft
[AD-A145123] p 24 N85-10060

LED multifunction keyboard engineering study
[AD-A145199] p 24 N85-10061

Content, variety, and augmentation of simulated visual scenes for teaching air-to-ground attack
[AD-A145218] p 38 N85-10080

Command flight path display. Phase I and II: Appendix F
[AD-A145858] p 107 N85-12056

A comparative evaluation of EMADS (Engine Monitoring and Display System) and conventional engine instruments
[AD-A145901] p 112 N85-12060

System status display information
[NASA-CR-172347] p 107 N85-12889

Display Techniques for Advanced Crew Stations (DTACS). Phase 1: Display techniques study
[AD-A146922] p 259 N85-15722

Built-in-test for first line testing p 202 N85-16739

A Computer-generated topographic display system for navigation and mission planning in helicopters
p 259 N85-16800

Map display for helicopters p 259 N85-16801

Integration of sensor fusion in advanced helicopter cockpit design p 260 N85-16813

Flight research on visual aids and navigation equipment for helicopter low-level flight at night
p 261 N85-16820

A cockpit-display concept for executing a multiple glide-slope approach for wake-vortex avoidance
[NASA-TP-2386] p 261 N85-16869

Realization and testing of an experimental color display system for general aviation helicopters and aircraft
[BMFT-FB-W-84-042] p 262 N85-16872

Producing high scene content with perspective validity
[AD-P004314] p 358 N85-17968

Geographic subdivision and top level data structures, Columbus, Magellan, and expanding CIG (Computer Image Generation) horizons
[AD-P004317] p 374 N85-17971

The use of lasers in wide-angle visual systems
[AD-P004322] p 370 N85-17976

Considerations in an optical variable acuity display system
[AD-P004323] p 377 N85-17977

Design considerations for an eye tracked AOI (Area of Interest) display system
[AD-P004324] p 359 N85-17978

Control systems analysis program: A tool for analysis of the GE-VSCDP (General Electric-Visual System Component Display Program) image display system
[AD-P004325] p 356 N85-17979

Progress report on an eye-slaved area-of-interest visual display
[AD-P004326] p 359 N85-17980

Air combat visual simulation using a head slaved projector
[AD-P004327] p 359 N85-17981

A second generation WAVIDS (Wide Angle Virtual Image Display System)
[AD-P004328] p 359 N85-17982

Baffled eye and confounded brain or using visual illusions to train blind pilots
[AD-P004332] p 359 N85-17986

Pictorial format display evaluation
[AD-A149252] p 348 N85-18986

Electronic displays: Their strengths and weaknesses for advanced high performance aircraft
p 349 N85-19664

Proceedings of the 6th Advanced Aircrew Display Symposium
[AD-A150044] p 419 N85-21180

An airborne infrared thermal scanning system for easy use on Navy P-3 aircraft
[AD-A149690] p 461 N85-22143

Analysis of estimation algorithms for CDTI and CAS applications
[NASA-CR-172444] p 505 N85-22387

Multiple resources and display formatting: The implications of task integration in a simulated air traffic control task
[AD-A150713] p 530 N85-24205

A comparison of pictorial and speech warning messages in the modern cockpit
[AD-A151917] p 579 N85-26706

A general area air traffic controller simulation using colour graphics
[AD-A153634] p 645 N85-28933

Avionics and civil aircraft systems: The present and the future
[SNIAS-851-111-104] p 751 N85-31038

The development and evaluation of color display systems for airborne applications. Phase 1: Fundamental visual, perceptual, and display system considerations
[FAA/PM-85-19] p 857 N85-33700

DISTANCE

FAA policy regarding solid waste disposal facilities
[AD-P004196] p 428 N85-19963

Visual simulation requirements for aircraft aspect recognition at real world distances
[AD-A151040] p 517 N85-23810

DISTANCE MEASURING EQUIPMENT

Continued development of distance measuring equipment for real-time spatial positioning in military aircraft testing p 419 A85-28658

Evaluation of radio navigation systems and their configuration with respect to minimum cost
[ESA-TT-847] p 751 N85-31043

DISTILLATION

Analysis of middle distillate fuels by high resolution field ionization mass spectrometry
[AD-A147724] p 285 N85-17153

Trends of petroleum fuels
[DE85-000116] p 522 N85-24023

Nitrogen analysis by chemiluminescence
[AD-A156197] p 902 N85-35308

DISTORTION

Temperature distortion generator for turboshaft engine testing
[SAE PAPER 841541] p 659 A85-39065

Effect of combined pressure and temperature distortion orientation on high-bypass-ratio turbofan engine stability
[NASA-TM-83771] p 27 N85-10067

Temperature distortion generator for turboshaft engine testing
[NASA-TM-83748] p 200 N85-15658

Effect of steady-state temperature distortion on inlet flow to a high-bypass-ration turbofan engine
[NASA-TM-86896] p 265 N85-15725

Contamination and distortion of steady flow field induced by discrete frequency in aircraft gas turbines
[AD-A147092] p 294 N85-16073

Improved statistical analysis method for prediction of maximum inlet distortion
[AD-A153767] p 673 N85-28947

DISTRIBUTED PARAMETER SYSTEMS

A distributed aeroacoustic tracking algorithm
p 917 A85-47774

DISTRIBUTED PROCESSING

The use of Ada in distributed simulations
p 457 A85-28612

Advanced air data system concepts
p 833 A85-45027

DISTRIBUTION

On the altitudinal distribution of birds and bird strikes in the Netherlands
[AD-P004189] p 404 N85-19952

DISTRIBUTION FUNCTIONS

Tail behaviour for suprema of empirical processes
[AD-A147629] p 303 N85-17613

DISTRICT OF COLUMBIA

Test of dispersal of turbojet aircraft departure tracks at washington National Airport (1983-84), volume 1 report
[AD-A148111] p 306 N85-17669

DITCHING (LANDING)

Air carrier overwater emergency equipment and procedures
[PB85-917006] p 820 N85-32105

DIURNAL VARIATIONS

Descriptors for rotary wing aircraft noise
[AIAA PAPER 84-2292] p 59 A85-10847

DIVERGENCE

Divergence speed degradation of forward-swept wings with damaged composite skin p 18 A85-11988

Correlation and prediction of rotating stall inception by divergence method p 629 A85-39245

Active control of forward swept wings with divergence and flutter aeroelastic instabilities p 356 N85-18063

DIVERGENT NOZZLES

Observation of wave diagrams for shock tube with the divergent nozzle at diaphragm section
p 592 A85-35761

DO-28 AIRCRAFT

Experimental methods for wind-tunnel flight-mechanics investigations using dynamically similar aircraft models --- German thesis p 249 A85-19836

First stage of equipping a Do 28 as a research aircraft for icing, and first research results
[ESA-TT-855] p 416 N85-19982

Identification of gust input and gust response characteristics from Do 28 TNT flight test data
[DFVLR-FB-84-48] p 676 N85-27881

DOCUMENTATION

Built-in-test for first line testing p 202 N85-16739

Integrated control system engineering support
[AD-A149742] p 426 N85-21177

DOCUMENTS

AGARD bulletin technical programme, 1985
[AGARD-BUL-84-2] p 67 N85-11971

DOORS

Composite nacelle development p 71 A85-15960

Pilot production of superplastically formed/diffusion bonded T-38 main landing gear doors
[AIAA PAPER 84-0933] p 616 A85-39214

Integrated paratroop door
[AD-D011507] p 416 N85-21146

DOPPLER EFFECT

Doppler frequency shift for aircraft noise in a refractive atmosphere
[AIAA PAPER 84-2354] p 63 A85-10890

De-Dopplerisation and acoustic imaging of aircraft flyover measurements
[AIAA PAPER 84-2355] p 63 A85-10891

Doppler effect and its influence on low-altitude CW altimeters p 106 A85-13971

DOPPLER NAVIGATION

Status and development trends of navigation systems for general aviation p 748 A85-40292

Use of microprocessor techniques and new antenna systems to improve the navigation aids very high frequency omnidirectional radar (VOR), Doppler VOR and Instrument Landing System (ILS)
[BMFT-FB-W-84-026] p 16 N85-10930

Observations of lightweight Doppler system accuracy
[AD-A145966] p 96 N85-12049

Flight research on visual aids and navigation equipment for helicopter low-level flight at night
p 261 N85-16820

DOPPLER RADAR

Use of Doppler radar to detect weather hazards such as turbulence, wind shear, and gust fronts
p 191 A85-17485

Radar for storm forecasting and weather hazard warning
[AIAA PAPER 85-0092] p 299 A85-19514

Aviation radar — Russian book p 244 A85-19805

Airborne Doppler radar antennas p 335 A85-24832

Power traveling-wave tubes for modern airborne radars p 335 A85-24845

A multipurpose synthetic aperture radar
p 335 A85-24887

The structure of a microburst - As observed by ground-based and airborne Doppler radar
p 452 A85-28772

Aircraft and Doppler air motion comparisons in a JAWS microburst p 453 A85-28775

Microbursts in JAWS depicted by Doppler radars, PAM, and aerial photographs p 483 A85-28777
Microburst wind structure and evaluation of Doppler radar for wind shear detection
[DOT/FAA/PM-84/29] p 57 N85-11501
Spring program summary, 1983
[PB84-222223] p 152 N85-15330
The potential of the NEXRAD radar system for warning of bird hazards
[AD-P004210] p 408 N85-19977
Comparison of wind velocity in thunderstorms determined from measurements by a ground-based Doppler radar and an F-106B airplane
[NASA-TM-86348] p 585 N85-29687

**DORNIER AIRCRAFT**
Reliable turboprop engines p 111 A85-14856
Carbon and kevlar in the Dornier 228 utility-commuter aircraft p 341 A85-24819
Avionics systems for helicopters of the next generation p 338 A85-25851
Dornier helicopter avionics experiments p 338 A85-25852
Maintenance computer for Tornado p 348 A85-25854
New possibilities for future amphibian aircraft
[DGLR PAPER 84-084] p 753 A85-40304
The use of nonmetallic fiber-reinforced composites in the construction of civilian aircraft - The case of the Do 228
[DGLR PAPER 84-103] p 783 A85-40321

**DOWNWASH**
A study for calculating rotor loads using free vortex concept p 600 A85-35746
Quantification of downwash and ground vortex of a lifting rotor model by flow visualization technique p 867 A85-47134
Downwash in the plane of symmetry of an elliptically loaded wing
[NASA-TP-2414] p 235 N85-15680

**DRAFTING (DRAWING)**
An evaluation of improved analytically based weight estimation methodologies
[SAWE PAPER 1616] p 880 A85-49820

**DRAG**
Icing flight research - Aerodynamic effects of ice and ice shape documentation with stereo photography
[AIAA PAPER 85-0466] p 402 A85-30182
The drag of simple shaped bodies in the rarefied hypersonic flow regime
[AIAA PAPER 85-0996] p 621 A85-37642
Observations from varying the lift and drag inputs to a noise prediction method for supersonic helical tip speed propellers
[NASA-TM-83797] p 64 N85-10788
UH-60A external stores support system fixed provision fairings drag determination
[AD-A147166] p 256 N85-15719
Icing flight research: Aerodynamic effects of ice and ice shape documentation with stereo photography
[NASA-TM-86906] p 343 N85-18048
Evaluating wind flow around buildings on heliport placement
[FAA-PM-84-25] p 455 N85-21881
Effect of drag behind nozzle array on its force and energy characteristics p 481 N85-24107

**DRAG CHUTES**
Drag of the fundamental shapes of parachutes p 231 A85-20996
Advanced escape systems p 877 A85-49625
Extended moment arm anti-spin device
[NASA-CASE-LAR-12979-1] p 416 N85-21147
Parachute extraction device for ultralight gliders
[CH-643499-A5] p 559 N85-26683

**DRAG COEFFICIENTS**
Crossflow drag of finite-length rectangular wing-bodies
[AIAA PAPER 85-0451] p 224 A85-19780

**DRAG DEVICES**
A combined visualization-anemometry study of the turbulent drag reducing mechanisms of triangular micro-groove surface modifications
[AIAA PAPER 85-0548] p 369 A85-25941
Measurements in the flow field of a cylinder with a laser transit anemometer and a drag rake in the Langley 0.3 m transonic cryogenic tunnel
[NASA-TM-86399] p 531 N85-24270

**DRAG MEASUREMENT**
The measurements of drag resulting from small surface irregularities immersed in turbulent boundary layers p 126 A85-15937
Sidewall boundary-layer corrections in subsonic, two-dimensional airfoil/hydrofoil testing p 439 A85-26781
Determination of the drag of free flying particles in supersonic flow with a pulsed laser p 400 N85-21129

**DRAG REDUCTION**
NASA research on viscous drag reduction II p 48 A85-11624
Wing design for minimum drag with practical constraints p 18 A85-11983
The aerodynamics of three-surface airplanes
[AIAA PAPER 84-[illegible]08] p 101 A85-13577
New tricks for cutting drag p 143 A85-18434
Emmons spot forcing for turbulent drag reduction p 145 A85-18686
A comparison of flight test and analytical techniques for boundary layer transition on a sailplane
[AIAA PAPER 85-0075] p 210 A85-19501
Supercritical airfoil drag reduction by passive shock wave/boundary layer control in the Mach number range .75 to .90
[AIAA PAPER 85-0207] p 215 A85-19581
Afterbody drag reduction by vortex generators
[AIAA PAPER 85-0364] p 220 A85-19692
Arrays for minimum wave drag of bodies of revolution
[AIAA PAPER 85-0449] p 248 A85-19756
Airfoil large-eddy breakup devices for turbulent drag reduction
[AIAA PAPER 85-0520] p 320 A85-25936
A combined visualization-anemometry study of the turbulent drag reducing mechanisms of triangular micro-groove surface modifications
[AIAA PAPER 85-0548] p 369 A85-25941
The effect of opposing unsteady vorticity on turbulent wall flow
[AIAA PAPER 85-0550] p 321 A85-25943
The performance of smooth-wall drag reducing outer-layer devices in rough-wall boundary layers
[AIAA PAPER 85-0558] p 369 A85-25947
Aerodynamic effects of probe-induced flow separation of bluff bodies at transonic Mach numbers
[AIAA PAPER 85-0103] p 322 A85-26382
Boundary layer flow over long cylinders with suction p 444 A85-29140
Axisymmetric bluff-body drag reduction through geometrical modification p 548 A85-35687
Winglet effects on the flutter of a twin-engine transport-type wing p 650 A85-38217
Base pressure control by passive methods
[AIAA PAPER 85-1620] p 714 A85-40727
Natural laminar flow hits smoother air p 724 A85-41055
Drag reduction by means of controlled separated flows
[AIAA PAPER 85-1800] p 813 A85-43653
Arrays of bodies of revolution for minimum wave drag p 881 A85-49136
Force and moment measurements on a 74 deg delta wing with an apex flap
[NASA-CR-166081] p 12 N85-10916
Aircraft surface coatings
[NASA-CR-3681] p 21 N85-10935
Installed nacelle drag-improvement tests of an M = 0.8 turboprop transport configuration
[NASA-TM-84302] p 256 N85-15716
Aircraft drag reduction technology p 257 N85-16782
Drag reduction due to boundary-layer control by combined blowing and suction p 237 N85-16786
Turbulent drag reduction research p 237 N85-16788
Full scale experiments into the use of large eddy breakup devices for drag reduction on aircraft p 257 N85-16790
Pneumatic turbulators: A device for drag reduction at Reynolds numbers below 5 million p 257 N85-16791
Study of winglets applied to biplanes
[NASA-TM-86390] p 258 N85-16862
Exploratory wind-tunnel investigation of a wingtip-mounted vortex turbine for vortex energy recovery
[NASA-TP-2468] p 560 N85-26867
Demonstration of relaxed stability on a commercial transport p 590 N85-26745
Realisation of relaxed static stability on a commercial transport p 590 N85-26746
Numerical study of porous airfoils in transonic flow
[NASA-TM-86713] p 635 N85-27828
An automated technique for encasing specific payloads with low-drag fairings p 866 N85-35183
Wingtip vortex propeller
[NASA-CASE-LAR-13019-1] p 892 N85-35194

**DRAWING**
The flange elevation angle during the drawing of axisymmetric parts p 183 A85-17053

**DRIFT RATE**
Spectral analysis of optimal and suboptimal gyro monitoring filters p 696 A85-39459

**DRILLING**
Robotic drilling of acrylic windshields and canopies for fighter aircraft p 703 A85-37396

**DRONE AIRCRAFT**
Drones and RPVs - Technologies, systems and trend p 103 A85-14
Long-endurance drones mature p 157 A85-1511
Nonconservative evaluation of uniform stability margi of multivariable feedback systems p 455 A85-2642
Design of a flutter suppression system for experimental drone aircraft p 497 A85-3258
Teledyne Ryan focuses R & D effort on new RPVs, targe versions p 646 A85-3824
A multiloop robust controller design study using singula value gradients p 703 A85-3958

**DRONE VEHICLES**
Argus - Standoff-reconnaissance with unmanned ro platform
[DGLR PAPER 84-126] p 754 A85-40

**DROP SIZE**
Spontaneous vapor condensation in nonequilibrium supersonic monodisperse flow p 47 A85-1085
Droplet size distribution effects on aircraft ic accretion p 563 A85-3558
Fuel droplet size measurements with a laser Doppl interferometer
[AIAA PAPER 85-1182] p 697 A85-3964
Influence of downstream distance on simplex atomiz spray characteristics
[ASME PAPER 84-WA/HT-25] p 698 A85-3966
Effects of temperature variation among droplets in a evaporating fuel spray p 520 N85-2258

**DROP TESTS**
A 73-ft cross parachute for cargo delivery p 402 A85-2929
Analysis of a transport fuselage section drop test p 21 N85-1040
Impact studies of a 1/3-scale model of an air cushion vehicle
[NASA-TM-86360] p 501 N85-2375
B-52B/DTV (Drop Test Vehicle) flight test results: Dro test missions
[NASA-CR-171830] p 741 N85-299

**DROPS (LIQUIDS)**
Comparison of icing cloud instruments for 1982-198 icing season flight program
[AIAA PAPER 84-0020] p 163 A85-180
Computational particle trajectory analysis on a 3-dimensional engine inlet
[AIAA PAPER 85-0411] p 222 A85-1973
Three-dimensional airflow and hydrometeor trajectory calculation with applications
[AIAA PAPER 85-0412] p 222 A85-1973
Aircraft flow effects on cloud droplet images an concentrations
[AD-A146176] p 131 N85-1225
Effects of temperature variation among droplets in a evaporating fuel spray p 520 N85-2258

**DRUGS**
Tethered aerostat operations in the marin environment
[AIAA PAPER 85-0880] p 640 A85-3877

**DRY FRICTION**
Effects of friction dampers on aerodynamically unstabl rotor stages p 265 A85-2188
Metallurgical and mechanical phenomena due to rubbin of titanium against sintered powder Nichrome p 291 A85-2228

**DUAL WING CONFIGURATIONS**
Estimating the weight of generally configured dual win systems
[AIAA PAPER 85-0641] p 480 A85-302

**DUCT GEOMETRY**
Reheat buzz - An acoustically driven combustio instability
[AIAA PAPER 84-2321] p 41 A85-108
Internal flows of relevance to gas-turbines p 49 A85-116
The problem of gradual opening in wave ro passages p 365 A85-233
Circular-to-rectangular transition ducts for high-aspe ratio nonaxisymmetric nozzles
[AIAA PAPER 85-1346] p 632 A85-387

**DUCTED BODIES**
Cost and weight estimating considerations for transpo aircraft system installations
[SAWE PAPER 1548] p 180 A85-188

**DUCTED FAN ENGINES**
Model test results of the split-fan cross-duc propulsion system concept for medium speed V/STO aircraft
[SAE PAPER 841495] p 583 A85-392

**DUCTED FANS**
Numerical analyses in aerodynamic design o aero-engine fan p 582 N85-288

**DUCTED FLOW**
On the use of inverse modes of calculation in 2 cascades and ducts
[ONERA, TP NO. 1984-132] p 81 A85-158

Calculation of friction and heat transfer in turbulent flow of a compressible gas in a plane duct
p 291 A85-22114
Flow control in a diffusing S-Duct
[AIAA PAPER 85-0524] p 321 A85-25926
Computation of wind tunnel wall effects in ducted rotor experiments p 419 A85-26755
Fluid motion in the regions of abrupt expansion of the channels of rotor-cooling systems of energy-converting machines p 442 A85-28473
Review - Computational methods for internal flows with emphasis on turbomachinery p 392 A85-29126
Transonic shock-wave/turbulent boundary-layer interactions in a circular duct p 474 A85-32610
Interaction between acoustics and subsonic ducted flow in a ramjet configuration p 704 A85-37209
Loss in turbofan thrust caused by boundary layer growth in a nacelle's inlet and exhaust ducts
[AIAA PAPER 85-1261] p 631 A85-38687
Experimental and numerical investigation of supersonic flow through a square duct
[AIAA PAPER 85-1622] p 714 A85-40728
A numerical method for duct flow with boundary layer separation
[AIAA PAPER 85-1410] p 726 A85-41422
Multiple transonic shock-wave/turbulent boundary-layer interaction in a circular duct p 869 A85-48533
Calculation of the flow in an air intake duct by numerical solution of the Euler equations
[AAAF PAPER NT 84-24] p 870 A85-48998
Shock waves in transonic flows at moderate Reynolds Number p 236 N85-16823
Turbulent jet flow in a channel with a circulation region
p 371 N85-18216
**DUCTILITY**
Effect of inclusions on tensile ductility of a nickel-base oxide dispersion strengthened superalloy
p 785 A85-42753
Structural uses for ductile ordered alloys. Report of the committee on application potential for ductile ordered alloys
[AD-A148313] p 119 N85-12139
**DUCTS**
High temperature ducts - A composite alternative
[AIAA PAPER 84-2519] p 70 A85-13582
A method for the prediction of Coriolis induced secondary flows and their influence on heat transfer in rotating ducts p 601 A85-36672
Vortex-generating coolant-flow-passage design for increased film-cooling effectiveness and surface coverage
[NASA-TP-2388] p 127 N85-12314
An experimental investigation of an underexpanded rectangular jet ejector
[AD-A149856] p 422 N85-21170
High frequency estimation of 2-dimensional cavity scattering
[AD-A151687] p 602 N85-25606
**DUMPING**
Calculation of the flow in a dump combustor
[AIAA PAPER 85-1309] p 666 A85-39716
**DURABILITY**
Advanced composites p 433 A85-28649
Military engine durability improvements through innovative advancements in turbine design and materials
[AIAA PAPER 85-1221] p 666 A85-39664
F-16 force management, yesterday, today and tomorrow p 254 N85-15674
Design and test requirements for development of today's engines p 266 N85-15737
Overview of the AGARD SMP activities on turbine engine materials technology in the 1972 - 1982 period
p 266 N85-15738
Long term durability of urea formaldehyde glued joints removed from Vampire aircraft
[AD-A149083] p 346 N85-18985
Estimate of fatigue stability of gas-turbine engine compressor vanes in probabilistic aspect
p 530 N85-24169
Generation of marker lines on fatigue fracture surfaces p 532 N85-24328
**DUST**
Installed engine performance in dust-laden atmosphere
[AIAA PAPER 84-2488] p 109 A85-13563
Transonic small-disturbance theory for dusty gases
p 546 A85-35149
Theoretical and experimental investigations of dust loaded flow fields in industrial halls
[CMFT-FB-HA-84-044] p 449 N85-21411
**DUST COLLECTORS**
Analysis of a split-flow inertial particle separator by finite elements — for helicopter gas turbine engine
p 231 A85-21845
Development of an advanced vaneless inlet particle separator for helicopter engines
[AIAA PAPER 85-1277] p 666 A85-39894
**DYNAMIC CHARACTERISTICS**
A model for the analysis of dynamic properties of a helicopter rotor blade with various boundary conditions
p 115 A85-15719
Dynamic behavior of a propfan
[ONERA, TP NO. 1984-122] p 111 A85-15842
Dynamic characteristics of an unloading device — for flight vehicle vibration tests p 155 A85-17068
Characteristics of gas-lubricated spherical spiral groove bearings p 365 A85-23628
A design methodology for a compliant matrix composite bearingless main rotor p 496 A85-31996
Dynamic characteristics of the STARS aerostat
[AIAA PAPER 85-0866] p 674 A85-38795
Dynamic characteristics of peripheral jet ACV. I - Heaving motion p 791 A85-40985
Dynamic characteristics of peripheral jet ACV. II - Pitching motion p 791 A85-41001
Numerical analysis of the dynamic characteristics of a helicopter rotor blade with various boundary conditions
p 757 A85-41607
High temperature static strain sensor development program p 29 N85-10959
Control of lateral conjectory motion of spacecraft in atmosphere p 40 N85-11086
Hydrodynamic impeller stiffness, damping, and inertia in the rotordynamics of centrifugal flow pumps
p 187 N85-14125
Prediction of dynamic stall characteristics using advanced non-linear panel methods
[AD-A148453] p 239 N85-16836
The analysis on the dynamic performance of a single lug
[AD-P004289] p 379 N85-18686
Integrated Technology Rotor/Flight Research Rotor (ITR/FRR) concept definition
[NASA-CR-166445] p 345 N85-18979
Investigation of potential and viscous flow effects contributing to dynamic stall
[AD-A151696] p 602 N85-25773
Active control landing gear for ground loads alleviation
p 590 N85-26749
Design of helicopter rotor blades for optimum dynamic characteristics
[NASA-CR-176076] p 760 N85-31044
Flight-mechanics test with a restricted flying aircraft model in a wind tunnel
[ESA-TT-835] p 761 N85-31053
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 1: Analysis methods
[NASA-CR-177943-VOL-1] p 896 N85-35202
Analysis of flexible aircraft longitudinal dynamics and handling qualities. Volume 2: Data
[NASA-CR-177943-VOL-2] p 896 N85-35203
**DYNAMIC CONTROL**
Computer simulation of hovercraft heave dynamics and control p 66 A85-11665
Output feedback design for aircraft with ill-conditioned dynamics p 536 A85-33303
Application of a new type of pole collocation equations to designing the control law of a bi-input-multi-output system p 804 A85-43240
Drag reduction by means of controlled separated flows
[AIAA PAPER 85-1800] p 813 A85-43653
Aileron effectiveness for a subsonic transport model with a high-aspect-ratio supercritical wing
[NASA-TM-85674] p 235 N85-15695
Alternatives for jet engine control
[NASA-CR-175831] p 583 N85-26713
Alternatives for jet engine control
[NASA-CR-175832] p 583 N85-26714
Alternatives for jet engine control
[NASA-CR-175833] p 583 N85-26715
A perspective on superaugmented flight control advantages and problems p 588 N85-26733
**DYNAMIC LOADS**
Crack growth life-time prediction under aeronautical type loading
[ONERA, TP NO. 1984-113] p 125 A85-15833
Fatigue crack growth under variable amplitude loading
p 368 A85-23711
Aircraft flight stability testing: Dynamic loading — Russian book p 573 A85-35618
Evaluation of operational loads to verify structural design p 254 N85-15677
TUTOR (CL-41A) tail flight load survey
p 254 N85-15678
Tornado: Structural Usage Monitoring System (SUMS) p 292 N85-15680
Flight parameters recording for structure fatigue life monitoring p 292 N85-15682
USAF approach to airborne structural data recording: Airborne Data Acquisition Multifunction System (ADAMS)
p 292 N85-15683
Analytically redundant output feedback scheme for reduction of structural loads of a flexible transport aircraft
[TT-8303] p 417 N85-21154
An assessment of the suitability of the BHGA structural test rig for aerodynamic testing of hang gliders
[CA-8505] p 652 N85-27853
Expedient runway surfacing with post tensioning system for expeditionary airfields
[AD-D011677] p 781 N85-29976
**DYNAMIC MODELS**
The dynamics of ball separators in ball bearings. II - Results of optimization study
[ASLE PREPRINT 84-AM-6C-3] p 369 A85-25957
Analytical modeling of circuit aerodynamics in the new NASA Lewis Altitude Wind Tunnel
[AIAA PAPER 85-0380] p 323 A85-26388
A state-space model for an aeroelastic system
p 535 A85-33301
Dynamic analyses of rotor-bearing systems by finite element method p 795 A85-43238
Sensitivity analyses of automatic flight control systems using singular value concepts
[AIAA PAPER 85-1899] p 844 A85-45914
Design of optimal low-sensitivity controllers with prespecified eigenvalues - Application to aircraft lateral motion p 893 A85-47696
Modeling of aircraft cabin fires
[NBS-GCR-84-473] p 91 N85-12880
Analytical modeling of circuit aerodynamics in the new NASA Lewis wind tunnel
[NASA-TM-86912] p 234 N85-15688
The development of a dynamic model of a generalised combat aircraft with forward wings for the identification of stability and control characteristics
[CAR-84-33] p 343 N85-18050
Observations, theoretical ideas and modeling of turbulent flows: Past, present and future
[NASA-TM-86679] p 607 N85-27167
**DYNAMIC PRESSURE**
Escape system operation through adaptive control
p 331 A85-22769
Dynamic pressure fluctuations in the internozzle region of a twin-jet nacelle
[SAE PAPER 841540] p 627 A85-39064
Development of a temperature-compensated hot-film anemometer system for boundary-layer transition detection on high-performance aircraft
[NASA-TM-86732] p 635 N85-33121
**DYNAMIC PROGRAMMING**
A realistic aerial combat duel as a differential game study p 535 A85-33287
A missile duel between two aircraft
p 703 A85-39563
Optimal fuselage aiming — of fighter aircraft-mounted guns
[AIAA PAPER 85-1981] p 811 A85-45945
Normal mode calculations for fuselage type intricate structures by regarding them as systems with superposed constraints p 500 N85-22817
**DYNAMIC RESPONSE**
Influence of sampling rate on the calculated fidelity of an aircraft simulation p 57 A85-11083
Snap-through of initially buckled beams under uniform random pressure p 51 A85-12450
Flutter and forced response of mistuned rotors using standing wave analysis p 122 A85-12721
Unsteady response of an axial flow compressor to planar temperature transients p 143 A85-16507
A general model of helicopter blade dynamics
p 570 A85-33471
Control response measurements of the Skyship-500 airship
[AIAA PAPER 85-0881] p 649 A85-38796
Singular perturbation theory of longitudinal dynamic stability and response of aircraft p 839 A85-44683
Rotordynamic analysis of the SSME turbopumps using reduced models
[NASA-CR-171170] p 53 N85-10355
Basic study of bladed disk structural response
[AD-A146226] p 112 N85-12061
Flutter control with unsteady aerodynamic models
[AD-A147858] p 270 N85-15753
Theoretical investigation of dynamic stall using a momentum integral method
[AD-P004170] p 325 N85-17955
A research program in active control/aeroelasticity
[NASA-CR-175674] p 501 N85-23752
NASTRAN-based software for the structural dynamic analysis of vertical and horizontal axis wind turbines
[DE85-001712] p 605 N85-25911
An analytical investigation of dynamic coupling in nonlinear, geared rotor systems p 607 N85-27218

Controller requirements for uncoupled aircraft motion, volume 1
[AD-A153173] p 673 N85-27878

Flight-mechanics test with a restricted flying aircraft model in a wind tunnel
[ESA-TT-885] p 781 N85-31053

**DYNAMIC STABILITY**

Rotor blade flap-lag stability and response in forward flight in turbulent flows p 115 A85-14030

A solution to the problem of the stability analysis of the three-dimensional motions of flight vehicles
p 170 A85-17067

Effects of turbulence and viscosity variation on the dynamic coefficients of fluid film journal bearings
[ASME PAPER 84-TRIB-6] p 289 A85-21283

Analysis and testing for rotordynamic coefficients of turbulent annular seals with different, directionally-homogeneous surface-roughness treatment for rotor and stator elements
[ASME PAPER 84-TRIB-31] p 289 A85-21293

Skirt material effects on air cushion dynamic heave stability p 307 A85-21840

Aero/hydrodynamic stability of elastically supported plates in narrow channels with upstream barriers preventing flow redistribution p 794 A85-42564

Bifurcation theory applied to aircraft motions
[NASA-TM-86704] p 478 N85-23705

**DYNAMIC STRUCTURAL ANALYSIS**

Conversational time domain analysis for structural dynamics and control interaction problems
[AIAA PAPER 84-1871] p 57 A85-10562

Helicopter stability — Russian book
p 18 A85-11249

Bending effects on structural dynamic instabilities of transonic wings p 51 A85-11987

New developments in aeroelastic research
p 51 A85-12352

Snap-through of initially buckled beams under uniform random pressure p 51 A85-12450

Dynamic response and acoustic fatigue of stiffened composite structure p 52 A85-12473

Free vibration characteristics of periodically stiffened panels with damped stringers p 182 A85-16783

The treatment art of rigid-substructures in modal synthesis methods p 183 A85-17169

Dynamic analysis of large-scale mechanical systems and animated graphics
[AIAA PAPER 83-0946] p 184 A85-18340

Structural analysis and testing of ACAP subcomponents — Advanced Composite Airframe Program
p 251 A85-21384

Multilevel methods in the dynamics of the rotors of aircraft engines p 351 A85-24020

The dynamic stressed state of the cantilever turbocompressor blades of gas-turbine engines
p 421 A85-29886

Vibration analysis of a rotating blade using dynamic discretization p 446 A85-29969

An iterative procedure for nonlinear flutter analysis
[AIAA PAPER 85-0658] p 523 A85-30355

Three dimensional nonlinear dynamic finite element analysis for the response of a thick laminated shell to impact loads
[AIAA PAPER 85-0713] p 481 A85-30381

Dynamic loads analyses of flexible airplanes - New and existing techniques
[AIAA PAPER 85-0806] p 482 A85-30394

Computer-aided kinematic and dynamic analysis of the landing-gear mechanisms of aircraft p 492 A85-31471

Contribution to the linear dynamic analysis of slender bodies in low and medium frequency ranges
[ONERA, TP NO. 1985-95] p 525 A85-32345

Load sharing in a planetary gear stage in the presence of gear errors and misalignment
[ASME PAPER 84-DET-54] p 580 A85-33768

Nonstationary deformation of structural elements and their optimization p 696 A85-39450

Structural analysis of the CL-600 rear pressure bulkhead, using NASTRAN nonlinear analysis capabilities (Solution 64) p 754 A85-40459

A discrete model for the analysis of natural vibrations of a deformable aeroplane p 757 A85-41605

Vibration characteristics and dynamic stresses in hollow turbine blades p 770 A85-41851

Requirements and design method for matching aircraft guns with their supporting structure p 759 A85-43241

Equations of motion of a quasisteady flight vehicle utilizing restrained static aeroelastic characteristics
p 827 A85-45844

Probabilistic combination of vehicle dynamic vibration and acoustically induced random accelerations
p 855 A85-45847

Helicopter rotor blade design for minimum vibration
[NASA-CR-3825] p 19 N85-10032

Rotordynamic analysis of the SSME turbopumps using reduced models
[NASA-CR-171170] p 53 N85-10355

Effect of penetrant on fatigue of aluminum alloy lap joints
[NLR-TR-82104-U] p 53 N85-10373

Stress-derivative control of keystoning deformation in finite element codes p 54 N85-10385

Crashworthiness of light aircraft fuselage structures: A numerical and experimental investigation
p 20 N85-10399

Analysis of a transport fuselage section drop test
p 21 N85-10400

Aeroelastic stability analysis with interacting structural nonlinearities p 55 N85-11364

Status and prospects of computational fluid dynamics for unsteady transonic viscous flows
[NASA-TM-86018] p 65 N85-12037

Aeroelastic analysis and the identification of flight loads — Mirage 2000 aircraft p 254 N85-15679

Discrete modifications to continuous dynamic structural systems p 372 N85-18410

On-orbit systems identification of flexible spacecraft Technol., 1984, Pt. 2 p 465-481 p 518 N85-23841

Experience with transonic unsteady aerodynamic calculations p 554 N85-25176

Status and prospects of computational fluid dynamics for unsteady transonic flow p 555 N85-25180

NASTRAN-based software for the structural dynamic analysis of vertical and horizontal axis wind turbines
[DE85-001712] p 605 N85-25911

Turbulence structure in the boundary layers of an oscillating airfoil
[AD-A153631] p 637 N85-26926

**DYNAMIC TESTS**

Control of the properties of carbon fiber-reinforced plastics p 118 A85-12722

Fighter aircraft dynamic performance
p 414 A85-28647

Inspection of gas-turbine engine blades under operating conditions p 421 A85-29775

Seat experiments for the full-scale transport aircraft controlled impact demonstration
[AD-A155024] p 820 N85-32106

**DYNAMICAL SYSTEMS**

A generalized stability criterion for nonlinear dynamic systems — modeling aircraft roll maneuvers
[AIAA PAPER 85-0202] p 300 A85-19586

Data flow methods for dynamic system simulation - A CSSL-IV microcomputer network interface
p 458 A85-28614

Optimal generalized multistep integration formulae for real-time digital simulation
[AIAA PAPER 85-1740] p 802 A85-40556

Controlling the human centrifuge as a force and motion platform for the dynamic flight simulator
[AIAA PAPER 85-1742] p 779 A85-40558

Singular value analysis of competitive multi-input/multi-output manual control systems
[AIAA PAPER 85-1943] p 860 A85-45966

Control of rotordynamic instability in a typical gas turbine's power system p 187 N85-14120

Robustness of discrete-time dynamical systems: Application to the multivariable digital control of combat aircraft
[ONERA-NT-1984-2] p 425 N85-19986

**DYNAMICS**

A mathematical simulation model of the CH-47B helicopter, volume 1
[NASA-TM-84351-VOL-1] p 18 N85-10033

## E

**EARLY WARNING SYSTEMS**

The principles and practice of modern AEW radar — Airborne Early Warning p 336 A85-24916

**EARTH ORBITS**

Winged first stages of space transport appliances
[TUM-RT-TB-84/3] p 40 N85-11125

**EARTH RESOURCES**

Reducing gull use of some attractions near airports
[AD-P004195] p 428 N85-19962

**EARTH SURFACE**

Expedient runway surfacing with post tensioning system for expeditionary airfields
[AD-D011677] p 781 N85-29976

**ECHO SUPPRESSORS**

Radar signal processing p 599 A85-34443

**ECOLOGY**

Blackbirds and starlings: Population ecology and habits related to airport environments
[AD-P004190] p 404 N85-19953

The bird strike situation and its ecological background in the Copenhagen Airport, Kastrup
[AD-P004203] p 404 N85-19970

**ECONOMIC ANALYSIS**

Air cargo support technology - Economic realities
[AIAA PAPER 84-2514] p 136 A85-13580

International air transport - Economic aspects — Russian book p 612 A85-35817

Ultralights break the rules p 615 A85-38439

Foreign civil aviation competition: 1976 summary and implications
[NASA-TM-X-73907] p 1 N85-10907

cost and benefits optimization model for fault-tolerant aircraft electronic systems
[NASA-CR-166043] p 293 N85-15080

Digest of the Deutsche Lufthansa report, 1983
[ISSN-0415-603X] p 379 N85-18846

Transportation
[JPRS-UTR-85-004] p 384 N85-21105

Current development, applications of airships in USSR
p 396 N85-21109

FAA aviation forecasts: Fiscal years 1985-1996
[AD-A151050] p 484 N85-23747

The helicopter, instrument of choice for health evacuation
[SNIAS-851-220-101] p 761 N85-31051

New materials needs in aeronautics
[SNIAS-851-502-101] p 831 N85-33120

**ECONOMIC FACTORS**

Technology for profitable transportation — US airline industry p 378 A85-24204

Coordination of different types of air traffic
p 707 A85-40294

**ECONOMIC IMPACT**

Increased joint avionics standardization could result in major economies and operational benefits
[AD-A145730] p 25 N85-10946

The embedded test (BIT): Impact on the total cost of possession p 202 N85-16734

International airport study: How to improve the effect of airports on trade and on export-related industries
[PB85-124623] p 429 N85-19992

Aviation noise effects
[AD-A154319] p 806 N85-30776

**ECONOMICS**

Safety awareness, pilot education, and incident reporting programs p 332 N85-18020

Issues in air transport
[PB85-121374/GAR] p 333 N85-18030

**ECONOMY**

1st deputy minister on civil aviation support of economy p 463 N85-23890

Minister Bugayev reviews 1983 civil aviation work, sets course for 1984 p 468 N85-23895

**EDDY CURRENTS**

Eddy current jet engine disk-crack monitor
p 47 A85-11100

Evolution of an automated eddy current inspection system p 125 A85-15606

Inspection of gas-turbine engine blades under operating conditions p 421 A85-29775

Evaluation of automated eddy current system reliability
p 525 A85-31977

NDT-33 - A computerized eddy current instrument
p 906 A85-47470

Innovative eddy current probe coupling method
p 906 A85-47472

Development of active microwave ferromagnetic resonance eddy current probes and associated signal processing methods p 906 A85-47473

**EDDY VISCOSITY**

Predictions of transonic separated flow with an eddy-viscosity/Reynolds-shear-stress closure model
[AIAA PAPER 85-1683] p 717 A85-40768

**EDGES**

Conical flows near edge breaks of surfaces dividing the supersonic wake flows of an ideal gas
p 389 A85-28441

The isolated nature of solutions with a strong attached shock wave at the edges of a conical wing and a wedge
p 623 A85-38486

**EDUCATION**

Teaching undergraduate airbreathing propulsion at the US Air Force Academy
[AIAA PAPER 85-1145] p 883 A85-43776

Pilot education and safety awareness programs
p 333 N85-18028

NASA Lewis Research Center/University Graduate Research Program on Engine Structures
[NASA-TM-86916] p 372 N85-18373

Administration chief on air traffic control improvements
p 567 N85-25193

Rotorcraft digital advanced avionics system (Rodaas)
p 576 N85-26800

Development of NATOPS (Naval Air Training and Operating Procedure Standardization) performance software for the H-46D helicopter
[AD-A156089] p 887 N85-35190

**EFFECTIVE PERCEIVED NOISE LEVELS**
Descriptors for rotary wing aircraft noise
[AIAA PAPER 84-2292] p 59 A85-10847
Quantification of advanced turboprop aircraft flyover noise annoyance
[AIAA PAPER 84-2293] p 56 A85-10848
**EFFECTS**
The effect of modified spectacles on the field of view of the helmet display unit of the integrated helmet and display sighting system
[AD-A148693] p 348 N85-18065
**EFFICIENCY**
Numerical optimization design of advanced transonic wing configurations
[AIAA PAPER 85-0424] p 246 A85-19739
Fuel efficiency through new airframe technology
[NASA-TM-84548] p 2 N85-10909
Component-specific modeling p 31 N85-10971
Energy efficient engine. High pressure compressor detail design report
[NASA-CR-165558] p 35 N85-10986
Maintenance Management Information and Control System (MMICS): Administrative boon or burden
[AD-A145762] p 136 N85-12790
Flow characteristics of a partially submerged liquid pickup
[DE85-008744] p 690 N85-28276
**EGRESS**
Lear Fan Model 2100 emergency Egress System
p 401 A85-28840
**EIGENVALUES**
General characteristic theory of aerodynamics with oblique curvilinear coordinate system
p 318 A85-25217
Vibration analysis of a rotating blade using dynamic discretization p 446 A85-29968
Analyses of cascade flutter as a multi-eigenvalue problem (on cascade composed of two groups of blades having different natural frequencies)
p 769 A85-41836
Synthesis of direct lift control laws via eigenstructure assignment p 840 A85-45054
Flight control law synthesis for an elastic vehicle by eigenspace assignment
[AIAA PAPER 85-1898] p 846 A85-45970
Eigenstructure assignment and its application in design of flight control system p 860 A85-46822
Design of optimal low-sensitivity controllers with prespecified eigenvalues - Application to aircraft lateral motion p 893 A85-47696
Rotordynamic analysis of the SSME turbopumps using reduced models
[NASA-CR-171170] p 53 N85-10355
Design of multivariable feedback control systems via spectral assignment using reduced-order models and reduced-order observers
[NASA-CR-3889] p 514 N85-23800
**EIGENVECTORS**
General characteristic theory of aerodynamics with oblique curvilinear coordinate system
p 318 A85-25217
Active flutter suppression using eigenspace and linear quadratic design techniques p 512 A85-32779
Design of multivariable feedback control systems via spectral assignment using reduced-order models and reduced-order observers
[NASA-CR-3889] p 514 N85-23800
**EJECTION**
Low-profile fastener
[AD-D011667] p 796 N85-30343
**EJECTION SEATS**
Loss of cabin pressure in Canadian Forces ejection seat aircraft, 1962-1982 p 148 A85-16819
Development and testing of the Martin-Baker crashworthy seat p 340 A85-22753
Friendly ejection seat trajectory computer program
p 330 A85-22754
ACES II R&D upgrade program p 330 A85-22757
Selectable thrust rocket motor for crew escape systems p 340 A85-22758
A brief review of the performance of the Canadian aircrew life preservers over the last twenty years
p 330 A85-22760
A look at 'chair-chutes' - Parachute industry's answer to airline safety in the 1940s p 331 A85-22765
Problems in the quantification of aircrew automated escape systems (AAES) in-service reliability
p 331 A85-22766
U.S. Navy experience with side-by-side unsequenced escape in A-6 series aircraft lessons to be learned (1 January 1969 through 31 December 1979)
p 331 A85-22768
Escape system operation through adaptive control
p 331 A85-22769
Analysis of the reported incidence of tumble, flail and windblast by ejectees p 331 A85-22774
Significance and limitations of family ties among ejection seat type aircrew automated escape systems (AAES)
p 331 A85-22777
USAF R&D experience with enclosed escape systems
p 482 A85-30422
A method for determining the flight trajectory of an ejection seat p 493 A85-31778
The development of the generalized escape system simulation program
[ASME PAPER 84-WA/DSC-20] p 651 A85-39669
Advanced escape systems p 877 A85-49625
The USAF's CREST program — CRew EScape Technologies p 884 A85-49944
Simple nonrestrictive arm restraint system
[AD-D011216] p 14 N85-10026
Windblast leg protector assembly
[AD-D011378] p 242 N85-15700
Powered articulated headrest system
[AD-D011353] p 254 N85-15710
S-3A ballast block final design and engineering tests
[AD-A147685] p 243 N85-16842
A Generalized Escape System Simulation (GESS) computer program. Volume 2: GESS programmer's manual, version 2
[AD-A148363] p 243 N85-16845
Deployment sequence mode selection system for aircraft ejection seat
[AD-D011464] p 334 N85-18968
Airspeed sensing pressure valve system
[AD-D011472] p 348 N85-18967
Personnel protection concepts for advance escape system design p 334 N85-19658
A safety evaluation of the relocation of the ACM (Air Combat Maneuver) panel in the F-14 ( )/AIP (Avionics Integration Program)
[AD-A149696] p 419 N85-21158
Preliminary design of a limb restraint evaluator
[AD-A151749] p 564 N85-25226
Air bag restraint system
[AD-D011671] p 747 N85-29936
Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing
[NASA-CR-3917] p 886 N85-35184
**EJECTORS**
Advances in ejector thrust augmentation
[AIAA PAPER 84-2425] p 107 A85-13526
A method for calculating the performance of ejector nozzles p 287 A85-20232
Cryptosteady modes of energy exchange
p 439 A85-26769
Recent developments in ejector design for V/STOL aircraft
[SAE PAPER 841498] p 663 A85-39206
Performance characteristics of rectangular and circular thrust augmenting ejectors
[AIAA PAPER 85-1344] p 631 A85-39736
An investigation of high performance, short thrust augmenting ejectors
[ASME PAPER 84-WA/FE-10] p 697 A85-39873
An engine trade study for a supersonic STOVL fighter-attack aircraft, volume 1
[NASA-CR-166304] p 2 N85-10910
An experimental investigation of an underexpanded rectangular jet ejector
[AD-A149656] p 422 N85-21170
Combined cold compressor/ejector helium refrigerator
[DE85-006406] p 910 N85-34326
**ELASTIC ANISOTROPY**
A parachute theory allowing for the structure of the canopy fabric p 13 A85-11822
The static aeroelasticity of the anisotropic wing
[DGLR PAPER 84-150] p 752 A85-40287
**ELASTIC BENDING**
Transonic test of a forward swept wing configuration exhibiting Body Freedom Flutter
[AIAA PAPER 85-0689] p 491 A85-30356
**ELASTIC BODIES**
Determination of stresses in elastic aircraft surfaces during motion in unsteady flow p 183 A85-17056
Measured unsteady transonic aerodynamic characteristics of an elastic supercritical wing with an oscillating control surface
[AIAA PAPER 85-0598] p 489 A85-30327
The effect of the Mach number on the aerodynamic characteristics of a deformable body during its nonstationary motion p 472 A85-31491
Adaptive control of an elastic rotor with a magnetic bearing p 600 A85-36321
Experimental determination of the effect of nonlinear stiffness on the vibration of elastic structures
p 692 A85-37177
Nonequilibrium supersonic flows past oscillating 2-D lifting surfaces and thin elastic bodies
p 618 A85-37197
A surface finite element method for elasto-acoustic coupling p 861 A85-44038
Flight control law synthesis for an elastic vehicle by eigenspace assignment
[AIAA PAPER 85-1898] p 846 A85-45970
**ELASTIC BUCKLING**
A program for computerized structural resizing of aircraft structure subject to strength and local panel buckling criteria under multiple loading p 693 A85-37187
**ELASTIC MEDIA**
Structural optimization with dynamic behavior constraints p 185 A85-18693
Determination of the discrepancy vector components using nonlinear functions in solving certain boundary value elasticity problems p 600 A85-35900
**ELASTIC PLATES**
Dynamic edge effects during the aeroelastic vibration of plates p 124 A85-15248
The diffraction of sound waves by an elastic half-plane attached to a vertical rigid plane p 182 A85-16266
Aeroelastic stability and vibration of layered plates and cylindrical shells p 288 A85-20472
Generation by conformal mappings of aerofoil sections and of certain other simple shapes suitable for both aerodynamic and stress-concentration problems
[AD-A154901] p 819 N85-33112
**ELASTIC PROPERTIES**
Control of the properties of carbon fiber-reinforced plastics p 118 A85-12722
An implementation of the modular approach in solving elasticity problems p 524 A85-31455
Optimal structural design of shells - A survey
p 788 A85-40240
Radiation, propagation, fluid-structure coupling; Colloquium on Aeronautical Acoustics, 9th, Compiegne, France, November 14-16, 1984, Reports. Parts 1 & 2
p 861 A85-44037
Parachute inflation dynamics p 396 N85-20792
The application of transonic unsteady methods for calculation of flutter airloads p 585 N85-25186
Gust load alleviation of a cantilevered rectangular elastic wing. Wind tunnel experiment and analysis
[NAK-TR-86] p 681 N85-28950
**ELASTIC SHELLS**
The effect of source location on the structural-acoustic interaction of an infinite elastic shell
[AIAA PAPER 85-0786] p 523 A85-30390
The dynamics of a parachute panel during opening
p 819 A85-44173
**ELASTIC WAVES**
Reheat buzz - An acoustically driven combustion instability
[AIAA PAPER 84-2321] p 41 A85-10868
A system of shock and rarefaction waves in flows past bodies with complex shapes p 618 A85-37330
**ELASTODYNAMICS**
Structural optimization with dynamic behavior constraints p 185 A85-18693
**ELASTOHYDRODYNAMICS**
Calculation of the hydrodynamic characteristics of polyplanes p 290 A85-22113
Problems of elastic hydrodynamic lubrication of helicopter transmission gears p 521 N85-23784
**ELASTOMERS**
Flexible matrix composites applied to bearingless rotor systems p 281 A85-21389
Aircraft surface coatings
[NASA-CR-3861] p 21 N85-10935
Elastomer toughened polyimide adhesives — bonding metal and composite material structures for aircraft and spacecraft
[NASA-CASE-LAR-12775-2] p 437 N85-21349
Electro-expulsive separation system
[NASA-CASE-ARC-11613-1] p 700 N85-29150
Elastomers used in aeronautics industry
[SNIAS-851-551-103] p 786 N85-31304
**ELECTRIC ARCS**
A study of the physical mechanisms and the perturbations created by the attachment of an arc to a conducting cylinder
[ONERA, TP NO. 1985-47] p 904 A85-47258
**ELECTRIC CONDUCTORS**
Scattering from a periodic array of conducting bars of finite surface resistance p 794 A85-42015
**ELECTRIC CONNECTORS**
General aviation data bus update
[AIAA PAPER 84-2637] p 164 A85-17826
Characterization of solderless miniwrapping connections
[CNES-NT-112] p 608 N85-27238
**ELECTRIC CONTACTS**
Techniques for in-situ measurement of electrical bonding on aircraft structures p 809 A85-43536
Control of cascaded induction generator systems
[AD-A150429] p 527 N85-22897

**ELECTRIC CONTROL**
An adaptive control of an electro-hydraulic position control system p 893 A85-47702
**ELECTRIC CURRENT**
Electric Current Perturbation inspection of selected retirement-for-cause turbine engine components
p 906 A35-47474
Exploratory development of advanced surface flaw detection methods
[AD-A148757] p 354 N85-18080
Electro-expulsive separation system
[NASA-CASE-ARC-11613-1] p 700 N85-29150
**ELECTRIC ENERGY STORAGE**
Bionic Bat - Stored energy human powered aircraft
[AIAA PAPER 85-1447] p 708 A85-40842
**ELECTRIC EQUIPMENT**
The closed-loop air-cycle option for equipment cooling on aircraft
[SAE PAPER 840940] p 570 A85-33752
**ELECTRIC FIELD STRENGTH**
The lightning threat to aerospace vehicles
[AIAA PAPER 85-0094] p 240 A85-19516
Measurement of RF fields associated with ISM equipment as it relates to aeronautical services
[FAA-ES-84-2] p 795 N85-30180
**ELECTRIC FIELDS**
Further observations of X-rays inside thunderstorms
p 701 A85-37720
**ELECTRIC FILTERS**
EMI (electromagnetic interference) filter capacitor unit
[AD-D011392] p 293 N85-15941
**ELECTRIC GENERATORS**
A minimum interruption ac electric power generating system for avionics
[AIAA PAPER 84-2742] p 168 A85-17895
Auxiliary and emergency power system
[SAE PAPER 841572] p 662 A85-39162
Secondary power generation system considerations for advanced aircraft
[SAE PAPER 841604] p 650 A85-39184
Improved secondary power system efficiency through expanded electrical power use p 838 A85-45037
Experimental cascaded doubly fed variable speed constant frequency generator system
p 854 A85-45038
Solar powered actuator with continuously variable auxiliary power control
[NASA-CASE-MFS-25637-1] p 454 N85-21789
Control of cascaded induction generator systems
[AD-A150429] p 527 N85-22897
Test flight of IL-76TD long-range transport variant
p 641 N85-27842
**ELECTRIC IGNITION**
Electric direct current starter motors for gas turbine engines
[SAE PAPER 841569] p 663 A85-39167
**ELECTRIC MOTOR VEHICLES**
High-strength composite materials for aircraft, body armor p 435 N85-20057
**ELECTRIC MOTORS**
Design and test of a four channel motor for electromechanical flight control actuation
[NASA-CR-171838] p 297 N85-17294
**ELECTRIC POTENTIAL**
Surface characterization of anodic oxides on aluminum alloys by means of surface potential difference, surface impedance and surface morphology p 442 A85-27908
**ELECTRIC POWER SUPPLIES**
Electric power systems in aircraft - Comments to the Standard GOST 19705-74 p 110 A85-14275
Meeting the electric power needs for aircraft digital electronics p 835 A85-45036
Stirling engines for Air Force Applications
p 855 A85-45470
**ELECTRIC POWER TRANSMISSION**
A generalized algorithm for the topological optimization of the secondary electric power distribution systems of aircraft p 506 A85-31458
**ELECTRICAL ENGINEERING**
Antenna engineering handbook /2nd edition/
p 180 A85-16081
Activities report of the Department of Engineering
p 127 N85-12202
**ELECTRICAL IMPEDANCE**
Effectiveness of an overhead wire barrier system in reducing gull use at the BFI Jedburg sanitary landfill, Berkeley and Dorchester counties, South Carolina
[AD-P004200] p 454 N85-19967
**ELECTRICAL INSULATION**
Protection of carbon-fiber reinforced artificial materials against damage by lightning
[DGLR PAPER 84-151] p 752 A85-40283
Field and laboratory investigation of Kapton insulated aircraft wiring p 852 A85-45138
**ELECTRICAL MEASUREMENT**
The lightning threat to aerospace vehicles
[AIAA PAPER 85-0094] p 240 A85-19516
Techniques for in-situ measurement of electrical bonding on aircraft structures p 809 A85-43536
**ELECTRICAL PROPERTIES**
Proceedings of the Symposium on Electromagnetic Windows (17th) held at Georgia Inst. of Technology, Engineering Experiment Station, Atlanta, Georgia on 25-27 July 1984. Part 2
[AD-A149125] p 449 N85-21444
Development of the F-20 nose radome
[AD-P004374] p 449 N85-21468
**ELECTRICAL RESISTANCE**
Scattering from a periodic array of conducting bars of finite surface resistance p 794 A85-42015
Techniques for in-situ measurement of electrical bonding on aircraft structures p 809 A85-43536
**ELECTRICAL RESISTIVITY**
Estimation of structural transformations in jet fuels from electrical conductivity and viscosity p 518 A85-31572
In-flight electrical conductivity measurements
[ONERA, TP NO. 1985-61] p 912 A85-47284
**ELECTRICITY**
Light your runways and taxiways without electricity
[DE85-000268] p 429 N85-19081
**ELECTRO-OPTICAL PHOTOGRAPHY**
Sirius - An advanced concept for photo-interpretation
p 367 A85-24259
Data annotation techniques for film and electro-optic sensors p 367 A85-24262
Investigations of the accuracy of the Digital Photogrammetry System (DPS), a rigorous three-dimensional compilation process for pushbroom imagery
[MBB-UA-753/83-O] p 609 N85-27734
**ELECTRO-OPTICS**
Conformal EO sensor development for the AFTI/F-16 — Advance Fighter Technology Integrator
[AIAA PAPER 84-2478] p 92 A85-13558
Optoelectronic guidance instruments for flight vehicles (4th revised and enlarged edition) — Russian book
p 125 A85-15815
Evaluating defeat mechanisms of electro-optical systems onboard remotely piloted vehicles
p 347 A85-24268
Airborne optical information systems (Handbook) — in Russian p 835 A85-46119
Stereo Electro-optical Tracking System (SETS)
[NASA-CR-172471] p 295 N85-19096
Evaluation of nose, roof, and mast mounted sensor platforms for piloting and sighting, integrated in future combat helicopters p 280 N85-16806
A methodology for the determination of rotary wing aircraft vulnerabilities in air-to-air combat simulation
[AD-A148984] p 346 N85-18984
Miniature electrooptical air flow sensor
[NASA-CASE-LAR-13065-1] p 447 N85-20295
USSR report: Engineering and equipment
[JPRS-UEO-85-003] p 526 N85-22782
ACT applied to helicopter flight control
p 589 N85-26738
**ELECTRODYNAMICS**
Report of the Technology and Test Panel
p 448 N85-20370
**ELECTROFORMING**
Electroforming of complex parts and heat exchanger systems
[MBB-Z-42-85-OE] p 399 A85-35256
**ELECTROHYDRODYNAMICS**
Propagation of an ion jet near a dielectric surface
p 197 A85-18187
**ELECTROLUMINESCENCE**
Recent advances in electroluminescent displays applicable to future crew-station interfaces
[AIAA PAPER 84-2663] p 164 A85-17845
**ELECTROMAGNETIC COMPATIBILITY**
1984 SAE aerospace handbook: Electromagnetic compatibility p 156 A85-17247
**ELECTROMAGNETIC FIELDS**
Survey of lightning hazard and low altitude direct lightning strike program
[AIAA PAPER 84-2485] p 89 A85-13560
Lift and thrust of a linear synchronous engine with a solid-conductor stator winding p 658 A85-37550
Theoretical study of airborne electromagnetic leakage
p 826 A85-45139
**ELECTROMAGNETIC HAMMERS**
Electroimpulse deicing nears operation
p 400 A85-27384
**ELECTROMAGNETIC INTERFERENCE**
1984 SAE aerospace handbook: Electromagnetic compatibility p 156 A85-17247
Anomalous clutter interference in radar ranging
p 335 A85-24912
Overview of weapon assessments in an electromagnetic environment p 406 A85-2867
EMV assessment methodology for Navy guided weapons p 407 A85-28679
A new approach to applying electromagnetic transient protection requirements to avionic and electronic equipment p 439 A85-2668
Environmental testing of avionics p 763 A85-40980
The effect of aircraft generated electromagnetic interference (EMI) on future avionics systems: A compendium
[AD-A146380] p 189 N85-15101
EMI (electromagnetic interference) filter capacitor unit
[AD-D011392] p 293 N85-15941
An update on experience on the fly by wire Jaguar equipped with a full-time digital flight control system
p 589 N85-26740
Theoretical investigation of single-frequency 8-element localizer signal scattering for critical area determination
[FAA-PM-85-4] p 751 N85-31037
Effect of interference on the performance of a minimum TCAS 2
[FAA-PM-84-33] p 880 N85-34131
**ELECTROMAGNETIC MEASUREMENT**
E and H fields measurements on the Transall C160 aircraft during lightning flashes
[ONERA, TP NO. 1985-48] p 876 A85-4725
Lightning strikes on aircraft. The TRIP 82 experiment and 3-dimensional electromagnetic interferometry
[ONERA-RF-86/7154-PY] p 585 N85-2868
**ELECTROMAGNETIC NOISE**
A facetting model of target glint p 367 A85-2468
**ELECTROMAGNETIC NOISE MEASUREMENT**
1984 SAE aerospace handbook: Electromagnetic compatibility p 156 A85-17247
**ELECTROMAGNETIC PROPERTIES**
The effect of aircraft generated electromagnetic interference (EMI) on future avionics systems: A compendium
[AD-A146380] p 189 N85-15101
Shielded enclosures for experimental studies of shielding topology
[AD-A149292] p 447 N85-20227
A radome for air traffic control SSR radar systems
[AD-P004373] p 449 N85-21467
Comparison of the electromagnetic properties of lightning and EMP (Electromagnetic pulse): Results of recent lightning studies
[AD-A154325] p 800 N85-30580
**ELECTROMAGNETIC PULSES**
Flight test techniques for validating simulated nuclear electromagnetic pulse aircraft responses
[AIAA PAPER 84-2496] p 100 A85-1356
Electroimpulse deicing nears operation
p 400 A85-27384
Electro-impulse de-icing of a turbofan engine inlet
[AIAA PAPER 85-1118] p 754 A85-40811
Comparison of the electromagnetic properties of lightning and EMP (Electromagnetic pulse): Results of recent lightning studies
[AD-A154325] p 800 N85-30580
**ELECTROMAGNETIC RADIATION**
Proceedings of the Symposium on Electromagnetic Windows (17th) held at Georgia Inst. of Technology, Engineering Experiment Station, Atlanta, Georgia on 25-27 July 1984. Part 2
[AD-A149125] p 449 N85-21444
Theoretical investigation of single-frequency 8-element localizer signal scattering for critical area determination
[FAA-PM-85-4] p 751 N85-31037
Simulation and analysis of airborne antenna radiation patterns p 797 N85-313
**ELECTROMAGNETIC SCATTERING**
Scattering from a periodic array of conducting bars of finite surface resistance p 794 A85-42015
**ELECTROMAGNETIC SHIELDING**
Electromagnetic shielding by a CFC aircraft fuselage — Carbon Fiber Composite p 412 A85-2782
Detection of electromagnetic radiation leakage through small structural openings p 826 A85-4514
Shielded enclosures for experimental studies of shielding topology
[AD-A149292] p 447 N85-20227
**ELECTROMAGNETIC SPECTRA**
Reconnoitering the electromagnetic spectrum
p 879 A85-490
**ELECTROMAGNETIC WAVE TRANSMISSION**
Detection of electromagnetic radiation leakage through small structural openings p 826 A85-4514
**ELECTROMECHANICAL DEVICES**
The hydraulic and electrohydraulic elements used in flight simulators p 287 A85-19
A compact electromechanical actuator — for Boeing 727 upper rudder p 854 A85-450

Systems study for an Integrated Digital-Electric Aircraft (IDEA)
[NASA-CR-3840] p 255 N85-15714
Design and test of a four channel motor for electromechanical flight control actuation
[NASA-CR-171838] p 297 N85-17294
Electro-expulsive separation system
[NASA-CASE-ARC-11613-1] p 700 N85-29150

**ELECTRON PUMPING**
Some schemes for introducing an electron beam into a dense gas — for laser pumping p 388 A85-24055

**ELECTRONIC AIRCRAFT**
Modern aviation electronics — Book
p 86 A85-15523
The de-ja vu of all electric/all digital aircraft — future integrated system technology of commercial and military aircraft
[AIAA PAPER 84-2739] p 157 A85-17893
An assessment of the 1990 digital/electric airplane
[AIAA PAPER 84-2740] p 157 A85-17894
Future electronic map systems p 832 A85-44993
Reconnoitering the electromagnetic spectrum
p 879 A85-49094
DOD Value Engineering Conference report. Value Engineering (VE): A tool that benefits line management held at Leesburg, Virginia on 1-2 November 1984. Part 2. Plenary session
[AD-A158068] p 919 N85-35811

**ELECTRONIC CONTROL**
Electronic control and monitoring of aircraft secondary flying controls p 156 A85-17324
Introduction into commercial service for electronic controls used on large turbofan engines
[SAE PAPER 841507] p 352 A85-25962
Multifunction rotating electronically scanned radar (RESR) for air surveillance p 408 A85-27837
Flight testing the Digital Electronic Engine Control (DEEC) A unique management experience
p 420 A85-28636
Pressure measurement system for the National Transonic Facility p 445 A85-29568
General aviation avionics - An overview
p 410 A85-29873
Check of an electronic model of controlled systems
p 459 A85-30122
Development flight test of the full authority digital fuel control in the HH-65A helicopter p 506 A85-31986
Flight instrumentation p 578 A85-34585
Invincible aircraft may be a step closer to reality
p 585 A85-36723
The development of a hardware-in-the-loop engine simulation facility
[AIAA PAPER 85-1293] p 682 A85-39706
Fault detection and accommodation testing on an F100 engine in an F-15 airplane — digital engine control system
[AIAA PAPER 85-1294] p 765 A85-40830
New functional requirement to aero-engine control system p 766 A85-41030
Integrated flight/propulsion control - HIDEC modes
p 839 A85-45042
A compact electromechanical actuator — for Boeing 727 upper rudder p 854 A85-45058
A real-time FORTRAN implementation of a sensor failure detection, isolation and accommodation algorithm
p 917 A85-47704
An electronic limiter for aircraft engines
[SAE PAPER 850910] p 890 A85-50122
Performance improvements of a highly integrated digital electronic control system for an F-15 airplane
[NASA-TM-86748] p 837 N85-32120
Qualification needs for advanced integrated aircraft
[NASA-TM-86731] p 831 N85-33119

**ELECTRONIC COUNTERMEASURES**
Robust countermeasures help 'leap-frog' the threat
p 92 A85-14012
Maintenance test requirements of spread spectrum CNI systems — Communications-Navigation Identification
p 407 A85-26806
Modeling and simulation in missile target tracking
p 409 A85-26607
Airborne Communications Restoral/Relay
p 487 A85-32232
Meeting the challenge of ESM/ECM integration
p 889 A85-49091
Equipment for preflight test of an Electronic Countermeasures (ECM) avionic system
p 293 N85-15949

**ELECTRONIC EQUIPMENT**
Inspecting fastener holes electronically - The capacitance hole probe system p 52 A85-12592
Minimization of the maintenance impact associated with the introduction of high technology electronics to rotary wing aircraft
[AIAA PAPER 84-2413] p 92 A85-13518
Analysis and synthesis of radio-electronic complexes — Russian book p 124 A85-14631
A new approach to applying electromagnetic transient protection requirements to avionic and electronic equipment p 439 A85-26684
Advance technology impacts on rotorcraft weight
p 494 A85-31973
Use of GPS for determining position of drifting buoys
p 486 A85-32204
Electronics - Key to future military helicopters
p 831 A85-44769
Advanced Computer Aided Engineering requirements for electronics p 859 A85-45146
How much does it cost/how much does it weigh?
[SAWE PAPER 1593] p 919 A85-49913
Electronics/avionics depots in the United States Air Force Warner Robins Air Logistics Center
[AD-P004000] p 71 N85-11961
cost and benefits optimization model for fault-tolerant aircraft electronic systems
[NASA-CR-168043] p 293 N85-15993
Experience of one UK electronic equipment supplier with bite on engine/flight control systems over the past ten years p 298 N85-16738
Vibration isolated cold plate assembly
[AD-D011444] p 373 N85-19368
Nose and inlet duct radomes for the firebolt aerial target
[AD-P004375] p 449 N85-21469
Control of cascaded induction generator systems
[AD-A150429] p 527 N85-22897
Avionics integrity issues presented during NAECON (National Aerospace and Electronics Convention) 1984
[AD-A151923] p 579 N85-26707
Avionics and civil aircraft systems: The present and the future
[SNIAS-851-111-104] p 751 N85-31038
Air Force bid sample testing p 807 N85-31323

**ELECTRONIC EQUIPMENT TESTS**
On the development of a data base for the Navstar GPS phase IIB user equipment DT&E (OR) field testing
p 95 A85-14839
TI 4100 NAVSTAR navigator test results
p 95 A85-14840
Low cost GPS receiver signal processing
p 95 A85-14841
1984 SAE aerospace handbook: Electromagnetic compatibility p 156 A85-17247
Development tools - Case study for large systems — of digital avionics
[AIAA PAPER 84-2635] p 193 A85-17826
Avionics hardware design for testability
[AIAA PAPER 84-2708] p 152 A85-17876
Military electronics - Why so unreliable?
p 185 A85-18440
AUTOTESTCON '83; Proceedings of the Conference, Fort Worth, TX, November 1-3, 1983
p 455 A85-26776
Support program planning - Managing to get it supported — ATE for avionics p 461 A85-26785
System concepts/real-time parameters for a MIL-STD-1553B intermediate level tester
p 456 A85-26790
The Expeditionary Test Set - A fresh approach to automatic testing p 439 A85-26800
Flight line EW system testing - The key to operational readiness p 381 A85-26805
Maintenance test requirements of spread spectrum CNI systems — Communications-Navigation Identification
p 407 A85-26806
Electronic warfare automatic test equipment calibration p 440 A85-26809
Operational considerations for the design of military fiber optic test equipment p 440 A85-26813
Using flowcharts to map ATLAS route
p 456 A85-26831
Automating the decision support for ATE operations management p 456 A85-26836
Automated testing speeds EW receiver evaluation
p 408 A85-27845
Check of an electronic model of controlled systems
p 459 A85-30122
Iterative queueing network techniques for the analysis of large maintenance facilities p 535 A85-33299
The Collins AFDS Maintenance System for the Boeing 757/767 — Autopilot Flight Director System
[AIAA PAPER 85-1911] p 849 A85-45971
A systematic approach to designing for testability
p 909 A85-49586
Equipment for preflight test of an Electronic Countermeasures (ECM) avionic system
p 293 N85-15949
The Avionics Flight Evaluation System (AFES) of DFVLR
[DFVLR-MITT-85-01] p 657 N85-27864

**ELECTRONIC FILTERS**
A graphical approach to understanding and preventing the phenomenon of aliasing p 856 A85-45041
Quantitative feedback design approach to robust flying qualities
[AIAA PAPER 85-1902] p 844 A85-45916

**ELECTRONIC MODULES**
Integrated modular flight control - Costs and benefits
[AIAA PAPER 84-2490] p 114 A85-13564
Communication control group technology insertion for the S-3A p 93 A85-14454
Modular standards for emerging avionics technologies
[AIAA PAPER 84-2747] p 184 A85-17897
High density modular avionics packaging
[AIAA PAPER 84-2749] p 184 A85-17898
The relationship between an advanced avionic system architecture and the elimination of the need for an Avionics Intermediate Shop (AIS) p 439 A85-26804
Pressure measurement system for the National Transonic Facility p 445 A85-29568
Thermal test and analysis of SEM Format B integrated rack and application to SEM Format C — Standard Electronic Modules for aircraft avionics
[SAE PAPER 840944] p 566 A85-33755
Development of consensus modular avionics standards p 833 A85-45003
Thermal design criteria for standardized avionic modules as applied to system design p 826 A85-45137
ESP (External-Stores Program): A pilot computer program for determining flutter-critical external-store configurations. Volume 3, part 1: Program compilation
[AD-A152270] p 588 N85-26727

**ELECTRONIC PACKAGING**
High density modular avionics packaging
[AIAA PAPER 84-2749] p 184 A85-17898
Modular avionics packaging standardization
[AIAA PAPER 84-2746] p 184 A85-17899
Hardware design techniques — systems integration for civil and military aircraft avionics p 244 A85-21459
Packaging and interconnection for avionics
p 290 A85-21460
The relationship between an advanced avionic system architecture and the elimination of the need for an Avionics Intermediate Shop (AIS) p 439 A85-26804

**ELECTRONIC WARFARE**
Flight line EW system testing - The key to operational readiness p 381 A85-26805
Electronic warfare automatic test equipment calibration p 440 A85-26809
Automatic ATLAS program generator (AAPG) for the advanced electronic warfare test set
p 456 A85-26817
Automated testing speeds EW receiver evaluation
p 408 A85-27845
Electronic warfare - The next 15 years
p 792 A85-41547
INEWS ignites technology trade-offs and competition
p 879 A85-49096

**ELECTRONICS**
NAECON 1984; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 21-25, 1984 Volumes 1 & 2 p 810 A85-44976

**ELECTROSTATIC PRECIPITATORS**
A study of the control of particulate emissions from turbine engine test cells p 898 N85-35205

**ELEVATION ANGLE**
The flange elevation angle during the drawing of axisymmetric parts p 183 A85-17053

**ELEVATORS (CONTROL SURFACES)**
The application of the optimal model-following method to the design of elevator controllers p 511 A85-31342
Application of linear optimal control theory to the design of the elevator control system of the DHC-2 Beaver experimental aircraft
[VTH-LR-411] p 588 N85-26729
Proposals for the determination of necessary elevator handling characteristics of sailplanes in high speed range
[DFVLR-FB-84-52] p 676 N85-27882

**ELLIPTIC DIFFERENTIAL EQUATIONS**
Application of a two-dimensional grid solver for three-dimensional problems — of flows around aircraft configurations p 317 A85-25127
Computational methods for discontinuities in fluids
p 907 A85-48220

**ELLIPTICAL CYLINDERS**
Unsteady forces on a body immersed in viscous fluids. I - For a uniformly accelerated elliptic cylinder
p 47 A85-10971
Lift hysteresis of an oscillating slender ellipse
p 80 A85-15332
The stability of symmetrical vortices in the wake of elliptical cylinders in confined flow p 618 A85-37194
The use of visualization as a guide in the numerical determination of the flow around an abruptly accelerated elliptic cylinder or airfoil p 904 A85-47127

The unsteady boundary layer on an elliptic cylinder following the impulsive onset of translational and rotational motion — dynamic stall p 477 N85-23699

**ELLIPTICITY**

Supersonic aerodynamic characteristics of elliptic cross section bodies
[AIAA PAPER 85-1607] p 713 A85-40719

Downwash in the plane of symmetry of an elliptically loaded wing
[NASA-TP-2414] p 235 N85-15693

**EMBEDDED COMPUTER SYSTEMS**

Maintenance Assist Functions embedded within the 737-300 Flight Management System
[AIAA PAPER 84-2706] p 165 A85-17874

General Dynamics Convair Division totally reconfigurable embedded computer
[AIAA PAPER 84-2748] p 195 A85-17900

Designing a priority driven multi-frame rate flight executive
[AIAA PAPER 85-0309] p 268 A85-19656

Embedded-grid generation with complete continuity across interfaces for multi-element airfoils
p 11 N85-10911

The embedded test (BIT): Impact on the total cost of possession p 202 N85-16734

**EMERGENCIES**

Materials for emergency repair of runways
[AD-A146139] p 117 N85-12068

**EMERGENCY LOCATOR TRANSMITTERS**

Improved legislated emergency locating transmitters and emergency position indicating radio beacons
[NASA-CASE-GSC-12892-1] p 447 N85-20225

The 121.5 MHz ELT: Past, present and future — Emergency Locator Transmitter (ELT)
p 782 N85-31105

**EMISSION SPECTRA**

A standard aircraft diffusion flame: Spectral characteristics and a feasibility study for developing an alternate calibration source for aircraft optical fire detection systems
[AD-A150231] p 520 N85-22768

**EMULSIONS**

Ultra high energy events in ECHOS series and primary energy spectrum
[HE-3.7-9] p 920 N85-35966

**ENERGY ABSORPTION**

Energy absorbing qualities of fiber reinforced plastic tubes p 282 A85-21393

Crash energy absorption properties of composite structural elements p 382 A85-24815

Development of an energy absorbing passenger seat for the B-720 test aircraft p 332 A85-26308

Impact dynamics research on composite transport structures
[NASA-TM-86391] p 797 N85-30367

Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing
[NASA-CR-3917] p 856 N85-35184

**ENERGY CONSERVATION**

ACEE program rationale and implementation
[NASA-TM-84549] p 2 N85-10908

On-board near-optimal climb-dash energy management p 21 N85-10931

Hybrid laminar flow control study
[NASA-CR-165930] p 21 N85-10933

Energy efficient engine flight propulsion system preliminary analysis and design report
[NASA-CR-174701] p 28 N85-10947

Hangar heating and energy conservation manual
[AD-A147893] p 277 N85-15762

Collegium on aviation fuel conservation efforts
p 343 N85-18034

Deputy minister on civil aviation fuel conservation efforts p 500 N85-23691

Aviation workers plenum reviews fuel conservation progress p 542 N85-25197

USSR report: Transportation
[JPRS-UTR-84-014] p 564 N85-25229

Ilyushin bureau designer on fuel conservation research
p 564 N85-25231

Aviation turbine fuels from tar sands bitumen and heavy oils. Part 1: Process analysis
[AD-A151319] p 597 N85-25539

Planning fuel-conservative descents in an airline environmental using a small programmable calculator: Algorithm development and flight test results
[NASA-TP-2393] p 579 N85-26705

On power effecient operation of the 2m x 2m transonic wind tunnel at the National Aerospace Laboratory
[NAL-TR-847] p 684 N85-28953

Energy efficient transport technology: Program summary and bibliography
[NASA-RP-1135] p 830 N85-33116

Energy Efficient Engine Program technology benefit/cost study, volume 2
[NASA-CR-174766-VOL-2] p 892 N85-35198

Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 1
[NASA-CR-167862] p 913 N85-35534

Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 2
[NASA-CR-167863] p 913 N85-35535

Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 3
[NASA-CR-167864] p 913 N85-35536

Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4
[NASA-CR-167865] p 913 N85-35537

Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning: Summary report
[NASA-CR-167866] p 913 N85-35538

**ENERGY CONSUMPTION**

Wind tunnel results of advanced high speed propellers in the takeoff, climb, and landing operating regimes
[AIAA PAPER 85-1259] p 817 A85-47025

Hangar heating and energy conservation manual
[AD-A147893] p 277 N85-15762

Wind tunnel results of advanced high speed propellers in the takeoff, climb and landing operating regimes
[NASA-TM-87054] p 740 N85-29925

**ENERGY CONVERSION**

Exploratory wind-tunnel investigation of a wingtip-mounted vortex turbine for vortex energy recovery
[NASA-TP-2468] p 560 N85-26667

**ENERGY CONVERSION EFFICIENCY**

The effects of non-coherence on energy extraction from a turbulent wind p 451 A85-27344

Improved secondary power system efficiency through expanded electrical power use p 838 A85-45037

Energy efficient engine high pressure turbine test hardware detailed design report
[NASA-CR-167955] p 34 N85-10995

Energy Efficient Engine Program technology benefit/cost study, volume 1
[NASA-CR-174766-VOL-1] p 892 N85-35197

**ENERGY DISSIPATION**

Analytical method for determining the volumetric efficiency and power losses resulting from resistance in the inlet and exhaust systems of a piston engine
p 167 A85-16231

An energy approach to linearizing squeeze-film damper forces p 440 A85-27479

A theorem on swirl loss in propeller wakes
p 392 A85-29265

Dissipative properties of inhomogeneous materials and systems — Russian book p 687 A85-38874

Energy losses at leading edge of turbine blade during nutbrow jet cooling p 508 N85-22826

**ENERGY POLICY**

Ilyushin bureau designer on fuel conservation research
p 564 N85-25231

Navy geothermal plan
[AD-A152478] p 702 N85-28450

**ENERGY REQUIREMENTS**

Maximum final energy chandelle
[AIAA PAPER 85-0200] p 247 A85-19584

**ENERGY SPECTRA**

Ultra high energy events in ECHOS series and primary energy spectrum
[HE-3.7-9] p 920 N85-35966

**ENERGY TECHNOLOGY**

USSR report: Engineering and equipment
[JPRS-UEQ-84-007] p 186 N85-14854

Air Force Federal Photovoltaic Utilization Program
[DE85-010812] p 801 N85-31646

**ENERGY TRANSFER**

Flow characteristics of a partially submerged liquid pickup
[DE85-008744] p 699 N85-28276

**ENGINE AIRFRAME INTEGRATION**

Jet and wing/flap interaction noise
[AIAA PAPER 84-2362] p 64 A85-10886

Comment on 'PAN AIR applications to aero-propulsion integration' p 6 A85-11990

A comparison of different three-dimensional singularity methods for modelling internal flows
[ONERA, TP NO. 1984-150] p 205 A85-19264

The Altitude Wind Tunnel (AWT) - A unique facility for propulsion system and adverse weather testing
[AIAA PAPER 85-0314] p 275 A85-19681

New functional requirement to aero-engine control system p 766 A85-41030

Advanced propulsion through the 1990s - An airframer's view
[AIAA PAPER 85-1192] p 758 A85-42870

Predicted performance benefits of an adaptive digital engine control system of an F-15 airplane
[NASA-TM-85916] p 265 N85-1572

Energy efficient engine component development and integration program
[NASA-CR-172846] p 772 N85-2988

**ENGINE ANALYZERS**

The software pack GRAD for the analysis of gas-turbine engines p 660 A85-3911

The structure of the application software pack RAFIPKS for the analysis of physical processes in combustion chambers p 661 A85-39122

DEAN: A program for dynamic engine analysis
[NASA-TM-87033] p 673 N85-2894

**ENGINE CONTROL**

Engine control considerations for multifunction nozzles
[AIAA PAPER 84-2454] p 108 A85-1354

Integrated flight/fire/propulsion controls
[AIAA PAPER 84-2493] p 114 A85-1358

The role of modern control theory in the design of controls for aircraft turbine engines p 109 A85-13627

Predicted performance benefits of an adaptive digital engine control system on an F-15 airplane
[AIAA PAPER 85-0255] p 263 A85-1980

Microprocessor control of turboprop engines
p 263 A85-1987

Trends in digital engine control - Integration of propulsion control with flight control and avionic systems in future military and commercial aircraft p 264 A85-2148

Analysis of starting performance of the single shaft gas turbines by theory of similarity p 351 A85-25211

The use of Ada in distributed simulations
p 457 A85-28812

Multibus-based parallel processor for simulation
p 457 A85-28813

Flight testing the Digital Electronic Engine Control (DEEC) A unique management experience
p 420 A85-2863

Design of compensation schemes for a nonminimum-phase multivariable plant
p 458 A85-28810

TF34 convertible engine control system design
p 506 A85-322

Modernizing engine displays p 658 A85-3895

The development of a hardware-in-the-loop engine simulation facility
[AIAA PAPER 85-1293] p 662 A85-3970

Development and evaluation of an integrated flight and propulsion control system
[AIAA PAPER 85-1423] p 669 A85-39771

Integrated flight/propulsion control - Adaptive engine control system mode
[AIAA PAPER 85-1425] p 669 A85-39772

Fault detection and accommodation testing on an F100 engine in an F-15 airplane — digital engine control system
[AIAA PAPER 85-1294] p 765 A85-4083

Control of secondary flow in a turbine stage - Experimental and theoretical study p 727 A85-41804

Development of low cost digital control system for small gas turbine engine p 759 A85-418

A real-time FORTRAN implementation of a sensor failure detection, isolation and accommodation algorithm
p 917 A85-47704

An electronic limiter for aircraft engines
[SAE PAPER 850910] p 890 A85-50122

Energy Efficient Engine (E3) controls and accessories detail design report
[NASA-CR-168017] p 772 N85-29867

Performance improvements of a highly integrated digital electronic control system for an F-15 airplane
[NASA-TM-86748] p 837 N85-32120

**ENGINE COOLANTS**

Influence of blowing rate and injection angle on the performance of a film-cooled blade p 285 A85-2223

The effectiveness of the initial twist of the air in the blade cooling systems of gas turbines
p 349 A85-2297

A study of heat transfer during the injection of water into the cooling air of a turbine blade
p 349 A85-2398

Analytical prediction of the thermal state of flight vehicle engine chambers with internal film cooling under conditions of pulsed operation p 350 A85-2398

An experimental study of the hydraulic characteristics of air flow in the cooling slots of the nozzle guide vanes of gas turbine engines p 350 A85-24001

Comparison of advanced cooling concepts using color thermography — for high temperature-rise gas combustors
[AIAA PAPER 85-1289] p 667 A85-3970

Single-engine propulsion improvement through intercooling
[SAE PAPER 850894] p 890 A85-50114

Aerodynamics of liquid-cooled aircraft engine installations
[SAE PAPER 850896] p 891 A85-50132

Vortex-generating coolant-flow-passage design for increased film-cooling effectiveness and surface coverage
[NASA-TP-2388] p 127 N85-12314

Improvement of gas turbine engine performance by water injection into turbine cooling air
p 370 N85-18209

ENGINE DESIGN

Design development and optimization criteria considerations for a tandem fan medium speed V/STOL propulsion concept
[AIAA PAPER 84-2395] p 107 A85-13506

Development of the AV-8B propulsion system
[AIAA PAPER 84-2426] p 108 A85-13527

High temperature ducts - A composite alternative
[AIAA PAPER 84-2519] p 70 A85-13582

The role of modern control theory in the design of controls for aircraft turbine engines p 109 A85-13627

Reliable turboprop engines p 111 A85-14855

The fundamentals of the automated design of engines for flight vehicles — Russian book p 111 A85-15820

Composite nacelle development p 71 A85-15960

Development of the PW100 turboprop engines
p 168 A85-17229

Aeronautical gas turbines - I p 168 A85-18721

Aeronautical gas turbines. II p 169 A85-18722

Computational thermo-fluid dynamics contributions to advanced gas turbine engine design
[AIAA PAPER 85-0083] p 252 A85-19509

Three-dimensional inviscid flow analysis of turbofan forced mixers
[AIAA PAPER 85-0086] p 210 A85-19510

Real gas effects in advanced technology engines
[AIAA PAPER 85-0252] p 282 A85-19515

Aircraft turbojet engine modeling using artificial intelligence techniques
[AIAA PAPER 85-0253] p 283 A85-19516

A procedure for the optimization of the aerothermodynamic design of multistage axial compressors — German thesis p 227 A85-19851

Some improvements on an annular combustor of AI type turbojet engine p 284 A85-20235

Modern military engines. II p 284 A85-20822

Prediction of performance of aircraft gas turbines
p 284 A85-21342

Improved supersonic performance for the F-16 inlet modified for the J79 engine p 314 A85-23381

Elements of the functional decomposition of aircraft turbomachines during their synthesis using a computer-aided blade design system
p 350 A85-23993

For the eighties and beyond — aircraft turbofan engine design p 351 A85-24646

NASA researchers believe efforts could yield speeds of Mach 12 p 351 A85-25180

Calculation and analysis of the off-design performance of split shaft gas turbine p 351 A85-25212

International perspective on ceramic heat engines
[ACS PAPER 1-J111-84] p 383 A85-25288

Evolution in the U.S. of ceramic technology for turbine engines
[ACS PAPER 3-JIII-84] p 383 A85-25289

The evolution of high-thrust turbojet engine technology
p 353 A85-26017

An engine for a light helicopter p 353 A85-26024

Civil turbofan engines p 353 A85-26274

Wave rotor turbofan engines for aircraft
p 419 A85-26768

Computational design and validation tests of advanced concept subsonic inlets p 386 A85-27090

Powerplants for long-duration unmanned aircraft
p 420 A85-27094

Studies of convertible turboshaft/turbofan engines for high-speed rotorcraft p 432 A85-29257

New fighter engines - A review. I p 420 A85-29342

Designing for stability in advanced turbine engines
p 420 A85-29344

Design and experimental investigation of a high-loaded transonic axial model turbine p 421 A85-29695

Turbulent vortices and bionics in turbojet
p 383 A85-29700

Designing reliability into derivative engines
p 506 A85-32007

Definition of requirements for 5000 horsepower class demonstrator engine p 506 A85-32008

Internal aerodynamics of infrared suppressors for helicopter engines p 507 A85-32012

Is the unducted fan tomorrow's subsonic engine?
p 507 A85-32945

Will propfans require gearboxes? p 507 A85-32946

Development of automatic data acquisition system for RJ 500 engine p 516 A85-33353

Procedure for the calculation of the characteristics of axial, respectively radial, one or multistage thermal flow machines, taking into consideration also the effect of adjustable guide devices — German thesis
p 598 A85-33402

Design and performance evaluation of a two-position variable geometry turbofan combustor
p 580 A85-34005

Predicted turbine stage performance using quasi-three-dimensional and boundary-layer analyses
p 580 A85-34013

Porsche's new light-aircraft engine
p 581 A85-35354

Selecting design parameters for an engine from the totality of flight conditions p 659 A85-39103

A generalization of experimental data on heat transfer from the working medium to the housing components of the compressor of a gas-turbine engine
p 660 A85-39112

A comparison of experimental characteristics of porous and blade impellers p 660 A85-39120

Determination of the blade height of the last compressor stage for a refined thermodynamic design analysis of turbofan engines p 661 A85-39126

Starting systems technology; Proceedings of the Aerospace Congress and Exposition, Long Beach, CA, October 15-18, 1984
[SAE SP-598] p 661 A85-39151

Electric direct current starter motors for gas turbine engines
[SAE PAPER 841569] p 663 A85-39167

Model test results of the split-fan cross-ducted propulsion system concept for medium speed V/STOL aircraft
[SAE PAPER 841495] p 663 A85-39203

Advanced single-rotation propfan drive system
p 663 A85-39577

Future prop-fans - Tractor or pusher
[AIAA PAPER 85-1189] p 664 A85-39647

The unducted fan engine
[AIAA PAPER 85-1190] p 665 A85-39648

Prospects and problems of advanced open rotors for commercial aircraft
[AIAA PAPER 85-1191] p 665 A85-39649

Engine design for maintenance and support
[AIAA PAPER 85-1204] p 665 A85-39654

Supportability considerations for advanced engine development
[AIAA PAPER 85-1205] p 665 A85-39655

Application of 3-D flow computations to gas turbine aerodynamic design
[AIAA PAPER 85-1216] p 630 A85-39659

Military engine durability improvements through innovative advancements in turbine design and materials
[AIAA PAPER 85-1221] p 666 A85-39664

Aircraft preliminary design comparison of advanced compound engines with advanced turbine engines for helicopter applications
[AIAA PAPER 85-1276] p 666 A85-39693

Variable cycle turboshaft technology for rotor-craft of the 90's
[AIAA PAPER 85-1278] p 666 A85-39695

Technology for the design of high temperature rise combustors
[AIAA PAPER 85-1292] p 668 A85-39705

Derivative T56 engine development experience
[AIAA PAPER 85-1459] p 670 A85-39790

The conception and development of a family of small engines for the 1990's
[AIAA PAPER 85-1460] p 670 A85-39791

Are propellers coming back - and when?
p 764 A85-40070

Extension of CFD technology used to design the JVX inlet
[AIAA PAPER 85-1215] p 720 A85-40822

AV-8B/GR Mk5 Engine Monitoring System
[AIAA PAPER 85-1295] p 762 A85-40831

Stall recovery control strategy methodology and results
[AIAA PAPER 85-1433] p 765 A85-40841

Developing a derivative engine
[AIAA PAPER 85-1462] p 765 A85-408

The 'new look' ramjet p 766 A85-40912

A study of ramjet engine. II - Altitude specific range at the ceiling p 766 A85-41013

Development trend on aircraft gas turbine engine
p 766 A85-41025

Techniques for measurement of strain and temperature in advanced engine development p 792 A85-41032

V2500 turbofan engine p 767 A85-41035

A design technique for all sorts of gas turbine combustors p 768 A85-41789

Combustor development for FJR710/600 engine
p 768 A85-41790

Critical assessment of thermophysical properties data of combustion gases for calculating the performance of gas turbine p 805 A85-41803

Core compressor developments for large civil jet engines p 768 A85-41806

Design and performance comparison of three high-speed fans p 768 A85-41807

Mathematical modelling of performance characteristics and optimization of turbomachine stages
p 769 A85-41812

Development of computational flow analysis for blade rows p 727 A85-41813

A comparison of the Streamline Curvature Method with the Matrix Method used for turbo-machinery design in non-orthogonal curvilinear coordinate system
p 728 A85-41816

Research on supersonic diffusers of centrifugal compressor by means of swirl flow. I - Flow in a diffuser at various Mach numbers p 728 A85-41824

The influence of aircraft turbomachine technology on vehicular turbocharger design p 793 A85-41830

DOE automotive gas turbine modern technology engine program p 794 A85-41838

F404/RM12 - A key step in the F404 growth plans
[AIAA PAPER 85-1461] p 835 A85-43778

Inviscid analysis of advanced turboprop propeller flow fields
[AIAA PAPER 85-1263] p 814 A85-43977

Major Fokker 50 upgrade grows out of F-27 reengining program p 829 A85-47049

Rolls' Tay engine meets schedule for Gulfstream 4 first flight p 890 A85-49090

Prop jet singles have arrived
[SAE PAPER 850882] p 890 A85-50112

Porsche aircraft engine P F M 3200
[SAE PAPER 850895] p 890 A85-50115

Conversion of small aircraft to Allison turbine power
[SAE PAPER 850906] p 890 A85-50120

Garrett TPE331-12 engine provides improved altitude performance for high-speed executive turboprop aircraft
[SAE PAPER 850908] p 890 A85-50121

Development trends and requirements of propulsion system technology for civil aircraft p 27 N85-10066

Computational thermo-fluid dynamics contributions to advanced gas turbine engine design
[NASA-TM-86865] p 27 N85-10069

Preliminary mechanical redesign of an existing gas-turbine engine to incorporate a high-efficiency, low-pressure-ratio, highly regenerative cycle for marine applications
[AD-A144808] p 28 N85-10070

Energy efficient engine flight propulsion system preliminary analysis and design report
[NASA-CR-174701] p 28 N85-10947

Energy efficient engine component development and integration program
[NASA-CR-170034] p 33 N85-10990

Energy efficient engine ICLS Nacelle detail design report
[NASA-CR-167870] p 34 N85-10993

Energy efficient engine. Low pressure turbine test hardware detailed design report
[NASA-CR-167956] p 34 N85-10994

Energy efficient engine ICLS engine bearings, drives and configuration: Detail design report
[NASA-CR-167871] p 34 N85-10997

External fuel vaporization study, phase 2
[NASA-CR-174079] p 45 N85-11252

Propulsion — jet aircraft engines
[PNR-90208] p 113 N85-12062

Fabrication and quality assurance processes for superhybrid composite fan blades
[NASA-TM-83354] p 180 N85-14882

USSR report: Engineering and equipment
[JPRS-UEQ-84-007] p 188 N85-14954

Optimum thermogasdynamic design of gas turbine engines by characteristics of element prototypes
p 170 N85-14965

The aircraft engine of the future
[PNR-90226] p 268 N85-16875

USSR report: Engineering and equipment
[JPRS-UEQ-85-001] p 370 N85-18200

On one design principle of surge protector for gas turbine engine compressor p 370 N85-18206

Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-174809] p 379 N85-18831

Analytical fuel property effects: Small combustors, phase 2
[NASA-CR-174848] p 365 N85-19175

Lubrication and performance of high-speed rolling-element bearings
[NASA-TM-86958] p 450 N85-21658

Hydrodynamic simulation of transient processes in injection system of aircraft engines during pump unswirling p 509 N85-22829

Special course on V/STOL aerodynamics: An assessment of European jet lift aircraft
[AGARD-R-710-ADDENDUM] p 542 N85-25186

Ceramic applications in turbine engines
[NASA-CR-174715] p 690 N85-28109

Energy efficient engine. Fan and quarter-stage component performance report
[NASA-CR-168070] p 891 N85-34141

Shroud segments for unshrouded blade turbines
[PNR-90260] p 891 N85-34143

**ENGINE FAILURE**

Fault Detection/Location System (FD/LS) - How much, how little and how to implement p 466 A85-31992

Contingency power concepts for helicopter turboshaft engine p 506 A85-32005

System-theoretical solution of the failure diagnosis problem using the example of a flight engine — German thesis p 580 A85-33404

Techniques for accommodating control effector failures on a mildly statically unstable airplane
p 584 A85-35982

United States Air Force engine damage tolerance requirements
[AIAA PAPER 85-1209] p 665 A85-39657

Modeling post-stall operation of aircraft gas turbine engines
[AIAA PAPER 85-1431] p 669 A85-39775

Fault detection and accommodation testing on an F100 engine in an F-15 airplane — digital engine control system
[AIAA PAPER 85-1294] p 765 A85-40830

Application of frequency domain and time domain analysis tools to the analysis of nonrecoverable stall
[AIAA PAPER 85-1350] p 765 A85-40836

Identification of quasi-steady in-stall compressor maps from transient data
[AIAA PAPER 85-1351] p 765 A85-40837

Simulation study of an automatic trim system for reducing the control forces on a light twin after an engine failure
[SAE PAPER 850913] p 895 A85-50124

Stall elimination and restart enhancement device
[AD-D011217] p 27 N85-10062

A theory of post-stall transients in multistage axial compression systems
[NASA-CR-3878] p 396 N85-21117

Effects of inlet distortion on a static pressure probe mounted on the engine hub in an F-15 airplane
[NASA-TP-2411] p 508 N85-22394

Safety recommendation(s), A-84-128 through -133
[REPT-3996C/41] p 563 N85-25221

Nonlinear global stability analysis of compressor stall phenomena
[NASA-CR-174908] p 773 N85-29960

Fault detection and accommodation testing on an F100 engine in an F-15 airplane
[NASA-TM-86735] p 773 N85-29962

**ENGINE INLETS**

Numerical solutions of acoustic wave propagation problems using Euler computations
[AIAA PAPER 84-2290] p 59 A85-10845

Analysis of the flow field in an engine inlet particle seperator p 5 A85-11633

An experimental investigation on response of turbojet engine to the turbulence-type of dynamic inlet distortion
p 27 A85-12365

Evaluation and correction of the adverse effects of (i) inlet turbulence and (ii) rain ingestion on high bypass engines
[AIAA PAPER 84-2486] p 109 A85-13561

Comparison of model and full scale inlet distortions for subsonic commercial transport inlets
[AIAA PAPER 84-2487] p 74 A85-13562

Installed engine performance in dust-laden atmosphere
[AIAA PAPER 84-2488] p 109 A85-13563

Wave envelope and infinite element schemes for fan noise radiation from turbofan inlets p 134 A85-15330

Analytical method for determining the volumetric efficiency and power losses resulting from resistance in the inlet and exhaust systems of a piston engine
p 167 A85-16231

Computational particle trajectory analysis on a 3-dimensional engine inlet
[AIAA PAPER 85-0411] p 222 A85-19732

Icing tunnel tests of Electro-Impulse De-icing of an engine inlet and high-speed wings
[AIAA PAPER 85-0466] p 241 A85-20872

Analysis of a split-flow inertial particle separator by finite elements — for helicopter gas turbine engine
p 231 A85-21845

Improved supersonic performance for the F-16 inlet modified for the J79 engine p 314 A85-23391

Computational design and validation tests of advanced concept subsonic inlets p 386 A85-27090

Experimental study of flows in a two-dimensional inlet model p 386 A85-27092

Response of a supersonic inlet to downstream perturbations p 386 A85-27093

Reynolds number and fan/inlet coupling effects on subsonic transport inlet distortion p 544 A85-34011

Engine inlet interaction with a prop-fan propulsion system
[SAE PAPER 841478] p 627 A85-39058

Performance of a new nose-lip hot-air anti-icing concept
[AIAA PAPER 85-1117] p 664 A85-39614

Substantiation of the applicability of VSAERO panel method to subsonic inlet design
[AIAA PAPER 85-1119] p 629 A85-39615

Numerical simulation of flow through scramjet inlets using a three-dimensional Navier-Stokes code
[AIAA PAPER 85-1664] p 716 A85-40760

Electro-impulse de-icing of a turbofan engine inlet
[AIAA PAPER 85-1118] p 754 A85-40811

Stall recovery control strategy methodology and results
[AIAA PAPER 85-1433] p 765 A85-40841

Developing a derivative engine
[AIAA PAPER 85-1462] p 765 A85-40843

Some applications of actuator and semi-actuator disk theory to the problem of intake/engine compatibility
p 727 A85-41810

A study of bird ingestions into large high bypass ratio turbine aircraft engines
[DOE/FAA-CT-84/13] p 14 N85-10028

Effect of steady-state temperature distortion on inlet flow to a high-bypass-ration turbofan engine
[NASA-TM-86896] p 265 N85-15725

Air intake efficiency at zero speed and lip suction — jet engines
[BAE-KRS-N-GEN-303] p 326 N85-17996

Research and development for semi-spherical inflow control device
[NAL-TR-833] p 353 N85-18056

Experimental study of aerodynamic shielding of turbojet engine air intake against exhaust gases
p 355 N85-18210

Description of a technique to measure spray distribution in an air stream .
[AD-A149780] p 398 N85-21122

Selection of air intake parameters for supersonic-flow operation p 527 N85-22837

Shock waves in adjacent engine inlets
[ISL-R-104/84] p 781 N85-31068

Calculation of compressible flow about three-dimensional inlets with auxiliary inlets, slats and vanes by means of a panel method
[NASA-CR-174975] p 876 N85-35162

**ENGINE MONITORING INSTRUMENTS**

Eddy current jet engine disk-crack monitor
p 47 A85-11100

Advanced gearbox health monitoring techniques
p 124 A85-15171

Accuracies of digital engine monitoring proven by performance
[AIAA PAPER 84-2753] p 166 A85-17901

The F110 engine monitoring system
[AIAA PAPER 84-2754] p 166 A85-17902

Use of expanded AIDS in engine health monitoring on the CF6-80 engine for the A310 Airbus
[SAE PAPER 841505] p 352 A85-25980

Living with EICAS - Operational experience to date on the 757 and 767 — Engine Indication and Crew Alerting System
[SAE PAPER 841506] p 352 A85-25981

Development of automatic data acquisition system for RJ 500 engine p 516 A85-33353

Modernizing engine displays p 658 A85-38956

Instrumentation for gas turbine research in short-duration facilities
[SAE PAPER 841504] p 695 A85-39062

Usage monitoring - A milestone in engine life management
[AIAA PAPER 85-1206] p 665 A85-39656

'The test stand flies with the aircraft' - Engine condition monitoring in the case of the Airbus A 310 of the Lufthansa
[DGLR PAPER 84-114] p 764 A85-40330

AV-8B/GR Mk5 Engine Monitoring System
[AIAA PAPER 85-1295] p 762 A85-40831

Application of aircraft integrated data system on jet engine module performance monitoring and turbine blade life accounting p 770 A85-41840

Monitoring and diagnosing the technical condition of gas-turbine engines from vibration parameters — Russian book p 771 A85-42275

A comparative evaluation of EMADS (Engine Monitoring and Display System) and conventional engine instruments
[AD-A145901] p 112 N85-12060

The applications of fibre optics in gas turbine engine instrumentation
[PNR-90209] p 135 N85-12687

Advanced High Pressure O2/H2 Technology
[NASA-CP-2372] p 595 N85-26862

**ENGINE NOISE**

Far-field measurement and mode analysis of the effects of vane/blade ratio on fan noise
[AIAA PAPER 84-2280] p 25 A85-10840

Engine noise measurement with acoustic shield wall
[AIAA PAPER 84-2283] p 26 A85-10841

Applications of finite element and wave envelope element approximations to turbofan engine noise radiation including flight effects
[AIAA PAPER 84-2333] p 62 A85-10877

Application and test verification of finite element analysis for gas turbine extended reaction exhaust muffler systems
[AIAA PAPER 84-2334] p 26 A85-10878

Comparison of scaled model data to full size energy efficient engine test results
[AIAA PAPER 84-2281] p 110 A85-13953

Measurement and prediction of Energy Efficient Engine noise
[AIAA PAPER 84-2284] p 110 A85-13954

Wave envelope and infinite element schemes for fan noise radiation from turbofan inlets p 134 A85-15330

Analysis of the effect on combustor noise measurements of acoustic waves reflected by the turbine and combustor inlet
[AIAA PAPER 84-2323] p 196 A85-16103

Flight study of induced turbofan inlet acoustic radiation with theoretical comparisons p 197 A85-18513

An experimental study of sound attenuation characteristics in circular ducts with lined radial baffles
[AIAA PAPER 85-0079] p 304 A85-19505

Meeting the 1985 FAA noise regulations with old engines and modern acoustic technology
[AIAA PAPER 85-1120] p 651 A85-39616

Energy efficient engine component development and integration program
[NASA-CR-169496] p 33 N85-10969

Jet noise suppression by porous plug nozzles
[NASA-CR-3613] p 65 N85-11790

Turbofan noise generation. Volume 2: Computer programs
[NASA-CR-167952] p 65 N85-11791

Experimental investigation of shock-cell noise reduction for dual-stream nozzles in simulated flight
[NASA-CR-3846] p 135 N85-13549

Static jet noise test results of four 0.35 scale-mode QCGAT mixer nozzles
[NASA-TM-86871] p 135 N85-13551

Research and development for semi-spherical inflow control device
[NAL-TR-833] p 353 N85-18056

Fan noise suppression in turbofan engines

Mi-28 - The Soviets create Havoc p 250 A85-20147

Introduction into commercial service for electronic controls used on large turbofan engines
[SAE PAPER 841507] p 352 A85-25982
Effects of specification on airborne display hardware
p 833 A85-45102
The helicopter transmission design process
p 510 N85-23772

**EROSION**
Coatings for erosion resistance p 434 A85-27538
High-temperature erosion of plasma-sprayed, yttria-stabilized zirconia in a simulated turbine environment
[AIAA PAPER 85-1219] p 689 A85-39662
High-temperature erosion of plasma-sprayed, yttria-stabilized zirconia in a simulated turbine environment
[NASA-TP-2406] p 121 N85-13045

**ERROR ANALYSIS**
De-Dopplerisation and acoustic imaging of aircraft flyover measurements
[AIAA PAPER 84-2355] p 63 A85-10891
Clock coasting and altimeter error analysis for GPS
p 94 A85-14834
Modeling of certain strapdown heading-sensitive errors in INS error models p 153 A85-18345
Calculation of confined swirling flows
[AIAA PAPER 85-0060] p 285 A85-19491
A linearly correcting method of deviation function for considering the influence of pressure on the thermodynamic properties of combustion gas
p 304 A85-20236
An algebraic solution of the GPS equations
p 406 A85-26609
Optimization of averaging intervals of wind velocity for meteorological services to aviation p 453 A85-28956
Spurious entropy production and very accurate solutions to the Euler equations p 471 A85-30996
Effects of measurement errors in estimating the probability of vertical overlap — in air traffic
p 567 A85-36510
Engine thrust measurement uncertainty
[AIAA PAPER 85-1404] p 669 A85-39765
Generic faults - The first word — flight control system errors
[AIAA PAPER 85-1979] p 856 A85-45957
Generic fault-tolerance techniques for critical avionics systems
[AIAA PAPER 85-1980] p 860 A85-45973
TCAS 2 logic performance during phase one operational evaluation
[DOT/FAA/PM-84/20] p 154 N85-13793
Cockpit resources management and the theory of the situation p 333 N85-18022
On the application of compatibility checking techniques to dynamic flight test data
[ARL/AERO-R-161] p 416 N85-21151
Evaluation of a fault tolerant system for an integrated avionics sensor configuration with TSRV flight data
[NASA-CR-172589] p 657 N85-28941
Simulations of strapdown-system errors and error compensation methods — transport aircraft navigation
[DFVLR-MITT-84-22] p 751 N85-31040
Using regression analysis for determining air data sensor errors by means of an inertial navigation system
[ESA-TT-886] p 751 N85-31041
A comparison between Falcon data and motor glider data p 914 N85-35547
Accuracy and error analysis — airborne instruments
p 916 N85-35557

**ERROR CORRECTING CODES**
Error corrective coding for MIL-STD-1553B aircraft stores management systems p 823 A85-45127

**ERROR CORRECTING DEVICES**
Advanced Information Processing System - Fault detection and error handling
[AIAA PAPER 85-1952] p 859 A85-45938

**ERROR DETECTION CODES**
Experimental analysis of an innovations-based detection algorithm for surveillance radar p 336 A85-25102
The use of residue arithmetic for fault detection in a digital flight control system p 841 A85-45063

**ERROR FUNCTIONS**
Automated VOR ground check techniques
p 485 A85-31273

**ERROR SIGNALS**
Time reference errors of angle-measuring signals at the output of an envelope detector under multipath conditions p 488 A85-33045

**ERRORS**
Generic errors in airborne safety-critical systems from an FAA perspective
[AIAA PAPER 85-1983] p 820 A85-45969
Accounting for error stochasticity in terminal homing of aircraft p 97 N85-13115

Automatic land vehicle navigation using road map data
[DE84-017178] p 338 N85-18043
Error reduction program — combustor performance evaluation codes
[NASA-CR-174776] p 610 N85-27584
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning, volume 4
[NASA-CR-167865] p 913 N85-35537
Comparative analysis of operational forecasts versus actual weather conditions in airline flight planning: Summary report
[NASA-CR-167866] p 913 N85-35538

**ESCAPE CAPSULES**
USAF R&D experience with enclosed escape systems
p 482 A85-30422

**ESCAPE SYSTEMS**
Selectable thrust rocket motor for crew escape systems p 340 A85-22758
Problems in the quantification of aircrew automated escape systems (AAES) in-service reliability
p 331 A85-22766
U.S. Navy aircrew automated escape systems (AAES) and aircrew life support systems (ALSS) in-service usage data analysis program - A progress report and report of longer term plans p 331 A85-22767
U.S. Navy experience with side-by-side unsequenced escape in A-6 series aircraft lessons to be learned (1 January 1969 through 31 December 1979)
p 331 A85-22768
Escape system operation through adaptive control
p 331 A85-22769
Analysis of the reported incidence of tumble, flail and windblast by ejectees p 331 A85-22774
Significance and limitations of family ties among ejection seat type aircrew automated escape systems (AAES)
p 331 A85-22777
Lear Fan Model 2100 emergency Egress System
p 401 A85-28640
USAF R&D experience with enclosed escape systems
p 482 A85-30422
The development of the generalized escape system simulation program
[ASME PAPER 84-WA/DSC-20] p 651 A85-39869
Advanced escape systems p 877 A85-49625
Adaptive operation of escape systems - A look at design requirements p 884 A85-49945
Generalized Escape System Simulation - Its purpose, recent modifications, and potential p 884 A85-49946
Aeronautical systems technology needs: Escape, rescue and survival, test facilities and test equipment and training-simulation equipment
[AD-A145059] p 1 N85-10002
A Generalized Escape System Simulation (GESS) computer program. Volume 2: GESS programmer's manual, version 2
[AD-A148363] p 243 N85-16845
Personnel protection concepts for advance escape system design p 334 N85-19656
Chemical and photographic evaluation of rigid explosive transfer lines
[AD-A149303] p 437 N85-20145
Approach for service life extension of explosive devices for aircraft escape systems
[NASA-TM-86323] p 499 N85-22381
Preliminary design of a limb restraint evaluator
[AD-A151749] p 564 N85-25226
Generalized escape system simulation: Its purpose, recent modifications and potential
[DE85-005571] p 565 N85-26689
Design and testing of an energy-absorbing crewseat for the F/FB-111 aircraft. Volume 2: Data from seat testing
[NASA-CR-3917] p 886 N85-35184

**ESTERS**
The effect of esters on 'antiwear' properties of jet engine fuel obtained by hydrofining p 179 A85-16950

**ESTIMATES**
Estimation of gas turbine engine boost provided by injecting water behind compressor p 509 N85-22838
High frequency estimation of 2-dimensional cavity scattering
[AD-A151697] p 602 N85-25696

**ESTIMATING**
Integrated tracking software for multimode operation
[AIAA PAPER 84-2614] p 193 A85-17814
A method of estimating the probability of vertical overlap using observed height data p 749 A85-40986
Validation of procedures for reliability evaluation and confirmation p 854 A85-44858
Guaranteed reliability estimates for various amounts of information on the primary factors p 854 A85-44860
Research on optimal control, stabilization and computational algorithms for aerospace applications
[NASA-CR-174318] p 303 N85-17603

Three position estimation procedures
[AD-A148748] p 338 N85-18042
Estimation of flight mechanical variables by means of Kalman filters p 876 N85-35171

**ETCHING**
New processing techniques for automated chemical removal of surface metal
[DGLR PAPER 84-085] p 789 A85-40305

**EULER EQUATIONS OF MOTION**
Numerical solutions of acoustic wave propagation problems using Euler computations
[AIAA PAPER 84-2290] p 59 A85-10845
Euler equation simulation of propeller-wing interaction in transonic flow p 6 A85-11977
Computation of vortex flow around a canard/delta combination p 6 A85-11980
Numerical solutions of the Euler equations for complex three-dimensional aerodynamic configurations
[AIAA PAPER 84-2399] p 74 A85-13509
Computational simulation of free vortex flows using an Euler code p 76 A85-13951
A general perturbation approach for computational fluid dynamics p 80 A85-15334
Computation of flow around wings based on the Euler equations p 142 A85-18066
The hopscotch finite volume method for solving the Euler equations p 143 A85-18282
Efficient solution of the Euler and Navier-Stokes equations with a vectorized multiple-grid algorithm
p 145 A85-18679
Spectral methods for the Euler equations. I - Fourier methods and shock capturing p 185 A85-18684
Euler solution of axisymmetric flows about bodies of revolution using a multigrid method
[AIAA PAPER 85-0017] p 206 A85-19460
A comparison of Euler and Navier-Stokes solutions for supersonic flow over a conical delta wing
[AIAA PAPER 85-0111] p 210 A85-19526
Solution of the unsteady Euler equations for fixed and rotor wing configurations
[AIAA PAPER 85-0120] p 211 A85-19531
Three-dimensional Euler solutions with grid embedding
[AIAA PAPER 85-0121] p 211 A85-19532
A comparison of finite volume flux vector splittings for the Euler equations
[AIAA PAPER 85-0122] p 211 A85-19533
Numerical solution of the Euler equations for high-speed, blended wing-body configurations
[AIAA PAPER 85-0123] p 211 A85-19534
Euler calculations for multielement airfoils using Cartesian grids
[AIAA PAPER 85-0291] p 218 A85-19641
Numerical solution of the two-dimensional Euler equations by second-order upwind difference schemes
[AIAA PAPER 85-0292] p 218 A85-19642
Multigrid solution of the Euler equations using implicit schemes
[AIAA PAPER 85-0293] p 218 A85-19643
A relaxation approach to patched-grid calculations with the Euler equations
[AIAA PAPER 85-0295] p 218 A85-19644
A three-dimensional Navier-Stokes/Euler code for blunt-body flow computations
[AIAA PAPER 85-0361] p 220 A85-19696
Split-flux-vector solutions of the Euler equations for three-dimensional configurations
[AIAA PAPER 85-0434] p 223 A85-19747
Finite volume solution of the two-dimensional Euler equations on a regular triangular mesh
[AIAA PAPER 85-0435] p 223 A85-19748
Solution method for a hovering helicopter rotor using the Euler equations
[AIAA PAPER 85-0436] p 223 A85-19749
Evaluation of vortex wake predictions in the SWINT code
[AIAA PAPER 85-0450] p 224 A85-19759
Grid adaptation for the 2-D Euler equations
[AIAA PAPER 85-0484] p 225 A85-19781
An implicit, conservative, zonal-boundary scheme for Euler equation calculations
[AIAA PAPER 85-0488] p 226 A85-19785
Simulation of transonic three-dimensional nacelle/inlet flowfields using an Euler/Navier-Stokes algorithm
[AIAA PAPER 85-0084] p 226 A85-19796
Euler computations of AGARD Working Group 07 airfoil test cases
[AIAA PAPER 85-0018] p 229 A85-20851
Finite element solutions of Euler equations for lifting airfoils
[AIAA PAPER 85-0294] p 230 A85-20864
A numerical simulation of the NFAC (National Full-scale Aerodynamics Complex) open-return wind tunnel inlet flow
[AIAA PAPER 85-0437] p 230 A85-20869
Artificial dissipation models for the Euler equations
[AIAA PAPER 85-0438] p 231 A85-20870

A multigrid method for calculating transonic flows in cascades p 315 A85-24092
Computer-aided analysis of the convergence to steady state of discrete approximations to the Euler equations p 316 A85-24449
Automatic adaptive grid refinement for the Euler equations p 391 A85-29067
Euler and Navier-Stokes solutions for supersonic shear flow past a circular cylinder p 391 A85-29090
Euler solutions of transonic vortex flows around the Dillner wing p 392 A85-29261
Finite element methods for first-order hyperbolic systems with particular emphasis on the compressible Euler equations p 446 A85-30218
Spurious entropy production and very accurate solutions to the Euler equations p 471 A85-30996
A new stream function formulation for the steady Euler equations p 474 A85-32609
Comparison of various numerical techniques in gas dynamics p 475 A85-33354
Accelerated convergence of Jameson's finite-volume Euler scheme using van der Houwen integrators p 610 A85-35175
An implicit technique for computation of base flowfield p 551 A85-35778
Triangular finite element methods for the Euler equations p 601 A85-36414
Computation of three-dimensional flow using the Euler equations and a multiple-grid scheme p 627 A85-39200
Evaluation of Euler and Navier-Stokes solutions for leading-edge and shock-induced separations [AIAA PAPER 85-1563] p 711 A85-40688
Numerical solution of transonic wing flows using an Euler/Navier-Stokes zonal approach [AIAA PAPER 85-1640] p 715 A85-40742
Flow simulations using Euler equations for nacelle-propeller configurations in a wind tunnel environment [AIAA PAPER 85-1678] p 716 A85-40765
Inviscid flow field analysis of maneuvering hypersonic vehicles using the SCM formulation and parabolic grid generation — Split-Coefficient Matrix [AIAA PAPER 85-1682] p 716 A85-40767
Simulation of wing, fuselage, and wing/fuselage flowfields using a three-dimensional Euler/Navier-Stokes algorithm [AIAA PAPER 85-1693] p 718 A85-40775
Total pressure loss in vortical solutions of the conical Euler equations [AIAA PAPER 85-1701] p 718 A85-40777
Three-dimensional unsteady Euler equations solutions on dynamic grids [AIAA PAPER 85-1704] p 790 A85-40778
2-D and 3-D Euler flow calculations with a second-order accurate Galerkin finite element method [AIAA PAPER 85-1706] p 718 A85-40779
Convergence acceleration for a three-dimensional Euler/Navier-Stokes zonal approach [AIAA PAPER 85-1495] p 720 A85-40934
Numerical study of a non-centered scheme with application to aerodynamics [AIAA PAPER 85-1497] p 720 A85-40935
Transonic flows about oscillating airfoils using the Euler equations [AIAA PAPER 85-1514] p 721 A85-40949
An efficient iteration strategy for the solution of the Euler equations [AIAA PAPER 85-1529] p 803 A85-40961
Newton solution of direct and inverse transonic Euler equations [AIAA PAPER 85-1530] p 722 A85-40962
Implicit flux-split schemes for the Euler equations [AIAA PAPER 85-1680] p 803 A85-41743
Time dependent computation of the Euler equations for designing 2-D cascades, including the case of transonic shock free design p 727 A85-41814
Flow instabilities in transonic small-disturbance theory p 869 A85-48531
Calculation of the flow in an air intake duct by numerical solution of the Euler equations [AAAF PAPER NT 84-24] p 870 A85-48998
Finite element simulation of transonic flows by modified potential and stream function methods p 871 A85-49149
Research on implicit approximate-factorization finite-difference method for the Euler equation p 873 A85-49706
Shock capturing finite difference algorithms for supersonic flow past fighter and missile type configurations [NASA-CR-174051] p 11 N85-10913
A comparative study of the nonuniqueness problem of the potential equation [NASA-TP-2385] p 235 N85-15694
Flow instabilities in transonic small disturbance theory [NASA-TM-86251] p 326 N85-18000
Calculation of harmonic aerodynamic forces of aerofoils and wings from the Euler equations p 554 N85-25177
A new implicit plus minus splitting method for the solution of the Euler equations in the transonic flow regime p 556 N85-25200
Upwind-difference methods for aerodynamic problems governed by the Euler equations [REPT-84-23] p 635 N85-27834
Unsteady flow in multistage turbines p 698 N85-27946
A stream function approach to solving the conservative Euler equations for transonic flows p 875 N85-35156

**EUROPE**
Wind tunnel project demonstrates difficulties of European cooperation p 592 A85-36419
Turboshaft truce in Europe p 658 A85-38436
Analysis of bird strikes reported by European airlines, 1976 - 1980 [AD-P004181] p 402 N85-19943
West Europe report: Science and technology [JPRS-WST-84-012] p 601 N85-25552
Rotterdam Airport and the Common Market p 641 N85-27840
Introduction to European air traffic control [AD-A156328] p 878 N85-35176

**EUROPEAN AIRBUS**
A range for all needs — Airbus A310/A320 development p 156 A85-17325
Essential design features of A310 [SAWE PAPER 1569] p 160 A85-18821
Advanced technology - The key to European competitiveness — in Airbus industry p 200 A85-21680
Use of expanded AIDS in engine health monitoring on the CF6-80 engine for the A310 Airbus [SAE PAPER 841505] p 352 A85-25980
Commission stacker - Incorporation in a total logistic concept — for Airbus production [MBB-UT-36-84-OE] p 541 A85-35073
Insight. Background information for multipurpose pilots: Flight phenomena p 22 N85-10940
All-composite Airbus empennage p 284 N85-15931
Airbus fatigue tests p 416 N85-20186
A 320 to have combined automatic pilot, flight control system p 515 N85-24186
MBB cost-reduction plan for Airbus construction described p 542 N85-25616
FRG journal analyzes state, prospects of airbus programs: General analysis p 542 N85-25638
Lightning-safe carbon fiber composite for Airbus tail unit p 692 N85-29100
Avionics and civil aircraft systems: The present and the future [SNIAS-851-111-104] p 751 N85-31038

**EUROPEAN SPACE PROGRAMS**
European transonic wind tunnel p 681 A85-37491
Hermes - A cockpit inspired by the Airbus A320 p 782 A85-40914

**EVACUATING (TRANSPORTATION)**
A user-operated model to study strategy in aircraft evacuation p 148 A85-16240
The helicopter, instrument of choice for health evacuation [SNIAS-851-220-101] p 761 N85-31051

**EVALUATION**
Performance evaluation of A-10 aircraft mainteance units and aircraft using constrained facet analysis [AD-A146955] p 201 N85-15660
Flight service evaluation of advanced composite ailerons on the L-1011 transport aircraft [NASA-CR-172483] p 284 N85-17049
US Army Aviation Engineering Flight Activity (USAAEFA) report bibliography update 1983 - 1984 [AD-A151381] p 541 N85-25168
DC-10 winglet flight evaluation [NASA-CR-3704] p 760 N85-29949
Effect of interference on the performance of a minimum TCAS 2 [FAA-PM-84-33] p 880 N85-34131

**EVAPORATION**
Effects of temperature variation among droplets in an evaporating fuel spray p 520 N85-22562
Research test facility for evaporation and combustion of alternative jet fuels at high air temperatures [AD-A153830] p 691 N85-29073

**EVAPORATIVE COOLING**
The transpired turbulent boundary layer in various pressure gradients and the blow-off condition [ASME PAPER 84-WA/HT-71] p 698 A85-39899

**EVAPORATORS**
Open-cycle centrifugal vapor-compression heat pump [PB85-113405/GAR] p 372 N85-18348

**EVASIVE ACTIONS**
Pursuit-evasion between two realistic aircraft p 131 A85-13632
The use of local functionals to construct a circumvention maneuver in game problems of evasion p 302 A85-22374
To pursue or to evade - That is the question — differential game theory application to air combat p 381 A85-26426
Modeling and simulation in missile target tracking p 409 A85-28607
First-order feedback strategies for variable speed planar pursuit-evasion games p 703 A85-37198
Pursit-evasion game analysis in a line of sight coordinate system p 803 A85-41339
A new approach to the maneuvering target tracking problem p 917 A85-47769

**EXCITATION**
Flight test technique for evaluation of gust load alleviation analysis methodology [NASA-TM-86344] p 161 N85-14833
Large amplitude forcing of a high speed 2-dimensional jet [NASA-CR-175646] p 507 N85-22393

**EXHAUST DIFFUSERS**
An investigation of high performance, short thrust augmenting ejectors [ASME PAPER 84-WA/FE-10] p 697 A85-39873
Energy efficient engine combustor test hardware detailed design report [NASA-CR-167945] p 28 N85-10950
Strutless diffuser for gas turbine engine [AD-D011662] p 672 N85-28943

**EXHAUST EMISSION**
Fuel effects on gas turbine combustion-liner temperature, pattern factor, and pollutant emissions p 26 A85-11984
Dispersion process of jet engine exhaust plume p 351 A85-24569
Pitot pressure and heat transfer measurements in hydrazine thruster plumes [AIAA PAPER 85-0934] p 685 A85-37599
Combustors and their emission control technique p 766 A85-41027
Effects of heterogeneity of mixtures on gaseous emissions in premixed/prevaporized combustion p 793 A85-41800
Energy efficient engine component development and integration program [NASA-CR-169496] p 33 N85-10989
Outline of a new emissions model for military and civilian aircraft facilities [DE84-016455] p 131 N85-13394
Impact of aircraft emissions on air quality in the vicinity of airports. Volume 3: Air quality and emission modeling needs [AD-A147951] p 299 N85-17435
The influence on IR emission of engine parameters for an afterburn case. A sensitivity study on NATO infrared air target model (NIRATAM) version: 0.0 [AD-B089311L] p 422 N85-21171
Composition and photochemical reactivity of turbine engine exhaust [AD-A150559] p 533 N85-23256
A study of the control of particulate emissions from turbine engine test cells p 898 N85-35205

**EXHAUST FLOW SIMULATION**
Techniques to reduce exhaust gas ingestion for vectored-thrust V/STOVL aircraft [AIAA PAPER 84-2398] p 97 A85-13508
A novel experimental facility for conducting jet impingement studies related to VTOL aircraft [AIAA PAPER 85-0052] p 209 A85-19484
Approximate determination of the boundaries of an ideal gas jet issuing under conditions of pressure difference from a nozzle with the formation of a free vortex flow p 315 A85-23982
A new technique to break diaphragms electrically in a double-tube short duration jet simulation facility p 682 A85-38975
Circular-to-rectangular transition ducts for high-aspect ratio nonaxisymmetric nozzles [AIAA PAPER 85-1346] p 632 A85-39738
A simulation technique for jet temperature effects on nozzle-afterbody drag at transonic Mach numbers [AIAA PAPER 85-1463] p 633 A85-39792
The influence on IR emission of engine parameters for an afterburn case. A sensitivity study on NATO infrared air target model (NIRATAM) version: 0.0 [AD-B089311L] p 422 N85-21171
Numerical simulations of the effect of floor and ceiling venting on fire and smoke spread in aircraft cabins [PB85-178333] p 747 N85-29939

**EXHAUST GASES**
Loss in turbofan thrust caused by boundary layer growth in a nacelle's inlet and exhaust ducts
[AIAA PAPER 85-1281] p 631 A85-39697
Simulation of Nacelle-afterbody/exhaust-jet flowfields using a three-dimensional Navier-Stokes algorithm
[AIAA PAPER 85-1283] p 720 A85-40829
Integrated exhaust gas analysis system for aircraft turbine engine component testing
[NASA-TP-2424] p 295 N85-16100
Laboratory simulation of smoke reduction from aircraft engine test cell exhaust using a fluidized bed filter
[AD-A148600] p 278 N85-16886
Impact of aircraft emissions on air quality in the vicinity of airports. Volume 3: Air quality and emission modeling needs
[AD-A147951] p 299 N85-17435
An analytic model of gas turbine engine installations
[AD-A148708] p 354 N85-18059
Experimental study of aerodynamic shielding of turbojet engine air intake against exhaust gases
p 355 N85-18210
Opacity control technique for jet engine test cells
[AD-D011668] p 774 N85-29968

**EXHAUST NOZZLES**
Engine control considerations for multifunction nozzles
[AIAA PAPER 84-2454] p 108 A85-13542
Wind tunnel evaluation of advanced exhaust nozzles for STOL tactical aircraft
[AIAA PAPER 84-2457] p 108 A85-13545
A universal turboshaft engine test cell - Design considerations and model test results
[AIAA PAPER 85-0382] p 275 A85-19711
Prediction of performance of aircraft gas turbines
p 264 A85-21682
Modified F-15 will investigate advanced control concepts p 340 A85-24725
Altitude testing of a flight weight, self-cooled, 2D thrust vectoring exhaust nozzle
[SAE PAPER 841557] p 352 A85-25984
Experimental definition of nonaxisymmetric exhaust nozzle plumes — for aircraft thrust vector control
p 385 A85-26752
Integration of vectoring nozzles in a STOL transonic tactical aircraft
[AIAA PAPER 85-1285] p 667 A85-39699
Circular-to-rectangular transition ducts for high-aspect ratio nonaxisymmetric nozzles
[AIAA PAPER 85-1346] p 632 A85-39738
Summary of nonaxisymmetric nozzle internal performance from the NASA Langley Static Test Facility
[AIAA PAPER 85-1347] p 668 A85-39739
Three dimensional CSCM method for the compressible Navier-Stokes equations with application to a multi-nozzle exhaust flowfield
[AIAA PAPER 85-1193] p 726 A85-41419
The preliminary checkout, evaluation and calibration of a 3-component force measurement system for calibrating propulsion simulators for wind tunnel models
[NASA-CR-174113] p 118 N85-12903
Static jet noise test results of four 0.35 scale-model QCGAT mixer nozzles
[NASA-TM-86871] p 135 N85-13551

**EXHAUST SYSTEMS**
Application and test verification of finite element analysis for gas turbine extended reaction exhaust muffler systems
[AIAA PAPER 84-2334] p 26 A85-10878
Analytical method for determining the volumetric efficiency and power losses resulting from resistance in the inlet and exhaust systems of a piston engine
p 167 A85-16231
Internal aerodynamics of infrared suppressors for helicopter engines p 507 A85-32012
Dynamic gas temperature measurement system
p 694 A85-37706
An evaluation of the exhaust system configuration from the cruise efficiency criteria of an engine in an aircraft system p 660 A85-39121
Axisymmetric thrust reversing thrust vectoring exhaust system for maneuver and balanced field length aircraft
[AIAA PAPER 85-1466] p 670 A85-39794
Numerical simulations of the effect of floor and ceiling venting on fire and smoke spread in aircraft cabins
[PB85-178333] p 747 N85-29839
Measurement of turbofan-turbojet thrust from tailpipe static pressure
[AD-A154036] p 774 N85-29967

**EXOTHERMIC REACTIONS**
Performance assessment of exothermic compounds for directional solidification p 596 A85-34201

**EXPANDABLE STRUCTURES**
New adaptive test section for the high-speed wind tunnel of the DFVLR Goettingen
[DGLR PAPER 84-108B] p 778 A85-40326

**EXPANSION**
Fluid motion in the regions of abrupt expansion of the channels of rotor-cooling systems of energy-converting machines p 442 A85-28473
Device for measuring relative axial expansion of turbine rotor employing space-vector tracking method
p 169 N85-14962
Expedient runway surfacing with post tensioning system for expeditionary airfields
[AD-D011677] p 781 N85-29976

**EXPERIMENT DESIGN**
Selection of rational models in the optimal planning of aeromechanical experiments p 288 A85-20460
Design and implementation of a low-gravity solidification experiment package for the F-104 p 40 N85-11053

**EXPERIMENTATION**
On thermomechanical testing in support of constitutive equation development for high temperature alloys
[NASA-CR-174879] p 605 N85-25894
The impact of supercomputers on experimentation: A view from a national laboratory
[NASA-TM-86822] p 918 N85-34510

**EXPERT SYSTEMS**
Artificial intelligence applied to the inertial navigation system performance and maintenance improvement
p 94 A85-14830
Design of aerodynamic bodies using artificial intelligence/expert system technique
[AIAA PAPER 85-0112] p 301 A85-20856
Intelligent test generator — for Naval aircraft maintenance p 458 A85-26821
DARPA stressing development of pilot's associate system p 802 A85-40917
Avionics as an expert systems domain
p 833 A85-45001
Design of an expert-system flight status monitor
[AIAA PAPER 85-1908] p 834 A85-45975
Expert systems in maintenance diagnostics for self-repair of digital flight control systems
[AD-P003933] p 58 N85-11613
An interactive environment for the development of an expert system in ZOG
[AD-A149954] p 459 N85-22025
Research Reports: 1984 NASA/ASEE Summer Faculty Fellowship Program
[NASA-CR-171317] p 462 N85-22210
Diagnosis: Using automatic test equipment and an artificial intelligence expert system
[AD-A151918] p 610 N85-27576
Design of an expert-system flight status monitor
[NASA-TM-86730] p 860 N85-32794
Implications of artificial intelligence on the design of future onboard systems
[SFENA-DPS/C/S3/84252A] p 918 N85-34596

**EXPLODING WIRES**
Lightning strikes on aircraft. The TRIP 82 experiment and 3-dimensional electromagnetic interferometry
[ONERA-RF-88/7154-PY] p 565 N85-26690

**EXPLOSIVE DEVICES**
Approach for service life extension of explosive devices for aircraft escape systems
[NASA-TM-86323] p 499 N85-22381

**EXPLOSIVE FORMING**
Explosive forming of low carboon steel sheet into a stepped disc shape p 694 A85-38169

**EXPLOSIVES**
Aircraft accident report, Western Helicopters, Inc., Bell UH-1B, N87701, Valencia, California, July 23, 1982
[PB84-910414] p 149 N85-13789

**EXPOSURE**
A study of the methods for evaluating the noise impact of a proposed airport on a community
p 609 N85-25957
Low-profile fastener
[AD-D011667] p 798 N85-30343

**EXPULSION**
Electro-expulsive separation system
[NASA-CASE-ARC-11613-1] p 700 N85-29150

**EXTERNAL STORE SEPARATION**
A new technique to determine inflight store separation trajectories p 70 A85-13695
Perturbed motion of airplane and safe store separation p 674 A85-38168
Implementation of the supersonic triplet singularity into the USTORE computer code
[CSIR-NIAST-83/47] p 8 N85-10006
Remote pivot decoupler pylon: Wing/store suppression
[NASA-CASE-LAR-13173-1] p 416 N85-19961

**EXTERNAL STORES**
Bomb rack technology - Keeping up with advanced weapons p 246 A85-19274
Inexpensive calibrations for the influence function method using the interference distributed loads code — for prediction of store loads in aircraft flow fields
[AIAA PAPER 85-0270] p 247 A85-19623
Development of a velocity control algorithm for controlling a 6-DOF captive trajectory model support
p 427 A85-29567
The representation of aircraft-external store-interferences under supersonic conditions
[DGLR PAPER 84-112] p 709 A85-40328
UH-60A external stores support system fixed provision fairings drag determination
[AD-A147188] p 256 N85-15719
ESP (External-Stores Program): A pilot computer program for determining flutter-critical external-store configurations. Volume 1: User's manual
[AD-A152268] p 587 N85-26725
ESP (External-Stores Program): A pilot computer program for determining flutter-critical external-store configurations. Volume 2: Final report on program enhancement and delivery
[AD-A152269] p 587 N85-26726
ESP (External-Stores Program): A pilot computer program for determining flutter-critical external-store configurations. Volume 3, part 1: Program compilation
[AD-A152270] p 588 N85-26727
Flight trials of a modified gulfstream commander carrying external stores
[AD-A153376] p 653 N85-27859
Results of variable enthalpy tests of CPR-488 TIP panels in MSFC Hot Gas Facility
[NASA-CR-170889] p 902 N85-35237

**EXTERNAL TANKS**
Design and fabrication of crashworthy composite external fuel tanks p 104 A85-15630
Preliminary airworthiness evaluation AH-1S (MC) helicopter with external fuel tanks installed
[AD-A148091] p 258 N85-16865
BI-PAC F-15 external fuel tank container modification
[AD-A148636] p 344 N85-18053

**EXTERNALLY BLOWN FLAPS**
Aerodynamic characteristics of a circulation control elliptical airfoil with two blown jets p 816 A85-45834

**EXTRACTION**
Parachute extraction device for ultralight gliders
[CH-643499-A5] p 559 N85-26663

**EXTREMELY HIGH FREQUENCIES**
EHF air-to-air communications p 373 N85-19273

**EXTREMUM VALUES**
Extremum problem concerning a wing with a maximum gradient of lift force p 234 A85-22370
An extremum problem concerning the shape of a body of revolution in supersonic gas flow p 234 A85-22371

**EXTRUDING**
Composites for aluminum extrusions — for CH-47D Chinook helicopter p 311 A85-25100
Microstructures and properties of HIP, HIP plus forged and extruded P/M superalloy FGH95
p 786 A85-43137
Dispersion strengthened aluminum extrusions
p 786 A85-43143

**EYE (ANATOMY)**
The effect of modified spectacles on the field of view of the helmet display unit of the integrated helmet and display sighting system
[AD-A148693] p 348 N85-18055

**EYE MOVEMENTS**
Electrooculographic measurement, fatigue and variability of performance in simulated aircraft flight
p 760 N85-29946

**EYE PROTECTION**
Portable automatic eye-safe laser and FLIR test set
p 440 A85-26810

**F**

**F-100 AIRCRAFT**
Flight testing the Digital Electronic Engine Control (DEEC) A unique management experience
p 420 A85-28636
Fault detection and accommodation testing on an F100 engine in an F-15 airplane — digital engine control system
[AIAA PAPER 85-1294] p 765 A85-40830

**F-104 AIRCRAFT**
MBB - Reconnaissance programs p 346 A85-24252
Testing of the digital flight control system of the German CCV fighter experimental aircraft p 514 N85-22361

**F-106 AIRCRAFT**
Electromagnetic resonances of cylinders and aircraft model with resistive wires
[NASA-CR-174203] p 192 N85-15319
Comparison of wind velocity in thunderstorms determined from measurements by a ground-based Doppler radar and an F-106B airplane
[NASA-TM-86348] p 565 N85-26687

**F-111 AIRCRAFT**

The prediction of buffeting response in flight from wind-tunnel measurements on models of conventional construction p 18 A85-11475

Enhancing the F-111 avionics intermediate shop with dynamic test stations p 381 A85-26834

Mission adaptive wing p 828 A85-46499

AFTI MAW - Wing of the future — Advanced Fighter Technology Integrator flight test program for Mission Adaptive Wing concept [SAWE PAPER 1617] p 883 A85-49921

Interactions between F-111 fuselage fuel tank sealants. Part 2: Variation in performance properties of polysulfides after contact with polyester degradation products [AD-A149777] p 438 N85-21368

Automatic flight control modes for the AFTI/F-111 mission adaptive wing aircraft p 591 N85-26756

Automatic flight control modes for the AFTI/F-111 mission adaptive wing aircraft p 680 N85-27909

F-111 automatic test equipment replacement program p 782 N85-31322

**F-14 AIRCRAFT**

M61A1 gunfire environmental effects on F-14 aircraft structure and equipment p 411 A85-26552

F-14D for digital p 492 A85-30572

Naval Center seeks new uses for centrifuge-based simulator p 591 A85-33800

Flight simulation fidelity in a total g-force environment [AIAA PAPER 85-1741] p 779 A85-40557

F-14D - Tomorrow's tougher tomcat p 755 A85-41067

A safety evaluation of the relocation of the ACM (Air Combat Maneuver) panel in the F-14 ( )/AIP (Avionics Integration Program) [AD-A149596] p 419 N85-21158

F-14A aircraft high-speed flow simulations [NASA-CR-172559] p 478 N85-23702

**F-15 AIRCRAFT**

A method for testing a digital flight control system without the use of ground support equipment [AIAA PAPER 84-2684] p 172 A85-17851

Predicted performance benefits of an adaptive digital engine control system on an F-15 airplane [AIAA PAPER 85-0255] p 263 A85-19801

Modified F-15 will investigate advanced control concepts p 340 A85-24725

USAF negotiating contracts for F100, F110 improvements p 581 A85-35448

Color CRT in the F-15 p 656 A85-38954

Results of a wind tunnel/flight test program to compare afterbody/nozzle pressures on a 1/12 scale model and an F-15 aircraft [SAE PAPER 841543.] p 649 A85-39066

Fault detection and accommodation testing on an F100 engine in an F-15 airplane — digital engine control system [AIAA PAPER 85-1294] p 765 A85-40830

Rotary-balance experiments on a modern fighter aircraft configuration at high Reynolds numbers [AIAA PAPER 85-1829] p 848 A85-43870

F-15E on track p 825 A85-44073

F-15 digital map feasibility demonstration system p 832 A85-44090

Realism provided in a procedural trainer — for F-15 aircraft p 848 A85-45117

Development of control laws for a flight test maneuver autopilot for an F-15 aircraft [AIAA PAPER 85-1859] p 843 A85-45886

The use of Ada in digital flight control systems [AIAA PAPER 85-1953] p 834 A85-45939

The Eagle - A classic study in reliability growth p 882 A85-49579

F-15 readiness - The maintainability contribution p 882 A85-49582

The F-15 flight loads tracking program p 253 N85-15086

Predicted performance benefits of an adaptive digital engine control system of an F-15 airplane [NASA-TM-85916] p 285 N85-15729

BI-PAC F-15 external fuel tank container modification [AD-A148636] p 344 N85-18053

Effects of inlet distortion on a static pressure probe mounted on the engine hub in an F-15 airplane [NASA-TP-2411] p 508 N85-22394

Diagnosis: Using automatic test equipment and an artificial intelligence expert system [AD-A151918] p 610 N85-27576

Fault detection and accommodation testing on an F100 engine in an F-15 airplane [NASA-TM-86735] p 773 N85-29962

Recent developments in rotary-balance testing of fighter aircraft configurations at NASA Ames Research Center [NASA-TM-86714] p 811 N85-32090

Performance improvements of a highly integrated digital electronic control system for an F-15 airplane [NASA-TM-86748] p 837 N85-32120

Development of control laws for a flight test maneuver autopilot for an F-15 aircraft [NASA-TM-86736] p 847 N85-33122

**F-16 AIRCRAFT**

Conformal EO sensor development for the AFTI/F-16 — Advance Fighter Technology integrator [AIAA PAPER 84-2478] p 92 A85-13556

YF16-CCV multivariable flight control design with uncertain parameters p 114 A85-13681

Crash-survivable flight data recorder [AIAA PAPER 84-2705] p 166 A85-17878

Contrast sensitivity performance assessment of HUD display systems p 259 A85-21593

Improved supersonic performance for the F-16 inlet modified for the J79 engine p 314 A85-22391

Flight test techniques for the advanced fighter technology integration (AFTI) F-16 p 340 A85-24230

A design methodology for pitch pointing flight control systems p 423 A85-26429

The F-16 A/C-ATE centralized data system p 418 A85-26839

Pilot report - AFTI/F-16 p 412 A85-27660

Medium PRF for the AN/APG-66 radar — Pulse Repetition Frequency for Pulse Doppler Radar p 408 A85-27834

Quantifying AFTI/F-16 gust alleviation characteristics using frequency response analysis p 424 A85-28641

F-16 - Into the 1990s p 414 A85-29799

A robust pitch pointing control law p 513 A85-33304

USAF negotiating contracts for F100, F110 improvements p 581 A85-35448

Design of direct digital flight-mode control systems for high-performance aircraft with multiple actuator non-linearities p 840 A85-45051

Synthesis of direct lift control laws via eigenstructure assignment p 840 A85-45054

Design of fast non-interacting digital flight-mode control systems for high-performance aircraft [AIAA PAPER 85-1903] p 846 A85-45974

Design of decoupled longitudinal flight control laws utilizing eigensystem assignment p 893 A85-47697

Evaluation of the AFTI/F-16 on the LAMARS (large amplitude multi-mode aerospace research simulator) p 881 A85-49008

F-16 force management, yesterday, today and tomorrow p 254 N85-15674

Dynamic wind-tunnel testing of active controls by the NASA Langley Research Center p 514 N85-22353

Multivariable control law design for the AFTI/F-16 with a failed control surface [AD-A151908] p 586 N85-25271

Flight control system reconfiguration design using quantitative feedback theory [AD-A151771] p 587 N85-25722

Application of AFTI/F-16 task-tailored control modes in advanced multirole fighters p 677 N85-27888

**F-17 AIRCRAFT**

Dynamic wind-tunnel testing of active controls by the NASA Langley Research Center p 514 N85-22353

**F-18 AIRCRAFT**

Backup modes for the F/A-18 digital flight control system [AIAA PAPER 84-2622] p 171 A85-17819

Development of the F/A-18A automatic carrier landing system p 512 A85-32777

Versatile F/A-18 Hornet performs fighter and attack missions p 571 A85-34199

Thrust reverser effects on fighter aircraft aerodynamics p 547 A85-35577

Pictorial format program - Past, present, and future p 656 A85-38958

Simulator evaluation of F/A-18 ski jump [AIAA PAPER 85-1730] p 754 A85-40553

Active aeroelastic oscillation control on the F/A-18 aircraft [AIAA PAPER 85-1858] p 843 A85-45887

F/A-18 supportability assurance readiness program p 886 A85-49585

**F-20 AIRCRAFT**

F-20 air turbine cartridge start system [SAE PAPER 841570] p 662 A85-39160

Development of the F-20 nose radome [AD-P004374] p 449 N85-21468

**F-27 AIRCRAFT**

Safety recommendation(s), A-84-128 through -133 [REPT-3996C/41] p 563 N85-25221

Static longitudinal stability and control characteristics of the Fokker F27 Friendship calculated by simple handbook methods [VTH-LR-394] p 588 N85-26728

**F-4 AIRCRAFT**

Stability of adaptive control algorithms - Theoretical examination and simulation for F-4 flight control [AIAA PAPER 85-1966] p 845 A85-45965

**F-5 AIRCRAFT**

RF-5e production development and flight test p 346 A85-24253

**F-8 AIRCRAFT**

Analytical redundancy management mechanization and flight data analyses for the F-8 digital fly-by-wire aircraft flight control sensors [NASA-CR-170396] p 173 N85-14844

F-8 refueling boom ground vibration test [NASA-TM-84914] p 255 N85-15713

**FABRICATION**
